No. 96-110-CFX Title: Washington, et al., Petitioners
v.
Harold Glucksberg, et al.

Docketed: July 19, 1996 Court: United States Court of Appeals for the Ninth Circuit

See also:
95-1858

Entry	Date	Proceedings and Orders
	May 14 1996	Application (A95-919) to extend the time to file a petition for a writ of certiorari from June 4, 1996 to August 3, 1996, submitted to Justice O'Connor.
	May 14 1996	Application (A95-919) granted by Justice O'Connor extending the time to file until July 4, 1996.
	May 29 1996	Application (A95-974) for a stay of the mandate pending the filing and disposition of a petition for a writ of certiorari, submitted to Justice O'Connor.
	May 29 1996	(A95-974) Upon consideration of the application of counsel for the applicants, It is Ordered that the mandate of the United States Court of Appeals for the Ninth Circuit, case No. 94-35534, issued on May 29, 1996, be recalled and stayed pending receipt of a response, due on or before June 5, 1996, and further order of the undersigned or of the Court.
	May 30 1996	Response to application (A95-974) filed by Harold Glucksberg, et al.,.
	Jun 5 1996	Application (A95-974) referred to the Court by Justice O'Connor.
	Jun 10 1996	Application (A95-974) granted by the Court. The application for a stay of the issuance of the mandate of the United States Court of Appeals for the ninth circuit, case No. 94-35534, issued on May 29, 1996, presented to Justice O'Connor and by her referred to the Court is granted pending the timely filing and disposition by this Court of a petition for a writ of certiorari. Should the petition for a writ of certiorari be denied, this stay terminates automatically. In the event the petiiton for a writ of certiorari is granted, this stay shall continue pending the sending down of the judgment of this Court.
	Jul 3 1996	Petition for writ of certiorari filed. (Response due August 18, 1996)
	Jul 3 1996	Appendix of petitioners filed.
	Aug 7 1996	Brief amici curiae of California, et al. filed.
	Aug 16 1996	Brief of respondents Harold Glucksberg, et al. in opposition filed.

HOPE

QUESTIONS PRESENTED

1. Is there a constitutionally protected liberty interest under the Due Process Clause of the Fourteenth Amendment in committing suicide, and if so, does that interest include assistance in so doing?

2. If the answer to the foregoing question is in the affirmative, is a State statute that infringes on the protected liberty interest by prohibiting one person from assisting another to commit suicide nonetheless valid under the Due Process Clause because it furthers legitimate State interests?

3. Is there a rational basis for distinguishing between refusing life-sustaining medical treatment and requesting life-ending medical intervention, so that a State whose law allows the former but not the latter does not violate the Equal Protection Clause of the Fourteenth Amendment?

LIST OF PARTIES

The parties to the proceeding below were:

Petitioners: State of Washington and Christine O. Gregoire, Attorney General of Washington, both of whom were aligned as defendants/appellants below.

Respondents: Harold Glucksberg, M.D., Abigail Halperin, M.D., Thomas A. Preston, M.D., and Peter Shalit, M.D., Ph.D., all of whom were aligned as plaintiffs/respondents below. Three individuals identified only by pseudonyms were plaintiffs in the District Court below, but died during the pendency of the proceedings and are no longer parties to the litigation. A nonprofit corporation, Compassion in Dying, was a plaintiff in the District Court; however, its claims were not adjudicated by the District Court order that prompted this appeal and it is not a party to the appeal.

PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

The Petitioners respectfully pray that a writ of certiorari issue to review the judgment and opinion of the United States Court of Appeals for the Ninth Circuit, filed March 6, 1996.

OPINIONS BELOW

The decision of the *en banc* panel of the United States Court of Appeals for the Ninth Circuit[1] is reported at 79 F.3d 790 (9th Cir. 1996). The Court's Amended Order[2] denying a request that the full court rehear the case *en banc*, with dissenting opinions, is reported at ___ F.3d ___ (1996 WL 315922) (9th Cir. 1996). The decision of the Ninth Circuit three judge panel[3] is reported at 49 F.3d 586 (9th Cir. 1995). The decision of the United States District Court for the Western District of Washington[4] is reported at 850 F. Supp. 1454 (W.D. Wash. 1994).

JURISDICTION

The Court of Appeals' opinion was filed and judgment entered on March 6, 1996.[5] The jurisdiction of

this Court is invoked pursuant to 28 U.S.C. § 1254(1). By order of May 14, 1996, the time for filing an application for a writ of certiorari was extended to July 4, 1996.[6]

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED

U.S. Constitution, Fourteenth Amendment

> All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Declaratory Judgment Act, 28 U.S.C. § 2201

> (a) In a case of actual controversy within its jurisdiction, except with respect to Federal taxes other than actions brought under section 7428 of the Internal Revenue Code of 1986, a proceeding under section 505 or 1146 of title 11, or in any civil action involving an antidumping or countervailing duty proceeding regarding a class or kind of merchandise of a free trade area country (as defined in section 516A(f)(10) of the Tariff Act of 1930), as determined by the administering authority, any court of the United States, upon the filing of an

[6] App. at F-1 to F-2.

> appropriate pleading, may declare the rights and other legal relations of any interested party seeking such declaration, whether or not further relief is or could be sought. Any such declaration shall have the force and effect of a final judgment or decree and shall be reviewable as such.
>
> (b) For limitations on actions brought with respect to drug patents see section 505 or 512 of the Federal Food, Drug, and Cosmetic Act.

Washington Revised Code § 9A.36.060

> (1) A person is guilty of promoting a suicide attempt when he knowingly causes or aids another person to attempt suicide.
>
> (2) Promoting a suicide attempt is a class C felony.

STATEMENT OF THE CASE

The jurisdiction of the District Court was invoked pursuant to 28 U.S.C. § 2201 and 42 U.S.C. § 1983. Eight plaintiffs—three patients, four physicians, and a nonprofit corporation—filed suit seeking a declaratory judgment that Washington's criminal statute prohibiting one person from aiding another person to commit suicide violates the Fourteenth Amendment of the United States Constitution. Plaintiffs also sought to enjoin enforcement of the statute.

1. The Statutory Scheme At Issue

Washington's statute prohibiting one person from assisting another person to commit suicide was initially adopted in 1854 by the first Territorial Legislature. The prohibition has remained in effect throughout the State's history, although the specific language of the statute has

varied with different codifications of the State's criminal code.[7]

The 1975 revision of the criminal code retained the prohibition against assisted suicide while at the same time removing criminal penalties from the act of attempting suicide.[8] The legislative committee whose comprehensive study led to the revision explained:

> "[W]hatever may be said of suicide itself, it seems clear that the introduction into the situation of another person who actively promotes the suicide could well increase the instability or irrationality of the potential suicide, affecting his judgment or emotional outlook. . . . Whatever the thoughts of a potential suicide may be, it is almost inconceivable that the threat of a two year prison sentence if he is unsuccessful in his attempt is going to deter his act. Moreover, it seems clear that such a person is in all probability a troubled, disturbed human being who need[s] psychiatric care or some other counseling service. His condition could only be aggravated by being branded a convicted felon and sent to [prison] for

[7] Copies of the various legislative enactments, including the statute currently in effect, are found in the appendix at pages G-1 to G-3.

[8] *See* Washington Laws of 1975, 1st Ex. Sess., ch. 249, § 9A.92.010 (214) (repealing former Wash. Rev. Code § 9.80.020, which was originally enacted by Washington Laws of 1909, ch. 249, § 134).

> two years. Thus no attempted suicide crime is defined by this [proposed] code."[9]

In 1991, Washington's voters rejected Initiative 119, which, had it passed, would have authorized a form of physician aid in dying.[10] Its enactment also would have presumably created an implied exception to the crime of promoting or aiding a suicide, at least for conduct explicitly authorized by the initiative. The initiative did not expressly amend or repeal the assisted suicide statute at issue here.

Almost all other States also prohibit assisting a suicide, either by statutes or by case law.[11] These statutes—generally considered part of the States' homicide laws—have been recognized by this Court as evidencing the States' interest in protecting and preserving human life.[12]

[9] Legislative Council's Judiciary Committee, *Report on the Revised Washington Criminal Code* 153 (December 3, 1970).

[10] A copy of the initiative is found in the appendix at pages H-1 to H-10. The initiative was prepared in standard legislative drafting form, reflecting changes in the existing statutory language by underlining language to be added and striking language to be deleted, enclosing the latter in double parentheses.

[11] In his dissent from the *en banc* panel decision, Judge Beezer catalogued forty-four States that condemn assisted suicide. *See* App. at A-135 to A-136, n.10-13. The list is extensive, but not exhaustive, because States are continuing to grapple with the issue. Judge Beezer's list does not include, for example, the 1995 Louisiana statute prohibiting "criminal assistance to suicide". *See* La. Rev. Stat. § 14:32.12 (as amended by Louisiana Acts of 1995, No. 384, § 1. It should also be noted that the Model Penal Code includes a prohibition against aiding suicide. Model Penal Code § 210.5.

[12] *Cruzan v. Missouri Dep't of Health*, 497 U.S. 261, 280 (1990).

2. The Proceedings Below

a. The District Court Opinion

On cross motions for partial summary judgment, the District Court held that "a competent, terminally ill adult has a constitutionally guaranteed right under the Fourteenth Amendment to commit physician-assisted suicide."[13] Finding that Washington's statute prohibiting assisted suicide places an "undue burden" on the exercise of that right, the District Court concluded that the statute violates the Due Process Clause of the Fourteenth Amendment.[14]

The District Court also held that persons who depend on life support systems to remain alive are situated similarly to those who are terminally ill but able to continue living without life support, and that the refusal or withdrawal of life support by the former is "equivalent" to assisted suicide.[15] The District Court concluded that by allowing withdrawal or withholding life support, but prohibiting assisted suicide, Washington law violates the Equal Protection Clause as well.[16] Based on these conclusions, the District Court declared the statute unconstitutional.[17]

The District Court granted final judgment declaring the statute invalid pursuant to Fed. R. Civ. P. 54(b) and 28 U.S.C. § 2201, addressing only the claims of the patient

[17] App. at E-28 to E-29.

plaintiffs and those advanced on their behalf by the physician plaintiffs.[18] The District Court did not reach the claims of the nonprofit corporation, nor the claims of the physicians on their own behalf, as they were not argued to the District Court.[19] The District Court declined to grant injunctive relief.[20]

b. The Court Of Appeals Panel Decision

Petitioners appealed to the Court of Appeals pursuant to 28 U.S.C. § 1291. A majority of a three judge panel of the Court of Appeals reversed the District Court, finding that the "decision of the district court lacks foundation in recent precedent [and] in the traditions of our nation."[21] Even assuming the existence of a liberty interest, the panel recognized several State interests furthered by the statute and concluded that "Washington's interests . . . individually and convergently, outweigh any alleged liberty of suicide."[22]

Rejecting the District Court's equal protection analysis, the panel also held that "plaintiffs have not sustained [their] burden"[23] of demonstrating that there is no rational basis for Washington's statutory distinction

[23] App. at D-19.

"between actions taking life and actions by which life is not supported."[24] Senior Judge Wright dissented.[25]

c. ***En Banc* Review**

Respondents' suggestion for *en banc* review was granted[26] and a limited *en banc* panel was convened pursuant to 28 U.S.C. § 46(c) and Ninth Circuit Rule 35-3. Following oral argument, a majority of the *en banc* panel "clarified" the scope of the District Court opinion and then affirmed.[27] Rather than declaring the entire statute invalid, the *en banc* panel held that the "or aids" portion of the Washington statute violates the Due Process Clause when applied to the prescription of medications to assist adult persons who are mentally competent and terminally ill in committing suicide.[28]

Three judges dissented. Judge Beezer concluded that mentally competent, terminally ill adults have a liberty interest in committing physician-assisted suicide, but that the State's interests "are sufficiently strong to sustain the constitutionality of RCW 9A.36.060 as applied to plaintiff's asserted liberty interest."[29] Judges Fernandez and Kleinfeld, in separate opinions, concurred with Judge

Beezer, but added that they found no constitutionally protected interest in committing suicide.[30]

d. **Post-Decision Proceedings**

The Court of Appeals' *sua sponte* suggestion for rehearing before the full court failed to receive a majority of the votes of the non-recused active judges of the Ninth Circuit.[31] Pursuant to orders of this Court, the Ninth Circuit's mandate has been stayed pending disposition of this petition.[32]

REASONS FOR GRANTING THE PETITION

Petitioners agree with the opening two sentences of the *en banc* panel opinion:

> "This case raises an extraordinarily important and difficult issue. It compels us to address questions to which there are no easy or simple answers, at law or otherwise."[33]

Citing such diverse authorities as Plato,[34] Shakespeare,[35] and the Harris Poll,[36] a majority of the

[36] App. at A-48 to A-49.

Ninth Circuit *en banc* panel held that mentally competent, terminally ill adult patients have interests protected under the Due Process Clause of the Fourteenth Amendment and that these interests include a liberty interest in obtaining physician assistance in ending their lives.

At first blush, the Ninth Circuit appears to have narrowed the scope of the District Court's decision. Rather than declaring the entire statute invalid, the ruling by its terms applies only to the "or aids" provision, and then only to circumstances involving physician prescription of medications for terminally ill patients.[37]

On closer reading, however, it becomes clear that the Ninth Circuit ruling is in many respects much broader than that of the District Court. Thus, not only does it apply to physicians, but also to other health care workers, family members, and friends.[38] Though the purported liberty interest is described in terms of avoiding pain, the *en banc* panel suggests that the desire to avoid medical bills may be sufficient to implicate constitutional protection.[39] Nor is the Ninth Circuit decision limited to those who are mentally competent: "[A] decision of a duly appointed surrogate decision maker is for all legal purposes the decision of the patient himself."[40] Finally, the Ninth Circuit decision telegraphs the possibility that in future cases the "right to die" may expand to "other forms of life-

[37] App. at A-19 to A-20.

[39] App. at A-87.

[40] App. at A-100 to A-101, n.120.

ending medical assistance, such as the administration of drugs by a physician"—i.e., active euthanasia.[41]

1. The Ninth Circuit's Opinion Conflicts With Established Supreme Court Jurisprudence

The Supreme Court has historically found constitutional protection to apply to those liberties "'implicit in the concept of ordered liberty [such that] neither liberty nor justice would exist if [they] were sacrificed.'"[42] In an alternative formulation, this Court described interests entitled to constitutional protection as those that are "deeply rooted in this Nation's history and tradition."[43]

In deciding whether particular conduct is constitutionally protected, this Court has looked not to broad categories of activities, or even to the ends the activities seek to accomplish, but rather to the specific conduct at issue in the case before the Court. As the Court has recently cautioned, "'[s]ubstantive due process' analysis must begin with a careful description of the asserted right".[44]

[41] App. at A-100; *see also* A-30, n.15 ("The constitutionality of prohibiting physicians from administering life-ending drugs to terminally ill persons is not before us.").

[42] *Bowers v. Hardwick*, 478 U.S. 186, 191-92 (1986) (quoting *Palko v. Connecticut*, 302 U.S. 319, 325-26 (1937)).

[43] *Moore v. City of East Cleveland*, 431 U.S. 494, 503 (1977).

[44] *Reno v. Flores*, 507 U.S. 292, 302 (1993) (*citing Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992)).

Thus, for example, this Court has concluded that marriage[45] and the use of contraceptives[46] are constitutionally protected. These are but two means toward the end of controlling the makeup of one's family. But other means to that end—polygamy and infanticide, for example—are not the subject of constitutional protection.

Similarly, liberty interests in refusing unwanted medical treatment[47] or having access to abortion services[48] have not been transformed to a broader liberty interest in controlling all activities affecting one's body,[49] an end that could include prostitution and recreational drug use.

Disregarding this cautionary approach, the Ninth Circuit majority took the opposite approach. Its inquiry was not limited to the more narrow issue before it—whether there is a liberty interest in committing suicide that includes assistance in doing so. Instead, the Ninth Circuit addressed the broader question of "whether there is a liberty interest in determining the time and manner of one's death," or "the right to die."[50] As Judge Reinhardt,

---

[45] *Turner v. Safely*, 482 U.S. 78 (1987).

[46] *Eisenstadt v. Baird*, 405 U.S. 438 (1972).

[47] *See, e.g., Washington v. Harper*, 494 U.S. 210 (1990).

[48] *Roe v. Wade*, 410 U.S. 113 (1973); *Planned Parenthood v. Casey*, 505 U.S. 833 (1992).

[49] The *Roe* Court declined an invitation to rule "that one has an unlimited right to do with one's body as one pleases." *Roe*, 410 U.S. at 154.

[50] App. at A-27.

writing for the majority, explained: "[I]t is the end and not the means that defines the liberty interest."[51]

The Ninth Circuit's conclusion departed from this Court's jurisprudence by selectively reading fragments of the *Cruzan* and *Casey* decisions without reference to their holdings or the larger context in which they were decided. It then compounded its error by applying the wrong test.

a. *Cruzan*

In *Cruzan v. Missouri Department of Health*,[52] this Court considered whether there were constitutional limitations on the procedural requirements a State could impose prior to granting a request that artificial life support be withdrawn from a comatose patient who had no hope of recovery.

The *Cruzan* Court acknowledged that its prior decisions recognized a liberty interest in refusing unwanted medical treatment.[53] The Court further assumed, but specifically did not decide, that withdrawal of mechanically administered nutrition and hydration was encompassed within such a liberty interest.[54]

The *Cruzan* Court then held that Missouri's imposition of procedural safeguards to assure that such a

---

[51] *Id.*

[52] *Cruzan v. Missouri Dep't of Health*, 497 U.S. 261 (1990).

[53] *Cruzan*, 497 U.S. at 278 (1990). Given that providing unwanted medical treatment without consent was a tort at the common law, it is difficult to argue that such a liberty interest is not "deeply rooted in this Nation's history and traditions". *Moore*, 431 U.S. at 503.

[54] *Cruzan*, 497 U.S. at 279.

decision was made voluntarily did not violate the Fourteenth Amendment.[55] Such procedural safeguards were justified on the basis of at least two important State interests—preserving life, and protecting against undue influence or abuse.[56]

With respect to the State's interest in preserving life, the *Cruzan* Court noted that:

> "As a general matter, the States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide."[57]

The *Cruzan* Court rejected the notion that a State's interest in protecting and preserving an individual's life varies proportionately to the quality of that life:

> "[A] State may properly decline to make judgments about the "quality" of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life[.]"[58]

The Ninth Circuit turned *Cruzan* on its head. Even though the *Cruzan* Court only *assumed* a liberty interest in refusing artificial food and hydration, the *en banc* panel

---

[55] *Id.* at 283.

[56] *Id.* at 280.

[57] *Id.* at 280.

[58] *Id.* at 282.

concluded that *Cruzan* "necessarily recognizes a liberty interest in hastening one's own death."[59]

The Ninth Circuit opinion acknowledged the *Cruzan* Court's admonition that "the state's interest in preserving life may be unqualified, and may be asserted regardless of the quality of the life or lives at issue."[60] But it nonetheless concluded that the "*strength* [of the state's interest] is dependent on relevant circumstances, including the medical condition . . . of the person whose life is at stake."[61]

The *en banc* panel majority does not disclose how, under its formulation, a State legislature is to assess the *strength* of the State's interest in protecting life in individual situations without making "judgments about the 'quality' of life that a particular individual may enjoy"[62]—precisely the judgments that the *Cruzan* Court said a State is not required to make.

Finally, the Ninth Circuit decision converted *Cruzan*'s approval of a State's procedural safeguards surrounding end of life decisions to a purported holding that "the state could not prohibit" such decisions altogether.[63] Regardless of how this Court might decide that question—were it presented—nothing in the *Cruzan* opinion suggests that it was presented or answered in the

---

[59] App. at A-62 (footnote omitted).

[60] App. at A-65 (citing *Cruzan*).

[61] *Id.* (emphasis in original).

[63] App. at A-59, n.67; *see also* A-104.

Cruzan case. This conversion of what "may" be done into what "must" be done is precisely the kind of sophistry that this Court criticized in *Cruzan*.[64]

b. *Casey*

The Ninth Circuit also misapplied this Court's holding in *Planned Parenthood v. Casey*.[65] The issue in that case was whether to narrow or overturn the holding in *Roe v. Wade*[66] that a woman's decision to terminate a pregnancy was constitutionally protected. In *Casey*, a majority of the Court concluded that "the essential holding of *Roe v. Wade* should be retained and once again reaffirmed."[67]

The Ninth Circuit decision below expanded the *Casey* holding into a reformulation of the standard by which the existence of constitutionally protected liberty interests are to be determined. It read introductory language describing a category of previously recognized liberty interests as a pronouncement that any activities

---

[64] Two prior Supreme Court decisions held that a State may require that parents make certain decisions on behalf of their minor children. Apparently, Ms. Cruzan's parents contended that these decisions stood for the proposition that a State must recognize parental decisionmaking. The *Cruzan* Court noted that "petitioners would seek to turn a decision which allowed a State to rely on family decisionmaking into a constitutional requirement that the State recognize such decisionmaking. But constitutional law does not work that way." *Cruzan*, 497 U.S. at 286.

[65] 505 U.S. 833 (1992).

[66] 410 U.S. 113 (1973).

[67] *Casey*, 505 U.S. at 846.

falling within the grammatical construct of this categorization is now subject to constitutional protection.[68]

Such a reading ignores the context in which *Casey* was decided, its solid grounding in the doctrine of *stare decisis*, and the following explicit language in Justice O'Connor's opinion:

> "Abortion is a *unique* act. [In the abortion context] the liberty of the woman is at stake in a sense unique to the human condition and so *unique* to the law."[69]

c. The Appropriate Test

The Ninth Circuit *en banc* panel expressly held that the "'or aids' provision of [the] Washington statute . . . is unconstitutional *as applied* to terminally ill competent adults who wish to hasten their deaths with medication prescribed by their physician."[70]

By attempting to limit its holding to a single category of those subject to the statute, the Ninth Circuit finessed the test announced in *United States v. Salerno*[71] for determining facial[72] challenges to statutes under the

---

[68] *See generally*, App. at A-54 to A-58.

[69] *Casey*, 505 U.S. at 852 (emphasis added).

[70] App. at A-113 to A-114 (emphasis added). As noted above at pages 10-11, the import of the decision may be much broader.

[71] 481 U.S. 739 (1987).

[72] The District Court analyzed Respondents' complaint as challenging the statute on its face. App at E-16 to E-20. On appeal, Respondents re-framed their challenge, attacking the statute "as applied" to the group for whom they advocate. Both they and the

Due Process Clause, i.e., whether there is "no set of circumstances . . . under which the Act would be valid."[73] The *Salerno* Court pointed out that "we have not recognized an 'overbreadth' doctrine outside the limited context of the First Amendment."[74]

The Ninth Circuit attempted to defend its approach by acknowledging that "[d]eclaring a statute unconstitutional as applied to members of a group is atypical but not uncommon."[75] However, the two cases it cites do not support this proposition. The first[76] involved a statute purporting to authorize government conduct that violated the Fourth Amendment. It was the conduct, and not the statute, that was at issue. The second[77] was a First Amendment case; its holding clearly was consistent with the "overbreadth" doctrine recognized by the *Salerno* Court as an exception to the general rule.

The Ninth Circuit instead applied its own version of a balancing test, relying on *Cruzan* and two cases cited by

---

Ninth Circuit appear to agree that the statute serves legitimate State interests in all other circumstances to which it applies—i.e., situations involving those who are mentally or emotionally disturbed, those not terminally ill (however defined), and those who, though mentally competent and terminally ill, wish to live.

[73] *Salerno*, 481 U.S. at 745.

[74] *Id.*

[75] App. at A-20, n.9.

[76] *Tennessee v. Garner*, 471 U.S. 1 (1985).

[77] *Wisconsin v. Yoder*, 460 U.S. 205 (1972).

the *Cruzan* Court.[78] All three of these cases involved the application of State law to particular fact situations involving identified individuals.

At issue in the instant case is a legislative judgment about the appropriate scope of the Washington enactment, not its application to particular individuals. Labeling this case as involving a challenge to the statute "as applied" is a misnomer.

State legislatures must have the discretion to assess the needs of various segments of their respective populaces, balance competing interests, and craft legislation that reflects that balance, so long as the enactment serves a legitimate purpose as to at least some of those to whom it is addressed.

It is the essential nature of this legislative process that the interests of some are subordinated to further what the legislature deems to be a greater benefit to others or to society as a whole. As this Court has recently noted:

> "Even laws enacted for broad and ambitious purposes often can be explained by reference to legitimate public policies which justify the incidental disadvantages they impose on certain persons."[79]

Application of the *Salerno* rule to cases such as this—regardless of the label applied to them—allows States to continue this essential legislative function, so long as the choices they make further legitimate State interest in at

---

[78] *Youngberg v. Romeo*, 457 U.S. 307 (1982), and *Mills v. Rogers*, 457 U.S. 291 (1982), cited in *Cruzan*, 497 U.S. at 279.

[79] *Romer v. Evans*, ___ U.S. ___, 116 S. Ct. 1620, 1628 (1996).

least some of the circumstances to which they are addressed.

This Court should grant certiorari to correct the Ninth Circuit's erroneous reading of its prior decisions and to give guidance as to the appropriate test to be applied when statutes of general application are challenged under the Due Process Clause.

2. The Ninth Circuit Due Process Conclusion Conflicts With Those Of Other Appellate Courts That Have Considered The Issue

The Ninth Circuit is the only appellate court in this or any other country[80] to hold that a statute prohibiting assisted suicide violates the Due Process Clause. It stands in conflict with decisions of State appellate courts in Michigan and California, and with a recent decision of the Second Circuit.

The Michigan Supreme Court, in a series of related cases involving the well-known Dr. Kevorkian,[81] affirmed the Michigan Court of Appeals in rejecting the argument that a State ban on assisted suicide violates the Due Process Clause:

> "[T]he right to commit suicide is neither implicit in the concept of ordered liberty nor deeply rooted in this nation's history and

---

[80] The Supreme Court of Canada has rejected a claim that section 7 of the Canadian Charter of Rights and Freedoms, a provision that parallels the Due Process Clause, mandates allowing assisted suicide. *Rodriguez v. British Columbia (Attorney General)*, 3 S.C.R. 519 (1993).

[81] For a detailed account of the activities of Dr. Kevorkian—the so-called suicide doctor—see Michael Betzold, *Appointment With Dr. Death* (1993).

> tradition. It would be an impermissibly radical departure from existing tradition, and from the principles that underlie that tradition, to declare that there is such a fundamental right protected by the Due Process Clause."[82]

This Court denied certiorari.[83] The California Court of Appeals has also rejected the notion that the Due Process Clause protects a liberty interest in assisted suicide.[84]

The most recent appellate court in this country to consider the issue is the Second Circuit Court of Appeals, which also declined to find that a State prohibition against assisted suicide violates the Due Process Clause.[85]

---

[82] *People v. Kevorkian*, 447 Mich. 436, 481, 527 N.W.2d 714 (1994). The Michigan Supreme Court reversed the holding of the Michigan Court of Appeals that the statute at issue had been enacted in violation of procedural requirements of the Michigan Constitution, but upheld the Court of Appeals' alternative holding that the statute did not violate the Due Process Clause. *See Hobbins v. Attorney General*, 205 Mich. App. 194, 518 N.W.2d 487 (1994).

[83] *Kevorkian v. Michigan*, 115 S. Ct. 1795 (1995).

[84] "In the case of assisted suicides, however, the state has an important interest to ensure that people are not influenced to kill themselves. The state's interest must prevail over the individual because of the difficulty, if not the impossibility, of evaluating the motives of the assister or determining the presence of undue influence."

Donaldson v. Lundgren, 4 Cal. Rptr. 2d 59, 64, 2 Cal. App. 4th 1614 (Cal. App. 2d Dist. 1992).

[85] *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996) (Petition for Certiorari pending). The *Quill* court's holding that New York statutes similar to Washington's violate the Equal Protection Clause is discussed below.

> "The right to assisted suicide finds no cognizable basis in the Constitution's language or design, even in the very limited cases of those competent persons who, in the final stages of terminal illness, seek the right to hasten death."[86]

In short, the Ninth Circuit is the *only* appellate court to conclude that a statute prohibiting assisting a suicide violates the Due Process Clause.

This Court should grant certiorari to resolve the conflict created by the erroneous decision below.

3. The Equal Protection Clause Does Not Support The Conclusion Reached Below

The District Court advanced the Due Process Clause and the Equal Protection Clause as alternative bases for concluding that the Washington statute is unconstitutional.[87] The panel decision rejected both.[88]

The Ninth Circuit *en banc* panel, having concluded that the statute violates the Due Process Clause, ostensibly did not consider the equal protection prong of the District Court's analysis.[89]

---

[86] *Id.* at 724-25.

[87] App. at E-28.

[88] *Compassion in Dying* I, App. at D-18 to D-19.

[89] App. at A-115. Even though not relied on by the *en banc* panel, Respondents' equal protection arguments are properly considered in connection with this Petition For Certiorari as Respondents "may legitimately defend their judgment on any ground properly raised below." *Reno*, 507 U.S. at 300, n.3 (1993).

A closer reading of the opinion below reveals, however, that equal protection principles played an integral part in its due process analysis. This is most apparent in the *en banc* panel's assessment of the strength of Washington's interest in enforcing the statute in individual situations involving the terminally ill. That analysis is based largely on the existence of Washington's Natural Death Act,[90] a statute authorizing the withholding or withdrawing of life support from terminally ill persons in some circumstances. According to the Ninth Circuit majority:

> "In adopting the statute, the Washington legislature necessarily determined that the state's interest in preserving life is not so weighty that it ought to thwart the informed desire of a terminally ill, competent adult to refuse medical care."[91]

The court then proceeded from this premise to a conclusion that Washington's interests in prohibiting assisted suicide were equally weak:

---

[90] Wash. Rev. Code §§ 70.122.010-.120.

[91] App. at A-66. The Ninth Circuit majority did not explain why the Natural Death Act could not simply be viewed as a legislative choice among many competing interests in the difficult circumstances to which the Natural Death Act is addressed. Nor did the majority explain how its assessment of legislative intent could be squared with the following explicit language from the Natural Death Act:

> Nothing in this chapter shall be construed to condone, authorize, or approve mercy killing, or to permit any affirmative or deliberate act or omission to end life other than to permit the natural process of dying.

Wash. Rev. Code § 70.122.100.

> "[W]e see no ethical or constitutionally cognizable difference between a doctor's pulling the plug on a respirator and his prescribing drugs which will permit a terminally ill patient to end his own life. . . . [W]e find the state's interests in preventing suicide do not make its interests substantially stronger here than in cases involving other forms of death-hastening medical intervention. To the extent that a difference exists, we conclude that it is one of degree and not of kind."[92]

The equal protection analysis implicit in the Ninth Circuit's conclusion was explicitly the basis for the Second Circuit's recent decision that two New York laws substantially similar to the Washington statute were invalid.[93] According to the Second Circuit, "New York does not treat similarly circumstanced persons alike"[94] and the distinction is "not rationally related to any legitimate state interest."[95]

This conclusion was predicated on the same two flawed premises underlying the District Court's equal protection analysis in the instant case—that persons who depend on life support systems to remain alive are situated similarly to those who are able to eat, drink, and breathe

---

[92] App. at A-82.

[95] *Id.* at 731.

on their own; and that refusing or withdrawing life support by the former is "equivalent" to assisted suicide.[96]

Other courts that have addressed the issue of withholding or withdrawing life-sustaining treatment, including artificial hydration and nutrition, have reached the opposite conclusion. Most of these cases recognized the difference between refusing unwanted medical treatment and suicide, the act of refusing life itself.[97]

Consider the following examples:

The Washington State Supreme Court:

> "We emphasize that we are not endorsing suicide or euthanasia."[98]

---

[96] App. at E-18. The District Court's analysis was also predicated on the erroneous proposition that the "strict scrutiny" test applied to the statute. App. at E-25. The *Quill* Court recognized, correctly, that statutes not implicating fundamental rights or involving suspect classifications are to be overturned only if there is no rational basis for the statutory classification. *Quill*, 80 F.3d at 727.

Akron Gen. Med. Ctr.*, 68 Ohio Misc. 1, 426 N.E.2d 809, 815 (1980); *In re Grant*, 109 Wn.2d 545, 563, 747 P.2d 445 (1987).

[98] *In re Grant*, 109 Wn.2d at 563.

The New Jersey Supreme Court:

> "We would see, however, a real distinction between the self-infliction of deadly harm [suicide] and a self-determination against artificial life support . . . ."[99]

The Arizona Supreme Court:

> "Asserting the right to refuse medical treatment is not tantamount to committing suicide."[100]

The Maine Supreme Court :

> "[A patient's] decision not to receive [medical procedures], far from constituting suicide, is a choice to allow to take its course the natural dying process set in motion by his physiological inability to chew or swallow."[101]

In short, the equal protection analysis that is explicit in *Quill* and implicit in the *en banc* panel decision is at odds with virtually every appellate court decision addressing end of life issues.

4. This Case Presents Important Issues Of Public Policy And Federalism

This case is important because its subject matter—physician assisted suicide—is hotly debated in

---

[99] *In the Matter of Quinlan*, 355 A.2d at 665.

[100] *Rasmussen v. Fleming*, 154 Ariz. at 218.

[101] *In re Gardner*, 534 A.2d at 955-56 (citations omitted).

hospital corridors and legislative halls across the nation. A constitutional "right to die"—if it exists—has implications for every American.

Two States—Michigan and New York—have commissioned studies of the assisted suicide issue, each producing thoughtful analyses of the complex set of medical, philosophical, ethical, social, and legal interests that the subject evokes.[102] The fact that these analyses arrived at opposite conclusions evidences the complexity of the issue.

But this case has implications far beyond the subject of assisted suicide. The Ninth Circuit's reasoning, if allowed to stand, portends a substantially redefined relationship between the federal judiciary and the States, whose legislatures have historically been viewed as the appropriate venue in a democratic society for resolving important issues of social policy.

This Court has repeatedly cautioned that federal judicial review of State legislation under the Fourteenth Amendment is limited to assuring that it is rationally related to legitimate State interests.[103] As this Court recently noted:

---

[102] The New York State Task Force On Life And The Law, *When Death Is Sought: Assisted Suicide And Euthanasia In The Medical Context* (1994); The Michigan Commission On Death And Dying, *Final Report* (1994).

[103] *See, e.g., Williamson v. Lee Optical of Oklahoma*, 348 U.S. 483 (1955); *Ferguson v. Skrupa*, 372 U.S. 726 (1963) ("The [state] statute may be wise or unwise. But relief, if any be needed, lies not with us but in the body constituted to pass laws for the State . . .", 372 U.S. at 732).

> "The Court has always been reluctant to expand the concept of substantive due process because guideposts for responsible decisionmaking in this unchartered area are scarce and open-ended."[104]

This restrained jurisprudential approach gives the States latitude to craft legislation that balances the various competing interests affected by a particular issue.

The Ninth Circuit opinion, if allowed to stand, trumpets a substantially more intrusive role for federal courts in reviewing State legislation. Under its approach, State statutes that impose general rules that rationally advance legitimate State interests across a continuum of conduct will not stand. Rather, under the Ninth Circuit's construct, federal courts must examine each application of a State statute and determine whether the State's interest in that particular application is sufficiently strong to outweigh other interests that may be involved. Such balancing of interests, we are told, "is quintessentially a judicial role . . . no legislative body can perform the task."[105]

The question of whether some form of physician assisted suicide should be allowed is a controversial issue of social policy implicating a wide range of interests. The Ninth Circuit decision not only purports to find a constitutionally compelled resolution of that issue, it does so in a manner that significantly enlarges the role of the federal judiciary in resolving other such issues. For both of these reasons, this is a case of exceptional importance, warranting review by this Court.

---

[104] *Collins v. Harker Heights*, 503 U.S. 115, 125 (1992).

[105] App. at A-111.

CONCLUSION

In addressing an important issue of social policy, the Ninth Circuit has departed from the traditional approach adopted by this Court and misapplied this Court's prior holdings, creating an expansive and intrusive role for the federal judiciary in reviewing State statutes. Its explicit due process holding conflicts with that of every other appellate court that has considered the issue, and its implicit equal protection decision suffers from the same flaw as that of the only other appellate court to reach the same conclusion.

For all these reasons, this Court should grant the Petition for Writ of Certiorari and reverse the decision of the United States Court of Appeals for the Ninth Circuit.

Respectfully submitted this 3rd day of July, 1996.

Opinion by Judge Reinhardt; Dissent by Judge Beezer; Dissent by Judge Fernandez; Dissent by Judge Kleinfeld.

SUMMARY

Individual Rights/Constitutional Rights/Privacy

Sitting en banc, the court of appeals affirmed a district court judgment. The court held that a provision of a Washington statute banning assisted suicide, as applied to competent, terminally ill adults who wish to hasten their deaths by obtaining medication prescribed by their doctors, violates the Due Process Clause.

A Washington state statute provides that a person is guilty of promoting a suicide when he or she knowingly causes "or aids" another person to attempt suicide. Under the statute, aiding a person who wishes to end his or her life constitutes a criminal act and subjects the aider to the possibility of a lengthy prison term, even if the recipient of the aid is a terminally ill, competent adult and the aider is a licensed physician who is providing medical assistance at the patient's request.

Appellees Jane Roe, John Doe, and James Poe (collectively, the patients) desired to obtain prescription drugs to hasten death. The patients were described as mentally competent and in the terminal phase of an illness. Along with four physicians who treat terminally ill patients and appellee Compassion in Dying, a Washington non-profit organization, the patients challenged the Washington statute's "or aids" provision both on its face and as applied to terminally ill, mentally competent adults who wish to hasten their own deaths with the help of medication prescribed by their doctors. The plaintiffs contended that the provision impermissibly prevented the exercise by

terminally ill patients of a constitutionally-protected liberty interest in violation of the Fourteenth Amendment's Due Process Clause, and that it impermissibly distinguished between similarly situated terminally ill patients in violation of the Equal Protection Clause. The district court granted the physicians standing to assert the rights of their terminally ill patients in general.

The district court held that "a competent, terminally ill adult has a constitutionally guaranteed right under the Fourteenth Amendment to commit physician-assisted suicide." The court concluded that the Washington statute placed an undue burden on the exercise of that constitutionally-protected liberty interest and held that the law also violated the Equal Protection Clause. It appeared that the court declared the statute invalid only insofar as it applied to the prescription of medication to terminally ill competent adults who wish to hasten their deaths.

A panel of the court of appeals reversed, holding that there is no due process liberty interest in physician-assisted suicide. The court also concluded that the statute did not violate the Equal Protection Clause. The majority of the panel held that the statute was not invalid facially or as applied. The court of appeals decided to rehear the case en banc.

[1] The doctors met standing requirements because they ran a severe risk of prosecution under the Washington statute, which proscribed conduct in which they sought to engage.

[2] The majority opinion of the panel erroneously concluded that historical analysis alone was sufficient basis for rejecting the plaintiffs' claim to a substantive liberty interest or right. [3] In addition, in recent years, there has been increasingly widespread support for allowing the terminally ill to hasten their deaths and avoid painful,

undignified, and inhuman endings to their lives. **[4]** The now recognized right to refuse or terminate treatment and the emergent right to receive medical assistance in hastening one's death are inevitable consequences of changes in causes of death, medical advances, and development of new technologies. **[5]** Examination of prior Supreme Court decisions demonstrated that there was a strong liberty interest in determining how and when one's life shall end. **[6]** Few decisions are more personal, intimate, or important than the decision to end one's life, especially when the reason for doing so is to avoid excessive, protracted pain. **[7]** Like the decision of whether or not to have an abortion, the decision how and when to die is one of "the most intimate and personal choices a person may make in a lifetime," a choice that is "central to personal dignity and autonomy." **[8]** A Supreme Court case stands for the proposition that there is a due process liberty interest in rejecting unwanted medical treatment, including the provision of food and water by artificial means. **[9]** Court cases provide persuasive evidence that the Constitution encompasses a due process liberty interest in controlling the time and manner of one's death — that there is a constitutionally recognized "right to die." **[10]** There is a liberty interest in determining the time and manner of one's death.

[11] Although the protection of life is one of the state's most important functions, the state's interest is dramatically diminished if the person it seeks to protect is terminally ill or permanently comatose and has expressed a wish that he or she be permitted to die without further medical treatment. **[12]** In addition, the state's interest in preventing suicides in general is substantially diminished in the case of terminally ill, competent adults who wish to die; **[13]** the state has acknowledged that terminally ill persons are entitled in a whole variety of circumstances to

hasten their deaths, and that in such cases their physicians may assist. **[14]** The state's interests in preventing suicide do not make its interest substantially stronger in this case than in cases involving other forms of death-hastening medical intervention. **[15]** Sufficient safeguards can and will be developed by the state and medical profession to ensure that the possibility of error will ordinarily be remote. **[16]** While the state has an interest in preventing the exercise of undue, arbitrary, or unfair influences over an individual's decision to end his life, **[17]** given the possibility of undue influence that already exists, the recognition of the right to physician-assisted suicide would not increase that risk unduly. **[18]** The state's interest in safeguarding the interests of innocent third parties is of almost negligible weight when the patient is terminally ill and his or her death is imminent and inevitable. **[19]** Although the state has a legitimate interest in assuring the integrity of the medical profession, the integrity of the medical profession would not be threatened in any way by the vindication of the liberty interest at issue in this case. **[20]** Although recognition of a right creates the possibility of abuse, there was no reason to believe that legalizing assisted suicide would lead to the horrific consequences suggested by opponents; **[21]** purported definitional difficulties provided no legitimate reason for refusing to recognize a liberty interest in hastening one's death.

[22] The Washington statute prohibiting assisted suicide has a drastic impact on the terminally ill. By prohibiting physician assistance, it bars what for many terminally ill patients is the only palatable, and the only practical, way to end their lives. **[23]** For many terminally ill patients, the Washington statute is effectively a prohibition. **[24]** Although state laws or regulations governing physician-assisted suicide are necessary and desirable to ensure against errors and abuse and to protect legitimate state

interests, [25] Washington, by adopting appropriate, reasonable, and properly drawn safeguards, could ensure that people who choose to have their doctors prescribe lethal doses of medication are truly competent and meet all requisite standards. [26] There was an extensive body of legal, medical, and sociological literature lending support to the conclusion that a prohibition on physician assistance imposes an onerous burden on terminally ill, competent adults who wish to hasten their deaths.

[27] No matter how much weight could legitimately be afforded the state's interest in preventing suicide, that weight, when combined with the weight given all of the other state interests, was insufficient to outweigh the terminally ill individual's interest in deciding whether to end his or her agony and suffering by hastening the time of his or her death with medication prescribed by his or her physician. The individual's interest in making the decision is compelling. Thus, the "or aids" provision of the Washington statute was unconstitutional as applied to terminally ill competent adults who wish to hasten their deaths with medication prescribed by their physicians.

Circuit Judge Beezer dissented, stating that he would hold that the mentally competent, terminally ill adults do not have a fundamental right to physician-assisted suicide, but rather an ordinary, nonfundamental, liberty interest in doing so. Circuit Judge Beezer further stated that because the statute at issue rationally advanced four legitimate governmental purposes, it did not violate the plaintiffs' constitutional substantive due process rights. Circuit Judge Beezer also stated that he would hold that the statute does not violate the plaintiffs' constitutional equal protection rights.

Circuit Judge Fernandez dissented, joining in Circuit Judge Beezer's dissenting opinion with a caveat. Circuit

Judge Fernandez stated that he was not convinced that there is any constitutional right to commit suicide.

Circuit Judge Kleinfeld dissented, joining in Circuit Judge Beezer's dissenting opinion, with two qualifications. Circuit Judge Kleinfeld stated that it did not need to be decided whether suicide is a constitutionally protected right.

COUNSEL

William L. Williams, Sr. Assistant Attorney General, Olympia, Washington, for the defendants-appellants.

Kathyrn L. Tucker (argued), David J. Burman, Thomas L. Boeder, Kari Anne Smith, Perkins Coie, Seattle, Washington, for the plaintiffs-appellees.

Wesley J. Smith, San Francisco, California, for amicus curiae International Anti-Euthanasia Task Force.

Katrin E. Frank, Robert A. Free, Kathleen Wareham, MacDonald, Hoague & Bayless, Seattle, Washington, for amicus curiae Ten Surviving Family Members.

James Bopp, Jr., Thomas J. Marzen, Daniel Avila, John Altomare, Jane E.T. Brockman, National Legal Center for the Medically Dependent and Disabled, Inc., Indianapolis, Indiana, as amicus curiae.

John R. Reese, Robert A. Lewis, Page R. Barnes, Amy J. Metzler, Holly Morris, McCuthchen, Doyle, Brown & Enersen, San Francisco, California, for amicus curiae Americans for Death with Dignity.

Mary D. Clement, Junction City, Oregon, for amicus curiae Euthanasia Research & Guidance Organization.

Mark E. Chopko, Michael F. Moses, Washington, D.C., for amicus curiae United States Catholic Conference.

Paul Benjamin Linton, Clarke D. Forsythe, Americans United for Life, Chicago, Illinois, for amici curiae, Washington State Legislators.

Barbara Allan Shickich, Joseph E. Shickich, Jr., Riddell, Williams, Bullitt & Walkinshaw, Seattle, Washington, for amicus curiae Washington State Hospital Association and Catholic Health Association of the United States.

Catherine W. Smith, Edwards, Sieh, Wiggins & Hathaway, Seattle, Washington, for amicus curiae Amici State Legislators.

Todd Maybrown, Allen, Hansen & Maybrown, Seattle, Washington, for amici curiae the American Civil Liberties Union of Washington, the Northwest Women's Law Center, Lambda Legal Defense and Education Fund, Inc., AIDS Action Council, the Northwest AIDS Foundation, the Seattle AIDS Support Group, the Gray Panthers Project Fund, the Older Women's League, the Seattle Chapter of the National Organization for Women, the American Humanist Association, the National Lawyers Guild, Local 6 of the Service Employees International Union, Temple De Hirsch Sinai, the Unitarian Universalist Association, the Seattle Chapter and the Pacific Northwest District Council of the Japanese American Citizens League.

Kirk B. Johnson, Michael L. Ile, David Orentlicher, Jack R. Bierig, Sidley & Austin, Chicago, Illinois, Paul E. Kalb, Sidley & Austin, Washington, D.C., for amicus curiae American Medical Association.

OPINION

REINHARDT, Circuit Judge:

I.

This case raises an extraordinarily important and difficult issue. It compels us to address questions to which there are no easy or simple answers, at law or otherwise. It requires us to confront the most basic of human concerns -- the mortality of self and loved ones -- and to balance the interest in preserving human life against the desire to die peacefully and with dignity. People of good will can and do passionately disagree about the proper result, perhaps even more intensely than they part ways over the constitutionality of restricting a woman's right to have an abortion. Heated though the debate may be, we must determine whether and how the United States Constitution applies to the controversy before us, a controversy that may touch more people more profoundly than any other issue the courts will face in the foreseeable future.

Today, we are required to decide whether a person who is terminally ill has a constitutionally-protected liberty interest in hastening what might otherwise be a protracted, undignified, and extremely painful death. If such an interest exists, we must next decide whether or not the state of Washington may constitutionally restrict its exercise by banning a form of medical assistance that is frequently requested by terminally ill people who wish to die. We first conclude that there is a constitutionally-protected liberty interest in determining the time and manner of one's own death, an interest that must be weighed against the state's legitimate and countervailing interests, especially those that relate to the preservation of human life. After balancing the competing interests, we conclude by answering the narrow question before us: We hold that insofar as the Washington statute prohibits physicians from

prescribing life-ending medication for use by terminally ill, competent adults who wish to hasten their own deaths, it violates the Due Process Clause of the Fourteenth Amendment.

II.

Preliminary Matters and History of the Case

This is the first right-to-die case that this court or any other federal court of appeals has ever decided.[1] The plaintiffs are four physicians who treat terminally ill patients, three terminally ill patients, and a Washington non-profit organization called Compassion In Dying.[2] The four physicians — Dr. Harold Glucksberg, Dr. Thomas A. Preston, Dr. Abigail Halperin, and Dr. Peter Shalit — are respected doctors whose expertise is recognized by the state. All declare that they periodically treat terminally ill, competent adults who wish to hasten their deaths with help from their physicians. The doctors state that in their professional judgment they should provide that help but are deterred from doing so by a Washington statute that makes it a felony to knowingly aid another person to commit suicide.

---

[1] The Second Circuit currently has before it a similar case: *Quill v. Vacco*, No. 95-7028 (2d Cir.). The district court in that case, *Quill v. Koppell*, 870 F. Supp. 78 (S.D.N.Y. 1994), held that terminally ill, competent adult patients do not have a fundamental substantive due process right to physician-assisted suicide and that the New York statutes that prohibit assisted-suicide while permitting terminally ill patients to reject life-sustaining treatment do not violate the Equal Protection Clause.

[2] Compassion In Dying provides information, counseling, and assistance to mentally competent, terminally ill adult patients considering hastening their deaths. It also provides similar services to the families of such patients. *Compassion In Dying v. State of Wash.*, 850 F. Supp. 1454, 1458 (W.D. Wash. 1994).

Under the Washington statute, aiding a person who wishes to end his life constitutes a criminal act and subjects the aider to the possibility of a lengthy term of imprisonment, even if the recipient of the aid is a terminally ill, competent adult and the aider is a licensed physician who is providing medical assistance at the request of the patient. The Washington statute provides in pertinent part: "A person is guilty of promoting a suicide attempt when he knowingly causes *or aids* another person to attempt suicide." RCW 9A.36.060 (emphasis added). A violation of the statute constitutes a felony punishable by imprisonment for a maximum of five years and a fine of up to $10,000. RCW 9A.36.060(2) and 9A.20.020(1)(c).

On appeal, the four plaintiff-doctors asserted the rights of terminally ill, competent adult patients who wished to hasten their deaths with the help of their physicians so that they might die peacefully and with dignity. That group included the three patient-plaintiffs. The district court described the patient-plaintiffs, each of whom desired to obtain prescription drugs to hasten his death, as follows:

> Jane Roe is a 69-year-old retired pediatrician who has suffered since 1988 from cancer which has now metastasized throughout her skeleton. Although she tried and benefitted temporarily from various treatments including chemotherapy and radiation, she is now in the terminal phase of her disease. In November 1993, her doctor referred her to hospice care. Only patients with a life expectancy of less than six months are eligible for such care.
>
> Jane Roe has been almost completely bedridden since June of 1993 and experiences constant pain, which becomes especially sharp and severe when she moves. The only medical treatment available to her at this time is medication, which cannot fully

alleviate her pain. In addition, she suffers from swollen legs, bed sores, poor appetite, nausea and vomiting, impaired vision, incontinence of bowel, and general weakness.

Jane Roe is mentally competent and wishes to hasten her death by taking prescribed drugs with the help of Plaintiff Compassion in Dying. In keeping with the requirements of that organization, she has made three requests for its members to provide her and her family with counseling, emotional support, and any necessary ancillary drug assistance at the time she takes the drugs.

John Doe is a 44-year-old artist dying of AIDS. Since his diagnosis in 1991, he has experienced two bouts of pneumonia, chronic, severe skin and sinus infections, grand mal seizures and extreme fatigue. He has already lost 70% of his vision to cytomegalovirus retinitis, a degenerative disease which will result in blindness and rob him of his ability to paint. His doctor has indicated that he is in the terminal phase of his illness.

John Doe is especially cognizant of the suffering imposed by a lingering terminal illness because he was the primary caregiver for his long-term companion who died of AIDS in June of 1991. He also observed his grandfather's death from diabetes preceded by multiple amputations as well as loss of vision and hearing. Mr. Doe is mentally competent, understands there is no cure for AIDS and wants his physician to prescribe drugs which he can use to hasten his death.

James Poe is a 69-year-old retired sales representative who suffers from emphysema, which causes him a constant sensation of suffocating. He

> is connected to an oxygen tank at all times, and takes morphine regularly to calm the panic reaction associated with his feeling of suffocation. Mr. Poe also suffers from heart failure related to his pulmonary disease which obstructs the flow of blood to his extremities and causes severe leg pain. There are no cures for his pulmonary and cardiac conditions, and he is in the terminal phase of his illness. Mr. Poe is mentally competent and wishes to commit suicide by taking physician-prescribed drugs.

Compassion In Dying, 850 F. Supp. at 1456-57.

The names of the patients are pseudonymous in order to protect their privacy. All three patients died after the case began. Two had died by the time the District Court issued its decision. *See Compassion In Dying v. State of Washington*, 850 F. Supp. 1454, 1456 n.2 (W.D. Wash. 1994). The other died prior to the date of the decision by the three-judge panel of this court. *Compassion In Dying v. State of Washington*, 49 F.3d 586, 588 (9th Cir. 1995).

Since the District Court properly granted the physicians standing to assert the rights of their terminally ill patients in general, 850 F. Supp. at 1467, it is clear that this case was not rendered moot by the death of the three named patients. The physicians meet both Article III and jurisprudential standing requirements. *See Singleton v. Wulff*, 428 U.S. 106, 116-17 (1976) (holding that doctors had standing to challenge — on behalf of women patients in general — a Missouri law banning Medicaid reimbursement for abortions that were not medically required). *See also Doe v. Bolton*, 410 U.S. 179, 188 (1973) (holding that physicians, asserting the rights of their patients, have standing to challenge the constitutionality of a criminal abortion statute even though "the record does

not disclose that any one of them has been prosecuted, or threatened with prosecution, for violation of the State's abortion statutes"); *Planned Parenthood of Cent. Mo. v. Danforth,* 428 U.S. 52, 62 (1976) (same). Although there is some ambiguity in *Bolton* as to whether the physicians were asserting their own rights or the rights of their patients, the Court in *Singleton*, after discussing *Griswold v. Connecticut,* 381 U.S. 479 (1965), described *Bolton* as a case "where the Court also permitted physicians to assert the rights of their patients."[3]

[1] The doctors in *Bolton* were held to have standing to assert their patients' rights even though the doctors had never been threatened with prosecution. The doctors here also meet the standing requirements because they run a severe risk of prosecution under the Washington statute, which proscribes the very conduct in which they seek to engage. The state has never indicated that it would not prosecute doctors who violate that law. *See Babbitt v. United Farm Workers National Union,* 442 U.S. 289 (1979) (holding that plaintiff does not have to risk arrest or prosecution in order to have standing to challenge the constitutionality of a criminal statute). *See also Planned Parenthood of Cent. Mo.,* 428 U.S. at 62; *Bolton*, 410 U.S. at 188 (saying that the "physician is the one against whom these criminal statutes directly operate" and that the

[3] For purposes of this appeal, we do not distinguish between the two capacities in which the doctors sue. As we explain in the text immediately following, the doctors have standing to sue on their own behalf as well as on behalf of the patients. In both cases, the doctors are required to raise the patients' liberty interests. Regardless of the capacity in which the doctors sue, the result depends on the identical constitutional inquiry: May the provision of certain medical assistance to competent, terminally ill adult patients who wish to die be prohibited by state law in light of the patients' rights and interests protected by the Due Process Clause?

"physician-appellants, therefore, assert a sufficiently direct threat of personal detriment . . . . [and] should not be required to await and undergo a criminal prosecution as the sole means of seeking relief").

We need not decide whether, the deaths of the three patient-plaintiffs would negate the ability of their lawyers to continue the challenge that those patients brought while they were still alive. *See Southern Pacific Terminal Co. v. ICC,* 219 U.S. 498, 515 (1911) (holding a case is not moot when the controversy is capable of repetition yet evading review). We note, however, that in invoking the capable-of-repetition-yet-evading-review doctrine in *Roe v. Wade,* 410 U.S. 113 (1973), the Court specifically relied, in part, on the fact that *other* women would become pregnant.[4] The Court said:

> [W]hen, as here, pregnancy is a significant fact in the litigation, the normal 266-day human gestation period is so short that the pregnancy will come to term before the usual appellate procedure is

[4] Cases after *Roe*, without mentioning *Roe*, have said that the capable-of-repetition-yet-evading-review doctrine applies when there is a reasonable expectation that the same party could be subject to the same action again. *Murphy v. Hunt,* 455 U.S. 478, 482 (1982); *Sosna v. Iowa,* 419 U.S. 393, 400-402 (1975). None of these cases, however, involved terminally ill persons. We would think that a distinction could reasonably be drawn between the terminally ill, *all* of whom *necessarily* will die prior to completion of the litigation, and those whose cases become moot for more mundane or less predictable reasons. In this connection, we note that the most common classification of terminally ill persons limits that group to individuals who are expected to die within six months. In any event we emphasize that even if the *Murphy-Sosna* interpretation of the capable-of-repetition-yet-evading-review requirement applies to cases involving terminally ill plaintiffs, this case would not be moot because the doctors have standing to challenge the Washington statute both on behalf of terminally ill patients and on their own behalf.

> complete. If that termination makes a case moot, pregnancy litigation will seldom survive much beyond the trial stage, and appellate review will be effectively denied. *Our law should not be that rigid. Pregnancy often comes more than once to the same woman, and in the general population, if man is to survive, it will always be with us.*

Roe, 410 U.S. at 125 (emphasis added). So, too, unfortunately, will terminal illness.[5]

The District Court in this case reached only claims asserted by two of the three categories of plaintiffs: the patients' claims that they had a right to receive medical assistance from their physicians and the claims that the physicians asserted on behalf of their patients. It did not address the claim asserted by Compassion In Dying. Nor, correlatively, did it reach the claim by the terminally ill patients that they had a right to receive assistance from organizations such as Compassion In Dying.

---

[5] *City of Los Angeles v. Lyons*, 461 U.S. 95 (1983) is not to the contrary. In that case, Lyons claimed that Los Angeles police officers placed him in a chokehold without provocation and secured an injunction to keep LAPD officers from placing people in chokeholds except as necessary for self-defense. The Court reversed the injunction, saying that the lower court lacked jurisdiction to enter it because Lyons had not established that he was in real and immediate danger of being needlessly subjected to a chokehold again. The Court said that any future danger to Lyons was speculative because that danger would only materialize if Lyons again committed an act that caused the police to arrest him, and the police then again acted improperly or illegally. In this case, by contrast, there are unquestionably patients who are terminally ill and the danger to them and to their doctors is neither speculative nor dependent on illegal or improper actions by state actors.

Like the District Court, we decide only claims brought by the terminally ill patients and the doctors.[6] We consider those claims to the extent that they relate to the provision of certain medical assistance to terminally ill persons by physicians or persons acting pursuant to their authorization or direction. The claims involving Compassion In Dying are not before us. The district court suggested that it would reach those additional claims at a later stage in the proceedings if Compassion In Dying so desired. We have jurisdiction over this appeal from partial summary judgment because the district court certified the appeal at the request of both parties under Federal Rule of Civil Procedure 54(b).

The plaintiffs do not challenge Washington statute RCW 9A.36.060 in its entirety. Specifically they do not object to the portion of the Washington statute that makes it unlawful for a person knowingly to *cause* another to commit suicide. Rather, they only challenge the statute's "*or aids*" provision. They challenge that provision both on its face and as applied to terminally ill, mentally competent adults who wish to hasten their own deaths with the help of medication prescribed by their doctors.[7] The plaintiffs contend that the provision impermissibly prevents the exercise by terminally ill patients of a constitutionally-

---

[6] While the District Court did not reach the claims that the doctors asserted on their own behalf, as we explained *supra* note 3, those claims are properly before us, and, given the result we reach, they are necessarily resolved by our decision.

[7] In their complaint, under Causes of Action, plaintiffs stated: "The Fourteenth Amendment protects the rights of terminally ill adults with no chance of recovery to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs and thereby avoid pain and suffering."

protected liberty interest in violation of the Due Process Clause of the Fourteenth Amendment, and also that it impermissibly distinguishes between similarly situated terminally ill patients in violation of the Equal Protection Clause.

In an extremely thoughtful opinion, Chief District Judge Barbara Rothstein held that "a competent, terminally ill adult has a constitutionally guaranteed right under the Fourteenth Amendment to commit physician-assisted suicide." 850 F. Supp. at 1462. Ruling on cross-motions for summary judgment, the District Court concluded that the Washington statute places an undue burden on the exercise of that constitutionally-protected liberty interest. *Id.* at 1465. The District Court held that the Washington law also violates the Equal Protection Clause because it impermissibly treats similarly situated groups of terminally ill patients differently. *Id.* at 1467. Although the scope of the relief the District Judge ordered is not clear, *id.* 1456, 1459, 1462-1464, 1467, it appears that she declared the statute invalid only insofar as it applies to the prescription of medication to terminally ill competent adults who wish to hasten their deaths — or, to use the district court's precise terminology, only insofar as it applies to "physician-assisted suicide," *id.* at 1467.[8]

---

[8] Notwithstanding the District Court's declaration that the Washington statute is unconstitutional, the effect of its ruling is unclear. It is extremely unlikely that the district judge intended to strike down the entire statute, as the state asserts she did, in view of the fact that the appellants attacked only its "or aids" provision. This is particularly true because the "or aids" provision is clearly severable under Washington law. *See Brockett v. Spokane Arcades, Inc.*, 472 U.S. 491, 505 (1985).

It is equally unclear whether the District Judge intended to strike the "or aids" provision on its face or as applied. *Compare Compassion In Dying*, 850 F. Supp. at 1456 *with id.* at 1459 *and id.* at 1462-64. Again, we think it unlikely that she intended to strike the entire provision for two reasons. First, the plaintiffs only argued that the assisted-suicide provision violated the constitutional rights of terminally ill, competent adults, and only offered evidence to that end. The parties did not address whether broader relief was permitted or required, and the District Court offered no explanation as to why a finding that the provision was unconstitutional as applied to the terminally ill would cause her to strike the provision on its face rather than as applied to the injured group. Second, as we noted previously, the District Court did not reach the claims raised by Compassion In Dying. *Id.* at 1467. As to Compassion In Dying, Judge Rothstein found only that summary judgment was not warranted "at this time." *Id.* at 1467-68. If the District Court had struck down the provision on its face, there would have been no purpose to its denying Compassion In Dying's summary judgment motion with a qualification that so clearly suggests that further proceedings might transpire. Nor would there have been any reason for it to have denied the doctors' motion on their own behalf in an equally non-final manner.

On appeal, a three-judge panel of this court voted 2-1 to reverse the district court decision. *Compassion In Dying v. State of Washington*, 49 F.3d 586 (9th Cir. 1995). The majority held that there is no due process liberty interest in physician-assisted suicide. It also concluded that the Washington statute does not violate the Equal Protection Clause. Accordingly, the majority held that the statute is not invalid facially or as applied. Judge Wright dissented and would have held that the statute is invalid as applied to terminally ill, mentally competent adults because it violates their privacy and equal protection rights. *Id.* at 594, 597 (Wright, J., dissenting). Because of the extraordinary importance of this case, we decided to rehear it en banc. *Compassion In Dying v. State of Wash.*, 62 F.3d 299 (9th Cir. 1995).

We now affirm the District Court's decision and clarify the scope of the relief. We hold that the "or aids"

provision of Washington statute RCW 9A.36.060, as applied to the prescription of life-ending medication for use by terminally ill, competent adult patients who wish to hasten their deaths, violates the Due Process Clause of the Fourteenth Amendment.[9] Accordingly, we need not

---

[9] Declaring a statute unconstitutional as applied to members of a group is atypical but not uncommon. *See, e.g., Tennessee v. Garner*, 471 U.S. 1, 11 (1985) (holding that state law permitting police officers to use deadly force to prevent the escape of felony suspects was unconstitutional as applied to suspects who pose no immediate threat to officers or others); *Wisconsin v. Yoder*, 406 U.S. 205 (1972) (holding Wisconsin's mandatory attendance law unconstitutional but only as applied to Amish children who have graduated from eight grade). Although the Court did not explicitly use the term "as applied," it did explicitly affirm the judgment of the Wisconsin Supreme Court, *id.* at 207, which struck down the statute only as applied to Amish children who had graduated from the eighth grade. *Wisconsin v. Yoder*, 182 N.W.2d 539 (Wis. 1971).

Because we are not deciding the facial validity of RCW 9A.36.060, there can be no question that the exacting test for adjudicating claims of facial invalidity announced in *United States v. Salerno*, 481 U.S. 739 (1987), is inapplicable here. ("A facial challenge to a legislative Act is, of course, the most difficult challenge to mount successfully, since the challenger must establish that no set of circumstances exists under which the Act would be valid." *Id.* at 744). For that reason alone, we would reject Washington's suggestion that we use the *Salerno* test for adjudicating plaintiffs' constitutional challenge.

Moreover, not only is there strong evidence that the Court does not generally apply the *Salerno* test, *see* Michael C. Dorf, *Facial Challenges to State and Federal Statutes*, 46 Stan. L. Rev. 235 (1994), but it is clear that it has applied a different test for judging the constitutionality of statutes restricting a woman's right to secure an abortion. *Planned Parenthood v. Casey*, 112 S.Ct. 2791, 2829-30 (1992). Since the claimed liberty issue in this case is in many respects similar to the liberty issue involved in *Casey*, *see* discussion *infra* at pp. 3162-3164 and 3138, we believe that the *Salerno* test would not in any event be the appropriate one for adjudicating a facial challenge to

resolve the question whether that provision, in conjunction with other Washington laws regulating the treatment of terminally ill patients,[10] also violates the Equal Protection Clause.

III.

Overview of Legal Analysis: Is There a Due Process Violation?

In order to answer the question whether the Washington statute violates the Due Process Clause insofar as it prohibits the provision of certain medical assistance to terminally ill, competent adults who wish to hasten their own deaths, we first determine whether there is a liberty interest in choosing the time and manner of one's death — a question sometimes phrased in common parlance as: Is there a right to die? Because we hold that there is, we must then determine whether prohibiting physicians from prescribing life-ending medication for use by terminally ill patients who wish to die violates the patients' due process rights. The mere recognition of a liberty interest does not mean that a state may not prohibit the exercise of that interest in particular circumstances, nor does it mean that a state may not adopt appropriate regulations governing its exercise. Rather, in cases like the one before us, the

---

Washington's prohibition on assisted suicide.

[10] The Washington Natural Death Act, RCW 70.122.010 *et seq.*, states:

> adult persons have the fundamental right to control the decisions relating to the rendering of their own health care, including the decision to have life-sustaining treatment withheld or withdrawn, in instances of a terminal condition or permanent unconscious condition . . . .

RCW 70.122.010.

courts must apply a balancing test under which we weigh the individual's liberty interests against the relevant state interests in order to determine whether the state's actions are constitutionally permissible. As Chief Justice Rehnquist, writing for the Court, explained in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), the only right-to-die case that the Court has heretofore considered:

> [D]etermining that a person has a "liberty interest" under the Due Process Clause does not end our inquiry; "whether respondent's constitutional rights have been violated must be determined by balancing his liberty interests against the relevant state interests." *Youngberg v. Romeo*, 457 U.S. 307, 321, 102 S. Ct. 2452, 2461, 73 L. Ed. 2d 28, (1982); *See also Mills v. Rogers*, 457 U.S. 291, 299, 102 S. Ct. 2442, 2448, 73 L. Ed. 2d 16 (1982).

Cruzan, 497 U.S. at 279 (footnote omitted).

The Court has invoked a balancing test in a number of substantive due process cases, not just in the right-to-die context. For example, as the *Cruzan* Court noted, the Court applied a balancing test in *Youngberg and Mills*, liberty interest cases involving the right to refuse medical treatment. *Youngberg* addressed the rights of patients involuntarily committed to state mental institutions. The Court said: "In determining whether a substantive right protected by the Due Process Clause has been violated, it is necessary to balance the liberty of the individual and the demands of organized society." *Youngberg*, 457 U.S. at 320 (internal citation and quotation omitted). *Mills* addressed the question of the right of mental patients to refuse treatment with antipsychotic drugs. There, the Court stated explicitly that the "state interests" are "to be balanced against an individual's liberty interests." 457

U.S. at 304. As the *Cruzan* Court also noted, the use of a balancing test is deeply rooted in our legal traditions. The Court has been applying a balancing test in substantive due process cases at least since 1905, when in *Jacobsen v. Massachusetts*, 197 U.S. 11 (1905), "the Court balanced an individual's liberty interest in declining an unwanted smallpox vaccine against the State's interest in preventing disease." *Cruzan*, 497 U.S. at 278.

As Justice O'Connor explained in her concurring opinion in *Cruzan*, the ultimate question is whether sufficient justification exists for the intrusion by the government into the realm of a person's "liberty, dignity, and freedom." *Cruzan*, 497 U.S. at 287, 289 (O'Connor, J., concurring). If the balance favors the state, then the given statute -- whether it regulates the exercise of a due process liberty interest or prohibits that exercise to some degree -- is constitutional. If the balance favors the individual, then the statute -- whatever its justifications -- violates the individual's due process liberty rights and must be declared unconstitutional, either on its face or as applied. Here, we conclude unhesitatingly that the balance favors the individual's liberty interest.[11]

IV.

Is There a Liberty Interest?

Before beginning our inquiry into whether a liberty interest exists, we reiterate a few fundamental precepts that guide us. The first lies in the Court's cautionary note in *Roe v. Wade*, 410 U.S. 113, 116 (1973):

---

[11] For a brief discussion of the dissent's rejection by implication of the balancing test, see pp. 3139-3140 *infra*.

> We forthwith acknowledge our awareness of the sensitive and emotional nature of the . . . controversy, of the vigorous opposing views, even among physicians, and of the deep and seemingly absolute convictions that the subject inspires. One's philosophy, one's experiences, one's exposure to the raw edges of human existence, one's religious training, one's attitude toward life and family and their values, and the moral standards one establishes and seeks to observe, are all likely to influence and to color one's thinking and conclusions . . . .

Like the *Roe* Court, we endeavor to conduct an objective analysis of a most emotionally-charged of topics. In doing so, we bear in mind the second Justice Harlan's admonition in his now-vindicated dissent in *Poe v. Ullman,* 367 U.S. 497, 543 (1961) (Harlan, J., dissenting from dismissal on jurisdictional grounds):

> [T]he full scope of the liberty guaranteed by the Due Process Clause cannot be found in or limited by the precise terms of the specific guarantees elsewhere in the Constitution. This 'liberty' is not a series of isolated points pricked out in terms of the taking of property; the freedom of speech, press, and religion; the right to keep and bear arms; the freedom from unreasonable searches and seizures; and so on. It is a rational continuum which, broadly speaking, includes a freedom from all substantial arbitrary impositions and purposeless restraints, . . . and which also recognizes, what a reasonable and sensitive judgment must, that certain interests require particularly careful scrutiny of the state needs asserted to justify their abridgment.

Applying Justice Harlan's teaching, we must strive to resist the natural judicial impulse to limit our vision to that which

can plainly be observed on the face of the document before us, or even that which we have previously had the wisdom to recognize.

Most important, we undertake our difficult task with a profound respect for the noble objectives of the Constitution, as described by Justice Brandeis in the second most famous dissent in American jurisprudence.[12] In *Olmstead v. United States,* 277 U.S. 438 (1928), Justice Brandeis wrote, and his words have since been quoted in full in several opinions of the Court and in innumerable appellate court decisions:

> The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. They recognized the significance of man's spiritual nature, of his feelings and of his intellect. They knew that only a part of the pain, pleasure and satisfaction of life are to be found in material things. They sought to protect Americans in their beliefs, their thoughts, their emotions and their sensations. They conferred, as against the government, the right to be let alone --- the most comprehensive of rights, and the right most valued by civilized men.

Id. at 478 (Brandeis, J., dissenting).

In examining whether a liberty interest exists in determining the time and manner of one's death, we begin with the compelling similarities between right-to-die cases and abortion cases. In the former as in the latter, the relative strength of the competing interests changes as physical, medical, or related circumstances vary. In right-to-die cases the outcome of the balancing test may differ at different points along the life cycle as a person's physical

---

[12] The most famous dissent, of course, was that of the first Justice Harlan in *Plessy v. Ferguson,* 163 U.S. 537 (1896).

or medical condition deteriorates, just as in abortion cases the permissibility of restrictive state legislation may vary with the progression of the pregnancy.[13] Equally important, both types of cases raise issues of life and death, and both arouse similar religious and moral concerns. Both also present basic questions about an individual's right of choice.

Historical evidence shows that both abortion and assisted suicide were for many years condemned, but that the efforts to prevent people from engaging in the condemned conduct were always at most only partially successful. Even when prohibited, abortions and assisted-suicides flourished in back alleys, in small street-side clinics, and in the privacy of the bedroom. Deprived of the right to medical assistance, many pregnant women and terminally ill adults ultimately took matters into their own hands, often with tragic consequences.

Because they present issues of such profound spiritual importance and because they so deeply affect individuals' right to determine their own destiny, the abortion and right-to-die cases have given rise to a highly emotional and divisive debate. In many respects, the legal arguments on

---

[13] Most of the liberty interests or rights that the Court recognized before *Roe* are static. One's liberty interest in marriage, procreation, family relationships, child rearing, intercourse for purposes other than procreation, and whether or not to bear or beget children, for instance, remains relatively constant, at least throughout one's adult years. Similarly the state's countervailing interests change little if at all. Abortion cases require a more dynamic mode of analysis, however. In *Roe*, the Court explained that the relative weight of a woman's liberty interest in terminating an unwanted pregnancy, compared to the state's interest in protecting life shifts dramatically during the course of a pregnancy. As a result, the extent to which state action is permissible shifts dramatically as well. *See also Planned Parenthood v. Casey*, 112 S. Ct. 2791 (1992).

both sides are similar, as are the constitutional principles at issue.

In deciding right-to-die cases, we are guided by the Court's approach to the abortion cases. *Casey* in particular provides a powerful precedent, for in that case the Court had the opportunity to evaluate its past decisions and to determine whether to adhere to its original judgment. Although *Casey* was influenced by the doctrine of *stare decisis*, the fundamental message of that case lies in its statements regarding the type of issue that confronts us here: "These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment." *Casey*, 112 S. Ct. at 2807.

A.

Defining the Liberty Interest and Other Relevant Terms

The majority opinion of the three-judge panel that first heard this case on appeal defined the claimed liberty interest as a "constitutional right to *aid* in killing oneself." *Compassion In Dying*, 49 F.3d at 591 (emphasis added). However, the subject we must initially examine is not nearly so limited. Properly analyzed, the first issue to be resolved is whether there is a liberty interest in determining the time and manner of one's death. We do not ask simply whether there is a liberty interest in receiving "aid in killing oneself" because such a narrow interest could not exist in the absence of a broader and more important underlying interest -— the right to die. In short, it is the end and not the means that defines the liberty interest.

The broader approach we employ in defining the liberty interest is identical to the approach used by the Supreme Court in the abortion cases. In those cases, the Court initially determined whether a general liberty interest

existed (an interest in having an abortion), not whether there was an interest in implementing that general liberty interest by a particular means (with medical assistance). Specifically, in *Roe v. Wade*, 410 U.S. 113 (1973), the Court determined that women had a liberty interest in securing an abortion, not that women had a liberty interest in obtaining medical assistance for purpose of an abortion. The Court did so even though the Texas statute at issue did not prohibit a woman from inducing her own abortion; nor did it criminalize a woman's conduct in securing an abortion. Rather, the Texas statute, like the Washington statute here, prohibited the rendering of assistance; specifically, the Texas statute prohibited only *assisting* a woman to secure an abortion. *Roe*, 410 U.S. at 151-52. The Court first determined that a woman had a constitutional right to choose an abortion. Only after it did so, did it proceed to the second step: to determine whether the state's prohibition on assistance unconstitutionally restricted the exercise of that liberty interest. Similarly, in *Planned Parenthood v. Casey*, 112 S. Ct. 2791 (1992), the Court first reaffirmed, after extensive analysis, its earlier holding that women have a liberty interest in obtaining an abortion. In determining the *existence* of that liberty interest, the Court did not address the subject of spousal notification. As in *Roe*, only after affirming a woman's right to have an abortion, did the Court proceed to the second step: to examine whether the statutory provision requiring married women to notify their spouses prior to obtaining an abortion posed an undue burden on the exercise of that liberty interest. In this case, our analysis is necessarily the same. First we must determine whether there *is* a liberty interest in determining the time and manner of one's death; if so, we must then examine whether Washington's ban on assisted suicide unconstitutionally restricts the exercise of that liberty interest.

While some people refer to the liberty interest implicated in right-to-die cases as a liberty interest in committing suicide, we do not describe it that way. We use the broader and more accurate terms, "the right to die," "determining the time and manner of one's death," and "hastening one's death" for an important reason. The liberty interest we examine encompasses a whole range of acts that are generally not considered to constitute "suicide." Included within the liberty interest we examine, is for example, the act of refusing or terminating unwanted medical treatment. As we discuss later at pp. 3179- 3180, a competent adult has a liberty interest in refusing to be connected to a respirator or in being disconnected from one, even if he is terminally ill and cannot live without mechanical assistance. The law does not classify the death of a patient that results from the granting of his wish to decline or discontinue treatment as "suicide." Nor does the law label the acts of those who help the patient carry out that wish, whether by physically disconnecting the respirator or by removing an intravenous tube, as assistance in suicide. Accordingly, we believe that the broader terms -— "the right to die," "controlling the time and manner of one's death," and "hastening one's death" -— more accurately describe the liberty interest at issue here. Moreover, as we discuss later, we have serious doubts that the terms "suicide" and "assisted suicide" are appropriate legal descriptions of the specific conduct at issue here. *See infra* 3185-3186.

There is one further definitional matter we should emphasize. Following our determination regarding the existence of a liberty interest in hastening one's death, we examine whether the Washington statute unconstitutionally infringes on that liberty interest. Throughout that examination, we use the term "physician-assisted suicide," a term that does not appear in the Washington statute but

is frequently employed in legal and medical discussions involving the type of question before us. For purposes of this opinion, we use physician-assisted suicide as it is used by the parties and district court and as it is most frequently used: the prescribing of medication by a physician for the purpose of enabling a patient to end his life.[14] It is only that conduct that the plaintiffs urge be held constitutionally-protected in this case.[15]

B.

The Legal Standard

There is no litmus test for courts to apply when deciding whether or not a liberty interest exists under the Due Process Clause. Our decisions involve difficult judgments regarding the conscience, traditions, and fundamental tenets of our nation. We must sometimes apply those basic principles in light of changing values based on shared experience. Other times we must apply them to new problems arising out of the development and use of new technologies. In all cases, our analysis of the applicability of the protections of the Constitution must be made in light

---

[14] *See, e.g.*, Sarah Henry, The Battle Over Assisted-Suicide, Calif. Law., 1, 35 (defining physician-assisted death "as providing or prescribing medication to someone, knowing that that person intends to take a lethal dose of the medication").

[15] We use the terms "assisted suicide" and "physician-assisted suicide" interchangeably throughout this opinion, although as we have noted, we have serious doubts as to the correctness or propriety of the terms, as they are generally used. We should note, however, that there is another commonly used term -- "physician-aid-in-dying" -- that is also relevant to our discussion. That term includes not only the prescribing of drugs ("assisted suicide") but also the *administration* of drugs by the physician. The issue of the constitutionality of prohibiting physicians from administering life-ending drugs to terminally ill persons is not before us for decision.

of existing circumstances as well as our historic traditions. Historically, the Court has classified "fundamental rights" as those that are "implicit in the concept of ordered liberty," *Palko v. Connecticut*, 302 U.S. 319, 325-26 (1937). The Court reasserted this historic standard, along with an alternative description, in its highly controversial *Bowers v. Hardwick* opinion, 478 U.S. 186, 191-92 (1986):[16]

> Striving to assure itself and the public that announcing rights not readily identifiable in the Constitution's text involves much more than the imposition of the Justices' own choice of values on the States and the Federal Government, the Court has sought to identify the nature of the rights qualifying for heightened judicial protection. In *Palko v. Connecticut*, 302 U.S. 319, 325, 326, 82 L. Ed. 288, 58 S. Ct. 149 (1937), it was said that this category includes those fundamental liberties that are

---

[16] The case was decided by a 5-4 vote, and Justice Powell subsequently announced on several occasions that he regretted that vote. "I think I probably made a mistake," Powell reportedly once said. Upon rereading the opinion a few months after it was issued, he reportedly remarked, "I thought the dissent had the better of the argument." David Cole, *Playing Pornography's Rule: The Regulation of Sexual Expression*, 143 U. Pa. L. Rev. 111, 176-77 (1994), *citing* Linda Greenhouse, When Second Thoughts in a Case Come Too Late, N.Y. Times, Nov. 5, 1990, at 14. The *Bowers* decision has been widely criticized by commentators. William N. Eskridge Jr. and Phillip P. Frickey, *The Supreme Court 1993 -- Forward: Law as Equilibrium*, 108 Harv. L. Rev. 26, 95 (1994) (criticizing *Bowers* for embodying "segregationist" caste distinctions similar to those upheld in *Plessy v. Ferguson*); Kendall Thomas, *The Eclipse of Reason: A Rhetorical Reading of Bowers v. Hardwick*, 79 Va. L. Rev. 1805, 1806 (1993) (saying *Bowers* represents a homophobic ideology); Lance Liebman, *A Tribute to Justice Byron A. White*, 107 Harv. L. Rev. 13, 19 (1993) (calling *Bowers* Justice White's worst opinion). The passage quoted in the text, however, is not controversial.

"implicit in the concept of ordered liberty," such that "neither liberty nor justice would exist if [they] were sacrificed." A different description of fundamental liberties appeared in *Moore v. East Cleveland*, 431 U.S. 494, 503, 97 S. Ct. 1932, 1937, 52 L Ed. 2d 531 (1977) (opinion of POWELL, J.), where they are characterized as those liberties that are "deeply rooted in this Nation's history and tradition." *Id.* at 503, 97 S. Ct. at 1938 (POWELL, J.).

In recent years, the Court has spoken more frequently of substantive due process *interests* than of *fundamental* due process *rights*. *Compare Thornburgh v. American Coll. of Obst.*, 476 U.S. 747, 772 (1986) (describing "fundamental right" to abortion) and *Akron v. Akron Center for Reproductive Health, Inc.*, 462 U.S. 416, 420 n.1 (1983) (same) *with Webster v. Reproductive Health Services*, 492 U.S. 490, 520 (1989) (plurality opinion) (describing women's entitlement to an abortion as a "liberty interest protected by Due Process Clause"). *See also Cruzan*, 497 U.S. 2841. The Court has also recently expressed a strong reluctance to find new fundamental rights. *Collins v. City of Harker Heights*, Tex., 112 S. Ct. 1061, 1068 (1992).

The Court's evolving doctrinal approach to substantive due process claims is consistent with the basic truth enunciated by Justice Harlan and later endorsed by the Court in *Casey*: "the full scope of the liberty guaranteed by the Due Process Clause is a rational continuum which, broadly speaking, includes a freedom from all substantial arbitrary impositions and purposeless restraints . . ." *Casey*, 112 S. Ct. at 2806, citing *Poe v. Ullman*, 367 U.S. 497, 543 (1961) (Harlan, J., dissenting from dismissal on

jurisdictional grounds).[17] As Justice Harlan noted, some liberty interests are weightier than others. Under the Court's traditional jurisprudence, those classified as fundamental rights cannot be limited except to further a compelling and narrowly tailored state interest. *See Collins*, 112 S. Ct. at 1068. Other important interests, such as the liberty interest in refusing unwanted medical treatment, are subject to a balancing test that is less restrictive, but nonetheless requires the state to overcome a substantial hurdle in justifying any significant impairment.

Recent cases, including *Cruzan*, suggest that the Court may be heading towards the formal adoption of the continuum approach, along with a balancing test, in substantive due process cases generally. If so, there would no longer be a two-tier or three-tier set of tests that depends on the classification of the right or interest as fundamental, important, or marginal. Instead, the more important the individual's right or interest, the more persuasive the justifications for infringement would have to be. We see the evolution in the Court's approach more as a recognition of the artificiality of the current classification system than as a fundamental change in the Court's practical approach to specific issues. So long as the liberty interest is an important one, the state must shoulder the burden of justifying any significant limitations it seeks to impose. However, we need not predict the Court's future

---

[17] This passage appears in Part II of the joint opinion by Justices O'Connor, Kennedy, and Souter. In their concurring opinions, both Justice Stevens and Justice Blackmun joined in that part of the joint opinion. 112 S. Ct. at 2843. Thus Part II represents the views of five justices and so the Court. Unless otherwise noted, all passages cited from *Casey* represent the opinion of the Court and not merely a plurality of its members.

course in order to decide the case before us. Here, as we have said, even under the Court's traditional mode of analysis, a balancing test is applicable.

Nothing in *Reno v. Flores*, 113 S. Ct. 1439 (1993), the insubstantial reed on which the dissent rests its case — even though the case was not cited by any of the parties or any of the eleven amici who filed briefs before this court — suggests anything to the contrary. In *Flores*, the Court simply declined to find a new fundamental right, and repeated its general reluctance to do so. *Id.* at 1447. The Court did not, as the dissent implies, purport to establish a new classification system under which all liberty interests other than fundamental rights would be subject to rational basis review. Nor did *Flores* purport to overrule, or even hint at any desire to modify, the Court's ninety-year-old practice of using a balancing test in liberty interest cases that raise important issues of the type before us. In fact, *Flores* did not mention *Cruzan*, *Youngberg*, *Mills*, *Jacobsen*, or any other balancing case.[18] While one might legitimately argue either that the liberty interest at issue here rises to the level of a fundamental right or that it is simply an important liberty interest that is subject to a balancing test, one point is absolutely clear: there can be no legitimate argument that rational basis review is applicable, and *nothing* in *Flores* suggests that it is.

---

[18] In one case in which the liberty interest was at a bare minimum because it involved the interest of uniformed police officers in their *appearance* -- a matter in which the Court said that the citizenry at large had only *"some sort* of liberty interest" and suggested that uniformed police officers had far less even than that -- the Court subjected departmental grooming regulations to rational basis review. *See Kelley v. Johnson*, 425 U.S. 238, 244, 248-249 (1976). Subsequent to that decision, however, with liberty interests of more than minimal weight, the Court has consistently applied either strict scrutiny or a balancing test.

Although in determining the existence of important rights or liberty interests, the Court examines our history and experience, it has stated on a number of occasions that the limits of the substantive reach of the Due Process Clause are not frozen at any point in time. In *Casey*, the Court said: "Neither the Bill of Rights nor the specific practices of States at the time of the adoption of the Fourteenth Amendment marks the outer limits of the substantive sphere of liberty which the Fourteenth Amendment protects." 112 S. Ct. at 2805. Justice Frankfurter may have put it best when, writing for the Court in *Rochin v. California*, 342 U.S. 165, 171-72 (1952), he declared, "To believe that this judicial exercise of judgment could be avoided by freezing 'due process of law' at some fixed stage in time or thought is to suggest that the most important aspect of constitutional adjudication is a function for inanimate machines and not for judges . . . ." Certainly, it would be difficult to imagine a more felicitous expression of the dynamism of constitutional interpretation. Thus, while historical analysis plays a useful role in any attempt to determine whether a claimed right or liberty interest exists, earlier legislative or judicial recognition of the right or interest is not a *sine qua non*.

In *Casey*, the Court made it clear that the fact that we have previously failed to acknowledge the existence of a particular liberty interest or even that we have previously prohibited its exercise is no barrier to recognizing its existence. In discussing a woman's liberty interest in securing an abortion, the *Casey* Court stated that pregnancy involves "suffering [that] is too intimate and personal for the State to insist, without more, upon its own vision of the woman's role, *however dominant that vision has been in the course of our history and culture*." *Casey*, 112 S. Ct. at 2807 (emphasis added).

[2] In contrast to *Casey*, the majority opinion of the three judge panel in the case now before us erroneously concluded that a historical analysis alone is sufficient basis for rejecting plaintiffs' claim to a substantive liberty interest or right. *Compassion In Dying*, 49 F.3d at 591. As explained below, we believe that the panel's historical account is misguided, but even if it were indisputably correct, historical evidence alone is not a sufficient basis for rejecting a claimed liberty interest.[19]

Were history our sole guide, the Virginia anti-miscegenation statute that the Court unanimously overturned in *Loving v. Virginia*, 388 U.S. 1 (1967), as violative of substantive due process and the Equal Protection Clause, would still be in force because such anti-miscegenation laws were commonplace both when the United States was founded and when the Fourteenth Amendment was adopted.[20] The Court explicitly

---

[19] The district judge who heard the constitutional challenge to the New York Statute barring doctors from helping terminally ill, competent adults to hasten their deaths committed a similar error in concluding that plaintiffs' alleged failure to offer historical evidence was fatal to their claim. *Quill v. Koppell*, 870 F. Supp. 78, 83 (S.D.N.Y. 1994) ("The trouble is that plaintiffs make no attempt to argue that physician assisted suicide, even in the case of terminally ill patients, has any historic recognition as a legal right.").

[20] Had the Court applied a rigid, originalist view of constitutional interpretation, a married couple consisting of a black husband and a white wife (or vice-versa) would be unable to live in the state of Virginia today. Our nation's long history of outlawing racially-mixed marriages is traceable to the early colonial period. The first anti-miscegenation statute was passed in Maryland in 1661. Harvey M. Applebaum, *Miscegenation Statutes: A Constitutional and Social Problem*, 53 Geo. L.J. 49, 50 (1964).

As the nation grew, so did the number of states with miscegenation bans. Forty-one states enacted anti-miscegenation statutes at one time

---

or another; all but three of these forty-one states had such statutes during the nineteenth century. Applebaum, *supra*, at 50 & n.9. During the time surrounding the Congressional debates concerning the passage of the Fourteenth Amendment, all the slave states and most of the non-slave states had anti-miscegenation statutes. R. Carter Pittman, *The Fourteenth Amendment: Its Intended Effect on Anti-Miscegenation Laws*, 43 N.C. L. Rev. 92, 106 (1964).

The passage of the Fourteenth Amendment had little effect on the judiciary's view of the constitutionality of anti-miscegenation statutes. Even as late as the early 1960's, only a few years before the *Loving* decision, the courts continued to hold to the strong tradition prohibiting interracial marriages:

> The courts of last resort of fifteen states have reached the question of their [anti-miscegenation statutes'] constitutionality and all but one have upheld them. In addition, the federal [district] courts and the one federal court of appeals that have been confronted with the statutes have sustained their constitutional validity.

Applebaum, *supra*, at 56 (footnotes omitted). *See also* James Trosino, *American Wedding: Same-Sex Marriage and the Miscegenation Analogy*, 73 B.U. L. Rev. 93, 104 (1993) ("In the 100 years following the ratification of the Fourteenth Amendment, only one state court overturned an anti-miscegenation law.").

The Supreme Court did not directly address the constitutionality of proscriptions against interracial marriage until its decision in *Loving*. It could have done so previously but chose to sidestep the issue. *See Pace v. Alabama*, 106 U.S. 583, 585 (1883). At the time of the *Loving* decision, sixteen states still prohibited and punished interracial marriages. *Loving*, 388 U.S. at 6. Six of those states went so far as to include in their state constitutions a provision banning interracial marriages. 388 U.S. at 6 n.5.

The *Loving* Court declared anti-miscegenation statutes unconstitutional, saying that they violated both the Equal Protection Clause and the Due Process Clause. In so doing, the Court rejected three hundred years of tradition and overwhelming precedent to the contrary.

acknowledged as much in *Casey*, 112 S. Ct. at 2805, in rejecting the view that substantive due process protects rights or liberties only if they possess a historical pedigree. In *Casey*, the Court said:

> It is . . . tempting . . . to suppose that the Due Process Clause protects only those practices, defined at the most specific level, that were protected against government interference by other rules of law when the Fourteenth Amendment was ratified. . . . But such a view would be inconsistent with our law. It is a promise of the Constitution that there is a realm of personal liberty which the government may not enter. We have vindicated this principle before. Marriage is mentioned nowhere in the Bill of Rights and interracial marriage was illegal in most States in the 19th century, but the Court was no doubt correct in finding it to be an aspect of liberty protected against state interference by the substantive component of the Due Process Clause in *Loving v. Virginia*, 388 U.S. 1, 12, 87 S. Ct. 1817, 1824, 18 L. Ed. 2d 1010 (1967), (relying, in an opinion for eight Justices, on the Due Process Clause). Similar examples may be found in *Turner v. Safley*, 482 U.S. 78, 94-99, 107 S. Ct. 2254, 2265-67, 96 L. Ed. 2d 64 (1987) [holding that prisoners have a constitutionally protected right to marry a civilian or other inmate]; in *Carey v. Population Services International*, 431 U.S. 678, 684, 686, 97 S. Ct. 2010, 2015-2017, 52 L. Ed. 2d 675 (1977) [holding that the state cannot prohibit the sale of contraceptives to all minors or bar everyone but licensed pharmacists from selling contraceptives to adults]; in *Griswold v. Connecticut*, 381 U.S. 479, 481-82, 85 S. Ct. 1678, 1680-81, 14 L. Ed. 2d 510 (1965)

> [holding that a Connecticut law forbidding the use of contraceptives unconstitutionally intrudes on the right of marital privacy] . . .

Casey, 112 S. Ct. at 2805. Indeed, if historical evidence of accepted practices at the time the Fourteenth Amendment was enacted were dispositive, the Court would not only have decided *Loving* differently, but it would not have held that women have a right to have an abortion. As the dissent pointed out in *Roe*, more than three-quarters of the existing states (at least 28 out of 37 states), as well as eight territorial legislatures restricted or prohibited abortions in 1868 when the Fourteenth Amendment was adopted. *Roe*, 410 U.S. at 175-76 & n.1 (Rehnquist, J., dissenting).

C.

Historical Attitudes Toward Suicide

The majority opinion of the three-judge panel claimed that "a constitutional right to aid in killing oneself " was "unknown to the past." *Compassion In Dying*, 49 F.3d at 591. As we have pointed out at p. 3138, our inquiry is not so narrow. Nor is our conclusion so facile. The relevant historical record is far more checkered than the majority would have us believe.

Like the Court in *Roe*, we begin with ancient attitudes.[21] In Greek and Roman times, far from being

---

[21] When the Court turns to history, it does not limit its inquiry to the practices at the time of the founding or the time of the adoption of the Fourteenth Amendment. Rather, the Court also looks to British common law and beyond. In *Roe*, for example, Justice Blackmun, writing for the majority, went to great pains to show that abortion was practiced "in Greek times and in the Roman era" and also that abortion of a fetus before quickening was not a crime at English common law or in the early days of the American Republic. *Roe*, 410 U.S. at 130-140.

universally prohibited, suicide was often considered commendable in literature, mythology, and practice.

> The first of all literary suicides, that of Oedipus' mother, Jocasta, is made to seem praiseworthy, an honorable way out of an insufferable situation. Homer records self-murder without comment, as something natural and heroic. The legends bear him out. Aegeus threw himself into the sea — which therefore bore his name -— when he mistakenly thought his son Theseus had been slain by the Minotaur.

A. Alvarez, *The Background, in Suicide: The Philosophical Issues* 18 (M.Pabst Battin and David J. Mayor, eds. 1980). In Athens, as well as the Greek colonies of Marseilles and Ceos, magistrates kept a supply of hemlock for those who wished to end their lives. The magistrates even supplied those who wished to commit suicide with the means to do so.

> Whoever no longer wishes to live shall state his reasons to the Senate, and after having received permission shall abandon life. If your existence is hateful to you, die; if you are overwhelmed by fate, drink the hemlock. If you are bowed with grief, abandon life. Let the unhappy man recount his misfortune, let the magistrate supply him with the remedy, and his wretchedness will come to an end.[22]

While Socrates counseled his disciples against committing suicide, he willingly drank the hemlock as he was condemned to do, and his example inspired others to end

[22] Emile Durkheim, *Suicide: A Study in Sociology* 330 (John A. Spaulding & George Simpson trans., 1951) (citing Libanius).

their lives. *Id.* at 19. Plato, Socrates' most distinguished student, believed suicide was often justifiable.

> He suggested that if life itself became immoderate, then suicide became a rational, justifiable act. Painful disease, or intolerable constraint were sufficient reasons to depart. And this when religious superstitions faded was philosophic justification enough. *Id.*

Many contemporaries of Plato were even more inclined to find suicide a legitimate and acceptable act. In *Roe*, while surveying the attitudes of the Greeks toward abortion, the Court stated that "only the Pythagorean school of philosophers frowned on the related act of suicide," 410 U.S. at 131; it then noted that the Pythagorean school represented a distinctly minority view. *Id.*

The Stoics glorified suicide as an act of pure rational will.[23] Cato, who killed himself to avoid dishonor when Ceasar crushed his military aspirations, was the most celebrated of the many suicides among the Stoics. Montaigne wrote of Cato: "This was a man chosen by nature to show the heights which can be attained by human steadfastness and constancy . . . . Such courage is above philosophy."

Like the Greeks, the Romans often considered suicide to be acceptable or even laudable.[24]

[23] Thomas J. Marzen, et al., *Suicide: A Constitutional Right*, 24 Duq. L. Rev. 1, 25 (1985) [hereinafter Marzen].

[24] Other ancient peoples also viewed suicide with equanimity or acceptance. Hundreds of Jews killed themselves at Masada in order to avoid being captured by Roman legions. The ancient Sythians believed it was an honor to commit suicide when they became too frail for their nomadic way of life. The Vikings believed that the next greatest honor, after death in battle, was death by suicide. *Id.* at 14-17.

To live nobly also meant to die nobly and at the right time. Everything depended on a dominant will and a rational choice.

This attitude was reinforced by Roman law. . . . According to Justinian's *Digest*, suicide of a private citizen was not punishable if it was caused by "impatience of pain or sickness, or by another cause," or by "weariness of life . . . lunacy, or fear of dishonor." Since this covered every rational cause, all that was left was the utterly irrational suicide "without cause," and that was punishable on the grounds that "whoever does not spare himself would much less spare another." In other words, it was punished because irrational, not because it was a crime. *Id.* at 22-23.

The Romans did sometimes punish suicide. Under Roman law, people convicted of crimes forfeited their property to the Emperor, thereby disinheriting their heirs. Roman law imposed a special penalty on people who were caught committing a crime and then committed suicide prior to conviction to avoid forfeiting the property. To protect the Emperor's interests, the property of people who committed suicide under such circumstances was forfeited, just as if they had been convicted of the crime involved. Marzen at 57-58.

The early Christians saw death as an escape from the tribulations of a fallen existence and as the doorway to heaven.[25] "In other words, the more powerfully the Church instilled in believers the idea that this world was a

[25] The stories of four suicides are noted in the Old Testament -- Samson, Saul, Abimlech, and Achitophel -- and none is treated as an act worthy of censure. In the New Testament, the suicide of Judas Iscariot is not treated as a further sin, rather as an act of repentance.

vale of tears and sin and temptation, where they waited uneasily until death released them into eternal glory, the more irresistible the temptation to suicide became." *Id.* at 25. The Christian impulse to martyrdom reached its height with the Donatists, who were so eager to enter into martyrdom that they were eventually declared heretics. Gibbon, in the Decline and Fall of the Roman Empire, described them this way:

> They sometimes forced their way into courts of justice and compelled the affrighted judge to give orders for their execution. They frequently stopped travellers on the public highways and obliged them to inflict the stroke of martyrdom by promise of a reward, if they consented -— and by the threat of instant death, if they refused to grant so singular a favour.[26]

St. Augustine said of the Donatists, "to kill themselves out of respect for martyrdom is their daily sport." *Id.* at 27. Prompted in large part by the utilitarian concern that the rage for suicide would deplete the ranks of Christians, St. Augustine argued that committing suicide was a "detestable and damnable wickedness" and was able to help turn the tide of public opinion. *Id.* Even staunch opponents of a constitutional right to suicide acknowledge that "there were many examples of Christian martyrs whose deaths bordered on suicide, and confusion regarding the distinction between suicide and martyrdom existed up until the time of St. Augustine (354-430 A.D.)."[27]

In 562 A.D., the Council of Braga denied funeral rites to anyone who killed himself. A little more than a century

[26] Edward Gibbon, I *Decline and Fall of the Roman Empire* 721 (Oliphant Smeaton ed.).

[27] Marzen, *supra* note 23, at 26.

later, in 693 A.D., the Council of Toledo declared that anyone who attempted suicide should be excommunicated. *Id.* at 27-28. Once established, the Christian view that suicide was in all cases a sin and crime held sway for 1,000 years until philosophers, poets, and even some clergymen -— Montesquieu, Voltaire, Diderot, Francis Bacon, David Hume, John Donne, Sir Thomas More, among others[28] —- began to challenge the all-encompassing nature of the dominant ideology. In his book Utopia, Sir Thomas More, who was later canonized by the Roman Catholic Church, strongly supported the right of the terminally ill to commit suicide and also expressed approval of the practice of assisting those who wished to hasten their deaths.[29] Hume argued that a decision by a terminally ill patient to end his life was often laudable.[30] France even enacted a statute legalizing suicide in 1790, primarily as a result of the influence of the nation's leading philosophers.[31]

Suicide was a crime under the English common law, at least in limited circumstances, probably as early as the

[31] Messinger, *supra* note 28, at 188.

thirteenth century.[32] Bracton, incorporating Roman Law as set forth in Justinian's *Digest*, declared that if someone commits suicide to avoid conviction of a felony, his property escheats to his lords.[33] Bracton said"[i]t ought to be otherwise if he kills himself through madness or unwillingness to endure suffering."[34] Despite his general fidelity to Roman law, Bracton did introduce a key innovation: "[I]f a man slays himself in weariness of life or because he is unwilling to endure further bodily pain . . . he may have a successor, but his movable goods [personal property] are confiscated. He does not lose his inheritance [real property], only his movable goods."[35] Bracton's innovation was incorporated into English common law, which has thus treated suicides resulting from the inability to "endure further bodily pain" with compassion and understanding ever since a common law scheme was firmly established.

Sir Edward Coke, in his *Third Institute* published in 1644, held that killing oneself was an offense and that someone who committed suicide should forfeit his movable property. But Coke listed an exception for someone who "by the rage of sickness or infirmity or otherwise," kills himself "while he is not of compos mentia," or sound mind.[36] In eighteenth century England, many and perhaps most juries compensated for the perceived unfairness of the law by concluding that anyone who killed himself was

[36] *Id.* at 61.

necessarily *not* of sound mind.[37] Thus, although, formally, suicide was long considered a crime under English common law, in practice it was a crime that was punished leniently, if at all, because juries frequently used their power to nullify the law.

The traditional English experience was also shaped by the taboos that have long colored our views of suicide and perhaps still do today. English common law reflected the ancient fear that the spirit of someone who ended his own life would return to haunt the living. Accordingly, the traditional practice was to bury the body at a crossroads — either so the suicide could not find his way home or so that the frequency of travelers would keep his spirit from rising.[38] As added insurance, a stake was driven through the body.

English attitudes toward suicide, including the tradition of ignominious burial, carried over to America[39] where they subsequently underwent a transformation. By 1798, six of the 13 original colonies had abolished all penalties for suicide either by statute or state constitution.[40] There is no evidence that any court ever imposed a punishment for suicide or attempted suicide under common law in post-

---

[37] *Id.*

[38] 4 William Blackstone, *Commentaries* 190 (noting that people who committed suicide were subject to "an ignominious burial in the highway, with a stake driven through the body").

[39] This practice was continued in seventeenth century Virginia. In 1661, for instance, a jury found a man guilty of suicide and "caused him to be buried at the next cross path as the Law Requires with a stake driven though the middle of him in his grave." Marzen, *supra* note 23, at 64-65, *citing* A. Scott, *Criminal Law in Colonial Virginia* at 198-199 & n.16 (1930).

[40] Marzen, *supra* note 23, at 67.

revolutionary America.[41] By the time the Fourteenth Amendment was adopted in 1868, suicide was generally not punishable, and in only nine of the 37 states is it clear that there were statutes prohibiting assisting suicide.[42]

The majority of states have not criminalized suicide or attempted suicide since the turn of the century.[43] The New Jersey Supreme Court declared in 1901 that since suicide was not punishable it should not be considered a crime. "[A]ll will admit that in some cases it is ethically defensible," the court said, as when a woman kills herself to escape being raped or "when a man curtails weeks or months of agony of an incurable disease." *Campbell v. Supreme Conclave Improved Order Heptasophs*, 66 N.J.L. 274, 49 A. 550, 553 (1901).[44] Today, no state has a statute prohibiting suicide or attempted suicide; nor has any state had such a statute for at least 10 years.[45] A majority of states do, however, still have laws on the books against assisting suicide.[46]

Current Societal Attitudes

[3] Clearly the absence of a criminal sanction alone does not show societal approbation of a practice. Nor is there any evidence that Americans approve of suicide in general. In recent years, however, there has been increasingly widespread support for allowing the terminally ill to hasten their deaths and avoid painful, undignified, and inhumane endings to their lives. Most Americans simply do not appear to view such acts as constituting suicide, and there is much support in reason for that conclusion. *See infra* at pp. 3185-3186.

Polls have repeatedly shown that a large majority of Americans — sometimes nearing 90% — fully endorse recent legal changes granting terminally ill patients, and sometimes their families, the prerogative to accelerate their death by refusing or terminating treatment.[47] Other polls indicate that a majority of Americans favor doctor-assisted suicide for the terminally ill. In April, 1990, the Roper Report found that 64% of Americans believed that the terminally ill should have the right to request and receive physician aid-in-dying.[48] Another national poll, conducted in October 1991, shows that "nearly two out of three Americans favor doctor-assisted suicide and euthanasia for terminally ill patients who request it."[49] A 1994 Harris

poll found 73% of Americans favor legalizing physician-assisted suicide.[50] Three states have held referenda on proposals to allow physicians to help terminally ill, competent adults commit suicide with somewhat mixed results. In Oregon, voters approved the carefully-crafted referendum by a margin of 51 to 49 percent in November of 1994.[51] In Washington and California where the measures contained far fewer practical safeguards, they narrowly failed to pass, each drawing 46 percent of the vote.[52] As such referenda indicate, there is unquestion-ably growing popular support for permitting doctors to provide assistance to terminally ill patients who wish to hasten their deaths.[53]

---

[50] David Cannella, Physician-Assisted Suicide, Fight Rages in Several States: Issue Expected to Go to the Supreme Court, The Arizona Republic, May 13, 1995. A Field poll conducted in California in March 1995 found that 70% of Californians agreed that the terminally ill should be able to obtain medication from their doctors to end their lives. Henry, *supra* note 14, at 35.

[51] The Oregon statute was enjoined by a federal district judge the day before it was to take effect. *See Lee v. State of Oregon*, 891 F. Supp. 1429 (D. Or. 1995), discussed *infra* at pp. 106-107.

[52] Cheryl K. Smith, *What About Legalized Assisted Suicide*, 8 Issues In Law & Med. 503, 503 (1993). Proposals to permit physician-assisted suicide have also been introduced in Iowa, Maine, Michigan, and New Hampshire. *Id.* at 503 nn. 3-6.

[53] See *Shaffer*, *supra* note 41, at 367 n.114, stating:

> The National Opinion Research Group asked in a survey: "'When a person has a disease that cannot be cured, do you think that doctors should be allowed by law to end the patient's suffering by some painless means if the patient and his family request it.' " N.Y. Times, Sept. 23, 1984, S 1, at 1, col. 3. In 1947, 37% of the respondents said "yes." In 1973, a little over half agreed, and in 1983, 63% replied affirmatively. *Id.*

Just as the mere absence of criminal statutes prohibiting suicide or attempted suicide does not indicate societal approval so the mere presence of statutes criminalizing assisting in a suicide does not necessarily indicate societal disapproval. That is especially true when such laws are seldom, if ever, enforced. There is no reported American case of criminal punishment being meted out to a doctor for helping a patient hasten his own death.[54] The lack of enforcement of statutes prohibiting assisting a mentally competent, terminally ill adult to end his own life would appear to reflect widespread societal disaffection with such laws.[55]

---

[54] Franklin G. Miller et al, *Regulating Physician-Assisted Death*, 331 N. Eng. J. Med. 119, 119 (1994). Dr. Jack Kevorkian is currently facing criminal charges for helping several patients hasten their deaths. His case presents a number of peculiar factors that prevent us from drawing any particular inferences from the fact that local authorities in Michigan have made a number of efforts to obtain a conviction.

In a celebrated, though less complicated, recent example, a grand jury decided against indicting Dr. Timothy Quill, who admitted in the pages of the *New England Journal of Medicine* that he had intentionally prescribed the barbiturates that a terminally ill patient used to end her life. Pugliese, *supra* note 46, at 1298 n. 47.

Quill's case was not exceptional. In 1973, a New York physician who administered a lethal injection to a comatose patient was acquitted of assisted suicide. In 1950, another doctor was acquitted after injecting a "fatal air embolism into the blood vessels of a carcinoma patient, who had repeatedly urged him to end her misery." *Id.* at 1298 nn. 45-46.

[55] *See* Kadish, *supra* note 47, at 859 & n.10, noting that no-fault divorce "came well after the widespread nullification of strict divorce requirements" and also that "the legitimation of plea bargaining followed . . . decades of its widespread but officially denied practice."

Our attitudes toward suicide of the type at issue in this case are better understood in light of our unwritten history and of technological developments. Running beneath the official history of legal condemnation of physician-assisted suicide is a strong undercurrent of a time-honored but hidden practice of physicians helping terminally ill patients to hasten their deaths.[56] According to a survey by the American Society of Internal Medicine, one doctor in five said he had assisted in a patient's suicide.[57] Accounts of

---

[56] *See generally* Pugliese, *supra* note 46. Some experts estimate that notwithstanding criminal sanctions, physicians may play a role in hastening the deaths of 6,000 terminally ill patients a day, many through the use of pain relieving drugs that accelerate death. Timothy E. Quill, et al., *Care of the Hopelessly Ill: Proposed Clinical Criteria for Physician-Assisted Suicide*, 327 New Eng. J. Med., 1380, 1381 (1992).

[57] Note, *Physician-Assisted Suicide and the Right to Die with Assistance*, 105 Harv. L. Rev. 2021, 2021 n.7 (1992) (citing Richard A. Knox, One in Five Doctors Say They Assisted in a Patient's Death, Survey Finds, Boston Globe, Feb. 28, 1992 at 5). According to the same survey, one doctor in four said he had been asked by a patient for assistance in ending his life. *See also* Lawrence K. Altman, More Physicians Broach Forbidden Subject of Euthanasia, N.Y. Times, Mar. 12, 1991, at C3.

Another poll of physicians showed that 10% of the respondents admitted to assisting a patient to end his life in some way. Doctors Who Help Patients Die; MD's Reveal a Secret Practice: Aiding Suicides, Mercy Killing, Newsday, Sept. 29, 1991 at 4 (reporting that 10% of respondents to poll by Physician's Management Magazine admitted to assisting suicide in some way).

The figures are considerable higher in some subspecialties. According to a 1995 study of San Francisco Bay Area AIDS physicians, more than half of 188 doctors polled acknowledged having helped at least one patient to hasten his death. Henry, *supra* note 14, at 38.

doctors who have helped their patients end their lives have appeared both in professional journals[58] and in the daily press.[59]

The debate over whether terminally ill patients should have a right to reject medical treatment or to receive aid from their physicians in hastening their deaths has taken on a new prominence as a result of a number of developments. Two hundred years ago when America was founded and more than one hundred years ago when the Fourteenth Amendment was adopted, Americans died from a slew of illness and infirmities that killed their victims quickly but today are almost never fatal in this nation --- scarlet fever, cholera, measles, diarrhea, influenza, pneumonia, gastritis, to name a few. Other diseases that have not been conquered can now often be controlled for years, if not decades --- diseases such as diabetes, muscular dystrophy, Parkinson's disease, cardiovascular disease, and certain types of cancer. As a result, Americans are living longer, and when they finally succumb to illness, lingering longer, either in great pain or in a stuporous, semi-comatose condition that results from the infusion of vast amounts of

---

Med. 691, 693 (1991); *It's Over, Debbie*, 259 J. Am. Med. Assoc. 272 (1988) (anonymous letter from doctor/author who administered a fatal dosage of morphine to a patient dying, painfully, of ovarian cancer, who asked for assistance).

[59] *See, e.g.*, Andrew Malcolm, To Suffer a Prolonged Illness or Elect to Die: A Case Study, N.Y. Times, Dec. 16, 1984, § 1, at 1, (describing woman with Lou Gehrig's disease whose death was secretly arranged to occur on a couch at home).

pain killing medications.[60] Despite the marvels of technology, Americans frequently die with less dignity than they did in the days when ravaging diseases typically ended their lives quickly. AIDS, which often subjects its victims to a horrifying and drawn-out demise, has also contributed to the growing number of terminally ill patients who die protracted and painful deaths.

[4] One result has been a growing movement to restore humanity and dignity to the process by which Americans die.[61] The now recognized right to refuse or terminate treatment and the emergent right to receive medical assistance in hastening one's death are inevitable consequences of changes in the causes of death, advances in medical science, and the development of new technologies. Both

---

[60] As a result of medical advances, most Americans now die from slow acting ailments such as heart disease, cancer, and cerebrovascular disease. One in every two Americans dies of a disease diagnosed at least 29 months in advance; chronic conditions were the cause of more than 87% of the deaths in 1978. G. Steven Neeley, *Chaos In the "'Laboratory' of the States": The Mounting Urgency in The Call for Judicial Recognition of a Constitutional Right to Self-Directed Death*, 26 U. Tol. L. Rev. 81, * 3 (1994).

[61] Most Americans used to die at home, in the comfort of familiar surroundings, with their loved ones around them. No longer. In 1939, only 37 percent of Americans died in hospitals or nursing homes. Cathaleen A. Roach, *Paradox and Pandora's Box: The Tragedy of Current Right-To Die Jurisprudence*, 25 U. Mich. J. L. Ref. 133, 154 (1991). Today, by contrast, between 80 and 85 percent of Americans die in institutions. *Id. citing* President's Comm'n for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research, Deciding to Forego Life-Sustaining Treatment 17-18 (1983). About 70 percent of those who die in institutions do so after a decision to hasten their death by withholding or withdrawing medical treatment or technology. *Id. citing* Lisa Belkin, As Family Protests, Hospital Seeks an End to Woman's Life Support, N.Y. Times, Jan. 10, 1991, at A1.

the need and the capability to assist individuals end their lives in peace and dignity have increased exponentially.[62]

E.

Prior Court Decisions

[5] Next we examine previous Court decisions that delineate the boundaries of substantive due process. We believe that a careful examination of these decisions demonstrates that there is a strong liberty interest in determining how and when one's life shall end, and that an explicit recognition of that interest follows naturally, indeed inevitably, from their reasoning.

The essence of the substantive component of the Due Process Clause is to limit the ability of the state to intrude into the most important matters of our lives, at least without substantial justification.[63] In a long line of cases, the Court has carved out certain key moments and decisions in individuals' lives and placed them beyond the general prohibitory authority of the state. The Court has recog-

---

[62] As a sidenote, President Francois Mitterrand of France, acknowledged universally as one of the contemporary world's greatest leaders, recently decided to hasten his death, only a short time after his voluntary retirement from office. He did so, after consulting with his doctor, by ceasing to take the medication that had not only been keeping him alive, but had enabled him to perform most of life's important tasks. As his doctor told him would be the case, he died three days later. President Mitterrand's decision was widely publicized and his final act was generally considered an act of courage and dignity. *See* Scott Kraft, Forsaking Cancer Medication, Mitterrand Wrote Own Final Chapter, L.A. Times, Jan. 13, 1996.

[63] When we refer to the Due Process Clause in this opinion, we refer to the due process clause of the Fourteenth Amendment, whether or not we include the reference to the specific numbered amendment. The due process clause of the Fifth Amendment, of course, provides *inter alia*, similar protection against comparable invasions by the federal government.

nized that the Fourteenth Amendment affords constitutional protection to personal decisions relating to marriage, *Loving v. Virginia*, 388 U.S. 1 (1967), procreation, *Skinner v. Oklahoma*, 316 U.S. 535 (1942), family relationships, *Prince v. Massachusetts*, 321 U.S. 158 (1944), child rearing and education, *Pierce v. Society of Sisters*, 268 U.S. 510, 534-535 (1925), and intercourse for purposes other than procreation, *Griswold v. Connecticut*, 381 U.S. 479 (1965). The Court has recognized the right of individuals to be free from government interference in deciding matters as personal as whether to bear or beget a child, *Eisenstadt v. Baird*, 405 U.S. 438 (1972), and whether to continue an unwanted pregnancy to term, *Roe v. Wade*, 410 U.S. 113 (1973).[64]

[6] A common thread running through these cases is that they involve decisions that are highly personal and intimate, as well as of great importance to the individual.[65] Certainly, few decisions are more personal,

---

[64] The dissent points to language in *Palko v. Connecticut*, 302 U.S. 319, 325 (1937), referring to liberty interests that are such that "neither liberty nor justice would exist if they were sacrificed." That language, however, has never been applied literally. It would be difficult, if not impossible, for any fundamental right or liberty interest to meet such a standard. One could hardly argue for example that neither liberty nor justice would survive if contraceptives were banned, as they were for most of our history. Nor, indubitably, would even the most vigorous proponent of abortion rights argue that neither liberty nor justice existed in this nation prior to *Roe*.

[65] In this respect, *Bowers v. Hardwick*, 478 U.S. 186 (1986), would appear to be aberrant and to turn on the specific sexual act at issue. In *Bowers*, the Court held that the Constitution does not "confer[ ] a fundamental right upon homosexuals to engage in [homosexual] sodomy." 478 U.S. at 190. We do not believe that the *Bowers* holding controls the outcome here or is in any way inconsistent with our conclusion that there is a liberty interest in dying peacefully and with dignity. We also note, without surprise, that in the decade since

intimate or important than the decision to end one's life, especially when the reason for doing so is to avoid excessive and protracted pain. Accordingly, we believe the cases from *Pierce* through *Roe* provide strong general support for our conclusion that a liberty interest in controlling the time and manner of one's death is protected by the Due Process Clause of the Fourteenth Amendment.

While the cases we have adverted to lend general support to our conclusion, we believe that two relatively recent decisions of the Court, *Planned Parenthood v. Casey*, 112 S. Ct. 2791 (1992) and *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), are fully persuasive, and leave little doubt as to the proper result.

F.

Liberty Interest under Casey

In *Casey*, the Court surveyed its prior decisions affording "constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing, and education", *id.* at 2807 and then said:

> These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.

Bowers was handed down the Court has never cited its central holding approvingly.

Id. at 2807. The district judge in this case found the Court's reasoning in *Casey* "highly instructive" and "almost prescriptive" for determining "what liberty interest may inhere in a terminally ill person's choice to commit suicide." *Compassion In Dying*, 850 F. Supp. at 1459. We agree.

[7] Like the decision of whether or not to have an abortion, the decision how and when to die is one of "the most intimate and personal choices a person may make in a lifetime," a choice "central to personal dignity and autonomy." A competent terminally ill adult, having lived nearly the full measure of his life, has a strong liberty interest in choosing a dignified and humane death rather than being reduced at the end of his existence to a childlike state of helplessness, diapered, sedated, incontinent. How a person dies not only determines the nature of the final period of his existence, but in many cases, the enduring memories held by those who love him.

Prohibiting a terminally ill patient from hastening his death may have an even more profound impact on that person's life than forcing a woman to carry a pregnancy to term. The case of an AIDS patient treated by Dr. Peter Shalit, one of the physician-plaintiffs in this case, provides a compelling illustration. In his declaration, Dr. Shalit described his patient's death this way:

> One patient of mine, whom I will call Smith, a fictitious name, lingered in the hospital for weeks, his lower body so swollen from oozing Kaposi's lesions that he could not walk, his genitals so swollen that he required a catheter to drain his bladder, his fingers gangrenous from clotted arteries. Patient Smith's friends stopped visiting him because it gave them nightmares. Patient Smith's agonies could not be relieved by medication or by the

> excellent nursing care he received. Patient Smith begged for assistance in hastening his death. As his treating doctor, it was my professional opinion that patient Smith was mentally competent to make a choice with respect to shortening his period of suffering before inevitable death. I felt that I should accommodate his request. However, because of the statute, I was unable to assist him and he died after having been tortured for weeks by the end-phase of his disease.[66]

For such patients, wracked by pain and deprived of all pleasure, a state-enforced prohibition on hastening their deaths condemns them to unrelieved misery or torture. Surely, a person's decision whether to endure or avoid such an existence constitutes one of the most, if not the most, "intimate and personal choices a person may make in a lifetime," a choice that is "central to personal dignity and autonomy." *Casey*, 112 S. Ct. at 2807. Surely such a decision implicates a most vital liberty interest.

G.

Liberty Interest under Cruzan

In *Cruzan*, the Court considered whether or not there is a constitutionally-protected, due process liberty interest in terminating unwanted medical treatment. The Court said that an affirmative answer followed almost inevitably from its prior decisions holding that patients have a liberty interest in refusing to submit to specific medical procedures. Those cases include *Jacobsen v. Massachusetts*, 197 U.S. 11, 24-30 (1905), in which the Court balanced an individual's liberty interest in declining an unwanted small pox vaccine against the State's interest in preventing disease; *Washington v. Harper*, 494 U.S. 210, 221-222, in which the Court said: "The forcible injection

---

[66] Declaration of Peter Shalit, M.D., at 5-6.

of medication into a nonconsenting person's body represents a substantial interference with that person's liberty"; and *Parham v. J.R.*, 442 U.S. 584, 600 (1979), in which it said: "[A] child, in common with adults, has a substantial liberty interest in not being confined unnecessarily for medical treatment". Writing for a majority that included Justices O'Connor and Scalia, Chief Justice Rehnquist said that those cases helped answer the first critical question at issue in *Cruzan*, stating: "The principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be *inferred* from our prior decisions." *Cruzan*, 497 U.S. at 278 (emphasis added).[67]

---

[67] In a passage that has caused confusion among commentators, the Chief Justice later said that the Court would assume the existence of a constitutionally protected *right* to reject life-sustaining delivery of food and water for purposes of deciding the controversy presented in *Cruzan*. The Court stated:

> Although we think the logic of the cases discussed above would embrace such a liberty interest, the dramatic consequences involved in refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible. But for purposes of this case, we *assume* that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition.

Cruzan, 497 U.S. at 279 (emphasis added). The passage is not inconsistent with, nor does it undermine, the Court's earlier statement that a due process liberty *interest* may be inferred from its prior holdings. Rather, the Court found a liberty *interest* and assumed a liberty *right*. That is, the Court recognized that an overall deprivation of the liberty interest would not be permissible and then assumed for purposes of deciding the ultimate issue before it that in the circumstances presented by *Cruzan* the interest resulted in a constitutional right and the state could not prohibit its exercise. *Cruzan*, 497 U.S. at 279. The ultimate question before the Court was whether or not

In her concurrence, Justice O'Connor explained that the majority opinion held (implicitly or otherwise) that a liberty interest in refusing medical treatment extends to all types of medical treatment from dialysis or artificial respirators to the provision of food and water by tube or other artificial means. As Justice O'Connor said: "I *agree* that a protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions, and that the refusal of artificial delivery of food and water is encompassed in that liberty interest." *Cruzan*, 497 U.S. 261, 287, 287 (O'Connor, J., concurring) (emphasis added).

Justice O'Connor further concluded that under the majority's opinion, "[r]equiring a competent adult to endure such procedures against her will burdens the patient's liberty, dignity, and freedom to determine the course of her own treatment." *Id.* at 289 (O'Connor, J., concurring). In the majority opinion itself, Chief Justice Rehnquist made a similar assertion, writing:

> *The choice between life and death is a deeply personal decision of obvious and overwhelming finality.* We believe Missouri may legitimately seek to safeguard the personal element of this choice through the imposition of heightened evidentiary requirements. *It cannot be disputed that the Due Process Clause protects an interest in life as well as an interest in refusing life-sustaining medical treatment.*

Cruzan, 497 U.S. at 281 (emphasis added).

Missouri could constitutionally require clear and convincing evidence of a comatose patient's previously stated wish not to be kept alive by artificial provision of food and water. The Court answered that question in the affirmative.

[8] These passages make it clear that *Cruzan* stands for the proposition that there is a due process liberty interest in rejecting unwanted medical treatment, including the provision of food and water by artificial means.[68] Moreover, the Court majority clearly recognized that granting the request to remove the tubes through which Cruzan received artificial nutrition and hydration would lead

---

[68] Justice Scalia, despite explicitly joining the majority opinion appears to assert that a person has no liberty interest in rejecting forced nourishment, at least when doing so is tantamount, in his opinion, to committing suicide. *Cruzan*, 497 U.S. at 293-94 (Scalia, J., concurring). We have two comments in response to that assertion. First, we interpret Justice Scalia's statement as setting forth his view on a somewhat different point — one that the Court explicitly did not decide — when, whether, and under what circumstances Nancy Cruzan's exercise of a liberty interest could be prohibited by the state. Second, if we are wrong and Justice Scalia intended his statement to reflect an opposite view of the majority opinion to that stated by Justice O'Connor, his expression of his individual view cannot serve to change the opinion itself. In our view, Justice O'Connor's interpretation of the opinion is correct. Moreover, Justice Brennan, in a dissent joined by Justices Marshall and Blackmun, concluded that Nancy Cruzan has "a fundamental right to be free from unwanted artificial nutrition and hydration," *id.* at 302, as did Justice Stevens in his dissent, *id.* at 343. Thus, at least eight of the justices recognized a strong due process liberty interest in rejecting unwanted medical treatment, including the artificial provision of food and water.

Even if, however, the majority opinion had only recognized a liberty interest in refusing unwanted medical treatment without deciding whether or not that liberty interest encompasses the rejection of the artificial provision of food and water, five justices (Justice O'Connor, in her concurrence, and the four dissenting justices) still clearly found a liberty interest in rejecting the artificial provision of food and water. The Supreme Court has previously recognized that concurring and dissenting justices can constitute a controlling majority on a particular issue, at least where that view does not conflict with the holding of the majority. Here, there is no conflict of any kind with the majority opinion. *Marks v. United States*, 430 U.S. 188, 194 n.8 (1977).

inexorably to her death. *Cruzan*, 497 U.S. at 267-68, 283.[69] Accordingly, we conclude that *Cruzan*, by recognizing a liberty interest that includes the refusal of artificial provision of life-sustaining food and water, necessarily recognizes a liberty interest in hastening one's own death.[70]

H.

Summary

[9] *Casey* and *Cruzan* provide persuasive evidence that the Constitution encompasses a due process liberty interest in controlling the time and manner of one's death — that there is, in short, a constitutionally recognized "right to die." Our conclusion is strongly influenced by, but not limited to, the plight of mentally competent, terminally ill adults. We are influenced as well by the plight of others, such as those whose existence is reduced to a vegetative state or a permanent and irreversible state of unconsciousness. *See* note 68 *supra*.

[10] Our conclusion that there is a liberty interest in determining the time and manner of one's death does not

---

[69] It is also clear that the proposition recognized by *Cruzan* is one of general applicability and not limited to the terminally ill. *Id.* at 278. Indeed, Nancy Cruzan was not terminally ill, and as the Court noted, "[m]edical experts testified that she could live another thirty years." *Cruzan*, 497 U.S. at 266 n.1. Thus, the Court *could not* have resolved the case as it did by finding a liberty interest only in the terminally ill.

[70] Prior to the Court's decision in *Cruzan*, more than 15 states specifically prohibited implementing an advance directive that would have led to the termination of artificial nutrition and hydration. Alan Meisel, *The Right to Die* 369 & n.63 (1989). A few years after *Cruzan*, however, only a few states still prohibited the termination of nutrition and hydration as part of a living will, a prohibition that is probably unconstitutional under *Cruzan*. Alan Meisel, *The Right to Die; 1994 Cumulative Supplement No. 2* 395-99 (1994).

mean that there is a concomitant right to exercise that interest in all circumstances or to do so free from state regulation. To the contrary, we explicitly recognize that some prohibitory and regulatory state action is fully consistent with constitutional principles.

In short, finding a liberty interest constitutes a critical first step toward answering the question before us. The determination that must now be made is whether the state's attempt to curtail the exercise of that interest is constitutionally justified.

V.

Relevant Factors and Interests

To determine whether a state action that impairs a liberty interest violates an individual's substantive due process rights we must identify the factors relevant to the case at hand, assess the state's interests and the individual's liberty interest in light of those factors, and then weigh and balance the competing interests. The relevant factors generally include: 1) the importance of the various state interests, both in general and in the factual context of the case; 2) the manner in which those interests are furthered by the state law or regulation; 3) the importance of the liberty interest, both in itself and in the context in which it is being exercised; 4) the extent to which that interest is burdened by the challenged state action; and, 5) the consequences of upholding or overturning the statute or regulation.

A.

The State's Interests

We analyze the factors in turn, and begin by considering the first: the importance of the state's interests. We identify six related state interests involved in the controversy before us: 1) the state's general interest in

preserving life; 2) the state's more specific interest in preventing suicide; 3) the state's interest in avoiding the involvement of third parties and in precluding the use of arbitrary, unfair, or undue influence; 4) the state's interest in protecting family members and loved ones; 5) the state's interest in protecting the integrity of the medical profession; and, 6) the state's interest in avoiding adverse consequences that might ensue if the statutory provision at issue is declared unconstitutional.[71]

---

[71] The majority of the three-judge panel identified five state interests. First, "[t]he interest in not having physicians in the role of killers of their patients." Second, "[t]he interest in not subjecting the elderly and even the not-elderly but infirm to psychological pressure to consent to their own deaths." Third, "[t]he interest in protecting the poor and minorities from exploitation." Fourth, "[t]he interest in protecting all of the handicapped from societal indifference and apathy." Fifth, "[a]n interest in preventing abuse similar to what has occurred in the Netherlands where, since 1984, legal guidelines have tacitly allowed assisted suicide or euthanasia in response to a repeated request from a suffering, competent patient." *Compassion In Dying*, 49 F.3d at 592-93. The district court, by contrast, employing more dispassionate and traditional terms, identified two somewhat broader state interests: preventing suicide and preventing undue influence and abuse. *Compassion In Dying*, 850 F. Supp. at 1464-65.

In two substituted judgment cases about halting the life-sustaining treatment of patients who were in or almost in a vegetative state, the Washington Supreme Court listed four possible countervailing state interests: 1) the preservation of life; 2) the protection of the interests of innocent third parties; 3) the prevention of suicide; and 4) the maintenance of the integrity of the medical profession. *In re Guardianship of Grant*, 747 P.2d 455, 451 (Wash. 1987); *In re Colyer*, 660 P.2d. 738, 743 (Wash. 1983).

In *Superintendent of Belchertown State School v. Saikewicz*, 373 Mass. 728 (1977), one of several state supreme court cases discussed in *Cruzan*, the state court found four state interests: preservation of life, protection of the interests of innocent third parties, the prevention

1. Preserving Life

The state may assert an unqualified interest in preserving life in general. As the Court said in *Cruzan*, "we think a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life . . ." *Cruzan*, 497 U.S. at 282. Thus, the state may assert its interest in preserving life in all cases, including those of terminally ill, competent adults who wish to hasten their deaths.

Although the state's interest in preserving life may be unqualified, and may be asserted regardless of the quality of the life or lives at issue, that interest is not always controlling.[72] Nor is it of the same strength in each case. To the contrary, its *strength* is dependent on relevant circumstances, including the medical condition and the wishes of the person whose life is at stake.

Most tellingly, the state of Washington has already decided that its interest in preserving life should ordinarily give way — at least in the case of competent, terminally ill adults who are dependent on medical treatment — to the wishes of the patients. In its Natural Death Act, RCW 70.122.020 *et seq.*, Washington permits adults to have "life-sustaining treatment withheld or withdrawn in instances of a terminal condition or permanent unconscious-

---

of suicide, and the maintenance of the ethical integrity of the medical profession. *Cruzan*, 497 U.S. at 271.

[72] Were it otherwise no state could administer capital punishment; similarly, the draft, as well as the defense budget, would be unconstitutional.

ness." RCW 70.122.010.[73] In adopting the statute, the Washington legislature necessarily determined that the state's interest in preserving life is not so weighty that it ought to thwart the informed desire of a terminally ill, competent adult to refuse medical treatment.

Not only does Washington law acknowledge that terminally ill and permanently unconscious adults have a right to refuse life-sustaining treatment, the statute includes specific legislative findings that appear to recognize that a due process liberty interest underlies that right. The statute states:

> The legislature finds that adult persons have the fundamental right to control the decisions relating to the rendering of their own medical care, including the decision to have life-sustaining procedures withheld or withdrawn in instances of terminal condition.
>
> The legislature further finds that modern medical technology has made possible the artificial prolongation of human life beyond natural limits.
>
> The legislature further finds that, in the interest of protecting individual autonomy, such prolongation of life for persons with a terminal condition may cause

[73] The statute, enacted in 1979, includes the following definition of terminal condition:

> "Terminal condition" means an incurable and irreversible condition caused by injury, disease, or illness, that, within reasonable medical judgment will cause death within a reasonable period of time in accordance with accepted medical standards, and where the application of life-sustaining treatment serves only to prolong the process of dying.

RCW 70.122.020(9).

> loss of patient dignity, and unnecessary pain and suffering, while providing nothing medically necessary or beneficial to the patient.

RCW 70.122.010.[74]

The Washington statute permits competent adults to reject life-sustaining medical treatment in advance by means of living wills and durable powers of attorney. RCW 70.122.010-030. Even in cases in which the Washington Natural Death Act does not authorize surrogate decision-making, the Washington Supreme Court has found that legal guardians may sometimes have life-sustaining treatment discontinued. *In re Guardianship of Grant*, 747

[74] Other states have recognized liberty interests similar to those recognized by Washington. *See e.g.* Ala. Code § 22-8A-2 (1995) (stating that adults have a "fundamental right" to control decisions relating to the rendering of their own medical care even when no longer able to participate actively in those decisions); Alaska Stat. § 18.12.100 (1995) (recognizing that some medical procedures "serve only to prolong the dying process"); Cal. Health & Safety Code § 7185.5 (West 1996) (finding that adults have "fundamental right" to control decisions affecting their medical care and recognizing that continued, unwanted medical treatment "violate[s] patient dignity and cause[s] unnecessary pain and suffering, while providing nothing medically necessary or beneficial to the person"); Ga. Code Ann. § 3132-1 (1995) (protecting patient autonomy from loss of dignity and unnecessary pain and suffering); 19 Haw. Rev. Stat. § 327D-1 (recognizing that "artificial prolongation of life for persons with a terminal condition . . . secure[s] only a precarious and burdensome existence"); La. Rev. Stat. Ann. § 1299.58.1 (West 1995) (stating that unwanted artificial prolongation causes a "loss of individual and personal dignity and secure[s] only a precarious and burdensome existence while providing nothing medically necessary or beneficial"); Nev. Rev. Stat. § 449.570 (1991) (recognizing unwanted treatment only prolongs dying process); Utah Code Ann. § 752-1102 (1995) (finding that all persons should be entitled "to die with a maximum of dignity and a minimum of pain").

P.2d 445 (Wash. 1987); *In re Colyer*, 660 P.2d 738 (Wash. 1983).[75]

There is nothing unusual about Washington's recognition that the state's interest in preserving life is not always of the same force and that in some cases at least other considerations may outweigh the state's.[76] More than 40 other states have adopted living will statutes that permit competent adults to declare by advance directive that they do not wish to be kept alive by medical treatment in the latter stages of a terminal illness.[77] Like Washington,

---

[75] A "living will" permits a competent adult to direct in advance that under certain specific circumstances future life-sustaining treatment should be withheld or terminated. A "durable power of attorney" for health care decisions allows a competent adult to designate someone else to make future medical decisions for him should he lose the capacity to make them himself. In cases in which an incompetent individual has not completed a living will or executed a durable power of attorney, some states permit the courts to appoint a guardian to make medical decisions on his behalf.

[76] In *Grant*, the Washington Supreme Court said that the state's interest in preserving life "weakens considerably, however, if treatment will merely postpone death for a person with a terminal and incurable condition." 747 P.2d at 451; In *Colyer*, the Washington Supreme Court held that the state's interest in preserving life "weakens, however, in situations where continued treatment only serves to prolong a life inflicted with an incurable condition." 660 P.2d at 743.

Stat. § 35-22-101(a)(ix) (1988 & Supp. 1992); see also Uniform Rights of the Terminally Ill Act, § 1(9), 9B U.L.A. 96, 98 (Supp. 1992).

they become permanently and irreversibly unconscious.[78]

---

[78] Meisel, *supra* note 77, (1989 & 1994 Supp. No. 2) § 11.12 notes that the Uniform Rights of the Terminally Ill Act permits the foregoing of treatment when the patient is in a persistent vegetative state. Meisel also states:

> An increasing number of states now define *terminal condition* to include permanent or persistent vegetative state and/or irreversible coma. *See, e.g.*, Conn. Gen. Stat. Ann. § 19a-570(3) (West Supp. 1993); Fla. Stat. Ann. § 765.101(17)(b) (West Supp. 1993); Iowa Code Ann. § 144A/2(8) (West 1989 & Supp.) (state of permanent unconsciousness); La. Rev. Stat. Ann. § 40:1299.58.2(7) (West 1992); Neb. Rev. Stat. § 20-403(11) (Supp. 1992); Nev. Rev. Stat. Ann. § 449.590 (Michie 1991); Ohio Rev. code Ann. § 2133.01(U) (Anderson Supp. 1991); R.I. Gen. Laws § 23.411-2(h) (Supp. 1992); Tenn. Code Ann. § 32-11-103 (9) (Supp. 1991); Va. Code Ann. § 54.1-2982 (Michie Supp. 1992). Other statutes reach the same result by defining *qualified patient* as one who is in a terminal condition or a persistent vegetative state. *See, e.g.*, Cal. Health & Safety Code § 7186(h) (west Supp. 1992); Colo. Rev. Stat. § 15-18-103(9) (1987 & Supp. 1992); Iowa Code Ann. § 144A.2(7) (West 1989 & Supp.); Me. Rev. Stat. Ann. titl. 18A, § 5 701(b)(7) (West Supp. 1991); Neb. Rev. Stat. § 20-403(9) (Supp. 1992); Nev. Rev. Stat. Ann. § 449.585 (Michie Supp. 1991); N.H. Rev. Stat. Ann. § 137-H:2(V) (Supp. 1992); Ohio Rev. Code Ann. § 2133.01(Z) (Anderson Supp. 1991); Okla. Stat. Ann. titl. 63, § 3101.3(10) (West Supp. 1993); Or. Rev. Stat. Ann. § 127.605(5) (1990); 20 Pa. Cons. Stat. Ann. § 5403 (Supp.); Tex. Health & Safety code Ann. § 672.002(8) (West 1992); Wash. Rev. Code Ann. § 70.122.020(8) (West Supp.); Wis. Stat. Ann. § 154.01(6) (West 1989 & 1992 Supp.). The amended Hawaii statute, however, achieves this result by deleting the definition of "qualified patient" and adding a definition of "permanent loss of the ability to communicate concerning medical treatment decisions" which includes being in a persistent vegetative state or a deep coma or having a permanent loss of the capacity to participate in medical treatment decisions. *See* Haw. Rev. Stat. Ann. § 327D-2 (1991). Still other statutes reach the same result by including a separate definition of *persistent vegetative state* or *permanent unconsciousness*. *See, e.g.*, Conn. Gen. Stat. Ann. § 19a-570(4) (West Supp. 1993); Ga. Code Ann. § 31-32-2(9) (1991 & Supp. 1992); Me. Rev. Stat. Ann. titl. 18A, § 5-701(b)(10) (West Supp. 1991); Md. Health-Gen. code Ann. § 5-601(0); Neb. Rev. Stat. § 20-403(6) (Supp. 1992); N.H. Rev. Stat. Ann. § 137-H:2(VII) (Supp. 1992); N.J. Stat. Ann. § 26:2H-55 (West Supp. 1992); Okla. Stat. Ann. tit. 63, § 3101.3(7) (West Supp. 1993) (defines *persistently unconscious*); 20 Pa. Cons. Stat. Ann. § 5403 (Supp.); S.C. Code Ann. § 44-77-20(7) (Law. Co-op Supp. 1991); Utah Code Ann. § 75-2-1103(8) (Michie Supp. 1993); Va. Code Ann. § 54.1-2982 (Michie supp. 1992); Wash. Rev. Code Ann. § 70.122.020(6) (West Supp.) (permanent unconscious condition); Wis. Stat. Ann. § 154.01(5m) (West 1989 & Supp. 1992); Wyo. Stat. § 35-22-101(a)(v) (1988 & Supp. 1992) ("irreversible coma").

Id.

Also, like Washington, many states allow patients to delegate decision-making power to a surrogate through a durable power of attorney, health care proxy, or similar device, or permit courts to appoint surrogate decision-makers.[79] Finally, Congress favors permitting adult patients to refuse life-sustaining treatment by advance directive and requires hospitals receiving federal financial support to notify adult patients of their rights to execute such instruments upon admission.[80]

---

[79] Meisel, *supra* note 77, *1994 Cumulative Supplement No. 2*, §§ 10A.1-10A.2.

[80] The Federal Patient Self-Determination Act, passed in 1990, requires all health care providers receiving Medicaid or Medicare to inform all competent adult patients, even those admitted for the simplest of procedures, about state laws on advance directives and to record any advance directives the patient might have. Omnibus Budget Reconciliation Act of 1990, Pub. L. No. 101-508, § 4206, 104 Stat. 1388-115 (codified at 42 U.S.C.A. § 1395cc(f)) (West 1992 & Supp. 1995).

[11] As the laws in state after state demonstrate, even though the protection of life is one of the state's most important functions, the state's interest is dramatically diminished if the person it seeks to protect is terminally ill or permanently comatose and has expressed a wish that he be permitted to die without further medical treatment (or if a duly appointed representative has done so on his behalf). When patients are no longer able to pursue liberty or happiness and do not wish to pursue life, the state's interest in forcing them to remain alive is clearly less compelling. Thus, while the state may still seek to prolong the lives of terminally ill or comatose patients or, more likely, to enact regulations that will safeguard the manner in which decisions to hasten death are made, the strength of the state's interest is substantially reduced in such circumstances.

2. Preventing Suicide

a.

While the state's general commitment to the preservation of life clearly encompasses the prevention of suicide, the state has an even more particular interest in deterring the taking of one's own life. The fact that neither Washington nor any other state currently bans suicide, or attempted suicide, does not mean that the state does not have a valid and important interest in preventing or discouraging that act.

During the course of this litigation, the state has relied on its interest in the prevention of suicide as its primary justification for its statute.[81] The state points to statistics concerning the rate of suicide among various age groups,

[81] For that reason, we include in this section an analysis, a large portion of which could just as appropriately have been included in the preceding section, treating the state's interest in preserving life.

particularly the young. *Compassion In Dying*, 850 F. Supp. at 1464. As the state notes, in 1991, suicide was the second leading cause of death after accidents for the age groups 15-19, 20-24, and 25-34 and one of the top five causes of death for age groups 35-44 and 45-54.[82] These figures are indeed distressing.

Although suicide by teenagers and young adults is especially tragic, the state has a clear interest in preventing anyone, no matter what age, from taking his own life in a fit of desperation, depression, or loneliness or as a result of any other problem, physical or psychological, which can be significantly ameliorated. Studies show that many suicides are committed by people who are suffering from treatable mental disorders. Most if not all states provide for the involuntary commitment of such persons if they are likely to physically harm themselves. For similar reasons, at least a dozen states allow the use of nondeadly force to prevent suicide attempts.[83]

[12] While the state has a legitimate interest in preventing suicides in general, that interest, like the state's interest in preserving life, is substantially diminished in the case of

[82] Washington State Dep't of Health, *Washington State Annual Summary of Vital Statistics 1991* (October, 1992).

[83] *See* Alaska Stat. § 11.81.430(a)(4) 1983; Ark. Code Ann. § 5-2-605(4) (1987); Colo. Rev. Stat. § 18-1-703(1)(d) (1986); Haw. Rev. Stat. § 703-308(1) (1985); Ky. Rev. Stat. § 503.100(1)(a) (1985); Mo. Ann. Stat. § 563.016(5) (Vernon 1979); N.H. Rev. Stat. § 627:6(vi); N.J. Stat. Ann. § 2C:3-7(e) (West 1982); N.Y. Penal § 35.10(4) (McKinney 1987); Or. Rev. § 161.209 (Repl. 1983); 18 Pa. Cons. Stat. Ann. § 508(d) (Purdon 1983); Wis. Stat. Ann. § 939.48(5) (West 1982).

terminally ill, competent adults who wish to die.[84] One of the heartaches of suicide is the senseless loss of a life ended prematurely. In the case of a terminally ill adult who ends his life in the final stages of an incurable and painful degenerative disease, in order to avoid debilitating pain and a humiliating death, the decision to commit suicide is not senseless, and death does not come too early.[85] Unlike "the depressed twenty-one year old, the romantically devastated twenty-eight year old, the alcoholic forty-year old," *Compassion In Dying*, 49 F.3d at 590-91, or many others who may be inclined to commit suicide, a terminally ill competent adult cannot be cured. While some people who contemplate suicide can be restored to a state of physical and mental well-being, terminally ill adults who wish to die can only be maintained in a debilitated and deteriorating state, unable to enjoy the presence of family or friends. Not only is the state's interest in preventing such individuals from hastening their deaths of comparatively little weight, but its insistence on frustrating their

---

[84] For an extended discussion of the arguments for and against legalizing physicians-assisted suicide, see generally The New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* (May 1994) and Michigan Commission On Death and Dying, *Final Report*, (June 1994). The New York States Task Force recommended retaining that state's prohibition on assisted suicide; the Michigan Commission recommended decriminalizing physician-assisted suicide under some circumstances.

[85] Many terminally ill patients would probably identify with Marcus Aurelius, a Roman emperor and stoic philosopher, who wrote: "It is a shame when the soul is first to give way in this life, and the body does not give way." Marcus Aurelius, *Meditations*, In Marcus Aurelius and His Times 61 (G. Long trans., 1973).

wishes seems cruel indeed.[86] As Kent said in *King Lear*, when signs of life were seen in the dying monarch:

> Vex not his ghost: O! let him pass; he hate him
> That would upon the rack of this tough world Stretch
> him out longer.[87]

b.

[13] The state has explicitly recognized that its interests are frequently insufficient to override the wishes of competent, terminally ill adult patients who desire to bring their lives to an end with the assistance of a physician. Step by step, the state has acknowledged that terminally ill persons are entitled in a whole variety of circumstances to hasten their deaths, and that in such cases their physicians may assist in the process. Until relatively recently, while physicians routinely helped patients to hasten their deaths, they did so discreetly because almost all such assistance was illegal. However, beginning about twenty years ago a series of dramatic changes took place. Each provoked the type of division and debate that surrounds the issue

---

[86] While recognizing the state's general interest in preventing suicide, the district court in this case said that it did not apply in the case of terminally ill, competent adults who wished to hasten their deaths. The court said:

> As to them, preventing suicide simply means prolonging a dying person's suffering, an aim in which the State can have no interest. In other words, the State's legitimate interest in preventing suicide is not abrogated by allowing mentally competent terminally ill patients to freely and voluntarily commit physician-assisted suicide.

Compassion In Dying, 850 F. Supp. at 1464.

[87] *King Lear*, act V. sc. iii, ll. 314-316, cited in Richard Posner, *Age and Old Age* 239 & n. 11 (1995).

before us today. Each time the state's interests were ultimately subordinated to the liberty interests of the individual, in part as a result of legal actions and in part as a result of a growing recognition by the medical community and society at large that a more enlightened approach was essential.

The first major breakthrough occurred when the terminally ill were permitted to reject medical treatment.[88] The line was drawn initially at extraordinary medical treatment because the distinction between ordinary and extraordinary treatment appeared to some to offer the courts an objective, scientific standard that would enable them to recognize the right to refuse certain medical treatment without also recognizing a right to suicide or euthanasia.[89] That distinction, however, quickly proved unworkable, and after a while, terminally ill patients were allowed to reject *both* extraordinary and ordinary treatment. For a while, *rejection* of treatment, often through "do not resuscitate" orders, was permitted, but *termination* was not. This dividing line, which rested on the illusory distinction between commission and omission (or active and passive), also appeared for a short time to offer a natural point of repose for doctors, patients and the law. However, it, too, quickly proved untenable, and ultimately patients were allowed both to *refuse* and to *terminate* medical treat-

---

[88] *See, e.g., Satz v. Perlmutter*, 362 So.2d 160 (Fla. Dist. Ct. App. 1978), *aff'd*, 379 So.2d 359 (Fla. 1980).

[89] Lawrence H. Tribe, *Governmental Control Over the Body: Decisions About Death and Dying*, American Constitutional Law § 15-11 (2d ed. 1988).

ment,[90] ordinary as well as extraordinary. Today, many states also allow the terminally ill to order their physicians to discontinue not just traditional medical treatment but the artificial provision of life-sustaining food and water, thus permitting the patients to die by self-starvation. Equally important, today, doctors are generally permitted to administer death-inducing medication, as long as they can point to a concomitant pain-relieving purpose.

In light of these drastic changes regarding acceptable medical practices, opponents of physician-assisted suicide must now explain precisely what it is about the physician's conduct in assisted suicide cases that distinguishes it from the conduct that the state has explicitly authorized. The state responds by urging that physician-assisted suicide is different in kind, not degree, from the type of physician-life-ending conduct that is now authorized, for three separate reasons. It argues that "assisted suicide": 1) requires doctors to play an active role; 2) causes deaths that would not result from the patient's underlying disease; and 3) requires doctors to provide the causal agent of patients' deaths.

The distinctions suggested by the state do not individually or collectively serve to distinguish the medical practices society currently accepts. The first distinction — the line between commission and omission — is a distinction without a difference now that patients are

---

[90] *See* Alan Meisel, *The Right to Die* § 4.4 "Withholding and Withdrawing Treatment" (1989). *See also In Re Conroy*, 486 A.2d 1209, 1234 (N.J. 1985) (noting that "from a policy standpoint, it might well be unwise to forbid persons from discontinuing a treatment under circumstances in which the treatment could permissibly be withheld. Such a rule could discourage families and doctors from even attempting certain types of care and could thereby force them into hasty and premature decisions to allow a patient to die.").

permitted not only to decline all medical treatment, but to instruct their doctors to *terminate* whatever treatment, artificial or otherwise, they are receiving. In disconnecting a respirator, or authorizing its disconnection, a doctor is unquestionably *committing* an act; he is taking an active role in bringing about the patient's death. In fact, there can be no doubt that in such instances the doctor intends that, as the result of his action, the patient will die an earlier death than he otherwise would.

Similarly, drawing a distinction on the basis of whether the patient's death results from an underlying disease no longer has any legitimacy. While the distinction may once have seemed tenable, at least from a metaphysical standpoint, it was not based on a valid or practical legal foundation and was therefore quickly abandoned. When Nancy Cruzan's feeding and hydration tube was removed, she did not die of an underlying disease. Rather, she was allowed to starve to death.[91] In fact, Ms. Cruzan was not

---

[91] As the Missouri Supreme Court starkly put it:

> This is also a case in which euphemisms readily find their way to the fore, perhaps to soften the reality of what is really at stake. But this is not a case in which we are asked to let someone die. Nancy is not dead. Nor is she terminally ill. *This is a case in which we are asked to allow the medical profession to make Nancy die by starvation and dehydration.*

Cruzan By Cruzan v. Harmon, 760 S.W.2d 408, 412 (1988) (emphasis added). The facts corroborate the Missouri Supreme Court's assertion. Nancy Cruzan was kept alive through artificial feeding for nearly eight years. After the United States Supreme Court remanded the case, a Missouri court determined that she had expressed a clear wish before her accident not to be kept alive by artificial means and ordered a halt to the artificial feeding. She died twelve days later. Cathaleen A. Roach, *Paradox and Pandora's Box: The Tragedy of Current Right-To-Die Jurisprudence*, 25 U. Mich. J.L. Ref. 133, 138 (1991), citing

even terminally ill at the time, but had a life expectancy of 30 years.[92] Similarly, when a doctor provides a conscious patient with medication to ease his discomfort while he starves himself to death -- a practice that is not only legal but has been urged as an alternative to assisted suicide[93] -- the patient does not die of any underlying ailment. To the contrary, the doctor is helping the patient end his life by providing medication that makes it possible for the patient to achieve suicide by starvation.

Nor is the state's third and final distinction valid. Contrary to the state's assertion, given current medical practices and current medical ethics, it is not possible to distinguish prohibited from permissible medical conduct on the basis of whether the medication provided by the doctor will cause the patient's death. As part of the tradition of administering comfort care, doctors have been supplying the causal agent of patients' deaths for decades. Physicians routinely and openly provide medication to terminally ill patients with the knowledge that it will have a "double

---

Cruzan v. Mouton Estate No. CV384-9P (Mo. Cir. Ct. Dec. 14, 1990). As the Missouri Supreme Court told us would be the case, it was the discontinuance of the provision of food and water, not Cruzan's accident almost eight years earlier, that caused her death. Thus, Nancy Cruzan did not die from an underlying illness, but from deliberate self-starvation.

[92] The removal of the gastronomy tube, which was clearly the precipitating cause of her death, is not considered to be the legal cause only because a judicial judgment has been made that removing the feeding tube is permissible. *See* Note, *Physician-Assisted Suicide and the Right to Die With Assistance*, 105 Harv. L. Rev. 2021, 2029-31 (1992).

[93] *See* James L. Bernat, M.D., et al., Commentary, *Patient Refusal of Hydration and Nutrition: An Alternative to Physician-Assisted Suicide or Voluntary Active Euthanasia* 153 Archives Internal Med. 2723 (1993).

effect" — reduce the patient's pain and hasten his death.[94] Such medical treatment is accepted by the medical profession as meeting its highest ethical standards.[95] It commonly takes the form of putting a

---

[94] *Decisions Near the End of Life*, a report by the Council on Ethical and Judicial Affairs of the American Medical Association, provides an informative discussion of "double effect." An abridged version of the report, published in the Journal of American Medicine described the Council's conclusions this way:

> The Council stated in its 1988 report that "the administration of a drug necessary to ease the pain of a patient who is terminally ill and suffering excruciating pain may be appropriate medical treatment even though the effect of the drug may shorten life." The Council maintains this position and further emphasizes that a competent patient must be the one who decides whether the relief from pain and suffering is worth the danger of hastening death. The principle of respect for patient autonomy and self-determination requires that patients decide about such treatment.

Council on Ethical and Judicial Affairs, American Medical Association, 54 *Decisions Near the End of Life*, 267 The Journal of the American Medical Association (April 22-29 1992).

[95] Timothy E. Quill, M.D., *Death and Dignity: Making Choices and Taking Charge* 107-108 (1993). The term "double effect" originates in Roman Catholic moral theology, which holds that it is sometimes morally justifiable to cause evil in the pursuit of good. *See* May, Double Effect, in Encyclopedia of Bioethics 316 (W. Reich ed. 1978).

See also Report of the Council on Ethical and Judicial Affairs of the American Medical Association, 10 Issues L. & Med. 91 (1994). In its report, the Council said:

> The intent of palliative treatment is to relieve pain and suffering, not to end the patient's life, but the patient's death is a possible side effect of the treatment. It is ethically acceptable for a physician to *gradually increase* the appropriate medication for a patient, realizing that the medication may

patient on an intravenous morphine drip, with full knowledge that, while such treatment will alleviate his pain, it will also indubitably hasten his death.[96] There can be no doubt, therefore, that the actual cause of the patient's death is the drug administered by the physician or by a person acting under his supervision or direction. Thus, the causation argument is simply "another bridge crossed" in the journey to vindicate the liberty interests of the terminally ill, and the state's third distinction has no more force than the other two.

c.

[4] We acknowledge that in some respects a recognition of the legitimacy of physician-assisted suicide would constitute an additional step beyond what the courts have previously approved. We also acknowledge that judicial acceptance of physician-assisted suicide would cause many sincere persons with strong moral or religious convictions great distress. Nevertheless, we do not believe that the state's interest in preventing that additional step is

---

> depress respiration and cause death.

Id. at 92 (emphasis added). The euphemistic use of "possible" and "may" may salve the conscience of the AMA, but it does not change the realities of the practice of medicine or the legal consequences that would normally flow from the commission of an act one has reason to believe will likely result in the death of another. In the case of "double effect" we excuse the act or, to put it more accurately, we find the act acceptable, not because the doctors sugarcoat the facts in order to permit society to say that they couldn't really *know* the consequences of their action, but because the act is medically and ethically appropriate even though the result — the patient's death — is both foreseeable and intended.

[96] Analgesics, most notably morphine, when applied in sufficient doses, will bring about a patient's death because they serve to repress respiration.

significantly greater than its interest in preventing the other forms of life-ending medical conduct that doctors now engage in regularly. More specifically, we see little, if any, difference for constitutional or ethical purposes between providing medication with a double effect and providing medication with a single effect, as long as one of the known effects in each case is to hasten the end of the patient's life. Similarly, we see no ethical or constitutionally cognizable difference between a doctor's pulling the plug on a respirator and his prescribing drugs which will permit a terminally ill patient to end his own life. In fact, some might argue that pulling the plug is a more culpable and aggressive act on the doctor's part and provides more reason for criminal prosecution. To us, what matters most is that the death of the patient is the intended result as surely in one case as in the other. In sum, we find the state's interests in preventing suicide do not make its interests substantially stronger here than in cases involving other forms of death-hastening medical intervention. To the extent that a difference exists, we conclude that it is one of degree and not of kind.

d.

Moreover, we are doubtful that deaths resulting from terminally ill patients taking medication prescribed by their doctors should be classified as "suicide." Certainly, we see little basis for such a classification when deaths that result from patients' decisions to terminate life support systems or to refuse life-sustaining food and water, for example, are not. We believe that there is a strong argument that a decision by a terminally ill patient to hasten by medical means a death that is already in process, should not be classified as suicide. Thus, notwithstanding the generally accepted use of the term "physician-assisted suicide," we have serious doubt that the state's interest in preventing suicide is even implicated in this case.

e.

[15] In addition to the state's purported interest in preventing suicide, it has an additional interest in preventing deaths that occur as a result of errors in medical or legal judgment. We acknowledge that it is sometimes impossible to predict with certainty the duration of a terminally ill patient's remaining existence, just as it is sometimes impossible to say for certain whether a borderline individual is or is not mentally competent.[97] However, we believe that sufficient safeguards can and will be developed by the state and medical profession, *see infra* p. 3204, to ensure that the possibility of error will ordinarily be remote. Finally, although life and death decisions are of the gravest order, should an error actually occur it is likely to benefit the individual by permitting a victim of unmanageable pain and suffering to end his life peacefully and with dignity at the time he deems most desirable.[98]

---

[97] *See generally* Harold G. Koenig, *Legalizing Physician-Assisted Suicide: Some Thoughts and Concerns*, 37 J. Fam. Prac. 171 (1993).

[98] There is some evidence that the state's efforts to prohibit assisted suicide in hopes of deterring suicide is at least partially counter-productive. As a result of the state's ban, some terminally ill adults probably commit suicide although they otherwise might not have done so and others probably commit suicide sooner than they would have done so.

In his recent book, Judge Richard Posner suggests that "permitting physician-assisted suicide . . . [in] cases of physical incapacity might actually *reduce* the number of suicides and *postpone* the suicides that occur." Posner, *infra* note 87, at 224. Judge Posner concludes that assuring such individuals that they would be able to end their lives later if they wished to, even if they became totally physically incapacitated, would deter them from committing suicide now and would also give such people a renewed peace of mind. He says that some of those individuals would eventually commit suicide but others would decide never to do so. *Id.* 243-253.

3. Avoiding the Involvement of Third Parties, and Precluding the Use of Arbitrary, Unfair, or Undue Influence

a.

A state may properly assert an interest in prohibiting even altruistic assistance to a person contemplating suicide on the grounds that allowing others to help may increase the incidence of suicide, undercut society's commitment to the sanctity of life, and, adversely affect the person providing the assistance. In addition, joint action is generally considered more serious than action by a single person. While we recognize that these concerns are legitimate, the most important -- the first two -- diminish in importance to the same extent that the state's interest in preventing the act itself diminishes. All are at their minimums when the assistance is provided by or under the supervision or direction of a doctor and the recipient is a terminally ill patient.

[16] In upholding Washington's statute, the majority of the three-judge panel relied heavily on the state's interest in preventing the exercise of undue, arbitrary or unfair influences over the individual's decision to end his life. *Compassion In Dying*, 49 F.3d at 592-93. We agree that this is an important interest, but for entirely different reasons than the majority suggests. One of the majority's prime arguments is that the statute is necessary to protect "the poor and minorities from exploitation," 49 F.3d at 592

The suicide of Nobel Prize winning physicist Percy Bridgman, recounted in one of the amicus briefs, graphically illustrates the point. Dr. Bridgman, 79, was in the final stages of cancer when he shot himself on August 20, 1961, leaving a suicide note that said: "It is not decent for society to make a man do this to himself. Probably this is the last day I will be able to do it myself." Sherman B. Nuland, *How We Die*, 152-53 (1993).

-- in other words, to protect the disadvantaged from becoming the victims of assisted suicide. This rationale simply recycles one of the more disingenuous and fallacious arguments raised in opposition to the legalization of abortion.[99] It is equally meretricious here. In fact, as with abortion, there is far more reason to raise the opposite concern: the concern that the poor and the minorities, who have historically received the least adequate health care, will not be afforded a fair opportunity to obtain the medical assistance to which they are entitled -- the assistance that would allow them to end their lives with a measure of dignity. The argument that disadvantaged persons will receive *more* medical services than the remainder of the population in one, and only one, area -- assisted suicide -- is ludicrous on its face. So, too, is the argument that the poor and the minorities will rush to volunteer for physician-assisted suicide because of their inability to secure adequate medical treatment.

Our analysis is similar regarding the argument relating to the handicapped. Again, the opponents of physician-assisted suicide urge a variation of the discredited anti-

---

[99] The argument there was that the poor and the minorities would either be persuaded to have too many abortions or would be forced to have them against their will: The fact is that the poor and the minorities have been disproportionately deprived of the opportunity to have abortions, not only because they cannot afford such operations, but because in numerous instances restrictive legislation, sponsored by those who oppose abortion rights, prohibits the use of public funds to pay for them. *See, e.g.*, 42 U.S.C. § 300a-6 (prohibiting the use of Title X grants in programs in which abortions are performed or abortion counseling is offered); *Planned Parenthood Affiliates of Cal. v. Swoap*, 173 Cal. App. 3d 1187 (Cal. Ct. App. 1985) (holding that section of state budget act containing restrictive language regarding use of family planning funds for abortion-related services violated the state constitution).

abortion argument. Despite the dire predictions, the disabled were not pressured into seeking abortions. Nor is it likely that the disabled will be pressured into committing physician-assisted suicide. Organizations representing the physically impaired are sufficiently active politically and sufficiently vigilant that they would soon put a halt to any effort to employ assisted suicide in a manner that affected their clients unfairly. There are other more subtle concerns, however, advanced by some representatives of the physically impaired, including the fear that certain physical disabilities will erroneously be deemed to make life "valueless." While we recognize the legitimacy of these concerns, we also recognize that seriously impaired individuals will, along with non-impaired individuals, be the beneficiaries of the liberty interest asserted here —- and that if they are not afforded the option to control their own fate, they like many others will be compelled, against their will, to endure unusual and protracted suffering. The resolution that would be best for all, of course, would be to ensure that the practice of assisted suicide is conducted fairly and well, and that adequate safeguards sufficient to avoid the feared abuses are adopted and enforced.

b.

[17] There is a far more serious concern regarding third parties that we must consider -— one not even mentioned by the majority in the panel opinion. That concern is the fear that infirm, elderly persons will come under undue pressure to end their lives from callous, financially burdened, or self-interested relatives, or others who have influence over them. The risk of undue influence is real —- and it exists today. Persons with a stake in the outcome may now pressure the terminally ill to reject or decline life-saving treatment or take other steps likely to hasten their demise. Surrogates may make unfeeling life and death decisions for their incompetent relatives. This

concern deserves serious consideration, as it did when the decision was made some time ago to permit the termination of life-support systems and the withdrawal or withholding of other forms of medical treatment, and when it was decided to recognize living wills, durable powers of attorney, and the right of courts to appoint substitute decision-makers. While we do not minimize the concern, the temptation to exert undue pressure is ordinarily tempered to a substantial degree in the case of the terminally ill by the knowledge that the person will die shortly in any event. Given the possibility of undue influence that already exists, the recognition of the right to physician-assisted suicide would not increase that risk unduly. In fact, the direct involvement of an impartial and professional third party in the decision-making process would more likely provide an important safeguard against such abuse.

We also realize that terminally ill patients may well feel pressured to hasten their deaths, not because of improper conduct by their loved ones, but rather for an opposite reason -- out of concern for the economic welfare of their loved ones. Faced with the prospect of astronomical medical bills, terminally ill patients might decide that it is better for them to die before their health care expenses consume the life savings they planned to leave for their families, or, worse yet, burden their families with debts they may never be able to satisfy. While state regulations can help ensure that patients do not make rash, uninformed, or ill considered decisions, we are reluctant to say that, in a society in which the costs of protracted health care can be so exorbitant, it is improper for competent, terminally ill adults to take the economic welfare of their families and loved ones into consideration.

Throughout its analysis, the dissent relies heavily on Professor Kamisar, a long-time, outspoken, and nationally

recognized opponent of assisted-suicide. Following Professor Kamisar's lead, our dissenting colleagues suggest that the nation's priorities are misplaced because some of the problems we address result from the "lack of universal access to medical care." Dissent at 3249. We would be inclined to agree that the country's refusal to provide universal health care, and the concomitant suffering so many Americans are forced to undergo, demonstrates a serious flaw in our national values. One answer, of course, is that concerns over the absence of decent medical coverage in this country should be addressed to Congress, which, if it recognizes the values the dissenters and others espouse, will surely enact the sorely-needed, health-care legislation it has up to now rejected. As members of the judicial branch, however, we are compelled to stand aside from that battle. On the other hand, we are certainly not obligated to pile injury upon injury by holding that all of our citizens may be subjected to the prospect of needless pain, suffering, and degradation at the end of their lives, either because of our concern over Congress' failure to provide government-insured health care or alternatively in order to satisfy the moral or religious precepts of a portion of the population.

c.

We are also aware of the concern that doctors become hardened to the inevitability of death and to the plight of terminally ill patients, and that they will treat requests to die in a routine and impersonal manner, rather than affording the careful, thorough, individualized attention that each request deserves. The day of the family doctor who made house calls and knew the frailties and strengths of each family member is long gone. So, too, in the main, is the intense personal interest that doctors used to take in their patients' welfare and activities. Doctors like the rest of society face constantly increasing pressures, and may not

always have the patience to deal with the elderly, some of whom can be both difficult and troublesome. Nevertheless, there are many doctors who specialize in geriatric care and there are many more who are not specialists but who treat elderly patients with great compassion and sensitivity. We believe that most, if not all, doctors would not assist a terminally ill patient to hasten his death as long as there were any reasonable chance of alleviating the patient's suffering or enabling him to live under tolerable conditions. We also believe that physicians would not assist a patient to end his life if there were any significant doubt about the patient's true wishes. To do so would be contrary to the physicians' fundamental training, their conservative nature, and the ethics of their profession. In any case, since doctors are highly-regulated professionals, it should not be difficult for the state or the profession itself to establish rules and procedures that will ensure that the occasional negligent or careless recommendation by a licensed physician will not result in an uninformed or erroneous decision by the patient or his family.

Having said all this, we do not dismiss the legitimate concerns that exist regarding undue influence. While steps can be taken to minimize the danger substantially, the concerns cannot be wholly eliminated. Accordingly, they are of more than minimal weight and, in balancing the competing interests, we treat them seriously.

4. Effect on Children, Other Family Members, and Loved Ones

[18] The state clearly has a legitimate interest in safeguarding the interests of innocent third parties such as minor children and other family members dependent on persons who wish to commit suicide. That state interest, however, is of almost negligible weight when the patient is terminally ill and his death is imminent and inevitable.

The state cannot help a minor child or any other innocent third party by forcing a terminally ill patient to die a more protracted and painful death. In fact, witnessing a loved one suffer a slow and agonizing death as a result of state compulsion is more likely to harm than further the interests of innocent third parties.[100]

5. Protecting the Integrity of the Medical Profession

[19] The state has a legitimate interest in assuring the integrity of the medical profession, an interest that includes prohibiting physicians from engaging in conduct that is at odds with their role as healers.[101] We do not believe that the integrity of the medical profession would be threatened in any way by the vindication of the liberty interest at issue here. Rather, it is the existence of a statute that criminalizes the provision of medical assistance to patients in need that could create conflicts with the doctors' professional obligations and make covert criminals out of honorable, dedicated, and compassionate individuals.

The assertion that the legalization of physician-assisted suicide will erode the commitment of doctors to help their patients rests both on an ignorance of what numbers of

---

[100] According to its protocol, Compassion In Dying will not assist terminally ill patients unless the patient has obtained the approval of family members or others with whom the patient has a close personal relationship. While we do not reach Compassion In Dying's claim or consider the merits of the safeguards it has devised, we note that a similar requirement by the state would raise constitutional concerns. We in no way suggest, however, that a private organization is not free to adopt higher standards than the state is permitted to impose in order to advance its interests or those of its clients.

[101] *Cf. Middlesex County Ethics Committee v. Gasrden*, 457 U.S. 423, 434 (1982) (noting that state has important interest in "maintaining and assuring the professional conduct of professional attorneys it licenses").

doctors have been doing for a considerable time and on a misunderstanding of the proper function of a physician. As we have previously noted, doctors have been discreetly helping terminally ill patients hasten their deaths for decades and probably centuries, while acknowledging privately that there was no other medical purpose to their actions. They have done so with the tacit approval of a substantial percentage of both the public and the medical profession, and without in any way diluting their commitment to their patients.

In addition, as we also noted earlier, doctors may now openly take actions that will result in the deaths of their patients. They may terminate life-support systems, withdraw life-sustaining gastronomy tubes, otherwise terminate or withhold all other forms of medical treatment, and, may even administer lethal doses of drugs with full knowledge of their "double effect."[102] Given the

---

[102] The American Medical Association devotes a considerable portion of the amicus brief it filed in this case to arguing that doctors who give medication with knowledge that it will have a double effect, including hastening death, should not be deemed to have violated Washington's assisted suicide law. The organization struggles mightily, albeit unsuccessfully, to distinguish for legal purposes between the administration of medication for a dual and a single effect. Nevertheless, we agree with the AMA's point — the administration of dual effect medication, with informed consent, does not constitute a criminal act. However, if, as the AMA contends, *administering* medicine that will result in death is lawful, we cannot comprehend the logic of its equivocal conclusion that *prescribing* life-ending medication for the patient at his request can constitute a crime, at least "at this time." (If the patient's consent has not been obtained for dual effect treatment, there would of course be even less justification for the AMA's fallacious distinction.) The line the AMA seeks to draw conflicts with reason as well as with the proper constitutional approach. The key factor in both dual effect and physician-assisted suicide cases is that it is the terminally ill patient's voluntary and informed wish that the

similarity between what doctors are now permitted to do and what the plaintiffs assert they should be permitted to do, we see no risk at all to the integrity of the profession. This is a conclusion that is shared by a growing number of doctors who openly support physician-assisted suicide and proclaim it to be fully compatible with the physicians' calling and with their commitment and obligation to help the sick.[103] Many more doctors support physician-assisted suicide but without openly advocating a change in the legal treatment of the practice. A recent study of Oregon physicians found that 60% of those who responded believed that physician-assisted suicide should be legal.[104] A recent study of attitudes among physicians in Michigan,

---

doctor assist him to die through medical treatment. Were we to agree with those who would label some of the current medical practices engaged in at life's end as killing a patient or "euthanasia," we would put the AMA-sanctioned dual effect practice on that side of the line long before we would include the act of prescribing medication that is to be self-administered. It is the glaring inconsistency in the AMA's position that is undoubtedly responsible in part for the dissent's rejection of the AMA's plea to hold lawful the "dual effect" practice. *See* Dissent at 3223.

[103] For a recent example, see Francis Moore, M.D., Easing Life's End: Doctors, Patients and the Final Medical Dilemma, Harv. Mag. at 46, 47 Aug. 1995 ("It is my credo that assisting people to leave the dwelling place of their body when it is no longer habitable is becoming an obligation of the medical profession").

The Oregon AMA refrained from taking a position on a successful ballot initiative to legalize physician assisted suicide because its membership was sharply divided on whether to back or oppose the measure. Melinda A. Lee & Susan W. Tolle, *Oregon's Assisted Suicide Vote: the Silver Lining*, 124 Annals of Internal Med. 267 (1996).

[104] Melinda Lee, et al., *Legalizing Assisted Suicide — Views of Physicians in Oregon*, 334 New Eng. J. Med. 310 (1996).

where the state legislature adopted a law banning assisted-suicide as a result of Dr. Jack Kevorkian's activities, found that only 17.2% of the physicians who responded favored a law prohibiting assisted-suicide. Almost all the rest supported one of three options: legalizing physician-assisted suicide (38.9%); permitting the medical profession to regulate the practice (16.1%); or leaving decisions about physician-assisted suicide to the doctor-patient relationship (16.6%).[105] Thus over 70% of the Michigan doctors answering the poll appear to believe that professional ethics do not preclude doctors from engaging in acts that today are classified as "assisted suicide." Even among those doctors who oppose assisted suicide medical ethics do not lie at the heart of the objections. The "most important personal characteristic" separating those doctors from their colleagues is a strong religious identification.[106]

Whether or not a patient can be cured, the doctor has an obligation to attempt to alleviate his pain and suffering. If it is impossible to cure the patient or retard the advance of his disease, then the doctor's primary duty is to make the patient as comfortable as possible. When performing that task, the doctor is performing a proper medical function, even though he knows that his patient's death is a necessary and inevitable consequence of his actions.[107]

---

[105] Jerald G. Bachman, *Attitudes of Michigan Physicians and the Public Toward Legalizing Physician-Assisted Suicide and Voluntary Euthanasia*, 334 New Eng. J. Med. 303, 305 fig. 1 (1996).

[106] *Id.* at 308.

[107] The state also has an interest in furthering the progress of medical science. Some argue that the relentless search for new and better treatments for the terminally ill might be undermined by permitting physicians to help terminally ill patients hasten their deaths. We put no stock in this argument. As is shown by the experience of countless patients suffering from cancer and AIDS, most patients are

As noted earlier, the American Medical Association filed an amicus brief urging that we uphold the practice of administering medicine with a dual effect. At the same time, it takes the position that physician-assisted suicide should not be legalized, at least as of this time.[108] Twenty years ago, the AMA contended that performing abortions violated the Hippocratic Oath; today, it claims that assisting terminally ill patients to hasten their death does likewise. Clearly, the Hippocratic Oath can have no greater import in deciding the constitutionality of physician assisted-suicide than it did in determining whether women had a constitutional right to have an abortion. In *Roe*, the Court cited a scholar's conclusion that the Hippocratic Oath "originated in a group representing only a small segment of Greek opinion and that it certainly was not accepted by all ancient physicians." The Court stressed the Oath's "rigidity" and was not deterred by its prohibitory language regarding abortion.[109] As *Roe* shows, a literalist reading

---

not willing to give up hope until they have exhausted all possibilities provided by established treatments and in addition have tried any available experimental ones. We are certain that there will be neither a shortage of patients willing to volunteer for controlled studies of new medications and treatments nor of researchers equally willing to develop new forms and manners of treatment.

[108] In its amicus brief in this case, the AMA attached a Journal of American Medicine article, reporting the conclusion of the AMA's Council on Ethical and Judicial Affairs. The article concluded this way: "the societal risk of involving physicians in medical interventions to cause patients' death is too great in this culture to condone euthanasia or physician-assisted suicide *at this time*" (emphasis added).

[109] In one of the two translations quoted by the *Roe* Court, the Oath says:

> I will neither give a deadly drug to anybody if asked for it, nor will I make a suggestion to this effect. Similarly I will not give a woman an abortive remedy.

Roe, 410 U.S. 131.

of the Hippocratic Oath does not represent the best or final word on medical or legal controversies today.[110] Were we to adhere to the rigid language of the oath, not only would doctors be barred from performing abortions or helping terminally ill patients hasten their deaths, but according to a once-accepted interpretation, they would also be prohibited from performing any type of surgery at all,[111] a position that would now be recognized as preposterous by even the most tradition-bound AMA members. More important, regardless of the AMA or its position, experience shows that most doctors can readily adapt to a changing legal climate. Once the Court held that a woman has a constitutional right to have an abortion, doctors began performing abortions routinely and the ethical integrity of the medical profession remained undiminished. Similarly, following the recognition of a constitutional right to assisted suicide, we believe that doctors would engage in the permitted practice when appropriate, and that the integrity of the medical profession would survive without blemish.

---

[110] We note that even in ancient times many physicians did not interpret the oath literally. As three commentators said, "It is well established that Greek and Roman physicians, even those who were Hippocratic, often supplied their patients with the means to commit suicide, despite the injunction against assistance in suicide embodied in the Hippocratic oath." Rebecca C. Morgan et al., The Issue of Personal Choice: The Competent Incurable Patient and the Right to Commit Suicide, 57 Missouri L. Rev. 3, 46 (1992).

[111] Peter A. Ubel, *Assisted Suicide and the Case of Dr. Quill and Diane*, 8 Issues In Law & Med. 487, 497 (1993).

Recognizing the right to "assisted-suicide" would not require doctors to do anything contrary to their individual principles. A physician whose moral or religious beliefs would prevent him from assisting a patient to hasten his death would be free to follow the dictates of his conscience. Those doctors who believe that terminally ill, competent, adult patients should be permitted to choose the time and manner of their death would be able to help them do so. We believe that extending a choice to doctors as well as to patients would help protect the integrity of the medical profession without compromising the rights or principles of individual doctors and without sacrificing the welfare of their patients.[112]

6. Fear of Adverse Consequences

We now consider the state's final concern. Those opposed to permitting physician-assisted suicide often point to a concern that could be subsumed under the state's general interest in preserving life, but which for clarity's sake we treat separately. The argument is a purely pragmatic one that causes many people deep concern: permitting physician-assisted suicide would "open Pandora's Box."[113]

---

[112] Patients who are concerned about the possibility that they will suffer an unwanted agonizing death because of a doctor's unwillingness to provide them with the medication they need would have the opportunity to select a doctor whose view of the physician's role comports with theirs. See Michigan Commission on Death and Dying, Final Report (June 1994), which reprints Model Statute Supporting Aid-In-Dying, including § 1.11, providing mechanism for the transfer of patients in case a physician refuses to provide aid-in-dying.

[113] *See generally* Yale Kamisar, *When Is there A Constitutional "Right To Die"? When Is There No Constitutional Right to Live"?* 25 Geo. L. Rev. 1203 (1991).

Once we recognize a liberty interest in hastening one's death, the argument goes, that interest will sweep away all restrictions in its wake. It will only be a matter of time, the argument continues, before courts will sanction putting people to death, not because they are desperately ill and want to die, but because they are deemed to pose an unjustifiable burden on society.[114] Known as a slippery slope argument or what one commentator has called the "thin edge of the wedge" argument,[115] the opponents of assisted-suicide conjure up a parade of horribles and insist that the only way to halt the downward spiral is to stop it before it starts. *See Compassion In Dying*, 49 F.3d at 590-91 (providing list of horribles).

---

[114] The dissent cites the experience in the Netherlands, where physician-aid-in-dying is allowed in some circumstances, to buttress both its claims that physician-assisted suicide cannot be adequately regulated and that approval of that limited practice will inevitably lead to the administration of death-inducing drugs without the patient's consent. Dissent at 3250, 3259. We note that the reports on relevant medical practices in the Netherlands are so mixed that it is difficult to draw any conclusions from them. *See, e.g.*, Maurice A.M., de Wachter, *Euthanasia in the Netherlands; Dying Well? A Colloquy on Euthanasia and Assisted Suicide*, The Hastings Center Report (1992) (describing sharply divergent appraisals of Dutch practices). We also note, that even if it were clear what lessons to draw from the Dutch experience, it would be far from clear how to apply those lessons to the United States. As two commentators have said: "One must be wary, however, of inferences drawn from the Netherlands and applied to the United States. Cultural, legal, psychological, and other variables make generalizations problematic, even in the Netherlands itself." T. Howard Stone & William J. Winslade, *Physician-Assisted Suicide and Euthanasia in the United States*, 16 J. Legal. Med. 481 (1995).

[115] Eugenie Anne Gifford, *Artes Moriendi: Active Euthanasia and the Art of Dying*, 40 UCLA L. Rev. 1545, 1566 (1993), citing Glanville Williams.

This same nihilistic argument can be offered against any constitutionally-protected right or interest. Both before and after women were found to have a right to have an abortion, critics contended that legalizing that medical procedure would lead to its widespread use as a substitute for other forms of birth control or as a means of racial genocide. Inflammatory contentions regarding ways in which the recognition of the right would lead to the ruination of the country did not, however, deter the Supreme Court from first recognizing and then two decades later reaffirming a constitutionally-protected liberty interest in terminating an unwanted pregnancy. In fact, the Court has *never* refused to recognize a substantive due process liberty right or interest merely because there were difficulties in determining when and how to limit its exercise or because others might someday attempt to use it improperly.

[20] Recognition of any right creates the possibility of abuse. The slippery slope fears of *Roe*'s opponents have, of course, not materialized. The legalization of abortion has not undermined our commitment to life generally; nor, as some predicted, has it led to widespread infanticide. Similarly, there is no reason to believe that legalizing assisted suicide will lead to the horrific consequences its opponents suggest.

[21] The slippery slope argument also comes in a second and closely related form. This version of the argument states that a due process interest in hastening one's death, even if the exercise of that interest is initially limited to the terminally ill, will prove infinitely expansive because it will be impossible to define the term "terminally ill." *See Compassion In Dying*, 49 F.3d at 593. (After all, all of us are terminal in some sense of the word, are we not?). *See id*. The argument rests on two false premises. First it presupposes a need for greater precision than is required in

constitutional law.[116] Second, it assumes that the terms "terminal illness" or "terminal condition" cannot be defined, even though those terms have in fact been defined repeatedly. They have, for example, been defined in a model statute, The Uniform Rights of the Terminally Ill Act,[117] and in more than 40 state natural death statutes,[118] including Washington's. The model statute and some of the state statutes have defined the term without reference to a fixed time period; others have taken the opposite approach, defining terminal to mean that death is likely to ensue within six months. As we have noted earlier, the Washington Act, like some others, includes persons who are permanently unconscious, that is in an irreversible coma or a persistent vegetative state. RCW 70.122.020(6). While defining the term "terminally ill" is not free from difficulty, the experience of the states has proved that the class of the terminally ill is neither indefinable nor undefined. Indeed, all of the persons described in the various statutes would appear to fall within an appropriate definition of the term. In any event, it is apparent that purported definitional difficulties that have repeatedly been surmounted provide no legitimate reason for refusing to recognize a liberty interest in hastening one's death.

---

[116] *See, e.g., United States v. Vuitch*, 402 U.S. 62, 71-72 (1971) (holding that an abortion statute barring abortions not performed to protect the mother's *health* was not unconstitutionally vague).

[117] 9B U.L.A. 96, 98 (Supp. 1992). According to the model act, a patient is in a terminal condition if the medical condition is incurable and irreversible, that is, without administering life-sustaining treatment the condition, will, in the opinion of the attending physician, result in death in a relatively short time. Alan Meisel, *The Right to Die: 1994 Cumulative Supplement No. 2* 366 (1994).

[118] *See* statutes cited *supra* note 77.

We do not dispute the dissent's contention that the prescription of lethal medication by physicians for use by terminally ill patients who wish to die does not constitute a clear point of demarcation between permissible and impermissible medical conduct. We agree that it may be difficult to make a principled distinction between physician-assisted suicide and the provision to terminally ill patients of other forms of life-ending medical assistance, such as the administration of drugs by a physician. We recognize that in some instances, the patient may be unable to self-administer the drugs and that administration by the physician, or a person acting under his direction or control, may be the only way the patient may be able to receive them.[119] The question whether that type of physician conduct may be constitutionally prohibited must be answered directly in future cases, and not in this one. We would be less than candid, however, if we did not acknowledge that for present purposes we view the critical line in right-to-die cases as the one between the voluntary and involuntary termination of an individual's life. In the first case -- volitional death -- the physician is aiding or assisting a patient who wishes to exercise a liberty interest, and in the other -- involuntary death -- another person acting on his own behalf, or, in some instances society's, is determining that an individual's life should no longer continue.[120] We consider it less important who

---

[119] When the physician rather than the patient administers the drug, the act is ordinarily classified as physician-aid-in-dying.

[120] In the latter case, "involuntary death," when the motive is benign or altruistic, we classify the act as "euthanasia." There is, however, no universally accepted meaning for that term. Some commentators distinguish between active and passive euthanasia, for example, while others do not. We define euthanasia as the act or practice of painlessly putting to death persons suffering from incurable and distressing disease, as an act of mercy, but *not* at the person's request. The issue of euthanasia is not implicated here. While we place euthanasia, as we define it, on the opposite side of the constitutional line we draw for purposes of this case, we do not intimate any view as to the constitutional or legal implications of the practice. Finally, we should make it clear that a decision of a duly appointed surrogate decision maker is for all legal purposes the decision of the patient himself.

administers the medication than who determines whether the terminally ill person's life shall end. In any event, here we decide only the issue before us -- the constitutionality of prohibiting doctors from prescribing medication for use by terminally ill patients who wish to hasten their death.

B.

The Means by Which the State Furthers Its Interests

In applying the balancing test, we must take into account not only the strength of the state's interests but also the means by which the state has chosen to further those interests.

1. Prohibition — A Total Ban for the Terminally Ill

[22] Washington's statute prohibiting assisted suicide has a drastic impact on the terminally ill. By prohibiting physician assistance, it bars what for many terminally ill patients is the only palatable, and only practical, way to end their lives. Physically frail, confined to wheelchairs or beds, many terminally ill patients do not have the means or ability to kill themselves in the multitude of ways that healthy individuals can. Often, for example, they cannot even secure the medication or devices they would need to carry out their wishes.

Some terminally ill patients stockpile prescription medicine, which they can use to end their lives when they decide the time is right. The successful use of the

stockpile technique generally depends, however, on the assistance of a physician, whether tacit or unknowing (although it is *possible* to end one's life with over-the-counter medication). Even if the terminally ill patients are able to accumulate sufficient drugs, given the pain killers and other medication they are taking, most of them would lack the knowledge to determine what dose of any given drug or drugs they must take, or in what combination. Miscalculation can be tragic. It can lead to an even more painful and lingering death. Alternatively, if the medication reduces respiration enough to restrict the flow of oxygen to the brain but not enough to cause death, it can result in the patient's falling into a comatose or vegetative state.

[23] Thus for many terminally ill patients, the Washington statute is effectively a prohibition. While technically it only prohibits one means of exercising a liberty interest, practically it prohibits the exercise of that interest as effectively as prohibiting doctors from performing abortions prevented women from having abortions in the days before *Roe*.[121]

2. Regulation — A Permissible Means of Promoting State Interests

[24] State laws or regulations governing physician-assisted suicide are both necessary and desirable to ensure against errors and abuse, and to protect legitimate state interests. Any of several model statutes might serve as an

---

[121] *See also Carey v. Population Services International*, 431 U.S. 678 (1977). Building on its decision in *Griswold* that the state could not ban the sale of contraceptives, the Court held in *Carey*, that the state could not prohibit adults from securing contraceptives through the most readily available channels by prohibiting everyone but licensed pharmacists from distributing them.

example of how these legitimate and important concerns can be addressed effectively.[122]

[25] By adopting appropriate, reasonable, and properly drawn safeguards Washington could ensure that people who choose to have their doctors prescribe lethal doses of medication are truly competent and meet all of the requisite standards. Without endorsing the constitutionality of any particular procedural safeguards, we note that the state might, for example, require: witnesses to ensure voluntariness; reasonable, though short, waiting periods to prevent rash decisions; second medical opinions to confirm a patient's terminal status and also to confirm that the patient has been receiving proper treatment, including adequate comfort care; psychological examinations to ensure that the patient is not suffering from momentary or treatable depression; reporting procedures that will aid in the avoidance of abuse. Alternatively, such safeguards could be adopted by interested medical associations and other organizations involved in the provision of health care, so long as they meet the state's needs and concerns.[123]

While there is always room for error in any human endeavor, we believe that sufficient protections can and will be developed by the various states, with the assistance of the medical profession and health care industry, to

---

[122] *See*, for instance, the procedural safeguards included in Oregon's Death With Dignity Act, described in Lee, *supra* note 104, or the Michigan Model Statute Supporting Aid-In-Dying, appended to the Final Report of the Michigan Commission on Death and Dying, *supra*, note 84.

[123] We do not suggest that all of these safeguards are either necessary or desirable singularly or collectively. That is essentially a matter for the states to determine. In doing so, they would of course consider the practical implications of the various potential procedural safeguards before deciding which, if any, to adopt.

ensure that the possibility of error will be remote. We do not expect that, in this nation, the development of appropriate statutes and regulations will be taken lightly by any of the interested parties, or that those charged with their enforcement will fail to perform their duties properly.

In treating a prohibition differently from a regulation, we are following the approach that the Court took in the only right-to-die case to come before it. In *Cruzan*, the Court recognized that the states had a legitimate role to play in regulating the process of refusing or terminating life-sustaining medical treatment even if they could not prohibit the making of decisions that met applicable state standards. The Court explicitly recognized that states did not have to refrain from acting, but rather could adopt appropriate regulations to further their legitimate interests. Missouri's requirement for clear and convincing evidence of a patient's wishes was a regulation designed to reduce the risk of erroneous decisions. The Court upheld that regulation, a requirement that, of course, had far less impact on the exercise of the due process liberty interest than the de facto prohibition at issue here.

To those who argue that courts should refrain from declaring that the terminally ill have a constitutional right to physician-assisted suicide and that we should leave such matters to the individual states, we reply that where important liberty interests are at stake it is not the proper role of the state to adopt statutes totally prohibiting their exercise. Rather, the state should enact regulatory measures that ensure that the exercise of those interests is properly circumscribed and that all necessary safeguards have been provided. In the case of abortions and in the case of the withdrawal of life-sustaining medical treatment, the Court permitted states to enact appropriate regulations that would further its legitimate interests. In this case, like the others, the guiding principle is found in the words of

Justice O'Connor. "[T]he more challenging task of crafting appropriate procedures for safeguarding . . . [terminally ill patients'] liberty interests is entrusted to the 'laboratory' of the states in the first instance." *Cruzan*, 497 U.S. at 287, 292 (O'Connor, J., concurring) (internal citation omitted).[124]

C.

The Strength of the Liberty Interest

Earlier in the opinion we described the liberty interest at issue here and explained its importance. We also explained that the strength of that interest is dependent on a number of factors, especially the individual's physical condition. We noted that an individual's liberty interest in hastening his death is at its low point when that person is young and healthy, because forcing a robust individual to continue living does not, at least absent extraordinary

---

[124] For an opposing view, see Posner, *supra* note 87, at 260-61. Posner argues that while laws banning assisted suicide (as applied to the terminally ill) violate Millsian principles and should, as a matter of policy, be repealed, the decision as to whether to do so should be made at the state level by voters and legislators. His reasoning for leaving the question to the states is based in part on his belief that moral values are sometimes coterminous with state boundaries, and that a national rule would be premature. He uses as an example the case of abortion, suggesting that *Roe v. Wade* wrongfully preempted the ability of individual states to resolve that issue properly.

One problem with allowing each state to decide whether to *prohibit* the exercise of a liberty interest is the human suffering that results from a patchwork-quilt pattern of prohibitory legislation. Permitting assisted suicide in one state but prohibiting it in a neighboring one can easily lead to entangled legal battles in which the dying patient or his family tries to obtain approval for his transfer to the more permissive state. The unseemly legal struggle that ensues turns out all too often to have been academic, since by the time the matter is resolved, the patient has suffered the distressing fate he sought to avoid.

circumstances, subject him to "pain . . . [and] suffering that is too intimate and personal for the State to insist on . . . ." *Casey*, 112 S. Ct. at 2807. As we also made clear, when a mentally competent adult is terminally ill, and wishes, free of any coercion, to hasten his death because his remaining days are an unmitigated torture, that person's liberty interest is at its height. For such a person, being forced to live is indeed being subjected to "pain . . . [and] suffering that is too intimate and personal for the State to insist on . . . ." *Id.*

D.

The Burden on the Liberty Interest

We have also previously discussed at some length the nature and extent of the burden that the Washington statute imposes on the liberty interest. Here, we need only mention some of the specific evidence introduced by the plaintiffs and refer to some of our earlier analysis. The plaintiffs offered considerable specific testimony involving individual patients that strongly supports their claims that the Washington statute frequently presents an insuperable obstacle to terminally ill persons who wish to hasten their deaths by peaceful means. The testimony produced by the plaintiffs shows that many terminally ill patients who wish to die with dignity are forced to resort to gruesome alternatives because of the unavailability of physician assistance. One such patient, a 34-year-old man dying from AIDS and lymphoma, asked his physician for drugs to hasten his inevitable death after enduring four excruciatingly painful months because he did not wish to die in a hospital in a drug-induced stupor. His doctor, Dr. Harold Glucksberg, one of the physician plaintiffs in this case, refused because he feared prosecution under Washington Statute RCW 9A.36.060. Denied medical assistance, the patient ended his life by jumping from the

West Seattle bridge and plummeting to his death.[125] Fortunately, he did not survive the plunge and require permanent hospitalization in an even more exacerbated state of pain.

Deprived of physician assistance, another terminally ill patient took his own life by withholding his insulin and letting himself die of insulin shock.[126] Like many terminally ill patients, one individual killed himself in a secretive and lonely fashion, in order to spare his family from possible criminal charges; as a result he was deprived of a chance to die in a dignified manner with his loved ones at his side. The man's daughter described her father's death this way:

> When he realized that my family was going to be away for a day, he wrote us a beautiful letter, went down to his basement, and shot himself with his 12 gauge shot gun. He was 84. . . My son-in-law then had the unfortunate and unpleasant task of cleaning my father's splattered brains off the basement walls.[127]

The plaintiffs also produced testimony showing that some terminally ill patients who try to kill themselves are unsuccessful, maiming instead of killing themselves, or that they succeed only after subjecting themselves to needless, excruciating pain.[128] One such terminally ill patient, a mentally competent woman in her 80s suffering from

[127] *Id.* at 7.

[128] *See* Declaration of John P. Geyman, M.D., ER at 205-206.

metastatic breast cancer, sought medication to hasten her death from her primary care physician, Dr. Abigail Halperin, one of the physician plaintiffs in this case. Although Dr. Halperin believed, in her professional judgment, that she should accommodate her patient's wishes, she did not do so because she feared prosecution under Washington statute RCW 9A.36.060. The patient acted on her own to hasten her death by placing a plastic bag over her head, securing it so no more air could enter. She suffocated to death, an end that was certainly more painful and inhumane than the death she would have experienced had she been given the prescriptions she sought.[129]

Next, the plaintiffs produced testimony showing that many terminally ill patients are physically or psychologically unable to take their lives by the violent means that are almost always their only alternatives in the absence of assistance from a physician. One man declared that his terminally ill wife "wanted to die but we did not know how to do it. We could not ask her doctors. . . She feared over-the-counter pills, hearing of all the cases where the person woke up a vegetable. Carbon monoxide was out since she wanted the dignity of dying in her own bed, surrounded by the things she loved."[130] Another woman told how her father, "to whom dignity was very important, lay dying, diapered, moaning in pain, begging to die."[131]

[131] *Id.*

[26] Following the approach of the Court in *Casey*, 112 S. Ct. at 2828, we note that there is also an extensive body of legal,[132] medical,[133] and sociological literature,[134] lending support to the conclusion that a prohibition on physician assistance imposes an onerous burden on terminally ill, competent adults who wish to hasten their deaths. That conclusion is further buttressed by extensive anecdotal evidence compiled in newspapers[135] and

Derek Humphrey's *Final Exit: The Practicalities of Self-Deliverance and Assisted Suicide for the Dying*, which shot to the top of the New York Times best seller list for 18 weeks when it was released in 1991, provides graphic practical advice for how terminally ill patients can kill themselves and for how family members can assist them. Chapter titles include the following: Bizarre Ways to Die, Self Starvation, Storing Drugs, and Self-Deliverance Via the Plastic Bag.

[135] In North Carolina, for example, an elderly woman helped her 81-year-old sister, who had a painful, degenerative heart condition, kill herself after her sister begged repeatedly for assistance in ending her life. The woman "hooked vacuum cleaner hose to the end of the exhaust pipe of the family car, gave her sister the other end of the hose, said good-bye, and left, closing the garage door." Shaffer at 360 n. 79.

magazines.[136] Although the statute at issue does not totally prohibit the exercise of the liberty interest by all who possess it, it does effectively prohibit its exercise by almost all of the terminally ill. In fact, as applied, the ban on the liberty interest is close to complete; for, there are few terminally ill persons who do not obtain illicit help from someone in the course of their efforts to hasten their deaths.

There is an additional burden on loved ones and family members that is often overlooked. Some terminally ill persons enlist their children, parents, or others who care for them deeply, in an agonizing, brutal and damaging endeavor, criminalized by the state, to end their pain and suffering. The loving and dedicated persons who agree to help -- even if they are fortunate enough to avoid prosecution, and almost all are -- will likely suffer pain and guilt for the rest of their lives. Those who decline to

---

A 67-year-old retired engineer helped his wife of 42 years who was suffering from cancer to commit suicide by preparing an overdose of sedatives, sitting with her as she took them, and then helping place a plastic bag over her head. Under Florida statutes, the man faced a 15-year maximum penalty. *Id.* at n. 79.

assist may always wonder whether they should have tried to save their parent or mate from enduring, unnecessary and protracted agony. This burden would be substantially alleviated if doctors were authorized to assist terminally ill persons to end their lives and to supervise and direct others in the implementation of that process.

E. The Consequences of Upholding or Overturning the Statutory Provision

In various earlier sections of this opinion, we have discussed most of the consequences of upholding or overturning the Washington statutory provision at issue, because in this case those consequences are best considered as part of the discussion of the specific factors or interests. The one remaining consequence of significance is easy to identify: Whatever the outcome here, a host of painful and agonizing issues involving the right to die will continue to confront the courts. More important, these problems will continue to plague growing numbers of Americans of advanced age as well as their families, dependents, and loved ones. The issue is truly one which deserves the most thorough, careful, and objective attention from all segments of society.

VI.

Application of the Balancing Test and Holding

Weighing and then balancing a constitutionally-protected interest against the state's countervailing interests, while bearing in mind the various consequences of the decision, is quintessentially a judicial role. Despite all of the efforts of generations of courts to categorize and objectify, to create multi-part tests and identify weights to be attached to the various factors, in the end balancing entails the exercise of judicial judgment rather than the application of scientific or mathematical formulae. No legislative body can perform the task for us. Nor can any computer. In

the end, mindful of our constitutional obligations, including the limitations imposed on us by that document, we must rely on our judgment, guided by the facts and the law as we perceive them.

As we have explained, in this case neither the liberty interest in choosing the time and manner of death nor the state's countervailing interests are static. The magnitude of each depends on objective circumstances and generally varies inversely with the other. The liberty interest in hastening death is at its strongest when the state's interest in protecting life and preventing suicide is at its weakest, and vice-versa.

The liberty interest at issue here is an important one and in, the case of the terminally ill, is at its peak. Conversely, the state interests, while equally important in the abstract, are for the most part at a low point here. We recognize that in the case of life and death decisions the state has a particularly strong interest in avoiding undue influence and other forms of abuse. Here, that concern is ameliorated in large measure because of the mandatory involvement in the decision-making process of physicians, who have a strong bias in favor of preserving life, and because the process itself can be carefully regulated and rigorous safeguards adopted. Under these circumstances, we believe that the possibility of abuse, even when considered along with the other state interests, does not outweigh the liberty interest at issue.

The state has chosen to pursue its interests by means of what for terminally ill patients is effectively a total prohibition, even though its most important interests could be adequately served by a far less burdensome measure. The consequences of rejecting the as-applied challenge would be disastrous for the terminally ill, while the adverse

consequences for the state would be of a far lesser order. This, too, weighs in favor of upholding the liberty interest.

[27] We consider the state's interests in preventing assisted suicide as being different only in degree and not in kind from its interests in prohibiting a number of other medical practices that lead directly to a terminally ill patient's death. Moreover, we do not consider those interests to be significantly greater in the case of assisted suicide than they are in the case of those other medical practices, if indeed they are greater at all. However, even if the difference were one of kind and not degree, our result would be no different. For no matter now much weight we could legitimately afford the state's interest in preventing suicide, that weight, when combined with the weight we give all the other state's interests, is insufficient to outweigh the terminally ill individual's interest in deciding whether to end his agony and suffering by hastening the time of his death with medication prescribed by his physician. The individual's interest in making that vital decision is compelling indeed, for no decision is more painful, delicate, personal, important, or final than the decision how and when one's life shall end. If broad general state policies can be used to deprive a terminally ill individual of the right to make that choice, it is hard to envision where the exercise of arbitrary and intrusive power by the state can be halted. In this case, the state has wide power to regulate, but it may not ban the exercise of the liberty interest, and that is the practical effect of the program before us. Accordingly, after examining one final legal authority, we hold that the "or aids" provision of Washington statute RCW 9A.36.06 is unconstitutional as applied to terminally ill competent adults who wish to

hasten their deaths with medication prescribed by their physicians.[137]

A.

One Possible Obstacle

The final legal obstacle we examine is an opinion of the District Court of Oregon issued after the panel decision in this case. In *Lee v. State of Oregon*, 891 F. Supp. 1429, 1438 (D. Or. 1995), Chief Judge Hogan held that the Oregon Death With Dignity Act, a voter initiative that permits doctors to prescribe medications for terminally ill patients for use in ending their lives, violates the Equal Protection Clause of the Fourteenth Amendment because it deprives terminally ill persons of a *benefit* that is afforded to the non-terminally ill. The *benefit* that the Oregon District Court thought the terminally ill were being deprived of is an Oregon statutory *prohibition* making it a crime for anyone, including doctors, to assist any person, including terminally ill patients, to end their lives, by providing medical assistance or otherwise. The Oregon District Court's reasoning conflicts squarely with the reasoning of this opinion and with the legal conclusions we have reached. Here, we determine that a statute that prohibits doctors from aiding terminally ill persons to hasten their deaths by providing them with prescription medications unconstitutionally *burdens* the liberty interests of the terminally ill. The benefit we conclude the

---

[137] While in balancing the competing interests we employ the approach the Court set forth in *Cruzan*, the outcome would be the same *a fortiori* were we to use the "undue burden" test that the District Court employed. *Compassion In Dying*, 850 F. Supp. at 1462-64. There can be no doubt whatsoever that Washington's ban on assisted suicide places a "substantial obstacle" in the path of terminally ill, competent adults who wish to choose the time and manner of their deaths. *Casey* at 2820.

terminally ill are entitled to receive in this case — the right to physician-assisted suicide — is precisely what Judge Hogan determined to be a *burden* and thus unlawful. In short, *Lee* treats a *burden* as a *benefit* and a *benefit* as a *burden*. In doing so, Judge Hogan clearly erred. *Lee* not only does not aid us in reaching our decision, its reasoning is directly contrary to our holding.[138]

B.

Is There An Equal Protection Violation?

In the case before us, Chief Judge Rothstein struck down the "or aids" provision of the Washington statute as it applies to the terminally ill, not only on due process grounds but also on the ground that it violates the Equal Protection Clause. Because we are convinced that her first reason is correct, we need not consider the second. One constitutional violation is enough to support the judgment that we reach here.[139]

---

[138] We note, incidentally, that if *Lee*'s equal protection analysis were correct, we could not examine the as-applied due process violation we examine here, or arrive at the limited holding we do. A ruling in favor of the terminally ill that was not equally applicable to all other persons would, under *Lee*, violate the Equal Protection Clause. Thus *Lee* would require us to determine whether the entire "or aids" provision of the statute is unconstitutional on its face. Because the rationale on which *Lee* was decided was clearly erroneously, we need not undertake that task.

[139] Unlike *Lee*'s highly irregular equal protection holding — that no rational basis exists for a state's allowing the *terminally ill* to receive medical assistance that will enable them to hasten their deaths while preventing the *young and healthy* from receiving similar medical assistance — the equal protection argument relied on by Chief Judge Rothstein is not insubstantial. Judge Rothstein based her equal protection determination on the difference in the statutory treatment afforded 1) those terminally ill persons who are being kept alive through medical treatment (including the use of artificial medical

VII.

Conclusion

We hold that a liberty interest exists in the choice of how and when one dies, and that the provision of the Washington statute banning assisted suicide, as applied to competent, terminally ill adults who wish to hasten their deaths by obtaining medication prescribed by their doctors, violates the Due Process Clause.[140] We recognize that this decision is a most difficult and controversial one, and that it leaves unresolved a large number of equally troublesome issues that will require resolution in the years ahead. We also recognize that other able and dedicated jurists, construing the Constitution as they believe it must be construed, may disagree not only with the result we reach but with our method of constitutional analysis. Given the nature of the judicial process and the complexity of the task of determining the rights and interests comprehended by the Constitution, good faith

---

devices) whose deaths can be brought about by the withdrawal of that treatment and 2) those terminally ill people who have no means of accelerating their deaths unless their doctor provides them with medical assistance. She concluded that it was unconstitutional to permit doctors to take actions that would permit the first group of terminally ill persons to die in comfort while preventing doctors from providing such services to the second group.

[140] We would add that those whose services are essential to help the terminally ill patient obtain and take that medication and who act under the supervision or direction of a physician are necessarily covered by our ruling. That includes the pharmacist who fills the prescription; the health care worker who facilitates the process; the family member or loved one who opens the bottle, places the pills in the patient's hand, advises him how many pills to take, and provides the necessary tea, water or other liquids; or the persons who help the patient to his death bed and provide the love and comfort so essential to a peaceful death.

disagreements within the judiciary should not surprise or disturb anyone who follows the development of the law. For these reasons, we express our hope that whatever debate may accompany the future exploration of the issues we have touched on today will be conducted in an objective, rational, and constructive manner that will increase, not diminish, respect for the Constitution.

There is one final point we must emphasize. Some argue strongly that decisions regarding matters affecting life or death should not be made by the courts. Essentially, we agree with that proposition. In this case, by permitting the *individual* to exercise the right to *choose* we are following the constitutional mandate to take such decisions out of the hands of the government, both state and federal, and to put them where they rightly belong, in the hands of the people. We are allowing individuals to make the decisions that so profoundly affect their very existence — and precluding the state from intruding excessively into that critical realm. The Constitution and the courts stand as a bulwark between individual freedom and arbitrary and intrusive governmental power. Under our constitutional system, neither the state nor the majority of the people in a state can impose its will upon the individual in a matter so highly "central to personal dignity and autonomy," *Casey*, 112 S. Ct. at 2807. Those who believe strongly that death must come without physician assistance are free to follow that creed, be they doctors or patients. They are not free, however, to force their views, their religious convictions, or their philosophies on all the other members of a democratic society, and to compel those whose values differ with theirs to die painful, protracted, and agonizing deaths.

AFFIRMED

BEEZER, Circuit Judge, Dissenting:

Wash. Laws 1975, 1st Ex. Sess., ch. 260, § 9A.36.060 says:

> PROMOTING A SUICIDE ATTEMPT.
>
> (1) A person is guilty of promoting a suicide attempt when he knowingly causes or aids another person to attempt suicide.
>
> (2) Promoting a suicide attempt is a Class C felony.

This law is codified as RCW 9A.36.060. A Class C felony is punishable by imprisonment of up to five years and a fine of up to $10,000. RCW 9A.20.020(1)(c).

The question is whether Washington's criminal prohibition of promoting a suicide attempt, defined as knowingly causing or aiding another person to attempt suicide, violates the constitutional substantive due process or equal protection rights of mentally competent, terminally ill adults to commit physician-assisted suicide. The district court held the Washington statute unconstitutional and I would reverse.

To succeed in arguing that a statute violates substantive due process, the party challenging the statute must show either: (1) that the statute violates a fundamental right and is not narrowly tailored to serve a compelling state interest, or (2) that the statute violates an ordinary, nonfundamental, liberty interest and does not rationally advance some legitimate governmental purpose. *Reno v. Flores*, 507 U.S. 292, ___, 113 S. Ct. 1439, 1447-1449 (1993). I would hold that the mentally competent, terminally ill adults do not have a fundamental right to physician-assisted suicide, but I would hold that they do have an ordinary, nonfundamental, liberty interest in doing so. I would further hold

that RCW 9A.36.060 rationally advances four legitimate governmental purposes: preserving life, protecting the interests of innocent third parties, preventing suicide and maintaining the ethical integrity of the medical profession. Because RCW 9A.36.060 rationally advances these four legitimate governmental purposes, it does not violate plaintiffs' constitutional substantive due process rights.

Likewise, I would hold that RCW 9A.36.060 does not violate plaintiffs' constitutional equal protection rights. Plaintiffs are not similarly situated to patients who wish to refuse or withdraw life-sustaining medical treatment, so an equal protection analysis is not even appropriate. If it were appropriate, I would hold that RCW 9A.36.060 rationally advances four legitimate legislative goals and does not violate plaintiffs' constitutional equal protection rights.

I

It is imperative that I make clear what I mean by physician-assisted suicide. The process should be distinguished definitionally from both euthanasia and the withdrawal or refusal of life-sustaining treatment.

Euthanasia occurs when the physician actually administers the agent which causes death. An example is when a physician injects the patient with a poisonous substance. A gray area between euthanasia and bona fide treatment arises when, for example, a physician administers ever-increasing doses of palliative pain-killing medication, and those doses eventually reach toxic levels.

Life-sustaining treatment is defined in Washington as "any medical means that uses mechanical or other artificial means, including artificially provided nutrition and hydration, to sustain, restore, or replace a vital function, which, when applied to a qualified patient, would serve only to prolong the process of dying. [It does not include treatment] deemed necessary solely to alleviate pain."

RCW 70.122.020(5). A patient has a nonfundamental constitutionally protected liberty-based right to refuse or withdraw life-sustaining treatment, including respirators and artificial nutrition and hydration. *See Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990). In Washington, that right is also explicitly guaranteed by the Natural Death Act, RCW 70.122.010 *et seq.*

Physician-assisted suicide encompasses the situation where a physician makes available to a patient the means for that patient intentionally to cause his or her own death. For example, physician-assisted suicide would be the proper description of a process in which a physician, with the intent to assist a patient to commit suicide, prescribes medication which, when taken by the patient in sufficient potency and quantity, is lethal. The prescription may be part of a bona fide treatment, or it may be specifically prescribed as a means by which the patient commits suicide.

In all three sorts of cases, euthanasia, withdrawal of life-sustaining treatment, and physician-assisted suicide, there is a decision that other factors outweigh the patient's continuing to live. Plaintiffs ask us to blur the line between withdrawal of life-sustaining treatment and physician-assisted suicide. At the same time, some proponents of physician-assisted suicide would maintain a conceptual distinction between physician-assisted suicide and euthanasia. Associating physician-assisted suicide with a relatively accepted procedure and dissociating it from an unpalatable one are rhetorically powerful devices, but run counter to U.S. Supreme Court precedent,[1] Washington

[1] *Cruzan v. Director, Mo. Dep't of Health*, 497 U.S. 261 (1990) (assuming the existence of a constitutional right to be free from unwanted life-sustaining medical treatment, but implying the constitutionality of prohibitions of assisted suicide).

State statutory law,[2] medical ethics guidelines of the American Medical Association and the American College of Physicians,[3] and legal reasoning.[4]

The proper place to draw the line is between withdrawing life-sustaining treatment (which is based on the right to be free from unwanted intrusion) and physician-assisted suicide and euthanasia (which implicate the assistance of others in controlling the timing and manner of death). The former is constitutionally protected (under *Cruzan*); the latter are not.

II

There are several jurisdictional and prudential concerns which I consider before addressing the merits of this appeal.

A. Procedural posture

This is an interlocutory appeal from the district court's grant of partial summary judgment in favor of plaintiff

[2] *Compare* RCW 9A.36.060 (prohibiting the promotion of a suicide attempt) *with* RCW 70.122.010 *et seq.* (authorizing people to give directives to withhold or withdraw life-sustaining medical treatment).

[3] American Medical Association, *Code of Medical Ethics and Current Opinions of the Council on Ethical and Judicial Affairs* 2.20 (withholding or withdrawing life-sustaining medical treatment), 2.21 (euthanasia), 2.211 (physician-assisted suicide). *See also* American College of Physicians, *Ethics Manual*, 117 *Annals of Internal Medicine* (Dec. 1992) (reprinted in **Codes of Professional Responsibility** 237, 252 (Rena A. Gorlin, ed., 3d. ed. 1994)).

[4] *See, e.g.*, Yale Kamisar, "Against Assisted Suicide—Even a Very Limited Form," 72 U. Det. Mercy L. Rev. 735, 757 (forthcoming 1995) ("I share the view of the New York State Task Force on Life and the Law that it is 'this right against intrusion—not a general right to control the timing and manner of death—that forms the basis of the constitutional right to refuse life-sustaining treatment.'").

patients and physicians, insofar as the physicians represent the interests of their patients. The partial summary judgment has been certified as final pursuant to Fed. R. Civ. P. 54(b). Plaintiff Compassion in Dying is not a party to this appeal; neither are plaintiff physicians, insofar as they represent their own interests.

Three groups, representing four sets of interests, filed this action in the U.S. District Court for the Western District of Washington, seeking a declaration that RCW 9A.36.060 violates the Due Process and Equal Protection Clauses of the United States Constitution. The groups also sought to enjoin the State of Washington from enforcing the statute.

The first plaintiff is Compassion in Dying, a Washington nonprofit corporation organized to assist mentally competent, terminally ill patients in committing suicide by providing them information, counselling and emotional support. The second group of plaintiffs consisted of three mentally competent, terminally ill patients, litigating under pseudonyms: Jane Roe, John Doe, and James Poe. All three are now dead. The third group consists of four physicians licensed by the State of Washington to practice medicine and surgery (Drs. Glucksberg, Preston, Halperin, and Shalit), representing their own interests and those of their patients. *Compassion in Dying v. Washington*, 850 F. Supp. 1454, 1457-1458 (W.D. Wash. 1994).

Defendants in this action are the State of Washington ("the State") and Christine Gregoire, the Attorney General of Washington. In suits against the State, the Attorney General is designated by statute as the person to receive service of the summons and complaint and to appear and act as counsel for the State. RCW 4.92.020, 4.92.030.

On cross-motions for summary judgment, the district court granted only the motions of the patients and of the

physicians "insofar as the physicians purport to raise claims on behalf of their terminally ill patients." *Compassion in Dying*, 850 F. Supp. at 1457. It denied the motions of Compassion in Dying, the physicians on behalf of themselves, and the State. The district court also declined to enjoin the State from enforcing the statute. The district court found that the statute violated the patients' equal protection and due process rights.

The State appealed, and a panel of this court filed an opinion reversing the district court. *Compassion in Dying*, 49 F.3d 586 (9th Cir. 1995). A majority of the active judges of this court voted to grant a rehearing en banc. *Compassion in Dying*, 62 F.3d 299 (9th Cir. 1995).

The district court's grant of summary judgment is reviewed de novo. *Warren v. City of Carlsbad*, 58 F.3d 439, 441 (9th Cir. 1995). There are no factual issues in dispute; the only issues are constitutional.

B. Mootness

Because the plaintiff patients have all died, the case is now moot as to them. The only remaining plaintiffs who were parties to the partial summary judgment are the plaintiff physicians, insofar as they represent the interests of their patients.

C. Standing

"[T]o satisfy the 'case' or 'controversy' requirement of Article III of the United States Constitution, a plaintiff must allege a present or immediate injury in fact which is fairly traceable to the challenged action and is likely to be redressed by a favorable court decision." *Board of Natural Resources v. Brown*, 992 F.2d 937, 945 (9th Cir. 1993). The plaintiff physicians assert a sufficient injury in fact to satisfy Article III's standing requirements. *See Craig v. Boren*, 429 U.S. 195 (1976) (liquor store owner had standing to challenge restriction on selling beer with 3.2%

alcohol content to 18-20 year-old males). The physicians' injury is fairly traceable to the challenged statute, and the relief sought will redress their harm.

When one party asserts the rights of another party, there is also a prudential component to standing. This prudential component consists of three factors: "the relationship of the litigant to the person whose rights are being asserted; the ability of the person to advance his own rights; and the impact of the litigation on third party interests." *Caplin & Drysdale Chartered v. United States*, 491 U.S. 617, 623 n.3 (1989). In the abortion context, physicians may assert the rights of their patients.. *Singleton v. Wulff*, 428 U.S. 106 (1976). The same reasoning, regarding *jus tertii* standing based on the physician-patient relationship, applies in this case. In *Quill v. Koppell*, 870 F. Supp. 78 (S.D.N.Y. 1994),[5] a case similar to this one, the district court for the Southern District of New York held that physician plaintiffs do have standing to represent the interests of their patients, apparently on the theory that the physicians are in a special relationship with their patients in respects relevant to the alleged right. *Id.* at 82.

III

Plaintiffs' challenge to the Washington statute is "as applied." Challenges to a statute may either be facial or as applied. Justice Scalia concisely summarizes the operation of facial and as applied challenges:

> Statutes are ordinarily challenged, and their constitutionality evaluated, "as applied"—that is, the plaintiff contends that the application of the statute in the particular context in which he has acted, or in which he proposes to act, would be unconstitutional.

[5] The appeal in this case was heard on September 1, 1995 under the name *Quill v. Vacco*, No. 95-7028 (2d Cir.).

> The practical effect of holding a statute unconstitutional "as applied" is to prevent its future application in a similar context but not to render it utterly inoperative. To achieve the latter result, the plaintiff must succeed in challenging the statute "on its face." Our traditional rule has been, however, that a facial challenge must be rejected unless there exists *no set of circumstances* in which the statute can constitutionally be applied. *See, e.g., United States v. Salerno*, 481 U.S. 739, 745, 107 S. Ct. 2095, 2100, 95 L. Ed. 2d 697 (1987).

Ada v. Guam Society of Obstetricians and Gynecologists, 113 S. Ct. 633, 634 (1992) (Scalia, J., dissenting from denial of certiorari). *See also, e.g., Frazier v. Heebe*, 482 U.S. 641, 643 (1986) (petition alleged unconstitutionality of a regulation on its face and as applied); *United States v. James Daniel Good Real Property*, ___ U.S. ___, 114 S. Ct. 492, 513 (1993) (O'Connor, J., concurring in part, dissenting in part) (characterizing the constitutional challenge in that case as "as applied").

The district court characterizes plaintiffs' challenge as "facial." *Compassion in Dying*, 850 F. Supp. at 1459. The district court's characterization is apparently due to the fact that the action is a preenforcement review seeking a declaratory judgment. It has not yet been "applied" to the plaintiffs, in the sense that no party to this action has been prosecuted. This is an incorrect usage of the "facial" and "as applied" distinction.

In *Salerno*, the Supreme Court described what is necessary to succeed in a facial constitutional challenge to a statute:

> A facial challenge to a statute is, of course, the most difficult challenge to mount successfully, since the

> challenger must establish that no set of circumstances exists under which the Act would be valid. The fact that the [statute] might operate unconstitutionally under some conceivable set of circumstances is insufficient to render it wholly invalid, since we have not recognized an "overbreadth" doctrine outside the limited context of the First Amendment.

481 U.S. at 745.

Plaintiffs here do not challenge the applicability and constitutionality of the statute to, for example, prison inmates who incite their coprisoners to suicide. Rather, as the district court states, "Plaintiffs challenge the statute only insofar as it bans physician-assisted suicide by mentally competent, terminally ill adults who knowingly and voluntarily choose to hasten their death." *Compassion in Dying*, 850 F. Supp. at 1456. Because plaintiffs have made no attempt to demonstrate that there is *no* set of circumstances under which the statute would be valid, their challenge cannot be facial under *Salerno*.

Analyzing RCW 9A.36.060, the district court concludes "that the *Casey* 'undue burden' standard, set forth by the Supreme Court five years after *Salerno*, controls in this case." *Compassion in Dying*, 850 F. Supp. at 1462 (citing *Planned Parenthood of Southeastern Pennsylvania v. Casey*, 505 U.S. 833, _____, 112 S. Ct. 2791, 2836-2837 (1992) ("*Casey*")). The district court relies on two Court of Appeals cases and a concurrence by Justice O'Connor to support the proposition that *Casey* and *Salerno* conflict with each other. *Id.* at 1463. All of the cases cited by the district court deal with the abortion context.

To date, the Supreme Court has not extended *Casey's* undue burden test beyond abortion cases. *See Planned Parenthood of Southeastern Pennsylvania v. Casey*, 114 S. Ct. 909, 911 (1994) (Souter, J., in chambers) (describing the undue burden test as "the standard for assessing constitutionality of abortion regulation") ("*Casey II*"). The language of *Casey* supports the proposition that the undue burden test is unique to the abortion right and derived from the right itself. As restated by *Casey*, the essence of the abortion right is "the right of the woman to choose to have an abortion before viability and to obtain it without undue interference from the State." *Casey*, 112 S. Ct. at 2804.

Since *Casey*, the Court has continued to expressly rely on *Salerno* for facial challenges in non-abortion contexts. *E.g., Anderson v. Edwards*, 115 S. Ct. 1291, 1298-1299 n.6 (1995); *Reno v. Flores*, 113 S. Ct. at 1446.

Applying the *Salerno* analysis to RCW 9A.36.060, the group affected by the statute consists of all people who attempt suicide with someone else's assistance or encouragement. This includes prisoners encouraged by their cellmates, depressed teenagers in suicide pacts, ailing persons of advanced age assisted by their spouses, *and* mentally competent terminally ill adults seeking the assistance of a physician in committing suicide. The group allegedly enjoying constitutional protection consists only of mentally competent, terminally ill adults seeking the assistance of a physician in committing suicide. The entire group affected by the statute is not a subset of those claiming constitutional protection; rather, only a portion of the group affected by the statute overlaps with the group claiming constitutional protection. The inquiry in *Salerno* for the permissibility of a facial challenge is what proportion of the instances of application of the statute will impede constitutional rights. If the answer in the *Salerno* inquiry is less than 100%, then a facial challenge is impermissible.

The challenge of RCW 9A.36.060 cannot be a facial challenge. It is an "as applied" challenge. Because the challenge is "as applied," the fact that there has been no violation of the statute or threatened prosecution for a violation of the statute implicates straightforward ripeness concerns.

IV

The doctrine of ripeness contains two criteria: (1) hardship to parties in delaying resolution of the issues; (2) fitness of issues for judicial resolution. *See Abbott Laboratories v. Gardner*, 387 U.S. 136, 149 (1967). The legal issues are fit for judicial resolution. Waiting for further factual development would require someone to attempt physician-assisted suicide, and for that person's physician to face reasonably foreseeable prosecution under the statute. This is a ripe and justiciable controversy.

It has been suggested that *Poe v. Ullman*, 367 U.S. 497 (1961), might control the ripeness inquiry in this case. *Poe* does not apply here. In *Poe*, the Supreme Court held unripe a challenge by a physician and patients to a Connecticut statute prohibiting the use of contraceptive devices and the giving of medical advice about the use of such devices. The statute had been on the books since 1879, but had been enforced only once in the ensuing eight decades—and that case was a test case in 1940 that was ultimately dismissed. Additionally, contraceptives were "commonly and notoriously" sold in drug stores in Connecticut. Accordingly, the Supreme Court determined that there had been an "undeviating policy of nullification by Connecticut of its anti-contraceptive laws." *Poe*, 367 U.S. at 502. It added, "'Deeply embedded traditional ways of carrying out state policy . . .'—or not carrying it out—'are often tougher and truer law than the dead words of the written text.'" *Id.* (citation omitted). The Court

concluded that there was no "realistic fear of prosecution" and therefore no justiciable controversy ripe for adjudication. *Poe*, 367 U.S. at 508.

Though the history of RCW 9A.36.060 bears some similarities to the statute in *Poe*, the cases may be readily distinguished. In *Poe*, the statute had been on the books for a very long time, and it had never been enforced. And there was more than just a pattern of nonenforcement; the statute was openly and notoriously violated on a regular basis. RCW 9A.36.060 has similarly been on the books, in one form or another, since 1854. But it has been enforced. *E.g., State v. Jamison*, 619 P.2d 352 (Wash. 1980). Further, the factual circumstances in this case are different. First, there is no evidence that the Washington statute is at all "commonly and notoriously" flouted, particularly in the narrow circumstances of physician-assisted suicide for the mentally competent and terminally ill. Second, the issue of physician-assisted suicide as a plausible medical alternative is relatively new. Only since Dr. Kevorkian started assisting patients to commit suicide in Michigan in 1990 has there been significant public and legal attention to the possible differences between physician-assisted suicide and ordinary cases of aiding and abetting suicide. Research indicates at least a dozen prosecutions in states other than Washington of suicide-assisters since 1961.[6] Additionally, there have been a

---

[6] Research reveals that suicide-assisters were sometimes charged with involuntary manslaughter, or even murder, rather than with assisting suicide. All the cited cases involve the prosecution of someone else when the decedent actually caused his or her own death. *City of Akron v. Head*, ___ N.E.2d ___, 73 Ohio Misc. 2d 67 (Ohio Mun. 1995); *People v. Kevorkian*, 527 N.W.2d 714 (Mich. 1994), *cert. denied*, 115 S. Ct. 1795 (1995) (holding that Dr. Kevorkian may be prosecuted either under a Michigan statute—held to be constitutional—or under the common-law felony of assisting suicide);

number of murder prosecutions of people who were more actively involved in helping others end their lives (i.e. these defendants actually pulled the trigger or committed similar active steps to cause death).[7]

A limited reading of *Poe* is consistent with intervening Supreme Court precedent. *Babbitt v. United Farm Workers Nat'l Union*, 442 U.S. 289, 302 (1974) ("when fear of criminal prosecution under an allegedly unconstitutional statute is not imaginary or wholly speculative a plaintiff need not 'first expose himself to actual arrest or prosecution to be entitled to challenge [the] statute'" (citation omitted)).

We have construed *Poe* narrowly as well. *San Francisco County Democratic Central Committee v. Eu*, 826 F.2d 814, 821 (9th Cir. 1987), *aff'd*, 489 U.S. 214 (1989) (justiciable controversy exists over constitutionality of never-enforced statute where there is no record that the statute has been commonly and notoriously violated).

People v. Duffy, 185 A.D.2d 371, 586 N.Y.S.2d 150 (N.Y. App. Div. 1992); *State v. Bauer*, 471 N.W.2d 363 (Minn. App. 1991); *People v. Cleaves*, 229 Cal. App. 3d 367, 280 Cal. Rptr. 146 (Cal. App. 1991); *Hinson v. State*, 709 S.W.2d 106 (Ark. App. 1986); *Chanslor v. State*, 697 S.W.2d 393 (Tex. App. 1985); *People v. Campbell*, 335 N.W.2d 27 (Mich. App. 1983); *State v. Marti*, 290 N.W.2d 570 (Iowa 1980); *State v. Bier*, 591 P.2d 1115 (Mont. 1979); *Commonwealth v. Schwartzentruver*, 389 A.2d 181 (Pa. Super. Ct. 1978); *Persampieri v. Commonwealth*, 175 N.E.2d 387 (Mass. 1961).

[7] *Edinburgh v. State*, 896 P.2d 1176 (Okla. Crim. App. 1995); *State v. Sexson*, 869 P.2d 301 (N.M. App.), *cert. denied*, 870 P.2d 753 (M.N. 1994); *Gentry v. State*, 625 N.E.2d 1268 (Ind. App. 1994); *Goodin v. State*, 726 S.W.2d 956 (Tex. App. 1987); *People v. Thomas C.*, 183 Cal. App. 3d 786, 228 Cal. Rptr. 430 (Cal.App. 1986); *Forden v. Joseph G.*, 34 Cal.3d 429, 667 P.2d 1176 (Cal. 1983); *State v. Fuller*, 278 N.W.2d 756 (Neb. 1979).

In short, there are no jurisdictional or prudential concerns which foreclose consideration of the constitutional issues presented by the parties to this appeal.

V

I turn now to an historical account of the role of suicide and assisted suicide in the traditions and consciences of our forbears. Thomas Marzen *et al.* (Marzen) devote over eighty pages to a survey of the attitudes of the "Western Tradition" to suicide. Thomas Marzen *et al.*, "Suicide: A Constitutional Right?" 24 **Duq. L. Rev.** 1, 17-100. The "Western Tradition" has some of its roots in the laws and philosophy of Judeo-Christian groups; however, I am concerned here with the underlying moral and philosophical arguments, and their impact on the historical development of attitudes about suicide.

Here I recount and supplement salient portions of Marzen's account.

Marzen finds only eight instances of suicide in the Old Testament, including the Apocrypha. Seven of the eight instances were cases of ignoble death; the only exception is Samson's destruction of the Philistine temple. Marzen at 18. Marzen speculates that "[t]he infrequency of suicide among the Hebrews . . . was most probably due to their religious creed's positive emphasis on the value of life and the special providence of God." Marzen at 20.

In Plato's philosophy, the ultimate good, aspiration to the realm of the gods and the Forms, is attainable only upon death. However, that death should not be hastened by suicide. Marzen at 21. As Socrates explained, "[I]t probably seems strange to you that it should not be right for those to whom death would be an advantage to benefit themselves . . . [but] we men are put in a sort of guard post, from which one must not release oneself or run away." Plato, *Phaedo* 62a-62b (in Edith Hamilton and

Hungtington Cairns, eds., *Plato: The Collected Dialogues* 44-45, 1987). Plato views suicide as a breach of the relationship between the individual, the state, and the universe. "[W]hen suicide is a rational and deliberate choice, it is deemed to be a flagrant act of contempt for the state and an abandonment of duty to society and the divine order." Marzen at 23-24.

Aristotle echoed Plato's sentiments against suicide:

> To kill oneself to escape from poverty or love or anything else that is distressing is not courageous but rather the act of a coward, because it shows weakness of character to run away from hardships, and the suicide endures death not because it is a fine thing to do but in order to escape from suffering.

Marzen at 24 (quoting Aristotle, *Ethics* Bk. III, ch. 7 (J. Thompson, trans., 1977)).

By contrast, the Stoics endorsed suicide. As Marzen states, "the inevitability of death is the ultimate challenge to liberty . . . [and one must] 'make death [one's] own in order to be free from it.'" Marzen at 25.

Roman law forbade suicide, and introduced the penalty of forfeiture of one's goods and property. Marzen at 26.

Between the decline of the Roman Empire and the rise of the Common Law, ecclesiastical law was a dominant force in the English legal order. *See* Sir Frederick Pollock and Frederic William Maitland, *The History of English Law*, vol. 1, pp. 1-20 (1968).

St. Augustine opposed suicide as violative of the sixth commandment ("Thou shalt not kill."). Marzen at 27. In his *Summa Theologica*, St. Thomas Aquinas stated that

> it is unlawful to kill oneself for three reasons[:] . . . [first], suicide is contrary to the inclination of nature, and to charity whereby every man should love himself[;] . . . [second], every man is part of the community, . . . [and] by killing himself he injures the community[;] . . . [third], because life is God's gift to man, . . . whoever takes his own life, sins against God.

St. Thomas Aquinas, *Summa Theologica*, II-II, q. 64, art. 5, (Fathers of the English Dominican Province, eds., vol. 2, pp. 1465 *et seq.*, 1947). Martin Luther and John Calvin also opposed suicide. Marzen at 31.

In the mid-thirteenth century, Henry de Bracton wrote that a felon committing suicide to escape punishment forfeited all his real property and movable goods, but a person committing suicide "in weariness of life or because he is unwilling to endure further bodily pain . . . may have a successor [of his real property], but his movable goods are confiscated." 2 *Bracton on the Laws of England* 424 (fol. 150) (G. Woodbine ed., S. Thorne trans. 1968). "The principle that suicide of a sane person, for whatever reason, was a punishable felony was thus introduced into English common law." Marzen at 59. In 1644, Sir Edward Coke published his *Third Institute*, in which he treated suicide by a sane person as a form of murder. Marzen at 60-61.

In 1765, Sir William Blackstone condemned suicide in his *Commentaries on the Laws of England*:

> [T]he suicide is guilty of a double offence; one spiritual, in invading the prerogative of the Almighty, and rushing into his immediate presence uncalled for; the other temporal, against the king, who hath an interest in the preservation of all his subjects; the law has therefore ranked this among the highest crimes, making it a peculiar species of felony, a felony committed on one's self.

William Blackstone, 4 *Commentaries* ch. 14, *189.

Among the philosophers who influenced America's founders, John Locke opposed suicide as against natural law and the principle of self-preservation. Marzen at 42.

The American colonies in the seventeenth century generally adopted the English common law criminal prohibitions of suicide. Marzen at 63-66. However, in 1701, William Penn abolished the criminal penalty of forfeiture for suicide, and most of the rest of the colonies (later states) followed suit by the end of the eighteenth century. Marzen at 65-68. Most states have adopted the English common law, to the extent that it does not conflict with state or federal statutory or constitutional requirements. Washington did so in 1862.[8]

Thomas Jefferson opposed criminal prohibitions of suicide, presaging the sentiments of the drafters of the Model Penal Code:

> Men are too much attached to this life to exhibit frequent instances of depriving themselves of it. At any rate, the quasi-punishment of confiscation will not prevent it. For if one can be found who can calmly determine to renounce life, who is so weary of his existence here as rather to make experiment of what is beyond the grave, can we suppose him, in such a state of mind, susceptible to influence from the losses to his family by confiscation? That men in general disapprove of this severity is apparent from the constant practice of juries finding the suicide in

[8] Washington Laws, 1862, p. 83, § 1 provide: "[T]he common law of England, so far as it is not repugnant to, or inconsistent with the constitution and laws of the United States and the organic act, and laws of Washington territory, shall be the rule of decision in all the courts of this territory." This statute was amended to its current form by Washington Laws, 1891, ch. 17, § 1. It is now codified at RCW 4.04.010.

> a state of insanity; because they have no other way of saving the forfeiture.

Marzen at 45 (quoting Thomas Jefferson, 6 *The Papers of Thomas Jefferson* 155 (J.P. Boyd ed. 1952)).

By the turn of the nineteenth century, criminal penalties for suicide appear to have been abandoned in the United States. But the reason for doing so was not a recognition of the supremacy of individual autonomy; rather, it was the desire not to penalize the decedent's family combined with a recognition of the limited deterrent effect of criminal penalties for suicide.

As the nineteenth century progressed, states began to enact criminal prohibitions on assisting suicide. Marzen at 71-74. By 1868, when the Fourteenth Amendment was ratified, twenty-one of the thirty-seven states prohibited assisted suicide by either statute or common law. Marzen at 75. Within the first year of becoming a Territory, Washington enacted a prohibition of assisted suicide.[9] Thirty-six states and territories currently have statutes imposing criminal sanctions for aiding, assisting, causing, or promoting suicide.[10] Three additional states and the

[9] "Every person deliberately assisting another in the commission of self-murder, shall be deemed guilty of manslaughter." Terr. Laws 1854, p. 78, § 17 (1st Sess. 1854).

[10] ALASKA STAT. § 11.41.120 (1989); ARIZ.REV. STAT.ANN. § 13-1103 (1989); ARK.CODE ANN. § 5-10-104 (Michie 1987); CAL.PENAL CODE § 401 (Westlaw 1996); COLO. REV.STAT. § 18-3-104(1)(b)(Westlaw 1996); CONN.GEN.STAT. §§ 53a-54a, -56 (Westlaw 1996); DEL.CODE.ANN. tit. 11 §§ 632, 645 (1987 & Supp.1990); FLA.STAT.ANN. § 782.08 (West 1986); GA. CODE ANN. § 16-5-5 (Westlaw 1996); HAW.REV.STAT. § 707-702 (Westlaw 1996); ILL.REV.STAT. ch. 720, ¶ 5/12-31 (Westlaw 1996); IND.CODE §§ 3542-1-2, -2.5 (Westlaw 1996); KAN.STAT.ANN. § 21-3406 (1971); KY.REV.STAT. § 216.302 et seq. (Westlaw 1996);

District of Columbia do not impose explicit criminal sanctions on assisted suicide, but nonetheless condemn assisted suicide in statutes allowing withdrawal of medical treatment.[11] Three other states have definitions of criminally negligent homicide that are sufficiently broad to encompass aiding, assisting, causing or promoting suicide.[12] An additional four states impose criminal penalties under case law.[13] In total, forty-four states, the District of Columbia and two territories prohibit or condemn assisted suicide.

The trend toward repeal of criminal sanctions against suicide, while still regarding suicide as an indicium of mental illness, and continued prohibition of aiding or assisting suicide, has produced what appears to be a modern consensus on the subject. The modern consensus consists of an overall disapproval of suicide which is manifested through (1) not criminally punishing suicide itself,[14] but instead treating it as a medical or psychological problem;[15] (2) allowing the state to intervene to prevent someone from committing suicide; and (3) enacting criminal statues prohibiting the aiding or assisting of suicide.

VI

Plaintiffs allege that RCW 9A.36.060 violates their substantive due process rights under the Fourteenth Amendment of the United States Constitution. They argue that physician-assisted suicide fits within the broad description of the liberty aspect of the substantive due process right set forth in *Casey*:

> These matters, including the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to

---

[14] Research indicates that the last prosecution in the U.S. for attempted suicide probably occurred in 1961. The North Carolina Supreme Court relied on the English common law to determine that attempted suicide was punishable as a misdemeanor. *State v. Willis*, 121 S.E.2d 854 (N.C. 1961).

[15] Washington subscribes to this view, and provides that attempts or threats to commit suicide can constitute a "likelihood of serious harm" to oneself sufficient to justify commitment. *See* RCW 71.05.020(3), RCW 71.05.240.

> define one's own concept of existence, of meaning, of the universe, and of the mystery of human life.

Casey, 112 S. Ct. at 2807.

Specifically, plaintiffs allege that mentally competent, terminally ill adults have a constitutionally protected liberty interest in committing physician-assisted suicide. The district court also addresses the issue in those terms. This narrow formulation follows the teaching of the Supreme Court in *Cruzan*, which says, "in deciding 'a question of such magnitude and importance . . . it is the [better] part of wisdom not to attempt, by any general statement, to cover every possible phase of the subject.'" *Cruzan*, 497 U.S. at 278. *See also Reno v. Flores*, 113 S. Ct. at 1447 ("'Substantive due process' analysis must begin with a careful description of the asserted right, for '[t]he doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field.'").

I would hold that mentally competent, terminally ill adults do not have a fundamental right to commit physician-assisted suicide. The Supreme Court has repeatedly indicated an unwillingness to expand the list of rights deemed fundamental. Physician-assisted suicide is not currently on that list. To be fundamental, a liberty interest must be central to personal autonomy or deeply rooted in history. The district court relies on language in *Casey's* plurality opinion to hold that substantive due process protects a wide range of autonomy-based liberty interests, including physician-assisted suicide. Such a reading of *Casey* is permissible, provided it is clearly understood that the liberty interests so protected are not fundamental. *Casey's* reaffirmation of the abortion right is best understood as a decision that relies heavily on *stare decisis*; the abortion right, uniquely protected under the

undue burden standard, is *sui generis*. The second test for determining the existence of fundamental rights, whether the interest is rooted in the nation's history, similarly militates against a fundamental right to physician-assisted suicide.

I would hold that mentally competent, terminally ill adults do have an autonomy-based, nonfundamental liberty interest in committing physician-assisted suicide.

A. No new fundamental rights

While the list of fundamental rights has not been definitively closed to expansion, the Court has indicated an unwillingness to find new penumbral, privacy-type fundamental rights. In *Reno v. Flores*, 113 S. Ct. 1439 (1993), the Court refuses to expand the list of fundamental rights to include a right of juveniles to be released into a noncustodial setting. *Reno* states:

> We are unaware . . . that any court—aside from the courts below—has ever held that [the asserted fundamental right exists]. The mere novelty of such a claim is reason enough to doubt that "substantive due process" sustains it; the alleged right certainly cannot be considered "'so rooted in the traditions and conscience of our people as to be ranked as fundamental.'" *Salerno*, *supra*, 481 U.S., at 751, 107 S. Ct., at 2103 (quoting *Snyder v. Massachusetts*, 291 U.S. 97, 105, 54 S. Ct. 330, 332, 78 L. Ed. 674 (1934)).

113 S. Ct. at 1447. *See also Bowers v. Hardwick*, 478 U.S. 186, 190 (1986) ("[T]here should be . . . great resistance to expand the substantive reach of [the due process clauses of the Fifth and Fourteenth Amendments], particularly if it requires redefining the category of rights deemed fundamental.").

Bowers clearly identifies its liberty inquiries as fundamental, and states the two tests as follows:

> In *Palko v. Connecticut*, 302 U.S. 319, 325, 326 (1937), it was said that this category [of rights which qualify for heightened judicial protection] includes those fundamental liberties that are "implicit in the concept of ordered liberty," such that "neither liberty nor justice would exist if [they] were sacrificed." A different description of fundamental liberties appeared in *Moore v. East Cleveland*, 431 U.S. 494, 503 (1977) (opinion of Powell, J.), where they are characterized as those liberties that are "deeply rooted in this Nation's history and tradition."

Bowers, 487 U.S. at 191-192.

These tests are distinct from the broader nonfundamental liberty inquiry of *Casey*. The sweeping description of liberty in *Casey* is never characterized as "fundamental" under the Constitution; rather, its wide purview covers all liberty protected by the Fourteenth Amendment, nonfundamental as well as fundamental.

There is no fundamental liberty interest in physician-assisted suicide. First, as discussed above in Part V, there is no history or tradition supporting any form of suicide. Second, however compelling the suicidal wishes of terminally ill patients are regarded, it cannot honestly be said that neither liberty nor justice will exist if access to physician-assisted suicide is proscribed.

B. The abortion right's strength rests on stare decisis

The *Casey* plurality states repeatedly that it is the combined force of *stare decisis* and liberty that protects a woman's right to abortion. *Casey*, 112 S. Ct. at 2804, 2808. This implies that liberty alone would be insufficient to support a new fundamental right to abortion.

The plurality never characterizes the abortion right as fundamental. This omission is significant, given the plurality's broad characterization of the liberty interest, as well as its use of the undue burden test in lieu of the strict scrutiny ordinarily applied to fundamental rights. The four-Justice dissent goes farther, stating that it would hold the abortion right to be nonfundamental:

> We are now of the view that, in terming this right fundamental, the Court in *Roe* read the earlier opinions upon which it based its decision much too broadly. Unlike marriage, procreation and contraception, abortion "involves the purposeful termination of human life." The abortion decision must therefore "be recognized as *sui generis*, different in kind from the others that the Court has protected under the rubric of personal or family privacy and autonomy."

Casey, 112 S. Ct. at 2859 (Rehnquist, C.J., concurring in the judgment in part and dissenting in part) (citations omitted). Central to the dissent's reason for wanting to call the abortion right nonfundamental is the fact that it involves the purposeful termination of human life. Abortion is *sui generis*, and the courts are on notice that these four Justices will not find fundamental any other asserted right that involves the purposeful termination of human life.

The other main end-of-life case, *Cruzan*, presumes a nonfundamental liberty interest in refusing unwanted medical treatment. This interest was subjected to ordinary balancing against the state interests, rather than strict scrutiny. *Cruzan*, 497 U.S. 261.

These cases, combined with the Supreme Court's disinclination to find new fundamental rights, compel the conclusion that a liberty interest in physician-assisted suicide, if one exists, is nonfundamental.

C. The history test does not support a liberty interest in physician-assisted suicide

In a recent English case, Lord Hoffman succinctly articulated the misperception upon which a history-based right to suicide is premised: "Suicide is no longer a crime, but its decriminalization was a recognition that the principle of self-determination should in that case prevail over the sanctity of life." *Airedale N.H.S. Trust v. Bland (C.A.)*, 2 W.L.R. 316, 351-352 (1993).

Yale Kamisar harshly criticizes this misperception:

> [T]he decriminalization of both suicide and attempted suicide did not come about because suicide was deemed a "human right" or even because it was no longer considered reprehensible. These changes occurred, rather, because punishment was seen as unfair to innocent relatives of the suicide and because those who committed or attempted to commit the act were thought to be prompted by mental illness.

Yale Kamisar, "Are Laws Against Assisted Suicide Unconstitutional?" 23 **Hastings Center Report** 32 (5/93) (citing "the most comprehensive and most heavily documented law review article ever written on the subject," Thomas Marzen et al., "Suicide: A Constitutional Right?" 24 **Duq. L. Rev.** 1, 68-100 (1985)). Kamisar also quotes the comments to the Model Penal Code, which explain the elimination of criminal sanctions for suicide: "There is a certain moral extravagance in imposing criminal punishment on a person who has sought his own self-destruction . . . and who more properly requires medical or psychiatric attention." Kamisar, *id.*

As I discussed above in Part V, suicide and assisted suicide are clearly not "deeply rooted in this Nation's history and tradition." *Bowers*, 487 U.S. at 192. Nor are

suicide or assisted suicide rooted in the English Common Law as adopted by the states, or in the legal and philosophical order underlying the English Common Law.

D. The autonomy test supports a limited liberty interest in physician-assisted suicide

The district court's starting point for the autonomy inquiry is the now-famous assertion in *Casey* that"[a]t the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State." *Casey*, 112 S. Ct. at 2807. Application of this statement in the adjudication of substantive due process claims is a matter of "reasoned judgment." *Casey*, 112 S. Ct. at 2806. This throws courts into the wide-open realm of pure moral reasoning about liberty. As a practical matter, such unfettered theoretical musing could not plausibly form the basis of a constitutional fundamental rights jurisprudence. This is borne out by *Casey*'s notable omission to mention "fundamental" rights. *Casey* should therefore be read as describing more general, nonfundamental liberty.

There is scant guidance in the quoted passage from *Casey* as to what may constitute a nonfundamental liberty interest. Taken out of context, the "right to define one's own concept of existence" is so broad and melodramatic as to seem almost comical in its rhetorical flourish. But the preceding sentence in *Casey* provides a more somber and usable definition of liberty. Personal decisions which "involv[e] the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment." *Casey*, 112 S.Ct. at 2807.

As plaintiffs and amicus Ten Surviving Family Members in Support of Physician-Assisted "Suicide" assert, a terminally ill person is dying, not eventually as all humans do, but imminently. Often, the decline to death is not only painful, but debilitating and demoralizing. Ideally, terminally ill people will be surrounded by caring, supportive family members, doctors, and friends, who will be able to alleviate the pain and the low morale. But ultimately, many of those who are terminally ill will face a choice of whether to continue the slow decline to death, or instead to truncate their lives.

The Hemlock Society's how-to suicide book, *Final Exit* illustrates that there are many feasible methods of ending one's life. But many of the choices are not terribly dignified. *Casey* says that liberty protects not only choices that are personal, intimate and central to autonomy, but also that are central to personal dignity. Suicide by physician-prescribed medication is seen by some as an inherently more dignified way to hasten an imminent and inevitable death than other methods in common usage.

To the extent that *Casey* defines the outer limits of the Constitution's nonfundamental liberty right, it can plausibly be said to include decisions about the manner and timing of one's death.

VII

Whatever test is ultimately used to evaluate the constitutionality of RCW 9A.36.060, the plaintiffs' liberty interest must be compared against the state interests underlying the statute.

The State asserts three interests: (1) preventing suicide, (2) protecting vulnerable individuals from abuse or undue influence and (3) preserving and protecting the lives of its people. It asserts that the interest in preventing suicide applies equally to all the state's citizens; the State does

not evaluate the quality of life among its citizenry, and preserve and protect only those whose lives are deemed "worth living."

Washington courts recognize four state interests common to end-of-life cases: (1) the preservation of life, (2) the protection of the interests of innocent third parties, (3) the prevention of suicide, and (4) the maintenance of the ethical integrity of the medical profession. *In re Guardianship of Grant*, 747 P.2d 445, 451 (Wash. 1987); *In re Colyer*, 660 P.2d 738, 743 (Wash. 1983). The Supreme Court has also recognized all four of these state interests. *Cruzan*, 497 U.S. at 271.

The four governmental interests recognized by Washington courts and endorsed by the Supreme Court are all very strong, and apply with undiminished vigor to justify RCW 9A.36.060's prohibition of physician-assisted suicide for mentally competent, terminally ill adults. Any one of these interests would be sufficient to support this application of the statute under a rational relationship test. Were it necessary for me to do so, I would even be inclined to hold that the cumulative force of all four governmental interests is sufficient to enable this application of the statute to withstand strict scrutiny.

A. The preservation of life

This interest has been addressed extensively in the cases involving withdrawal of nutrition and hydration. In particular, *Grant* and *Colyer* describe the contours of Washington's interest in the preservation of life. The *Colyer* court held that the interest "weakens . . . in situations where continued treatment serves only to prolong a life inflicted with an incurable condition." *Colyer*, 660 P.2d at 743. The *Grant* court held the interest "weaken[s] considerably . . . if treatment will merely postpone death

for a person with a terminal and incurable condition." *Grant*, 747 P.2d at 451.

It may be tempting to extrapolate from these cases a principle that terminally ill patients seeking to commit physician-assisted suicide fall within the zone where the state's interest in preserving life is weakened. Such an extrapolation would be improper. The state's interest is weakened only where continued medical treatment would do nothing more than postpone death. This is the holding of both *Colyer* and *Grant*, and it matches the line drawn in Part I of this opinion, between discontinuing medical treatment on one hand, and physician-assisted suicide and euthanasia on the other hand. As applied to terminally ill adults seeking physician-assisted suicide, the state's interest in preserving life remains at full strength.

The state's interest in preserving life is equally strong when applied to terminally ill patients seeking to commit assisted suicide as it is when applied to the general populace. The analogy to abortion is a rough one: in the abortion context, the Supreme Court tells us that the state's interests in fetal life are weaker before viability than they are once the fetus becomes viable. *See Casey*, 112 S. Ct. at 2804. A state's interest in preserving human life is stronger when applied to viable beings than it is when applied to nonviable beings. Like a first-trimester fetus, a person kept alive by life-sustaining treatment is essentially nonviable. A terminally ill patient seeking to commit physician-assisted suicide, by contrast, is essentially viable. The patient may be inexorably approaching the line of nonviability. But the patient is still on the viable side of that line, and consequently enjoys the full protection of the state's interest in preserving life.

B. The protection of the interests of innocent third parties

The question of physician-assisted suicide raises many issues involving the interests of innocent third parties. Constitutional protection for a right to assisted suicide might spawn pressure on the elderly and infirm—but still happily alive—to "die and get out of the way."[16] Also at risk are the poor and minorities, who have been shown to suffer more pain (i.e. they receive less treatment for their pain) than other groups. *See* Yale Kamisar, "Against Assisted Suicide—Even a Very Limited Form," 72 **U. Det. Mercy L. Rev.** 735, 737-739 (1995). Further, like the elderly and infirm, they, as well as the handicapped, are at risk of being unwanted and subjected to pressure to choose physician-assisted suicide rather than continued treatment. Kamisar quotes the New York State Task Force on Life and the Law:

> [I]t must be recognized that assisted suicide and euthanasia will be practiced through the prism of social inequality and prejudice that characterizes the delivery of services in all segments of society, including health care. Those who will be most vulnerable to abuse, error, or indifference are the poor, minorities, and those who are least educated and least empowered. This risk does not reflect a judgment that physicians are more prejudiced or influenced by race and class than the rest of society—only that they are not exempt from the prejudices manifest in other areas of our collective life.

---

[16] A recent computer search revealed 83 news stories with this phrase, including the famous 1984 statement by Colorado Governor Lamm.

. . .

> [Many patients] in large, overburdened facilities serving the urban and rural poor . . . will not have the benefit of skilled pain management and comfort care. Indeed, a recent study found that patients treated for cancer at centers that care predominantly for minority individuals were three times more likely to receive inadequate therapy to relieve pain. Many patients will also lack access to psychiatric services. Furthermore, for most patients who are terminally or severely ill, routine psychiatric consultation would be inadequate to diagnose reliably whether the patient is suffering from depression.

Kamisar, *Id.* at 738 (quoting The New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* at 125, 143 (1994)). Pain and suffering are directly related to the prevalence of requests for assisted suicide. Kamisar reports that

> Although pain is notoriously undertreated in this country, "according to experts in the field of pain control, almost all terminally ill patients can experience adequate relief with currently available treatments." Thus, . . . suicidal ideation and suicide requests "commonly . . . dissolve with adequate control of pain and other symptoms."

Id. (quoting Judith Ahronheim & Doron Weber, *Final Passages: Positive Choices For the Dying and Their Loved Ones* 102 (1992); Kathleen Foley, "The Relationship of Pain and Symptom Management to Patient Requests for Physician-Assisted Suicide," **J. Pain & Symptom Management** 289, 290 (1991)). Kamisar repeatedly suggests the explanation for inadequate control of pain: lack of universal access to adequate medical care. *Id.* at 738, 744 n.43.

People request physician-assisted suicide because they are in pain or are otherwise suffering. If their suffering is alleviated, they will likely withdraw their requests for physician-assisted suicide. We the courts are asked, in a nation of inadequate and unequal access to medical care for the alleviation of pain and suffering, to create a constitutional right to physician-assisted suicide. Surely this is a case of misplaced priorities.

Plaintiffs suggest that adequate procedural safeguards can be implemented to protect the interests of innocent third parties. This assertion is refuted by the experience of The Netherlands, where physician-assisted suicide and euthanasia are nominally legal.[17] At the outset, The Netherlands had guidelines: the patient must be incurably ill, the patient's suffering must be subjectively unbearable, the request for termination should be in writing, and there should be adequate consultation with other physicians before euthanasia was carried out. Lagerway at 439.

In 1991, the Dutch Government released a report on the practice of euthanasia and physician-assisted suicide in The Netherlands. Commissie Onderzoek Medische Praktijk Inzake Euthanasie, *Medische Beslissingen Rond Het Levenseinde* (1991) (the "Remmelink Report"). According to the Remmelink Report, 2.1% of all deaths in The Netherlands are due to physician-assisted suicide or euthanasia. Another 7% are due to the alleviation of pain

---

[17] Physician-assisted suicide and euthanasia are prohibited by the Penal Code of the Netherlands, art. 293-294. *See* John Keown, "Euthanasia in The Netherlands: Sliding Down the Slippery Slope? " 9 **Notre Dame J. Law, Ethics & Pub. Pol.** 407, 409-410 (1995). The courts have allowed physicians who participate in euthanasia to go unpunished since 1973. Nederlandse Jurisprudentie (1973), no. 183, District Court of Leeuwarden, February 21, 1973; trans., Walter Lagerway, 3 **Issues in Law and Med.** 429, 439-442 (1988).

or symptoms where the physician had the explicit (total or partial) purpose of shortening life. In 1990: 2300 people were euthanized upon request, 400 died as a result of physician-assisted suicide, 1000 died from involuntary euthanasia (patients were killed without their knowledge or consent), and 8100 died as a result of doctors deliberately giving them overdoses of pain medication (again, 61% of this category were killed without their knowledge or consent).[18]

Critics of this data would respond that the Dutch experiment has focused mainly on euthanasia, rather than physician-assisted suicide. But even proponents of assisted suicide have begun to abandon the distinction between physician-assisted suicide and euthanasia:

> To confine legalized physician-assisted death to assisted suicide unfairly discriminates against patients with unbelievable suffering who resolve to end their lives but are physically unable to do so. The method chosen is less important than the careful assessment that precedes assisted death.

Franklin G. Miller et al., "Sounding Board: Regulating Physician-Assisted Death," 331 **New England J. Med.** 119, 120 (1994). Likewise, the AMA Code of Ethics § 2.211 uses identical language to condemn both euthanasia and physician-assisted suicide.

The poor, the elderly, the disabled and minorities are all at risk from undue pressure to commit physician-assisted suicide, either through direct pressure or through inadequate treatment of their pain and suffering. They cannot be adequately protected by procedural safeguards, if the Dutch experience is any indication. The only way to

---

[18] Keown, *supra* note 17, at 419.

achieve adequate protection for these groups is to maintain a bright-line rule against physician-assisted suicide.

But it is not only people at the margins who are imperilled by the threat of a constitutional right to physician-assisted suicide. Such a right could disrupt the established legal order of wills, trusts, life insurance, annuities, pensions, and other estate planning tools employed by many Americans. Many life insurance policies have suicide clauses in them, which negate the insurer's liability if the insured commits suicide. Many states have statutes like Washington's Slayer's Act, which preclude participants in the unlawful killing of another person from acquiring property or receiving benefits as the result of the death.[19] A sampling of cases demonstrates that these and related concerns are real. In *People v. Matlock*, 336 P.2d 505 (Cal. (In Bank) 1959) and *Godsparek v. State*, 1993 WL 213854 (Ala. Cr. App. 1993), the defendants were tried for killing people who had hired or requested to be killed because they wanted to die, but did not want to void their life insurance by committing suicide. In *Keddie v. Delaware Violent Crimes Compensation Board*, 1991 WL 215655 (Del Super. 1991), Ms. Keddie was denied compensation under the Compensation for Innocent Victims of Crime Act for her husband's suicide. He committed suicide at the encouragement of Anthony Sabbato, who was convicted of promoting a suicide. The court reasoned that Ms. Keddie's husband was not an innocent victim of crime, insofar as he contributed to his own death. In *Holmes v. Morgan*, 899

---

[19] *See* RCW 11.84.010 *et seq*. The applicability of this statute to cases of assisted suicide has not yet been decided in Washington courts. However, RCW 11.84.900 provides: "This chapter . . . shall be construed broadly to effect the policy of this state that no person shall be allowed to profit by his own wrong, wherever committed."

P.2d 738 (Or. App. 1995), a distraught young man changed the named beneficiary on his life insurance policy from his parents to a friend, who may have assisted him in a suicide attempt. He later committed suicide without assistance. The Oregon Court of Appeals held that the friend could receive the policy proceeds. Finally, in *Wilmington Trust Co. v. Clark*, 424 A.2d 744 (Md. 1981), the Maryland Supreme Court considered whether a woman could bring a contract or tort action against her former husband's estate, on the ground that his suicide deprived her of alimony.

The interests of many innocent third parties are implicated by a putative right to physician-assisted suicide. Most obviously, the poor, minorities and the disabled are at risk of suffering undue indifference or pressure to commit physician-assisted suicide. Less obviously, a right to physician-assisted suicide could severely disrupt the economic interests of the relatives, partners and associates of those who commit physician-assisted suicide.

C. The prevention of suicide

The state interest in preventing suicide runs directly contrary to any claimed right to physician-assisted suicide. It is a longstanding interest. In Washington, committing or attempting suicide was punishable as a crime at least from 1909 to 1976. The 1976 repeal arguably represents a recognition that suicide is not a criminal problem, but rather one of mental and public health.[20] Suicide is a leading cause of death in Washington for all age groups, 15-54. Washington State Dep't of Health, *Washington State Annual Summary of Vital Statistics 1989* 38-39 (1990). Suicide is the cause of 1.8% of all deaths in

[20] A review of the legislative history and the state archives reveals that the repeal was enacted without comment from the legislature.

Washington. *Id.* at 37. Aiding suicide has been codified as a crime in Washington law since 1854, and continues to the present, in RCW 9A.36.060.

Plaintiffs imply that the prevention of suicide is merely a derivative of the state's general interest in protecting life. Even if this were the entire substance of the state interest in preventing suicide, the state's interest in preserving life remains at full strength in the case of terminally ill patients seeking to commit physician-assisted suicide.

However, the history of state regulation of suicide and the modern consensus on the regulation of suicide indicates that the state's interest in preventing suicide goes deeper than just keeping people alive. The state recognizes suicide as a manifestation of medical and psychological anguish; people with suicidal tendencies are suffering. The state's interest is in addressing and, where possible, relieving that suffering.

Plaintiffs make a compelling argument that in some cases of terminally ill patients, the suffering is due not to physical pain or to psychological illness, but to the knowledge that their terminal illness will slowly dissolve their physical and mental faculties, stripping them of dignity in their last days. But also compelling are the data indicating that a high percentage of persons withdraw their suicide requests once they receive adequate treatment for depression, pain, and the like. *See, e.g.*, Kamisar, 72 **U. Det. Mercy L. Rev.** at 744.

The state's interest in preventing suicide is distinct from its interest in preserving life, and it does not diminish with the onset and advancement of terminal illness.

D. The maintenance of the ethical integrity of the medical profession

It is sanctionable unprofessional medical conduct in Washington to "possess[ ], use, prescri[be] for use, or distribut[e] . . . controlled substances or legend drugs in any way other than for legitimate or therapeutic purposes . . . " RCW 18.130.180(6). Furthermore, "[t]he use of a nontraditional treatment by itself shall not constitute unprofessional conduct, provided that it does not result in injury to a patient or create an unreasonable risk that a patient may be harmed." RCW 18.130.180(4). These statutory provisions demonstrate that, in addition to the prohibitions of RCW 9A.36.060, physicians are subject to professional sanctions for prescribing drugs to their patients in order to assist those patients to commit suicide.

While not legally binding, the AMA Code of Ethics provides clear guidance on the current position of medical ethicists. Section 2.211 of the American Medical Association's Code of Medical Ethics and Current Opinions of the Council on Ethical and Judicial Affairs ("AMA Code of Ethics") prohibits physician participation in physician assisted suicide. In virtually identical language to its condemnation of euthanasia, section 2.211 provides:

> Physician assisted suicide occurs when a physician facilitates a patient's death by providing the necessary means and/or information to enable the patient to perform the life-ending act (e.g. the physician provides sleeping pills and information about the lethal dose, while aware that the patient may commit suicide).
>
> It is understandable, though tragic, that some patients in extreme duress—such as those suffering from a terminal, painful, debilitating illness—may

> come to decide that death is preferable to life. However, allowing physicians to participate in assisted suicide would cause more harm than good. Physician assisted suicide is fundamentally incompatible with the physician's role as healer, would be difficult or impossible to control, and would pose serious societal risks.
>
> Instead of participating in assisted suicide, physicians must aggressively respond to the needs of patients at the end of life. Patients should not be abandoned once it is determined that cure is impossible. Patients near the end of life must continue to receive emotional support, comfort care, adequate pain control, respect for patient autonomy, and good communication.

Because it is contrary to Washington statutory law, reinforced by the AMA Code of Ethics, it would violate the state's interest in maintaining the ethical integrity of the medical profession to allow physicians to participate in physician assisted suicide.

VIII

In reviewing a statute's constitutionality under the substantive due process clause, courts should apply one of two tests. If the right asserted is fundamental, the statute is subjected to strict scrutiny, under which it must be narrowly tailored to serve a compelling state interest. If the liberty interest is not fundamental, the statute is subjected only to the "unexacting" inquiry of whether the statute rationally advances some legitimate governmental purpose. *Reno v. Flores*, 113 S. Ct. at 1447-1449.

Because I would hold that the liberty interest of mentally competent, terminally ill adults in committing physician-assisted suicide is not a fundamental right, I would use the latter test, which has sometimes been called the rational relationship test.

The nonfundamental liberty interest at stake here is the right of mentally competent, terminally ill adults to commit physician-assisted suicide. This interest is rooted in the liberty to make intensely private choices that are central to personal dignity and autonomy. The exercise of this non-fundamental liberty interest is barred in Washington by RCW 9A.36.060, which states that promoting a suicide attempt is a criminal offense. The Washington statute rationally advances four legitimate state interests: the preservation of life, the protection of the interests of innocent third parties, the prevention of suicide, and the maintenance of the ethical integrity of the medical profession. Under the rational relationship test, RCW 9A.36.060 is valid.[21]

IX

The district court also holds that the Washington statute violates the Equal Protection Clause. Its analysis is based upon two premises, both of which are incorrect, and fall together. First, it assumes that *Cruzan*-type patients are similarly situated to the patients in this case. Second, it holds that the differentiation between these types of patients is subject to, and does not withstand, strict scrutiny. *Compassion in Dying*, 850 F. Supp. at 1466.

---

[21] The Supreme Court has occasionally appeared to employ a straight balancing test instead of the strict scrutiny-versus-rational relationship dichotomy. *E.g., Cruzan*, 497 U.S. at 278-279 ("whether [the individual's] constitutional rights have been violated must be determined by balancing his liberty interests against the relevant state interests"). Even under such a balancing test, I would hold that the state's four interests—in preserving life, protecting the interests of innocent third parties, preventing suicide, and maintaining the ethical integrity of the medical profession—outweigh the plaintiffs' autonomy-based liberty interest in committing physician-assisted suicide.

Cruzan-type patients are being subjected to unwanted life-saving medical treatment, from which they have a constitutionally protected right to be free. The patients in this case, though also terminally ill, are not seeking any such freedom from treatment. Rather, they are seeking medical assistance in ending their lives. The district court rejected arguments that the distinction between the two groups is one between "natural" and "artificial" deaths. There are dozens of ways that the two groups of patients could be distinguished or associated, not the least of which is the dramatic difference in the nature of their constitutional rights. One group has not just an interest but a right to be free from unwanted medical treatment. The other group has an interest, but not a protected right, in committing physician-assisted suicide. Washington statutes clearly distinguish the two groups, as does the AMA Code of Ethics. They are not similarly situated, and are therefore not subject to an equal protection analysis.

Even though the physician plaintiffs argue that the two groups are similarly situated, the patients in this case are neither a suspect classification nor holders of fundamental rights. The patients' position is entitled to no more than rational basis review. Strict scrutiny is only used where people are categorized into suspect classifications (e.g., race) or suffer the infringement of a constitutionally protected fundamental right. "[T]he pertinent inquiry is whether the [classification] advances legitimate legislative goals in a rational fashion. The Court has said that, although this rational basis standard is 'not a toothless one,' it does not allow us to substitute our notions of good public policy." *Schweiker v. Wilson*, 450 U.S. 221 (1981). *See also New York Transit Auth. v. Beazer*, 440 U.S. 568 (1979); *Kadrmas v. Dickinson Public Schools*, 487 U.S. 450 (1988). The state's interests in protecting life, preventing suicide, protecting the interests of third parties,

and preserving the ethical integrity of the medical profession are strong, perhaps even compelling. Even if the two groups—patients refusing unwanted medical treatment and mentally competent terminally ill adults seeking to commit physician-assisted suicide—were similarly situated, the distinction between them rests solidly on a rational basis and is constitutionally valid under the Equal Protection Clause.

X

The issue of whether mentally competent, terminally ill adults have a constitutionally protected right to commit physician-assisted suicide is one of the most difficult, divisive and heart-wrenching issues facing the courts today. The correlative issue of whether terminally ill loved ones ought to be allowed to commit assisted suicide is likewise one of the most difficult, divisive and heart-wrenching issues facing American society. The former is a constitutional issue for the courts; the latter is a moral question for society as a whole.

The two issues are not the same. The latter requires us —all of us, not just judges—to engage in a soul-searching dialogue about our collective morals. Given the tremendous advances in twentieth-century medical technology and public health, it is now possible to live much longer than at any time in recorded history. We have controlled most of the swift and merciful diseases that caused most deaths in the past. In their place are a host of diseases that cause a slow deterioration of the human condition: cancer, Alzheimer's disease, and AIDS are but a few. This change has forced us to step back and reexamine the historic presumption that all human lives are equally and intrinsically valuable. Viewed most charitably, this reexamination may be interpreted as our struggle with the question whether we as a society are willing to excuse the terminally

ill for deciding that their lives are no longer worth living. Viewed less charitably, the reexamination may be interpreted as a mere rationalization for housecleaning, cost-cutting and burden-shifting—a way to get rid of those whose lives we deem worthless. Whether the charitable or uncharitable characterization ultimately prevails is a question that must be resolved by the people through deliberative decisionmaking in the voting booth, as in Washington in 1991, California in 1992 and Oregon in 1994, or in the legislatures, as recently undertaken in Michigan and New York. This issue we, the courts, need not—and should not—decide.

Instead, we should restrict our decision to the former issue: whether mentally competent, terminally ill adults have a constitutionally protected liberty interest in committing physician-assisted suicide. This is the first federal appellate case in our nation's history to address the issue of physician-assisted suicide. To declare a constitutional right to physician-assisted suicide would be to impose upon the nation a repeal of local laws. Such a declaration would also usurp states' rights to regulate and further the practice of medicine, insofar as a right to physician-assisted suicide flies in the face of well-established state laws governing the medical profession. Finally, the rationales under which we are asked to create this right fail adequately to distinguish physician-assisted suicide as a unique category. If physician-assisted suicide for mentally competent, terminally ill adults is made a constitutional right, voluntary euthanasia for weaker patients, unable to self-terminate, will soon follow. After voluntary euthanasia, it is but a short step to a "substituted judgment" or "best interests" analysis for terminally ill patients who have not yet expressed their constitutionally sanctioned desire to be dispatched from this world. This is the sure

and inevitable path, as the Dutch experience has amply demonstrated. It is not a path I would start down.

I would hold that the four state interests discussed above are sufficiently strong to sustain the constitutionality of RCW 9A.36.060 as applied to plaintiffs' asserted liberty interest.

I dissent.

FERNANDEZ, Circuit Judge, dissenting:

I join in Judge Beezer's dissenting opinion with one caveat. Nothing in his opinion, or in that of the majority, convinces me that there is any constitutional right whatever to commit suicide. In my view, no one has an even nonfundamental *constitutional right* to become what our legal ancestors pithily denominated a *felo de se*. *See e.g.*, Sir Edward Coke, *Institutes of the Laws of England*, 3d Institute, 54 (Brooke ed. 1797) (1644); 1 Sir Matthew Hale, *Pleas of the Crown* 411 (Nutt ed. 1736) (1680); 4 Sir William Blackstone, *Commentaries on the Laws of England* 189 (15th ed. 1809) (1765). The arguments for and against suicide raise an issue which would elicit competing responses from even our most well trained moral philosophers. Like so many other issues, it is one "for the people to decide." *Guadalupe Org., Inc. v. Tempe Elementary Sch. Dist. No. 3*, 587 F.2d 1022, 1027 (9th Cir. 1978). Our Constitution leaves it to them; it is they and their representatives who must grapple with the riddle and solve it.

KLEINFELD, Circuit Judge, dissenting:

I join in Judge Beezer's dissenting opinion, with two qualifications.

First, I doubt that there is a constitutional right to commit suicide. "[N]o 'substantive due process' claim can be maintained unless the claimant demonstrates that the state has deprived him of a right historically and traditionally protected against state interference." *Cruzan v. Director, Missouri Dep't of Health*, 110 S. Ct. 2841, 2860 (1990) (Scalia, J. concurring). Suicide has not been traditionally or historically protected as a right:

> American law has always accorded the State the power to prevent, by force if necessary, suicide--including suicide by refusing to take appropriate measures necessary to preserve one's life; the point at which life becomes "worthless," and the point at which the means necessary to preserve it become "extraordinary" or "inappropriate" are neither set forth in the Constitution nor known to the nine Justices of this Court any better than they are known to nine people picked at random from the Kansas City telephone directory; . . . It is quite impossible (because the Constitution says nothing about the matter) that [Missouri's] citizens will decide upon a line less lawful than the one we would choose; and it is unlikely (because we know no more about "life-and-death" than they do) that they will decide upon a line less reasonable.

Cruzan, 110 S. Ct. at 2859 (Scalia. J. concurring).

That a question is important does not imply that it is constitutional. The Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions

would be decided by the judiciary. The majority treats the remark in *Planned Parenthood v. Casey*, 112 S. Ct. 2791 (1992), about "the most intimate and personal choices a person may make . . . the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life," *id.* at 2807, as a basis for constitutionalizing any really important personal decision. That an issue is important does not mean that the people, through their democratically elected representatives, do not have the power to decide it. One might suppose that the general rule in a democratic republic would be the opposite, with a few exceptions. Judge Beezer's view, that the statement is made in the *sui generis* context of abortion law, is sounder than the majority's. There is a difficulty with expanding the quoted language from *Casey* beyond abortion, in the face of *Bowers v. Hardwick*, 106 S. Ct. 2841, 2944-45 (1986), and we lack authority to overrule that decision of a higher court.

We do not need, however, to decide whether suicide is a constitutionally protected right. As Judge Beezer explains, even if it is, the State of Washington has a rational basis for preventing assisted suicide. It is not necessary to agree with Judge Beezer, that there is a nonfundamental constitutionally protected right to commit suicide, or with Judge Fernandez, that there is not. Either way, the district court erred, for the reasons stated by Judge Beezer.

Second, the majority says there is "little, if any, difference for constitutional or ethical purposes" between providing pain killing medication for the purpose of relieving pain, knowing that it will at some dosage cause death, and providing medication for the sole purpose of causing death. I would go further than Judge Beezer's characterization of this as a "gray area." I think the majority's proposition is exactly wrong. When General

Eisenhower ordered American soldiers onto the beaches of Normandy, he knew that he was sending many American soldiers to certain death, despite his best efforts to minimize casualties. His purpose, though, was to liberate the beaches, liberate France, and liberate Europe from the Nazis. The majority's theory of ethics would imply that this purpose was legally and ethically indistinguishable from a purpose of killing American soldiers. Knowledge of an undesired consequence does not imply that the actor intends that consequence. A physician who administers pain medication with the purpose of relieving pain, doing his best to avert death, is no murderer, despite his knowledge that as the necessary dosage rises, it will produce the undesired consequence of death.

Justice Holmes was the leading advocate of his time for the general proposition that "[a]cts should be judged by their tendency under the known circumstances, not by the actual intent which accompanies them." Holmes, *The Common Law* 54 (Harvard Univ. Press 1967)(1881). When applying this general principle to a specific case, however, Holmes qualified it, conceding that "when words are used exactly, a deed is not done with intent to produce a consequence unless that consequence is the aim of the deed." *Abrams v. United States*, 250 U.S. 616, 627 (1919) (Holmes J. dissenting). There is no novelty to the distinction between intended purpose and foreseen but undesired consequence. "It is deliberate purpose that constitutes wickedness and criminal guilt, and such names as 'outrage' and 'theft' imply deliberate purpose as well as the mere action." Aristotle, *Rhetoric*, book I, chap. 13, at 79 (Roberts trans. 1954). Jurors can no longer be instructed that "the law presumes that a person intends the ordinary consequences of his voluntary acts," in a case requiring purposeful conduct, because the instruction presumes away the prosecution's burden of proving

criminal intent. *Sandstrom v. Montana*, 442 U.S. 510, 513 (1979).

It is very difficult to judge what ought to be allowed in the care of terminally ill patients. The Constitution does not speak to the issue. People of varying views, including people with terrible illnesses and their relatives, physicians, and clergy, can, through democratic institutions, obtain enlightened compromises of the complex and conflicting considerations. They can do so at least as well as we judges can, and nothing in the Constitution prevents them from making the law.

UNITED STATES COURT OF APPEALS

FOR THE NINTH CIRCUIT

COMPASSION IN DYING, a Washington nonprofit corporation; Jane Roe; John Doe; James Poe, Harold Glucksberg, M.D., Plaintiffs--Appellees, v. STATE OF WASHINGTON; Christine Gregoire, Attorney General of Washington, Defendants-Appellants.	No. 94-35534 D.C. No. CV-94-119BJR O R D E R

Before: HUG, Chief Judge, BROWNING, SCHROEDER, FLETCHER, PREGERSON, REINHARDT, BEEZER, WIGGINS, THOMPSON, FERNANDEZ, and KLEINFELD, Circuit Judges.

The majority opinion is amended as follows:

1.) slip op. at 3118, line 20. Insert the word "attempt" after "suicide" and before "when".

2.) slip op. at 3127, note 9. Lines 5-6 of the second paragraph of the note on p. 3127. Delete "Casey, 112 S.Ct. at 2829-30." and replace it with the following: "Planned Parenthood v. Casey, 112 S.Ct. 2791, 2829-30 (1992)."

3.) slip op. at 3179, note 87. Delete rest of sentence after "cited in" and replace with the following: "Richard Posner, Age and Old Age 239 & n. 11 (1995).

4.) slip op. at 3186, n. 98, line 3. Delete "Richard Posner, Age and Old Age 224 (1995)" and replace it with the following: Posner, infra note 87, at 224.

5.) slip op. at 3205, n.124, line 1. Delete "74" after "note" and replace it with "87".

6.) slip op. at 3214, next to last line of text. Change "it" to "its reasoning".

7.) slip op. at 3214, n. 138, first line. Change "ruling" to "analysis".

8.) slip op. at 3214, n. 138, second to last line. Insert "the rationale on which" after "Because"; delete "erroneously" before "decided"; delete comma after "decided: and add "was clearly erroneous,".

UNITED STATES COURT OF APPEALS
FOR THE NINTH CIRCUIT

COMPASSION IN DYING, a Washington nonprofit corporation; JANE ROE; JOHN DOE; JAMES POE, HAROLD GLUCKSBERG, M.D., *Plaintiffs-Appellees*, v. STATE OF WASHINGTON; CHRISTINE GREGOIRE, Attorney General of Washington, *Defendants-Appellants*.	No. 94-35534 D.C. No. CV-94-119-BJR AMENDED ORDER

Filed June 12, 1996

Before: Procter Hug, Jr., Chief Judge, James R. Browning, Mary M. Schroeder, Betty B. Fletcher, Harry Pregerson, Stephen Reinhardt, Robert R. Beezer, Charles Wiggins, David R. Thompson, Ferdinand F. Fernandez, and Andrew J. Kleinfeld, Circuit Judges.

Dissent by Judge O'Scannlain; Dissent by Judge Trott.

ORDER

* * *

An active judge sua sponte requested that the full court rehear this case en banc. The request failed to

receive a majority of the votes of the non-recused active judges. The request is rejected.

O'SCANNLAIN, Circuit Judge, joined by TROTT and KLEINFELD, Circuit Judges, dissenting from order rejecting request for rehearing en banc by the full court:

By promulgating a new constitutional right, one unheard of in over two hundred years of American history, six men and two women--endowed with life tenure and cloaked in the robes of this court--have enacted by judicial fiat what the people of the State of Washington declined to do at the polls only five years ago.[1] By our failure to convene the full court to rehear this case, a mere one-third of the twenty-four active judges[2] eligible to vote has been empowered to strike down criminal laws, not just in Washington, but in Alaska, Arizona, California, Hawaii, and Montana, as well as in Idaho and Nevada to the extent they criminalize assisted suicide through common law, as they currently do. Because our failure to rehear this case as a full court permits a minority of our court to nullify the public will without adequate justification, I must respectfully dissent.

I

The Ninth Circuit Court of Appeals is the only appellate court in the federal system (indeed, in either the federal or state appellate systems) which permits a case to

[1] In November 1991, the people of Washington rejected Initiative 119, which would have permitted physicians to assist terminally ill patients in committing suicide.

[2] At the time of the filing of this order there are five vacancies on this 28-judge court. *See* 28 U.S.C. § 44. However, one judge took senior status after the voting began, but prior to this filing, reducing the current membership to 23.

be reheard by a limited en banc court.[3] In every other federal court of appeals ranging from the smallest, six judges on the First Circuit,[4] to the second largest, seventeen judges on the Fifth Circuit,[5] the full court sits en banc whenever a majority of that court has determined that a three-judge panel decision merits rehearing.

When Congress enlarged the Ninth Circuit from thirteen to twenty-three judges in 1978, it also authorized any court of appeals with more than fifteen active judges to "perform its en banc function by such numbers of members of its en banc court as may be prescribed by rule of the court...." Omnibus Judgeship Act of Oct. 20, 1978, Pub. L. No. 95-486, § 6, 92 Stat. 1629, 1633 (codified at 28 U.S.C. §§ 41 note, 46(c)). Pursuant to this congressional authorization, the Ninth Circuit adopted the eleven-judge limited en banc option in 1980. *See* Ninth Circuit R. 35-3. Neither of the other eligible circuits has done so.

This is only the third time, according to published orders, that our court has had a vote on whether to rehear a case by the full court. None of the three efforts has been successful. In 1980, the court failed to rehear a nine-judge decision[6] after the court was increased by ten judges to twenty-three. *See United States v. Penn*, 647 F.2d 876,

[3] *See* Arthur D. Hellman, *Maintaining Consistency in the Law of the Large Circuit*, *in* Restructuring Justice 62-70 (Arthur D. Hellman ed., 1990).

[4] Maine, Massachusetts, New Hampshire, Puerto Rico, and Rhode Island. 28 U.S.C. §§ 41, 44.

[5] Louisiana, Mississippi, and Texas. 28 U.S.C. §§ 41, 44.

[6] At the time of the *Penn* decision, there were 10 active members of this court and three vacancies. One of the active judges did not participate in the case.

889-91 (9th Cir.) (individual dissents from failure to grant rehearing en banc by full court by Judges Fletcher, Pregerson, and Ferguson), *cert. denied*, 449 U.S. 903 (1980). In 1994, a judge called for rehearing by the full court in *Campbell v. Wood*, where an eleven-judge limited en banc court held by a six-to-five vote that hanging, as a form of execution of the death penalty, did not violate the Eighth Amendment prohibition against cruel and unusual punishment. *See Campbell v. Wood*, 20 F.3d 1050, 1051, 1053 (Part II) (9th Cir.) (Reinhardt, J., dissenting from failure to grant rehearing en banc by full court), *cert. denied*, 114 S. Ct. 2125 (1994).

Judge Reinhardt urged in his dissent from full court rehearing in *Campbell* that the issue in that case was of the utmost constitutional importance and that it was wrongly decided. 20 F.3d at 1053. The same principles apply to this case, but with even greater force. In contrast to *Campbell* which simply followed existing law, affirmed the validity of the Washington statute, and made no new constitutional pronouncements, *Compassion* discovers and enunciates a new constitutional right, not found in the text of the Constitution or even hinted at in any Supreme Court opinion since 1791. In my view, such a solemn and sweeping declaration, particularly when it strikes down the existing statutes and common law of eight out of the nine states of this circuit, should not be undertaken without the express approval of a majority of the members of this court. The public's confidence in the legitimacy of judicial nullification of the will of the electorate is at stake, especially when only one-third of the eligible members of the court has signed on to the holding in this case.

Yet, while disappointing, it is not surprising that we will not rehear this case as a full court. Although one can only speculate, the motives for declining rehearing by the full court undoubtedly run a full spectrum. Some of my

colleagues may, of course, be persuaded that the legal analysis made by the eight-judge majority opinion is indeed sound and should not be revisited. There may be those who oppose full court en banc rehearing to avoid further delay in the hope that the Supreme Court will promptly grant certiorari, which the Attorney General of Washington intends to seek, to reverse an embarrassing judicial excess without further ado. Although our Pasadena Courthouse has a courtroom designed for full court en banc rehearings, there may be those who genuinely tremble at the prospect of up to twenty-eight judges looming from three tiers of benches, intimidating the hapless appellate advocates. Some of my colleagues may believe that full court en banc rehearing should never occur in any case; there may be those who believe that the court elected in 1980 to use the limited (eleven-judge) en banc *in lieu of* a full court en banc.[7] And there may be those who, knowing that we have never voted to rehear a case before the entire court since the procedure was established in 1980, fear the disruptive effect which such an event could have on the current congressional efforts to split the circuit or, as presently cast, to establish a commission to examine the realignment of the appellate courts in this country.

Notwithstanding all the foregoing reasons which might possibly have contributed to the decision not to rehear this case as a full court, I respectfully submit that they are outweighed by our obligation to sustain the

---

[7] Interestingly enough, the language of the limited en banc option statute is capable of such interpretation. *See* 28 U.S.C. §§ 41 note, 46(c). On balance, however, the context of our rule and the orders which implement it support the conclusion that our court never intended to renounce full court en banc in favor of a single limited en banc rehearing. *See* Ninth Cir. General Order 5; Ninth Cir. R. 35-3.

integrity of this court in the face of a shockingly broad act of judicial legislation.

II

Contrast this case with the Oregon experience. Unlike the voters of the State of Washington, the electorate in Oregon passed a ballot measure which specifically provided for a regime of physician-assisted suicide and set forth specific procedural safeguards.[8] When such a statute is reviewed by this court, it enjoys the benefit of presumptive constitutionality because it has been duly enacted into law through the legislative process. Indeed, the constitutionality of the Oregon statute will soon be tested in this court in the appeal of *Lee v. Oregon*, 891 F. Supp. 1429 (D. Or. 1995) (calendared for appeal before Ninth Circuit, July 9, 1996).

Unlike the *Compassion* majority, I will not comment on the merits of another case pending before our court. *Compassion in Dying v. Washington*, 79 F.3d 790, 837-38 (9th Cir. 1996) (en banc) (declaring that the district court "clearly erred" in *Lee*); *see Lee v. Oregon*, No. 94-6467, at 8 n.7 (D. Or. May 9, 1996) (unpublished order denying motion to lift or stay injunction) ("the state defendants agree with plaintiffs that the Ninth Circuit's comments about *Lee* in *Compassion in Dying* decision were dicta 'and could be considered gratuitous and inappropriate'"). What is significant, however, in the context of *Compassion*, is that the federal judge in Oregon "did *not* hold that states, including Oregon, are precluded from passing laws legalizing physician assisted suicide for terminally ill patients." *Lee*, No. 94-6467, at 24 (emphasis added). The point is that Oregonians did not need the "good offices" of

---

[8] Measure 16 (codified as Or. Rev. Stat. §§ 127.800-127.995).

the Ninth Circuit to make their legislative decision. Because of the *Compassion* majority, however, eight other states have had such legislation imposed upon them by court edict and, thus, have been deprived of their own right to choose.

By exempting an ill-defined class from Washington's statutory prohibition against assisted suicide, the majority simply appropriates the legislative power of the State of Washington. As Judge Kleinfeld eloquently writes: "That a question is important does not mean that it is constitutional. The Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions would be decided by the judiciary." *Compassion*, 79 F.3d at 857, 858 (Kleinfeld, J., dissenting).

Indeed, the plaintiff-physicians in *Compassion* present a strong legislative argument, but one that is best addressed to the popularly elected representatives of Washington, who are more capable than we of deciding whether to recognize the exception desired by the plaintiffs here. *See Compassion*, 79 F.3d at 839, 857 (Beezer, J., dissenting) ("To declare a constitutional right to physician-assisted suicide would be to impose upon the nation a repeal of local laws. . . . [and to] usurp states' rights to regulate and further the practice of medicine . . . .").

The difference between the Oregon and Washington experiences is compelling. In Oregon, the people acted out of their own free will to legislate; in Washington, the will of this court is imposed on the people contrary to their manifest intent.

III

As to the merits of this case, the eight-judge opinion in *Compassion* simply goes too far for an inferior federal court restricted to following Supreme Court precedent.

With utmost respect to my eight colleagues, I am convinced that by misapplying language uniquely crafted by the Supreme Court for application in circumstances wholly inapposite to those presented here, the opinion usurps the state legislative function, and in so doing silences the voice of the people of Washington and defies the Supreme Court's call for judicial restraint in the area of substantive due process.[9]

The majority fundamentally errs by resting its holding on obvious distortions of the language in *Planned Parenthood of Southeastern Pennsylvania v. Casey*, 112 S. Ct. 2791 (1992), and *Cruzan v. Director, Missouri Dept. of Health*, 110 S. Ct. 2841 (1990). As the Second Circuit recently concluded: "The right to assisted suicide finds no cognizable basis in the Constitution's language or design, even in the very limited cases of those competent persons who, in the final stages of terminal illness, seek the right to hasten death." *Quill v. Vacco*, 80 F.3d 716, 724-25 (2d Cir. 1996); *accord Compassion*, 79 F.3d at 857 (Fernandez, J., dissenting) ("no one has an even nonfundamental *constitutional right* to become what our legal ancestors pithily denominated a *felo de se*"); *People v. Kevorkian*, 527 N.W.2d 714, 728 (Mich. 1994) ("We disagree with [the district court in *Compassion*] that either *Cruzan* or *Casey* preordains that the Supreme Court would find that any persons, including the terminally ill, have a liberty interest in suicide that is protected by the Fourteenth Amendment."), *cert. denied*, 115 S. Ct. 1795 (1995).

---

[9] *See, e.g., Collins v. City of Harker Heights, Tex.*, 112 S. Ct. 1061, 1068 (1992) ("The doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in [the area of substantive due process].").

A

It is clear that the *Casey* Court upheld the right to abortion more on the basis of *stare decisis* than on a reasoned reaffirmation of the notion that abortion is a protected liberty interest. *See Casey*, 112 S. Ct. 2791, 2817 (joint opinion of Justices O'Connor, Kennedy, and Souter) ("after nearly 20 years of litigation in *Roe's* wake we are satisfied that the immediate question is not the soundness of *Roe's* resolution of the issue, but the precedential force that must be accorded to its holding"). Furthermore, the *Casey* Court *retreated* from the central holding of *Roe*[10] by rejecting the notion that abortion is a fundamental right triggering heightened judicial scrutiny. *See Casey*, 112 S. Ct. at 2855, 2860 (Rehnquist, C.J., dissenting) (describing the joint opinion). Considering the Court's refusal to reaffirm the entire holding of *Roe* on the merits, and in light of the utter lack of any *stare decisis* roots for the right to assisted suicide, it plainly appears that *Casey* is a perniciously thin reed upon which to rest the majority's radical holding.

The majority draws an absurd parallel between a person's decision to enlist a doctor's aid in the termination of her own life and a woman's decision to terminate a pregnancy. The majority grounds this novel marriage of two wholly inapposite situations in the poetic language of *Casey*, in which the Court described an abortion decision as "involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy." *Casey*, 112 S. Ct. at 2807; *see Compassion*, 79 F.3d at 813-14. Engaging in one of the most egregious judicial leaps, the majority discovers a right to assisted suicide by simply concluding that such a right

---

[10] *Roe v. Wade*, 410 U.S. 113 (1973).

involves "'one of the most intimate and personal choices a person may make in a lifetime . . . .'" *Compassion*, 79 F.3d at 813-14.

The majority's method of constitutional interpretation lays the foundation for the discovery of an endless parade of protected liberty interests involving choices that could be cast as "intimate" and "personal." If physician-assisted suicide is a protected "intimate and personal choice," why aren't polygamy, consensual duels, prostitution, and, indeed, the use of illicit drugs? Furthermore, if assisted suicide is so clearly protected by the Constitution, why immunize only the physician and those acting under a physician's supervision?[11] Why wouldn't the Constitution also immunize family members or friends who profess compassion for the dying and act without consulting a physician? Indeed, isn't the *Compassion* holding the first tangible step down the very "slippery slope" we were assured *Roe* never authorized?

B

The majority goes on to err by concluding that there is no constitutionally permissible distinction between suicide and refusing medical treatment; such a conclusion ignores a long line of judicial decisions that recognize the distinction.[12] The right to refuse medical treatment is

---

[11] *See, e.g.*, Daniel Q. Haney, *Nurses Admit They Hasten Deaths*, Wash. Post, May 23, 1996, at A13 (reporting that survey published in *The New England Journal of Medicine* reveals that one in five intensive-care nurses responding to survey admitted hastening deaths of terminally ill patients, sometimes acting contrary to physician's orders but out of compassion for the patient at the urging of the patient or family members).

[12] *See, e.g., Superintendent of Belchertown v. Saikewicz*, 370 N.E.2d 417, 426 n.11 (Mass. 1977) (distinguishing an act of intentional self-destruction from "a competent, rational decision to refuse treatment

grounded in the common law right to be free of unwanted bodily contact; in contrast, the common law has never recognized a right to assistance in deliberately taking one's life. The removal of life-support is not the actual cause of death; there, death results from natural causes. *See* Stephen Carter, The Culture of Disbelief 236 (1993)

---

when death is inevitable"); *People v. Kevorkian*, 527 N.W.2d 714, 728 (Mich. 1994) ("whereas suicide involves an affirmative act to end a life, the refusal or cessation of life-sustaining medical treatment simply permits life to run its course, unencumbered by contrived intervention"), cert. denied, 115 S. Ct. 1795 (1995); *McKay v. Bergstedt*, 801 P.2d 617, 626 (Nev. 1990) (concluding that there is a difference "between choosing a natural death summoned by an uninvited illness or calamity and deliberately seeking to terminate one's life by resorting to death-inducing measures unrelated to the natural process of dying"); *Matter of Quinlan*, 355 A.2d 647, 665 (N.J.) ("We would see . . . a real distinction between the self-infliction of deadly harm and a self-determination against artificial life support . . . in the face of irreversible, painful and certain imminent death."), *cert. denied sub nom. Garger v. New Jersey*, 429 U.S. 922 (1976); *Bouvia v. Superior Court*, 225 Cal. Rptr. 297, 306 (Ct. App. 1986) ("[A] decision to allow nature to take its course is not equivalent to an election to commit suicide with real parties aiding and abetting therein."); *see also* New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* 71 (May 1994) ("The imposition of life-sustaining medical treatment against a patient's will requires a direct invasion of bodily integrity and, in some cases, the use of physical restraints, both of which are flatly inconsistent with society's basic conception of personal dignity.... It is this right against intrusion - not a general right to control the timing and manner of death - that forms the basis of the constitutional right to refuse life-sustaining treatment. Restrictions on suicide, by contrast, entail no such intrusions, but simply prevent individuals from intervening in the natural process of dying.").

("[assisted suicide] involves not *letting* the patient die, but *making* the patient die").

The majority compounds its error by dramatically expanding the narrow holding of *Cruzan*, 110 S. Ct. 2841 (holding that Constitution does not forbid Missouri from requiring clear and convincing evidence of an incompetent's wishes as to the withdrawal of life-sustaining treatment). The *Cruzan* Court merely "assume[d] for purposes of this case" that a competent person does have "a constitutionally protected right to refuse lifesaving hydration and nutrition." *Id.* at 2852; *see* 2 Alan Meisel, The Right to Die § 18.22, at 498 (2d ed. 1995) ("the *Cruzan* opinion proceeded on *assumptions*, not holdings, about the rights of competent patients").

In *Cruzan*, the Supreme Court in no way offered support for the recognition of a right to assisted suicide. In fact, the Court not only emphasized that a state has an undeniable interest in the protection and preservation of human life, but also specifically noted that "the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Id.* at 2852. The hesitancy and narrowness of the *Cruzan* holding should have given the majority pause in its endeavor to recognize a new right under the Due Process Clause; instead, the majority inexplicably heralds the highly limited language of *Cruzan* as a "powerful precedent" in support of the right to assisted suicide.

C

Contrary to the conclusions contained in the majority's lengthy exegesis, neither the Constitution nor history supports the notion that this court may compel the State of Washington (and eight other western states) to recognize an individual's right to physician-assisted suicide.

Considering the pains to which the majority has gone to assert the redemptive nature of Judas Iscariot's suicide and to attribute utilitarian motivations to St. Augustine's writings on suicide,[13] I feel obliged to observe that no amount of historical revisionism can cure the constitutional infirmities that plague the majority's holding. Moreover, the majority's extensive discussion of historical attitudes toward suicide is beside the point; the proper focus should be on whether a right to assisted suicide is rooted in American history and tradition. Clearly it is not. *See, e.g., Cruzan*, 110 S. Ct. at 2859, 2860 (Scalia, J., concurring) ("Case law at the time of the adoption of the Fourteenth Amendment generally held that assisting suicide was a criminal offense."); *Quill*, 80 F.3d at 724 ("Nor can it be said that the right to assisted suicide claimed by plaintiffs is deeply rooted in the nation's traditions and history. Indeed, the very opposite is true.").

The most comprehensive study available on the history of suicide unequivocally concludes that "the weight of authority in the United States, from colonial days through at least the 1970s has demonstrated that the predominant attitude of society and the law has been one of opposition to suicide. It follows that courts should not hold suicide or its assistance to be a protected right under the United States Constitution." Thomas J. Marzen et al., *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 100 (1985).[14]

The Supreme Court has never recognized a substantive due process right without first finding that there is a

---

[13] *See Compassion*, 79 F.3d at 808 & n.25.

[14] Although the 8-judge opinion contains numerous citations to this study, the opinion is careful to omit any mention of the study's conclusion.

> Knowledge of an undesired consequence does not imply that the actor intends that consequence. A physician who administers pain medication with the purpose of relieving pain, doing his best to avert death, is no murderer, despite his knowledge that as the necessary dosage rises, it will produce the undesired consequence of death.

Compassion, 79 F.3d at 858 (Kleinfeld, J., dissenting). Clearly, *Compassion's* constitutionalization of the right of physicians to prescribe lethal doses for the express purpose of ending the lives of their consenting patients goes far beyond the most aggressive, medically approved pain treatments.

V

The eight-judge majority has not sustained its burden of proving that the Constitution compels a state to recognize, against the will of its people, a right to assisted suicide. However much judges, as individuals, may desire such a right for the terminally ill, we, as judges, are limited by the text of the Constitution and by the Framers' clear intent that the judiciary be "disassociated from direct participation in the legislative process." *See Dennis v. United States*, 341 U.S. 494, 517, 552 (1951) (Frankfurter, J., concurring). In the words of Justice Frankfurter: "Our duty to abstain from confounding policy with constitutionality demands perceptive humility as well as self-restraint in not declaring unconstitutional what in a judge's private judgment is deemed unwise and even dangerous." *Id.* at 552.

The constitutionalization of a right to physician-assisted suicide is nothing short of pure invention--constitutionally untenable and historically unprecedented. It is especially egregious when only eight of the

tradition of protecting that particular interest. Here, there is absolutely no tradition of protecting assisted suicide. Almost all states forbid assisted suicide and some states even permit the use of nondeadly force to thwart suicide attempts. No state has ever accepted consent of the victim as a defense to a charge of homicide. These are the political judgments made by the democratic process; if they are no longer "politically correct," let the legislatures act to change them, not life-tenured judges immune from the voters' reach.

IV

Finally, let no one be beguiled into misconceptions concerning *Compassion's* actual holding; this case is *not* about aggressive pain management.

Long before the eight-judge opinion was issued, pain treatments--such as the injection of morphine--have been legal and well-established in the medical community. *See* American Medical Ass'n, Current Opinions of the Council on Ethical & Judicial Affairs, Code of Medical Ethics § 2.20, at 14 (1992) ("For humane reasons, with informed consent, a physician may do what is medically necessary to alleviate severe pain, or cease or omit treatment to permit a terminally ill patient to die when death is imminent. However, the physician should not intentionally cause death.").

Furthermore, no physician has ever been imprisoned for properly prescribing pain killers. It is common knowledge that physicians, with the tacit consent of the family, may over-medicate for pain with the risk of accelerating death. So long as the primary intention is to lessen pain, there is no danger of imprisonment. As Judge Kleinfeld emphasizes, under these circumstances, there is a fundamental distinction between putting one in harm's way and intending death:

twenty-four active judges on our court can nullify the will of the voters of Washington who rejected a physician-assisted suicide law just five years ago.

I respectfully dissent from this court's improvident refusal to grant rehearing en banc by the full court.

TROTT, Circuit Judge, with whom Circuit Judge O'SCANNLAIN concurs, dissenting from the order rejecting the request for rehearing en banc by the full court.

I

> Liberty is not the mere absence of restraint, it is not a spontaneous product of majority rule, it is not achieved merely by lifting under-privileged classes to power, nor is it the inevitable by-product of technological expansion. It is achieved only by a rule of law.

Jackson, Justice Robert H., The Supreme Court in the American System of Government 76 (1955).

No magician--not David Copperfield, not even Harry Houdini--can produce a rabbit from a hat unless the rabbit is in the hat to begin with. Moreover, if a hat does not contain such an animal, a magician cannot claim that anything he is able to produce from it is in fact a rabbit, no matter how sincere he may be or how great his forensic skills. All of this has something to do with basic physics.

But law may not be physics, as Judge Reinhardt's opinion on behalf of our en banc court demonstrates, because, with all respect, he has in fact succeeded in pulling a nonexistent liberty interest out of thin constitutional air, a liberty interest that certainly does not exist in the document itself. I honestly applaud his splendid effort, which is most skillful and elegant, but

unfortunately his production is not law either, it is simply constitutional sleight of hand. Maybe some of us or even many of us would like to see this rabbit in the hat because we believe it's a nice rabbit--hope is an ever-present temptress in a world of woe--but *we* do not get to change the Constitution any more than we get to change physics. Roger Traynor, the influential former Chief Justice of the California Supreme Court, offered the suggestion that

> "one entrusted with decision . . . must also rise above the vanity of stubborn preconceptions, sometimes euphemistically called the courage of one's convictions. He knows well enough that he must disconnect his own predilections, of however high grade he regards them, which is to say he must bring to his intellectual labors a cleansing doubt of his omniscience. . . ."[1]

Certainly our job is to interpret the Constitution and to apply its principles and purposes in a modern setting, but we must also take great care not to cross over into *rewriting* the Constitution. That profound privilege and right belongs to the People, not to us. This line, of course, has nothing to do with physics, it has to do with our assigned constitutional role in our republican form of government as enshrined in our oath of office. It is a line sometimes fuzzy and one about which reasonable judges might disagree, but as Edmund Burke once said, "Though no man can draw a stroke between the confines of day and night, yet light and darkness are upon the whole tolerably distinguishable."

The jurisprudential significance of this case has far more to do with our role and power as federal judges than

---

[1] R. Traynor, "Reasoning in a Circle of Law," 56 Va. L. Rev. 739, 750-51 (1970).

with the merits or desirability of physician-assisted suicide. The issue most deserving of attention is whether we have exceeded our lawful interpretative power to remind the democratic process what it can and cannot do.

II

Passive euthanasia, or letting death run its course, is one thing, and suicide another, but active euthanasia, or permitting one person to kill another--even at that person's competent request--seems massively different. This difference is lost in Judge Reinhardt's approach to this case as reflected in the questionable manner in which he states the issue: whether "there is a constitutionally-protected liberty interest in determining the time and manner of one's own death," or whether there is a "right to die." These alternative statements are at odds with the Supreme Court's admonition that "'[s]ubstantive due process' analysis must begin with a careful description of the asserted right, for '[t]he doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field.'" *Reno v. Flores*, 507 U.S. 292, 302 (1993) (quoting *Collins v. City of Harker Heights*, 503 U.S. 115, 126 (1992)).

The active involvement of a person other than the inchoate decedent cannot be excluded from the statement of the constitutional issue in this case. It is the very involvement of this second person as the agent of death--a state licensed physician no less--that adds a critical and irreducible dimension to the issue, a dimension that does not belong in the wings. To relegate this definitive aspect of the question to a subsidiary phase of the analysis strikes me as analytically unsound. After all, what are we *really* talking about? It is the alleged right to have *another* person end one's own life. My colleague Judge Noonan is correct

when he says that "this case is about the role of physicians in bringing about death."

I note with great interest that this alleged right is derivatively asserted by persons *other* than the now deceased patients themselves, i.e., their doctors; and this observation fuels my belief that the broad level of generality or abstraction at which Judge Reinhardt casts the issue is inappropriate and misleading. In substance, he slips the rabbit into the hat so he can later produce it as though it was there all the time.

The "careful description of the asserted right" called for in *Reno v. Flores* has an important purpose. A certain specificity and accuracy of focus enables us correctly to apply the required analysis to the assertion, and it avoids turning the Constitution into a friendly mirror in which we simply see our own predilections, or just a blank check. Constitutional rights are usually expressed in grand terms, but the terms must not be so broad that they fail to give notice as to what they encompass, especially if no textual language suggests their existence.

Given Judge Reinhardt's broad approach to the Constitution, I suppose he would complement his liberty interest right to die with an equally broad substantive right to live; and that a right to live surely encompasses a right to breath. Does this then become for example, the starting point in all environmental cases involving the trees that produce our atmosphere's oxygen? Are we going to balance logging programs against a liberty interest in life? On the basis of a right to breath, what new rights do I have against threats to the ozone layer? Can I invoke a general right to move against traffic laws? A right to eat against the IRS's attempt to collect taxes? If the substantive due process liberty interest in determining the method of our own death is so weighty, why cannot it be claimed by a

motorcycle rider as a balancing interest against helmet laws? The silliness of these examples is not intended to trivialize the weighty issue of physician-assisted suicide, but to expose the error inherent in casting a legal issue too broadly.

Thus, I believe the majority of the three-judge panel was correct in its statement of the issue as whether there exists "a constitutional *right to aid* in killing oneself." When looked at through *this* prism, the line between interpreting and rewriting is "tolerably distinguishable." Killing someone has usually been regarded as murder, unless done in self-defense, et cetera. Yet all of a sudden, a kind of killing that has traditionally been outlawed--assisted suicide is prohibited in forty-five states plus the District of Columbia--becomes enveloped in a liberty interest protected by the Constitution as a right.

III

Justice White has issued on behalf of the Supreme Court a doctrinal warning we should heed, not just because he said it, but because he is correct:

> The court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution. That this is so was painfully demonstrated by the face-off between the Executive and the Court in the 1930's, which resulted in the repudiation of much of the substantive gloss that the Court had placed on the Due Process Clauses of the Fifth and Fourteenth Amendments. There should be, therefore, great resistance to expand the substantive reach of those Clauses, particularly if it requires redefining the category of rights

> deemed to be fundamental. Otherwise, the Judiciary necessarily takes to itself further authority to govern the country without express constitutional authority. The claimed right pressed on us today falls far short of overcoming this resistance.

Bowers v. Hardwick, 478 U.S. 186, 194-95 (1986).

As well written, as erudite, and as seductive as Judge Reinhardt's opinion is on behalf of his school of constitutional interpretation, it conjures up an illusion with "no cognizable roots in the language or design of the Constitution." As such, and with all respect to the panel, the opinion is a well-intentioned and well-meaning tour de force, but illegitimate nonetheless. What *is* deeply rooted and still prevailing in our traditions is a strong aversion, both moral and legal, against the taking of a life of another. From the earliest days of recorded history, one of our most enduring secular principles has enjoined the killing of a fellow human being. Our Constitution protects life, not death. If assisted euthanasia is to be a protected liberty interest, then let the People put it in the Constitution.

Decisions like this are frequently accompanied by a discussion of the "slippery slope" principle. This case suggests, however, that we are not just on a slippery slope, but in a state of constitutional free fall resulting from what Dean Erwin Griswold called "decisional leapfrogging":

> the first decision is distilled from the language of the Constitution, but the next expansion begins from the reasoning of the last decision, and so on down the line until we reach a point where the words of the Constitution are so far in the background that they are virtually

> ignored. In the end, we may be left with a rationale that comes to little more than, "Well, it really is a good idea. We want a free society where all of these things can be done and we want to keep the Government off the backs of the people." There are governmental processes for bringing such results about, but it is hard to think that such adumbrations of the Constitution are an appropriate exercise of judicial power.[2]

I repeat, again with all respect to the en banc court, their decision has *rewritten* the Constitution, not interpreted it. The supposedly least dangerous branch has usurped the right of the People in a sovereign state to make their own laws, including their right to draft their own Constitution and to decide upon which areas of life the majority shall not trespass. This en banc decision and the manner in which it treats the Constitution and the role of federal judges sounds a sour note in the careful orchestration of our harmonious institutions and our republican form of government. Shorn of its Corinthian decor, it is nothing less than an act of judicial imperialism of the very kind that threatened the independence of the Supreme Court in the 1930's. When we face political questions in legal form, we must give legal answers, not political ones.

The decisions made by the legislative organs of our government are not always to our liking. In fact, some of us on occasion may think they are abhorrent. Some values possibly should be in our Constitution, but are not. But what sets us apart from other forms of government is our belief in process. We are a nation of laws, not of leaders. Whenever we override democratic choice as we have done

---

[2] Erwin N. Griswold, "The Judicial Process." 31 Fed. B.J. 309, 317 (1972).

here, we are just a naked power organ unless our warrant to do so manifests itself in the Constitution. The right to assisted euthanasia does not, not in the text of the original document or its interstices, not in the thinking or purpose of those who drafted the Fourteenth Amendment, and not in our traditions, customs, or history. Not a word supporting the existence of this "right" can be found in the records of any of the recognized sources of constitutional illumination.

If this supposed liberty interest cannot be found in any of these sources or anywhere in *our* history or traditions, where else is there to look? Where does this amorphous approach to substantive due process rights end? The majority opinion reads like a celebration of "natural law." Judge Reinhardt's revealing use of the Harris poll and the Roper Report as a source of constitutional enlightenment strikes me as particularly inappropriate. The Constitution's explicit provisions for amendment rely on government process, not on random sampling of public opinion. Polls are for the other branches of our government, not for the judiciary. Equally irrelevant is his observation that a retired Justice Powell said he probably made a mistake in *Bowers v. Hardwick*.

No matter where we stand on the range of our interpretive power, the supreme function of a judge is to recognize that there must be limits to our writ. Even those celebrated advocates of sociological jurisprudence who delivered us from the grip of the 19th century's rigidly mechanical approach to the law recognized clear limits to their authority as jurists. Justice Oliver Wendell Holmes, for example, said, "I recognize without hesitation that judges do and must legislate, but they only do so

interstitially; they are confined from molar to molecular motions."[3] Justice Benjamin Cardozo put it this way:

> "[A judge] is not a knight-errant, roaming at will in pursuit of his own ideal of beauty or of goodness. . . . He is not to yield to spasmodic sentiment, to vague and unregulated benevolence." . . . "Judges have . . . the power, though not the right to travel beyond the walls of the interstices, the bounds set to judicial innovation by precedent and custom. Nonetheless, by that abuse of power, they violate the law."[4]

Even more appropriate for a controversial polycentric issue involving the active taking by a state licensed medical doctor of the life of a gravely ill yet somehow competent person are the words of Justice William O. Douglas:

> The changes suggested implicate so many policies and raise so many problems of a political, economic, and social nature that it is fit that the Judiciary recuse itself. At times judges must legislate "interstitially" to resolve ambiguities in laws. But the problem of taking all or some alien commuters engaged in farm work out of the Act is not "interstitial" or as Mr. Justice Holmes once put it "molecular." It is a massive or "molar" action for which the judiciary is ill-equipped.[5]

---

[4] Benjamin N. Cardozo, "The Nature of the Judicial Process," 129, 141 (1921).

[5] *Saxbee v. Bustos*, 419 U.S. 65, 79-80 (1974).

If the only limit on our authority is the grand eloquence of our rhetoric, then we live by fiat of the judiciary. Dean Griswold called this, "Justice as administered by Harun al Rashid sitting under a tree. As Cardozo said, 'That might result in a benevolent despotism if the Judges were benevolent [people].'"[6] As Francis Bacon said in 1625, "This office is *jus dicere*, not *jus dare*, to interpret law, and not to make law or to give law." Francis Bacon, Of Judicature, in Essays Civil and Moral (58 Murphy's ed. 1826) (1625). If the difference is not tolerably discernible, trouble may become our middle name. Is our independence at stake? Archibald Cox gave us his answer to this question in 1987, an answer that may partially explain the Senate's aggressive approach to judicial confirmation hearings:

> The style of constitutional interpretation and the traditional independence of the judiciary from political pressure and responsibility are interrelated. If the process of decision making is excessively politicized, there will be additional pressure to choose judges who will cast their votes on grounds of policy. Such choices, in turn, would make the style of decision making still more political, in both fact and public perception. The heightened perception would fuel still further demand. The cycle would inevitably lead to demands for the election of justices and judges. If the key court decisions are little different from the determinations of policy by other branches of govern-

---

[6] Erwin N. Griswold, "The Judicial Process." 31 Fed. B.J. 309 (1972).

> ment, why should not the voters elect the justices and judges for terms of years?[7]

As Judge Learned Hand said,

> [The judge's] authority and immunity depend upon the assumption that he speaks with the mouth of others: The momentum of his utterance must be greater than any which his personal regulation and character can command, if it is to stand against the passionate resentments arising out of the interests he must frustrate.[8]

As did the framers, I prefer Justice Jackson's liberty of law to the protection of a benevolent dictator or a monarch, or of an unbridled federal judiciary where sooner or later power corrupts, and . . . you know the rest. I have the greatest admiration for my friend Judge Reinhardt and for the en banc court majority, able and dedicated jurists all, but on this issue, I respectfully disagree with their approach and their judgment. *We* have an obligation to undue this mistake, not to expect the Supreme Court to clean up our excesses.

Thus, I respectfully dissent from our decision not to rehear this landmark case sitting as a full court en banc.[9]

FOR THE NINTH CIRCUIT

COMPASSION IN DYING, a Washington nonprofit corporation; JANE ROE; JOHN DOE; JAMES POE, HAROLD GLUCKSBERG, M.D.,
Plaintiffs-Appellees,

v.

STATE OF WASHINGTON; CHRISTINE GREGOIRE, Attorney General of Washington,
Defendants-Appellants.

No. 94-35534
D.C. No. CV-94-00119-BJR
OPINION

Appeal from the United States District Court
for the Western District of Washington
Barbara J. Rothstein, Chief District Judge, Presiding

Argued and Submitted
December 7, 1994—Seattle, Washington

Filed March 9, 1995

Before: Eugene A. Wright, John T. Noonan, Jr., and Diarmuid F. O'Scannlain, Circuit Judges.

Opinion by Judge Noonan; Dissent by Judge Wright.

SUMMARY

Individual Rights/Constitutional Rights/Privacy

The court of appeals reversed a district court judgment. The court held that there was no basis for concluding that a Washington state statute that criminalizes promoting a suicide attempt violates the United States Constitution.

A Washington state statute states that a person is guilty of the felony of promoting a suicide attempt when he knowingly causes or aids another person to attempt suicide. Appellee Compassion in Dying, three now-deceased individuals who were suffering from diseases, and four physicians asserting their own rights and those of their patients, sued appellant the State of Washington, seeking a declaration that the statute violated 42 U.S.C. § 1983 and the Constitution of the United States. They also asked that enforcement of the statute be enjoined.

On motions for summary judgment, the district court denied the motion of the physicians asserting their own claims and denied Compassion's claim on its own behalf. The court, however, granted the motion for summary judgment of the now-deceased individuals and the similar motion of the physicians on behalf of their "terminally ill patients." The court declined to enjoin enforcement of the statute, but declared the statute to violate the Constitution of the United States. The court held that the statute violated the liberty guaranteed by the Fourteenth Amendment against deprivation by a state. The court quoted a Supreme Court case concerning abortion. *Planned Parenthood v. Casey*, in which the Court stated that "choices central to personal dignity and autonomy" are "central to the liberty protected by the Fourteenth

Amendment." The court also quoted a Supreme Court case, *Cruzan v. Director, Missouri Dept. of Health*, in which, the Court referred to the recognition of a "general liberty interest in refusing medical treatment." The court concluded that there was a constitutional right to physician-assisted suicide. The court further stated that the "total ban" on physician-assisted suicide for the terminally ill was "an undue burden" on the constitutional right, and consequently the statute was invalid. The court also held that the statute violated the Equal Protection Clause, seeing no constitutional distinction between the terminally ill able to direct the withdrawal or withholding of life support and the terminally ill seeking medical aid to end their lives. The State appealed.

[1] The district court's conclusion that the statute deprived the plaintiffs of a liberty protected by the Fourteenth Amendment and denied them equal protection of the laws could not be sustained. [2] The language taken from *Casey* was not to be removed from the context in which it was uttered. [3] Furthermore, the district court's decision lacked foundation in recent precedent and in the traditions of our nation. [4] The facial invalidation of the statute was wholly unwarranted; the district court conceded that there were circumstances in which the statute could operate constitutionally. [5] The district court declared the statute unconstitutional on its face without adequate consideration of the State's interests that, individually and convergently, outweigh any alleged liberty of suicide. [6] The state had interests in not having physicians in the role of killers of their patients; [7] not subjecting the elderly and even the not-elderly but infirm to psychological pressure to consent to their own deaths; [8] protecting the poor and minorities from exploitation; [9] protecting all of the handicapped from societal indifference and antipathy; [10] preventing abuse similar to what has occurred in the

Netherlands where legal guidelines have tacitly allowed assisted suicide or euthanasia in response to a repeated request from a suffering, competent patient. [11] In addition, the scope of the district court's judgment was indefinite; [12] one could only guess which definition of the "terminally ill" would satisfy the constitutional criteria of the district court; an amorphous class of beneficiaries was created in a non-class action. [13] Finally, at the heart of the district court's decision appeared to be its refusal to distinguish between actions taking life and actions by which life is not supported or ceases to be supported; however, the plaintiffs did not show that the distinction drawn by the legislature was irrational.

Circuit Judge Wright dissented, stating that the Washington statute violates the plaintiffs' privacy and equal protection rights.

-COUNSEL-

William L. Williams, Senior Assistant Attorney General, Olympia, Washington, for the defendants-appellants.

Kathryn L. Tucker, David J. Burman, Thomas L. Boeder, Kari Anne Smith, Perkins Coie, Seattle, Washington, for the plaintiffs-appellees.

Wesley J. Smith, San Francisco, California, for amicus curiae International Anti-Euthanasia Task Force.

Washington, D.C., for amicus curiae American Medical Association.

OPINION

NOONAN, Circuit Judge:

The State of Washington (Washington) appeals the decision of the district court holding unconstitutional Washington's statute on promoting a suicide attempt. Finding no basis for concluding that the statute violates the Constitution, we reverse the district court.

The Statute

The challenged statute reads as follows:

> Promoting a suicide attempt
>
> (1) A person is guilty of promoting a suicide attempt when he knowingly causes or aids another person to attempt suicide.
>
> (2) Promoting a suicide is a Class C felony. Wash. Rev. Code 9A.36.060.

The Plaintiffs

Compassion in Dying is a nonprofit incorporated in the state of Washington. Its avowed purpose is to assist persons described by it as "competent" and "terminally ill" to hasten their deaths by providing them information, counselling, and emotional support but not by administering fatal medication.

Three individuals were plaintiffs in their own right. Their identities are cloaked by an order permitting them to litigate under pseudonyms. They are now deceased. Jane Roe was a 69-year-old physician, suffering from cancer; she had been bedridden for seven months at the time the

suit was brought and died before judgment was entered by the district court. John Doe was a 44-year-old artist, who was partially blind at the time of suit and was also suffering from AIDS; he had been advised that his disease was incurable; he died prior to judgment. James Poe was a 69-year-old patient suffering from chronic obstructive pulmonary disease; he was connected to an oxygen tank at all times. He died after judgment but prior to the hearing of this appeal.

Four physicians also joined the suit asserting their own rights and those of their patients. Harold Glucksberg has specialized in the care of cancer since 1985 and is a clinical assistant professor at the University of Washington School of Medicine. According to his sworn declaration, he "occasionally" encounters patients whom he believes he should assist in terminating their lives, but does not because of the statute; he refers to two such patients, both deceased. Abigail Halpern is the medical director of Uptown Family Practice in Seattle and serves as a clinical faculty member at the University of Washington School of Medicine. In her practice, according to her sworn declaration, she "occasionally" treats patients dying of cancer or AIDS, whose death she believes she should hasten but does not because of the statute; she refers to one such patient, now deceased. Thomas A. Preston is chief of cardiology at Pacific Medical Center in Seattle and professor of Medicine at the University of Washington School of Medicine. According to his sworn declaration, he "occasionally" treats patients whose death he believes he should hasten but does not on account of the statute; he refers to one such patient, now deceased. Peter Shalit is in private practice in Seattle and the medical director of the Seattle Gay Clinic; he is a clinical instructor at the University of Washington School of Medicine. According to his sworn declaration, he "occasionally" treats patients

whose death he believes he should hasten, but does not on account of the statute; he refers to one such patient, now deceased.

PROCEEDINGS

On January 29, 1994, the plaintiffs brought suit against Washington, seeking a declaration that the statute violated 42 U.S.C. § 1983 and the Constitution of the United States; additionally, they asked that enforcement of the statute be enjoined.

The plaintiffs introduced the declarations of the physicians already noted, together with declarations from the executive director of Compassion in Dying and from Jane Roe, John Doe, and James Poe. They also introduced the sworn declaration of John P. Geyman, who had served from 1976 through 1990 as professor and chairman of the Department of Family Medicine at the School of Medicine of the University of Washington and is now engaged in rural practice at Friday Harbor. According to him, there is "often a severe adverse emotional and psychological effect" on patients unable because of the statute to broach the subject of their desire to hasten their deaths or who do broach the subject and are rebuffed.

The plaintiffs moved for summary judgment, and the defendants made a cross-motion for summary judgment. On May 3, 1994, the district court ruled on these motions. It denied the motion of the four physician plaintiffs asserting their own claims "on the grounds that the basis for those claims has not been adequately addressed." It denied Compassion in Dying's claim on its own behalf "for the same reason." It denied the cross-motion of Washington. It granted the motion for summary judgment of Jane Roe, John Doe and James Poe and the similar motion of the physician plaintiffs "on behalf of their terminally ill patients." The court declined to enjoin

enforcement of the statute but declared the statute to violate the Constitution of the United States.

The district court reached its conclusion as to unconstitutionality on two grounds. First, the court held that the statute violated the liberty guaranteed by the Fourteenth Amendment against deprivation by a state. The court reached this conclusion by noting "a long line of cases" protecting "personal decisions relating to marriage, procreation, contraception, family relationships, child rearing and education." The court quoted as the explanation of this line the statement made in *Planned Parenthood v. Casey*, 112 S. Ct. 2791, 2807 (1992): "These matters, including the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of the liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State."

The district court analogized the "terminally ill person's choice to commit suicide" to the choice of abortion protected by *Casey*, stating: "this court finds the reasoning in *Casey* highly instructive and almost prescriptive." Like the abortion decision, the court found the decision by a terminally ill person to end his or her life to be one of the most intimate and personal that could be made in a lifetime and a choice central to personal autonomy and dignity.

The district court also found *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990) to be "instructive." It quoted that case's reference to "the recognition of a general liberty interest in refusing medical

treatment," *Cruzan* at 278, and the assumption for purposes of the decision in *Cruzan* "that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Id.* at 279. The district court stated that it did not believe that a distinction of constitutional significance could be drawn "between refusing life-sustaining medical treatment and physician-assisted suicide by an uncoerced, mentally competent, terminally ill adult." Combining its exegesis of *Casey* and *Cruzan*, the district court reached its conclusion that there was a constitutional right to physician-assisted suicide.

The district court then reviewed the statute to determine whether, on its face, it imposed an "undue burden " on a personal right of the *Casey* kind. *See Casey* at 2830 (concluding that a statute regulating abortion was invalid on its face because "in a large fraction of the cases" in which the statute would operate it would "operate as a substantial obstacle to a woman's choice to undergo an abortion" and therefore placed "an undue burden"). The district court declared that there was "no question" that the "total ban" on physician-assisted suicide for the terminally ill was "an undue burden" on the constitutional right that the district court had discovered. Consequently, the statute was invalid.

Secondly, the district court held that the statute violated the Equal Protection Clause of the Fourteenth Amendment, requiring that all similarly situated persons be treated alike. Washington law, enacted in 1992, provides: "Any adult person may execute a directive directing the withholding or withdrawal of life-sustaining treatment in a terminal condition or permanent unconscious condition." Wash. Rev. Code 70.122.030. Any physician who participates in good faith "in the withholding or withdrawal of life-sustaining treatment" in accordance with such a

directive is immune from civil or criminal or professional liability. *Id.* 70.122.051. The district court could see no constitutional distinction between the terminally ill able to direct the withdrawal or withholding of life support and the terminally ill seeking medical aid to end their lives. Accordingly, it found an unequal application of the laws.

Washington appeals.

ANALYSIS

[1] The conclusion of the district court that the statute deprived the plaintiffs of a liberty protected by the Fourteenth Amendment and denied them the equal protection of the laws cannot be sustained.

[2] *First.* The language taken from *Casey*, on which the district court pitched its principal argument, should not be removed from the context in which it was uttered. Any reader of judicial opinions knows they often attempt a generality of expression and a sententiousness of phrase that extend far beyond the problem addressed. It is commonly accounted an error to lift sentences or even paragraphs out of one context and insert the abstracted thought into a wholly different context. To take three sentences out of an opinion over thirty pages in length dealing with the highly charged subject of abortion and to find these sentences "almost prescriptive" in ruling on a statute proscribing the promotion of suicide is to make an enormous leap, to do violence to the context, and to ignore the differences between the regulation of reproduction and the prevention of the promotion of killing a patient at his or her request.

The inappropriateness of the language of *Casey* in the situation of assisted suicide is confirmed by considering what this language, as applied by the district court, implies. The decision to choose death, according to the district court's use of *Casey*'s terms, involves "personal dignity

and autonomy" and "the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life." The district court attempted to tie these concepts to the decision of a person terminally ill. But there is no way of doing so. The category created is inherently unstable. The depressed twenty-one year old, the romantically-devastated twenty-eight year old, the alcoholic forty-year old who choose suicide are also expressing their views of the existence, meaning, the universe, and life; they are also asserting their personal liberty. If at the heart of the liberty protected by the Fourteenth Amendment is this uncurtailable ability to believe and to act on one's deepest beliefs about life, the right to suicide and the right to assistance in suicide are the prerogative of at least every same adult. The attempt to restrict such rights to the terminally ill is illusory. If such liberty exists in this context, as *Casey* asserted in the context of reproductive rights, every man and woman in the United States must enjoy it. See Yale Kamisar, "Are Laws Against Assisted Suicide Unconstitutional?" 23 *Hastings Center Report* 32, 36-37 (1995). The conclusion is a *reductio ad absurdum*.

Second. While *Casey* was not about suicide at all, *Cruzan* was about the termination of life. The district court found itself unable to distinguish between a patient refusing life support and a patient seeking medical help to bring about death and therefore interpreted *Cruzan*'s limited acknowledgment of a right to refuse treatment as tantamount to an acceptance of a terminally ill patient's right to aid in self-killing. The district court ignored the far more relevant part of the opinion in *Cruzan* that "there can be no gainsaying" a state's interest "in the protection and preservation of human life" and, as evidence of that legitimate concern, the fact that "the majority of States in this country have laws imposing criminal penalties on one

who assists another to commit suicide." *Cruzan*, 497 U.S. at 280. Whatever difficulty the district court experienced in distinguishing one situation from the other, it was not experienced by the majority in *Cruzan*.

[3] *Third*. Unsupported by the gloss on "liberty" written by *Casey*, a gloss on a gloss, inasmuch as *Casey* developed an interpretation of "liberty" first elaborated in *Eisenstadt v. Baird*, 405 U.S. 438, 453 (1972), and implicitly controverted by *Cruzan*, the decision of the district court lacks foundation in recent precedent. It also lacks foundation in the traditions of our nation. *See Snyder v. Massachusetts*, 291 U.S. 97, 105 (1934) (Cardozo, J.); *Lochner v. New York*, 198 U.S. 45, 76 (1905) (Holmes, J., dissenting). In the two hundred and five years of our existence no constitutional right to aid in killing oneself has ever been asserted and upheld by a court of final jurisdiction. Unless the federal judiciary is to be a floating constitutional convention, a federal court should not invent a constitutional right unknown to the past and antithetical to the defense of human life that has been a chief responsibility of our constitutional government.

[4] *Fourth*. The district court extrapolated from *Casey* to hold the statute invalid on its face. That extrapolation, like the quotation from *Casey*, was an unwarranted extension of abortion jurisprudence, often unique, to a very different field. The normal rule -- the rule that governs here -- is that a facial challenge to a statute "must establish that no set of circumstances exists under which the Act would be valid." *United States v. Salerno*, 481 U.S. 739, 745 (1987). The district court indeed conceded that there were circumstances in which the statute could operate constitutionally, for example to deter suicide by teenagers or to prevent fraud upon the elderly. The district court did not even attempt the calculation carried out in *Casey* to show that in "a large fraction of the cases" the statute

would operate unconstitutionally. From the declarations before it the district court had at most the opinion of several physicians that they "occasionally" met persons whom the statute affected detrimentally and their recitation of five case histories. There was no effort made to compare this number with the number of persons whose lives were guarded by the statute. The facial invalidation of the statute was wholly unwarranted.

[5] *Fifth.* The district court declared the statute unconstitutional on its face without adequate consideration of Washington's interests that, individually and convergently, outweigh any alleged liberty of suicide. The most comprehensive study of our subject by a governmental body is *When Death Is Sought. Assisted Suicide and Euthanasia in the Medical Context* (1994). The study was conducted by the New York State Task Force, a commission appointed by Governor Cuomo in 1985, which filed its report in May, 1994. The Task Force was composed of twenty-four members representing a broad spectrum of ethical and religious views and ethical, health, legal, and medical competencies. Its membership disagreed on the morality of suicide. Unanimously the members agreed against recommending a change in New York law to permit assisted suicide. Washington's interest in preventing such suicides is as strong as the interests that moved this diverse commission to its unanimous conclusion. A Michigan commission, set up in 1992, by majority vote in June 1994 recommended legislative change in the Michigan law against assisted suicide and set out a proposed new statute as a legislative option; the commission did not challenge the constitutionality of the existing Michigan legislation. Michigan Commission on Death and Dying, *Final Report* (1994). Neither the New York nor the Michigan reports were available to the district court. We take them into account on this appeal as we take

into account the legal and medical articles cited by the parties and amici as representative professional judgments in this area of law. In the light of all these materials, Washington's interests are at least these:

[6] 1. The interest in not having physicians in the role of killers of their patients. "Physician-assisted suicide is fundamentally incompatible with the physician's role as healer," declares the American Medical Association's *Code of Medical Ethics* (1994) § 2.211. From the Hippocratic Oath with its promise "to do no harm," *see* T.L. Beauchamp and J.F. Childress, *Principles of Biomedical Ethics* (1993) 330, to the AMA's code, the ethics of the medical profession have proscribed killing. Washington has an interest in preserving the integrity of the physician's practice as understood by physicians.

Not only would the self-understanding of physicians be affected by removal of the state's support for their professional stance; the physician's constant search for ways to combat disease would be affected, if killing were as acceptable an option for the physician as curing. *See* Alexander M. Capron, "Euthanasia in the Netherlands: American Observations," 22 *Hastings Center Report* 30, 32 (1992). The physician's commitment to curing is the medical profession's commitment to medical progress. Medically-assisted suicide as an acceptable alternative is a blind alley; Washington has a stake in barring it.

[7] 2. The interest in not subjecting the elderly and even the not-elderly but infirm to psychological pressure to consent to their own deaths. For all medical treatments, physicians decide which patients are the candidates. If assisted suicide was acceptable professional practice, physicians would make a judgment as to who was a good candidate for it. Physician neutrality and patient autonomy, independent of their physician's advice, are largely myths.

Most patients do what their doctors recommend. As an eminent commission concluded, "Once the physician suggests suicide or euthanasia, some patients will feel that they have few, if any alternatives, but to accept the recommendation." New York State Task Force, *When Death Is Sought*, 122. Washington has an interest in preventing such persuasion.

[8] 3. The interest in protecting the poor and minorities from exploitation. The poor and minorities would be especially open to manipulation in a regime of assisted suicide for two reasons: Pain is a significant factor in creating a desire for assisted suicide, and the poor and minorities are notoriously less provided for in the alleviation of pain. *Id.* at 100. The desire to reduce the cost of public assistance by quickly terminating a prolonged illness cannot be ignored: "the cost of treatment is viewed as relevant to decisions at the bedside." *Id.* at 129. Convergently, the reduction of untreated (although treatable) pain and economic logic would make the poorest the primest candidates for physician-assisted and physician-recommended suicide.

[9] 4. The interest in protecting all of the handicapped from societal indifference and antipathy. Among the many briefs we have received from amici curiae there is one on behalf of numerous residents of nursing homes and long-term care facilities. The vulnerability of such persons to physician-assisted suicide is foreshadowed in the discriminatory way that a seriously-disabled person's expression of a desire to die is interpreted. When the nondisabled say they want to die, they are labelled as suicidal; if they are disabled, it is treated as "natural" or "reasonable". *See* Carol J. Gill, "Suicide Intervention for Persons with Disabilities: A Lesson in Inequality," 8 *Issues in Law & Med.* 37, 38-39 (1993). In the climate of our achievement-oriented society, "simply offering the option of 'self-

deliverance' shifts a burden of proof, so that helpless patients must ask themselves why they are not availing themselves of it." Richard Doerflinger, "Assisted Suicide: Prochoice or Anti-Life?" 19 *Hastings Center Report* 16, 17 (1989). An insidious bias against the handicapped -- again coupled with a cost-saving mentality -- makes them especially in need of Washington's statutory protection.

[10] 5. An interest in preventing abuse similar to what has occurred in the Netherlands where, since 1984, legal guidelines have tacitly allowed assisted suicide or euthanasia in response to a repeated request from a suffering, competent patient. In 1990, approximately 1.8 per cent of all deaths resulted from this practice. At least an additional .8 percent of all deaths, and arguably more, come from direct measures taken to end the person's life without a contemporaneous request to end it. New York State Task Force, *When Death Is Sought*, 133-134.

[11] Sixth. The scope of the district court's judgment is, perhaps necessarily, indefinite. The judgment of the district court was entered in favor of Jane Roe and John Doe although they were dead. This unheard-of judgment was a nullity. The judgment in favor of James Poe lapsed with his death pending appeal. The judgment in favor of Doctors Glucksberg, Halperin, Preston and Shalit was "insofar as they raise claims on behalf of their terminally ill patients." No such patients were identified by these doctors except patients who were already deceased. Presumably, then, the judgment was behalf of terminally ill patients that these doctors might encounter in the future. The term "terminally ill" was not defined by the court. No class was certified by the court. There is a good deal of uncertainty on whose behalf the judgment was entered.

[12] It was suggested in argument that a definition of the terminally ill could be supplied from the Washington

statute on the refusal of life-sustaining treatment which does define "terminal condition." Wash. Rev. Code 70.122.020(9). There are three difficulties: "terminal condition" and "terminally ill" are different terms; the examples given by the plaintiffs show considerable variation in wnom they considered terminally ill to be; there is wide disagreement in definition of the terminally ill among the states. See New York State Task Force, *When Death Is Sought*, 23-35. Life itself is a terminal condition, unless terminal condition is otherwise defined by a specific statute. A terminal illness can vary from a sickness causing death in days or weeks to cancer, which Dr. Glucksberg notes is "very slow" in its deadly impact, to a heart condition which Dr. Preston notes can be relieved by a transplant, to AIDS, which Dr. Shalit declares is fatal once contracted. One can only guess which definition of the terminally ill would satisfy the constitutional criteria of the district court. Consequently, an amorphous class of beneficiaries has been created in this non-class action; and the district court has mandated Washington to reform its law against the promotion of suicide to safeguard the constitutional rights of persons whom the district court has not identified.

[13] Seventh. At the heart of the district court's decision appears to be its refusal to distinguish between actions taking life and actions by which life is not supported or ceases to be supported. This refusal undergirds the district court's reading of *Cruzan* as well as its holding that the statute violates equal protection. The distinction, being drawn by the legislature not on the basis of race, gender or religion or membership in any protected class and not infringing any fundamental constitutional right, must be upheld unless the plaintiffs can show "that the legislature's actions were irrational." *Kadrmas v. Dickerson Public Schools*, 487 U.S. 450, 458 (1988). The plaintiffs have not sustained this burden.

Against the broad background of moral experience that everyone acquires, the law of torts and the law of criminal offenses against the person have developed. "At common law, even the touching of one person by another without consent and without legal justification was a battery." *Cruzan*, 497 U.S. at 269. The physician's medical expertness is not a license to inflict medical procedures against your will.

Protected by the law of torts, you can have or reject such medical treatment as you see fit. You can be left alone if you want. Privacy in the primordial sense in which it entered constituted parlance -- "the right to be let alone" -- is yours. *See Olmstead v. United States*, 277 U.S. 438, 478 (1928) (Brandeis, J., dissenting).

Tort law and criminal law have never recognized a right to let others enslave you, mutilate you, or kill you. When you assert a claim that another -- and especially another licensed by the state -- should help you bring about your death, you ask for more than being let alone; you ask that the state, in protecting its own interest, not prevent its licensee from killing. The difference is not of degree but of kind. You no longer seek the ending of unwanted medical attention. You seek the right to have a second person collaborate in your death. To protect all the interests enumerated under Fifth above, the statute rightly and reasonably draws the line.

Compassion, according to the reflections of Prince Myshkin, is "the most important, perhaps the sole law of human existence." Feodor Dostoevsky, *The Idiot*, 292 (Alan Myers, trans.) (1991). In the vernacular, compassion is trumps. No one can read the accounts of the sufferings of the deceased plaintiffs supplied by their

declarations, or the accounts of the sufferings of their patients supplied by the physicians, without being moved by them. No one would inflict such sufferings on another or want them inflicted on himself; and since the horrors recounted are those that could attend the end of life anyone who reads of them must be aware that they could be attendant on his own death. The desire to have a good and kind way of forestalling them is understandably evident in the declarations of the plaintiffs and in the decision of the district court.

Compassion is a proper, desirable, even necessary component of judicial character; but compassion is not the most important, certainly not the sole law of human existence. Unrestrained by other virtues, as *The Idiot* illustrates, it leads to catastrophe. Justice, prudence, and fortitude are necessary too. Compassion cannot be the compass of a federal judge. That compass is the Constitution of the United States. Where, as here in the case of Washington, the statute of a state comports with that compass, the validity of the statute must be upheld.

For all the foregoing reasons, the judgment appealed from is REVERSED.

WRIGHT, Circuit Judge, Dissenting:

This case involves the state's power arbitrarily to deprive terminally ill, mentally competent adults of the right to choose how to die. Because RCW 9A.36.060 violates plaintiffs' privacy and equal protection rights, I dissent. The majority's approach subjects such patients to unwanted and needless suffering. *See* Brief of *Amicus Curiae* of Ten Surviving Family Members In Support of Physician-Assisted "Suicide."

The majority views the asserted right as illimitable because it depends upon the meaning of "terminally ill."[1] But if we were to affirm, our task would not be to specify the parameters of the right. We are limited, as was the district court, to the dispute before us. The majority's "depressed twenty-one year old" is not a party before us.[2] The deceased plaintiff patients were terminally ill, mentally competent adults, entitled to be free from unwarranted state interference in their last days.

A. *Due Process*

1. Privacy Right

Planned Parenthood v. Casey, 112 S. Ct. 2791 (1992), defines the scope of protected liberty interests. The Court there explained that:

> [M]atters [ ] involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected

---

[1] A federal district court that recently decided against recognizing the asserted right did not have such definitional concerns. *Quill v. Koppell*, 870 F. Supp. 78, 84 (S.D.N.Y. 1994) ("Plaintiffs are, of course, suggesting a limited form of physician assisted suicide.").

[2] In any event, the state has a legitimate interest in preserving the life of a "depressed twenty-one year old" because he or she has a significant life expectancy while the terminally ill plaintiffs before the court had only a limited amount of life left. The state's interest in preserving life declines and the individual's right to privacy grows as natural death approaches. *In re Quinlan*, 355 A.2d 647, 664 (N.J. 1976). For a complete discussion of the state's interest in preserving the lives of non-terminally ill adults see Robert Sedler, *Constitutional Challenges to Bans on "Assisted Suicide": The View From Without and Within*, 21 Hastings Const. L.Q. 777, 790-795 (1994); Robert L. Risley, *Ethical & Legal Issues in the Individual's Right to Die*, 20 Ohio N.U. L. Rev. 597, 610 (1993).

> by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.

Id. at 2807. The majority contends that this language is out of context in this case. Yet that general language was not tailored specifically for the abortion context but derived from well-established Supreme Court precedent. The same paragraph explains:

> Our law affords constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing, and education.

Id. (citation omitted).

The district court's application of *Casey* hardly amounts to "an enormous leap" that does "violence to the context."

An aspect of the liberty interest is the right to personal privacy, or a guarantee of certain areas or zones of privacy. *Carey v. Population Servs. Int'l*, 431 U.S. 678, 684 (1977) (quotation omitted). This privacy right includes "the interest in independence in making certain kinds of important decisions." *Whalen v. Roe*, 429 U.S. 589, 599-600 (1977).

The right to die with dignity falls squarely within the privacy right recognized by the Supreme Court. The decision by a terminally ill, mentally competent adult to request physician assistance in hastening death is a highly personal one, directly implicating the right to privacy. The Supreme Court recognized that "[t]he choice between life and death is a deeply personal decision." *Cruzan v.*

Director, Missouri Dept. of Health, 497 U.S. 261, 281(1990). The Court declared that the "principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." *Id.* at 278. *Accord In re Quinlan*, 355 A.2d 647, 663 (N.J. 1976) (privacy right "is broad enough to encompass a patient's decision to decline medical treatment under certain circumstances."); *Superintendent v. Saikewicz*, 370 N.E.2d 417, 424 (Mass. 1977).

A constitutional distinction cannot be drawn between refusing life-sustaining medical treatment and accepting physician assistance in hastening death.[3] "[I]f an individual has a constitutionally protected right to refuse lifesaving medical treatment and life sustaining nutrition, it would seem logically impossible to make it a crime for that person to take active steps to terminate his life." 3 Rotunda & Nowak, Treatise on Constitutional Law 388 (1992).[4] Such a distinction yields patently unjust results.

---

[3] Contrary to the majority's assertion, the *Cruzan* Court did not draw such a distinction. The majority lifts language from *Cruzan* that indicates only that states have a general interest in prohibiting the assistance of suicide. This begs the question whether a state can prohibit physician-hastened death for terminally ill, mentally competent adults.

[4] Indeed, as Justice Scalia framed the problem in his concurring opinion in *Cruzan*: "Starving oneself to death is no different from putting a gun to one's temple as far as the common-law definition of suicide is concerned; the cause of death in both cases is the suicide's conscious decision to put an end to his own existence. Of course the common law rejected the action-inaction distinction in other contexts involving the taking of human life as well. . . . A physician . . . could be criminally liable for failure to provide care that could have extended the patient's life, even if death was immediately caused by the underlying disease that the physician failed to treat." 497 U.S. at 296-97

For example, a respirator-dependent patient may demand that the respirator be removed when the pain becomes unbearable. Terminally ill patients not dependent on such life support, however, cannot receive physician assistance to end unwanted agony. So says the majority opinion.

Along with established precedent, "this Nation's history and tradition" help to define the content of substantive due process. *Moore v. East Cleveland*, 431 U.S. 494, 503 (1977). Because medicine is constantly evolving and presenting new legal questions,[5] whether American history and tradition support the right asserted must be answered at a more abstract level than the majority would permit. For example, in *Loving v. Virginia*, 388 U.S. 1, 12 (1967), the Court looked beyond the historical and traditional bars to interracial marriages to the more abstract principles of the "rights essential to the orderly pursuit of happiness by free men."

Likewise, we must ask whether American history and tradition reflect the values of self-determination and privacy regarding personal decisions. In the late nineteenth century, the Court wrote: "No right is held more sacred, or is more carefully guarded, by the common law, than the

(quotations and citations omitted). *See also* James Rogers, *Punishing Assisted Suicide: Where Legislators Should Fear to Tread*, 20 Ohio N.U. L. Rev. 647, 650 (1993) (explaining impossibility of distinguishing between letting die and assistance in death).

[5] "With the development of the new techniques, serious questions as to what may constitute acting in the best interests of the patient have arisen." *Superintendent v. Saikewicz*, 370 N.E.2d 417, 423 (Mass. 1977). "An inadvertent and unintended side effect of medicine's growing effectiveness is that the dying process has been elongated. . . . [F]or those who are suffering greatly . . . it has become harder and harder to die." Timothy E. Quill, M.D., *Death and Dignity: Making Choices and Taking Charge* 50 (1993).

right of every individual to the possession and control of his own person, free from all restraint or interference ofothers unless by clear and unquestioned authority of law." *Union Pac. R. Co. v. Botsford*, 141 U.S. 250 (1891). The right to die with dignity accords with the American values of self-determination and privacy regarding personal decisions.

2. Standard of Review

The applicable standard of review is strict scrutiny.[6] Because a fundamental right is involved, the statute that limits this right can be justified only by a "compelling state interest," *Shapiro v. Thompson*, 394 U.S. 618, 634 (1969), and it must be narrowly drawn to serve only that interest. *Aptheker v. Secretary of State*, 378 U.S. 500, 508 (1964).

3. The Statute is Invalid as Applied

The state has an interest in preserving the lives of its citizens. But the state's interest weakens and the individual's right to privacy grows as natural death approaches. *In re Quinlan*, 355 A.2d 647, 664 (N.J. 1976); *Superintendent v. Saikewicz*, 370 N.E.2d 417, 426 (Mass. 1977) (rational decision by terminally ill, competent patient to refuse life-sustaining treatment has no connection with state interest in preserving life).

The Washington Legislature is capable of enacting regulations that serve the state's interest in preserving

[6] The district court applied the "undue burden" standard because "the constitutional rights at issue in this case are analogous to those in *Casey* and other decisions using an undue burden standard." *Compassion in Dying v. State of Washington*, 850 F. Supp. 1455, 1463-64 (W.D. Wash. 1994). But *Casey* does not reject the strict scrutiny standard of review in non-abortion cases. Because the instant case does not involve a challenge to a regulation of abortion rights, the traditional strict scrutiny test must be applied.

human life, while protecting the fundamental liberties of terminally ill, mentally competent adults. As Washington law now stands, the statute prevents all terminally ill, mentally competent adults from exercising their right to physician-hastened death. Because the legislature can draft laws that would protect plaintiffs' right to privacy, the existing legislation is not narrowly tailored.

The district court invalidated the statute on its face. According to plaintiffs' reply brief before the district court and their oral argument before us, they challenge the statute as it is applied to them as well as on its face. I would hold the statute invalid only as it is applied to terminally ill, mentally competent adults.

B. ***Equal Protection***

Washington law permits terminally ill persons to obtain medical assistance in withdrawing life-sustaining treatment. *See In re Grant*, 747 P.2d 445 (Wash. 1987); RCW 70.122 .010. Yet it prohibits other forms of physician-hastened death for terminally ill, mentally competent adults. Because Washington's laws abrogate the fundamental rights of one group, but not those of a similarly situated group, they must be subjected to strict scrutiny and upheld only if the classifications are suitably tailored to serve a compelling state interest. *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985).

The two groups of patients are similarly situated because they are both comprised of terminally ill, mentally competent adults. As observed by the district court, "[b]oth [groups of] patients may be terminally ill, suffering pain and loss of dignity and subjected to a more extended dying process without some medical intervention, be it removal of life support systems or the prescription of medication to be self-administered." 850 F. Supp. at 1467. There is but one difference: one group can hasten death

through withdrawal of life support; the other can do so only with affirmative medical assistance. Washington'sdisparate treatment drawn on this difference is not suitably tailored to serve a compelling state interest. Therefore, RCW 9A.36.060 violates plaintiffs' right to equal protection.

C. ***Conclusion***

The majority has denied plaintiffs the right to die with dignity. Terminally ill, mentally competent adults, like plaintiff patients, have a fundamental privacy right to choose physician-hastened death. RCW 9A.36.060, as applied to those persons, violates the privacy and equal protection guarantees of the Constitution.

I dissent.

APPENDIX E

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	No. C94-119R
Plaintiffs,	)	ORDER GRANTING IN PART AND DENYING IN PART PLAINTIFFS' MOTION FOR SUMMARY JUDGMENT AND DENYING DEFENDANTS' CROSS-MOTION FOR SUMMARY JUDGMENT
v.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

I. INTRODUCTION

THIS COURT is asked to rule as a matter of first impression on the constitutionality of the State of Washington's criminal prohibition against physician-assisted suicide. Specifically, the plaintiffs assert that the

Fourteenth Amendment to the United States Constitution guarantees adults who are mentally competent, terminally ill, and acting under no undue influence the right to voluntarily hasten their death by taking a lethal dose of physician-prescribed drugs. Plaintiffs accordingly challenge the constitutionality of RCW 9A.36.060, which makes it a felony to knowingly aid another person in committing suicide. Plaintiffs challenge the statute only insofar as it bans physician-assisted suicide by mentally competent, terminally ill adults who knowingly and voluntarily choose to hasten their death.

The plaintiffs seek both a declaratory judgment striking down the statute as unconstitutional and injunctive relief barring defendants State of Washington and the Washington Attorney General from enforcing the statute. Both plaintiffs and defendants now move for summary judgment.[1]

II. BACKGROUND

A. DESCRIPTION OF PLAINTIFFS

The plaintiffs are a coalition of three terminally ill patients, five physicians who treat terminally ill patients, and Compassion in Dying, an organization which provides support, counseling and assistance to mentally competent, terminally ill adults considering suicide.

---

[1] The court has also received a brief from amici curiae American Civil Liberties Union of Washington; Northwest Aids Foundation; Seattle Aids Support Group; Older Women's League; Gray Panthers of Seattle; Hemlock Society of Washington State; National Organization for Women, Seattle Chapter; National Lawyers Guild, Seattle Chapter; Local 6 of Service Employees International Union; and Temple De Hirsch Sinai. The court hereby GRANTS Northwest Women's Law Center's unopposed motion to participate as an additional amicus curiae.

1. The patients[2]

Jane Roe is a 69-year-old retired pediatrician who has suffered since 1988 from cancer which has now metastasized throughout her skeleton. Although she tried and benefitted temporarily from various treatments including chemotherapy and radiation, she is now in the terminal phase of her disease. In November of 1993, her doctor referred her to hospice care. Only patients with a life expectancy of less than six months are eligible for such care.

Jane Roe has been almost completely bedridden since June of 1993 and experiences constant pain, which becomes especially sharp and severe when she moves. The only medical treatment available to her at this time is medication, which cannot fully alleviate her pain. In addition, she suffers from swollen legs, bed sores, poor appetite, nausea and vomiting, impaired vision, incontinence of bowel, and general weakness.

Jane Roe is mentally competent and wishes to hasten her death by taking prescribed drugs with the help of plaintiff Compassion in Dying. In keeping with the requirements of that organization, she has made three requests for its members to provide her and her family with counseling, emotional support and any necessary ancillary assistance at the time she takes the drugs.

John Doe is a 44-year-old artist dying of AIDS. Since his diagnosis in 1991, he has experienced two bouts of pneumonia, chronic, severe skin and sinus infections, grand

---

[2] To preserve their privacy, the patient plaintiffs have chosen to use pseudonyms. The court also notes that plaintiffs Jane Roe and John Doe have died since this case began. However, for purposes of examining the legal issue raised, the court will set forth their circumstances as they existed at the time the complaint was filed.

mal seizures and extreme fatigue. He has already lost 70% of his vision to cytomegalovirus retinitis, a degenerative disease which will result in blindness and rob him of his ability to paint. His doctor has indicated that he is in the terminal phase of his illness.

John Doe is especially cognizant of the suffering imposed by a lingering terminal illness because he was the primary caregiver for his long-term companion who died of AIDS in June of 1991. He also observed his grandfather's death from diabetes preceded by multiple amputations as well as loss of vision and hearing. Mr. Doe is mentally competent, understands there is no cure for AIDS, and wants his physician to prescribe drugs which he can use to hasten his death.

James Poe is a 69-year-old retired sales representative who suffers from emphysema, which causes him a constant sensation of suffocating. He is connected to an oxygen tank at all times, and takes morphine regularly to calm the panic reaction associated with his feeling of suffocation. Mr. Poe also suffers from heart failure related to his pulmonary disease which obstructs the flow of blood to his extremities and causes severe leg pain. There are no cures for his pulmonary and cardiac conditions, and he is in the terminal phase of his illness. Mr. Poe is mentally competent and wishes to commit suicide by taking physician-prescribed drugs.

2. The physicians

The five physician plaintiffs all regularly treat terminally ill patients. Dr. Harold Glucksberg is an assistant professor of medicine at the University of Washington School of Medicine and practices oncology, the treatment of cancer, at the Pacific Medical Center in Seattle. He has published dozens of articles in medical journals dealing with cancer.

In his declaration to the court, Dr. Glucksberg states:

> Cancer usually progresses steadily and slowly. The cancer patient is fully aware of his or her present suffering and anticipates certain future suffering. The terminal cancer patient faces a future that can be terrifying. Near the end, the cancer patient is usually bedridden, rapidly losing mental and physical functions, often in excruciating, unrelenting pain. Pain management at this stage often requires the patient to choose between enduring unrelenting pain or surrendering an alert mental state because the dose of drugs adequate to alleviate the pain will impair consciousness. Many patients will choose one or the other of these options; however, some patients do not want to end their days either racked with pain or in a drug-induced stupor. For some patients pain cannot be managed even with aggressive use of drugs.

Declaration of Harold Glucksberg, M.D., pp. 3-5.

Dr. John P. Geyman was a professor and chair of the Department of Family Medicine at the University of Washington School of Medicine from 1976 through 1990. He is currently a professor emeritus at the University of Washington and has a private practice in family medicine. Dr. Geyman has published over seventy articles regarding family medicine in medical journals, has written several books in the field, was the founding editor of the Journal of Family Practice, and has served as editor since 1990 of the Journal of the American Board of Family Practice. Dr. Geyman states to the court that,

> in the presence of terminal illness, the shared goal of medical care at some point becomes comfort care rather than cure.

With advancing medical technology, many patients are subject to active and ineffective therapeutic efforts by their physicians, even when an early terminal outcome is not in doubt. As a result, many experience prolonged deaths often involving pain, suffering and loss of dignity. In reaction to this problem, an increasing number of patients want more direct control over the type of care they receive in the last stage of their lives. A subset of dying patients desire to shorten their dying process and thereby avoid a lingering death and associated pain, suffering and loss of dignity.

Terminally ill persons who seek to hasten death by consuming drugs need medical counseling. . . . Knowing what drug, in what amount, will hasten death for a particular patient, in light of the patient's medical condition and medication regimen, is a complex medical task.

> It is not uncommon, in light of present legal constraints on physician assistance, that patients seeking to hasten their deaths try to do so without medical advice. These efforts are often unsuccessful and can cause the patient and family increased anxiety, pain and suffering. Very often, patients who survive a failed suicide attempt find themselves in worse shape than before the attempt.

Declaration of John P. Geyman, M.D., pp. 3-5.

Dr. Thomas A. Preston is currently chief of the cardiology unit at Pacific Medical Center in Seattle. He has published numerous articles and books in the field of cardiology, and has received numerous honors for medical teaching and writing. Dr. Preston regularly treats patients dying from cardiopulmonary diseases, a process which can last several months. Dr. Abigail Halperin practices family

medicine and occasionally treats patients with terminal illnesses including cancer and AIDS. Dr. Peter Shalit practices general internal medicine; a substantial number of his patients suffer from HIV infection and AIDS. Both Dr. Halperin and Dr. Shalit are also clinical instructors at the University of Washington School of Medicine.

The five physician plaintiffs all state that they have received requests from terminally ill, mentally competent patients in the final stage of their diseases who wished assistance in hastening death. Although their professional judgments have at times dictated that they should assist such patients, they have all been deterred from doing so by the existence of the Washington statute challenged in this case.[3]

3. Compassion in Dying

Compassion in Dying is a Washington nonprofit organization which provides information, counseling and assistance free of charge to mentally competent, terminally ill adult patients considering suicide and to the families of such patients.

Compassion in Dying operates under a written protocol and has strict eligibility requirements for the individuals to whom it provides services. Eligible patients must be considered terminally ill in the judgment of the primary care physician and must be capable of understanding their own decisions. Evaluation by a mental health professional

---

[3] Although the statute operates to deter physicians from prescribing drugs for the purpose of hastening death, it does not necessarily deter the patient who requested the drugs from committing suicide by other means. Both Dr. Halperin and Dr. Glucksberg recount personal experiences with terminally ill patients who killed themselves by violent means after being refused a drug prescription. Declaration of Abigail Halperin, M.D., pp. 4-5; Declaration of Harold Glucksberg, M.D., pp. 5-6.

may be obtained to insure that the patient's request is not motivated by depression, emotional distress or mental illness. A request for assisted suicide must not be the result of inadequate comfort care, nor can it be motivated by a lack of adequate health insurance or other economic concerns. The request must come from the patient personally, in writing or on videotape, and must be repeated three times, with an interval of at least 48 hours between the second and third requests. Requests may not be made through advance directives or by a health care surrogate, attorney-in-fact or any other person.

According to its guidelines, Compassion in Dying will not assist anyone to commit suicide who expresses any ambivalence or uncertainty. If the patient has immediate family members or other close personal friends, their approval must be obtained. If any members of the immediate family express disapproval, Compassion in Dying will not provide assistance with suicide. As an additional safeguard, Compassion in Dying requires the patient to provide medical records. A consulting physician must review them to verify the patient's terminal prognosis and decision-making capability as well as to rule out inadequate pain management as the reason for requesting assisted suicide.

Defendants do not contest the factual declarations by the various plaintiffs, except to deny that the physicians' personal statements of their professional standards are in accord with either the ethical standards or the licensing laws applicable to their profession.

B. WASHINGTON'S STATUTE PROHIBITING ASSISTED SUICIDES

Washington has no law prohibiting suicide or attempted suicide. However, Washington bans aiding or causing the suicide of another:

> A person is guilty of promoting a suicide attempt when he knowingly causes or aids another person to attempt suicide.

RCW 9A.36.060(1). Promoting a suicide attempt is a class C felony punishable by imprisonment for a maximum of five years and a fine of up to ten thousand dollars. RCW 9A.36.060(2) and 9A.20.020(1)(c).

C. DESCRIPTION OF PLAINTIFFS' CLAIMS

All of the plaintiffs assert a facial challenge to the constitutionality of RCW 9A.36.060 prohibiting assisted suicide. However, plaintiffs' specific claims vary because of their differing circumstances. Jane Roe, John Doe and James Poe allege that they, as mentally competent, terminally ill adults with no chance of recovery, have a constitutionally protected liberty interest under the Fourteenth Amendment which gives them the right to commit physician-assisted suicide without undue governmental interference. Thus, they challenge the constitutionality of the statute insofar as it bars physicians from aiding informed, mentally competent, terminally ill adults to commit suicide. They also attack the statute on equal protection grounds.

The plaintiff physicians assert claims on behalf of their mentally competent, terminally ill adult patients who seek to commit suicide with drugs prescribed for that purpose. The physicians also allege that the Fourteenth Amendment protects their right to practice medicine consistent with their best professional judgment, including the right to assist competent, terminally ill adult patients to hasten death by prescribing suitable medication for self-administration by the patient.

Compassion in Dying's alleged organizational purpose is to assist competent, terminally ill adults who wish to commit suicide by self-administering prescription

medications. Compassion in Dying contends that such persons have the right to request assistance from its staff members, including counseling and delivering or mixing the drugs that are to be used. Under current Washington law prohibiting any form of assisted suicide, Compassion in Dying fears that it may be criminally prosecuted for its activities in assisting dying persons as they exercise their alleged constitutional right to hasten their own deaths.

III. LEGAL ANALYSIS

A. EXISTENCE OF PROTECTED LIBERTY INTEREST

The Fourteenth Amendment to the United States Constitution declares that the state may not "deprive any person of life, liberty, or property, without due process of law." Plaintiffs assert the existence of a liberty interest protected by the Fourteenth Amendment which extends to a personal choice by a mentally competent, terminally ill adult to commit physician-assisted suicide. They contend that individuals in those circumstances have a constitutionally protected right to be free from undue governmental intrusion on their decision to hasten death and avoid prolonged suffering.

1. Liberty Interest under *Planned Parenthood v. Casey*

The United States Supreme Court has established through a long line of cases that personal decisions relating to marriage, procreation, contraception, family relationships, child rearing and education are constitutionally protected. Planned Parenthood v. Casey, ___ U.S. ___, ___, 112 S. Ct. 2791, 2807 (1992). As explained in Casey,

> [t]hese matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy,

> are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.

Id.

The opinion in Casey involved a woman's right to choose abortion, and thus did not address the question of what liberty interest may inhere in a terminally ill person's choice to commit suicide. However, this court finds the reasoning in Casey highly instructive and almost prescriptive on the latter issue. Like the abortion decision, the decision of a terminally ill person to end his or her life "involv[es] the most intimate and personal choices a person may make in a lifetime" and constitutes a "choice[ ] central to personal dignity and autonomy."

The court in Casey spoke of the suffering of the pregnant woman, which "is too intimate and personal for the State to insist, without more, upon its own vision of the woman's role, however dominant that vision has been in the course of our history and our culture." Id. Casey further acknowledged the deep, heart-felt differences of opinion about the morality of abortion, but recognized that the court's duty is not to impose a particular moral standard:

> Some of us as individuals find abortion offensive to our most basic principles of morality, but that cannot control our decision. Our obligation is to define the liberty of all, not to mandate our own moral code. The underlying constitutional issue is whether the State can resolve these philosophic questions in such a definitive way that a woman lacks all choice in the matter . . . .

Id. at 2806.

This court is well aware of the similarly divisive controversy about the appropriateness of suicide by the terminally ill. But the underlying constitutional issue is whether the State of Washington can resolve the profound spiritual and moral questions surrounding the end of life in so conclusive a fashion as to deny categorically any option for a terminally ill, mentally competent person to commit physician-assisted suicide. This court concludes that the suffering of a terminally ill person cannot be deemed any less intimate or personal, or any less deserving of protection from unwarranted governmental interference, than that of a pregnant woman. Thus, consonant with the reasoning in Casey, such an intimate personal decision falls within the realm of the liberties constitutionally protected under the Fourteenth Amendment.

Defendants point out that the Washington State legislature might, in the future, decide to amend the statute prohibiting all assisted suicide so as to make an exception for physician-assisted suicide. Defendants strongly urge the court to leave this decision to the State legislature, which will in turn reflect the will of the people living in Washington. But where a constitutional right is involved, this court simply may not abdicate its responsibility to face the issue, no matter how difficult or divisive. Under those circumstances, this court is legally bound to recognize the right and determine how it affects the outcome of the case before it.

Defendants also argue that the Casey analysis is inapposite because there are significant differences between reproductive rights and assisted suicide. First, defendants contend that the level of personal autonomy is greater in the area of reproductive rights because of the greater level of control that humans have historically been able to

exercise over the beginning of life, as opposed to the end of life, which usually results from forces outside individual control. Assuming that defendants' observation is correct, this hardly amounts to a distinction that warrants a different constitutional result.

Second, defendants contend that the competing interests differ in cases involving reproductive rights and assisted suicide. In the former, the ongoing life interest of the woman is pitted against the potential life interest of the fetus. In the latter, the interests of the person who wishes to take his or her own life must be weighed against the interests of similarly situated persons who might be subject to undue influence if assisted suicide were allowed.

The court agrees that the competing interests differ, but concludes that if any comparison can be made between the two types of decisions, both of which are emotionally complicated and fraught with social implications, the abortion situation raises more difficult questions about competing interests. In reproductive rights cases, there is not only the interest of the pregnant woman seeking an abortion, but also the potential life interest which cannot speak for itself. By contrast, in the case of assisted suicide involving a competent person, only one life is involved and that individual can voice his or her wishes.

Third, defendants contend that any system allowing assisted suicide would create the potential for abuse and undue influence, whereas recognizing a right to abortion does not raise the specter of undue influence from others with regard to making a decision to abort. This argument is unpersuasive. One can readily imagine many situations in which a pregnant woman or girl could be subjected to intense pressure from others to get an abortion.

Finally, defendants maintain that reproductive rights analysis differs from assisted suicide issues because of the

difference in the level of medical knowledge between the two situations. According to defendants, much more is known about the medical possibilities at the beginning of life than at the end. Even assuming the truth of defendants' argument, it is irrelevant. Casey and its progenitors did not base the right to choose abortion on the level of medical knowledge about human reproduction, but on the idea that there is a constitutionally protected "realm of personal liberty which the government may not enter." Id. at 2805. The question for this court is whether the choice to commit physician-assisted suicide falls within that realm. This determination is not dependent on advancements in medical science.

2. Liberty interest under *Cruzan v. Director, Missouri Dept. of Health*

In addition to Casey, the court also finds Cruzan v. Director, Missouri Dept. of Health, 497 U.S. 261 (1990), instructive. In Cruzan, the Supreme Court considered whether a competent person has a constitutionally protected liberty interest in refusing unwanted, life-sustaining medical treatment including artificially delivered food and water essential to life. In his majority opinion, Justice Rehnquist acknowledged that this principle "may be inferred from our prior decisions," id. at 278, and that "the logic of the cases . . . would embrace such a liberty interest." Id. at 279. He then assumed for purposes of the case before the Court "that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." Id.[4]

---

[4] The court notes that Justice O'Connor's concurring opinion concluded that there is a constitutionally protected liberty interest at stake:

> Requiring a competent adult to endure such procedures against her will burdens the patient's liberty, dignity, and freedom to determine the course of her own treatment. Accordingly, the liberty guaranteed by the Due Process Clause must protect, if it protects anything, an individual's deeply personal decision to reject medical treatment, including the artificial delivery of food and water.

Cruzan, 110 S. Ct. at 289.

This court is confident that, squarely faced with the issue, the Supreme Court would reaffirm Justice Rehnquist's tentative conclusion in Cruzan that a competent person has a protected liberty interest in refusing unwanted medical treatment, even when that treatment is life-sustaining and refusal or withdrawal of the treatment would mean certain death. The question then becomes whether a constitutional distinction can be drawn between refusal or withdrawal of medical treatment which results in death, and the situation in this case involving competent, terminally ill individuals who wish to hasten death by self-administering drugs prescribed by a physician. In other words, is there a difference for purposes of finding a Fourteenth Amendment liberty interest between refusal of unwanted treatment which will result in death and committing physician-assisted suicide in the final stage of life?

The liberty interest protected by the Fourteenth Amendment is the freedom to make choices according to one's individual conscience about those matters which are essential to personal autonomy and basic human dignity. There is no more profoundly personal decision, nor one which is closer to the heart of personal liberty, than the choice which a terminally ill person makes to end his or her suffering and hasten an inevitable death. From a constitutional perspective, the court does not believe that a distinction can be drawn between refusing life-sustaining medical treatment and physician-assisted suicide by an uncoerced, mentally competent, terminally ill adult.

Based on the reasoning set forth in Casey and Cruzan, the court concludes that a competent, terminally ill adult has a constitutionally guaranteed right under the Fourteenth Amendment to commit physician-assisted suicide.[5]

B. STANDARD OF REVIEW

Regarding the applicable standard of review, the Supreme Court held in Casey that, in order to demonstrate the unconstitutionality of a state statute, plaintiffs had to show that it would "operate as a substantial obstacle" to the exercise of a constitutional right and would, therefore,

---

[5] The court is aware of no other federal cases directly addressing the issue raised in this case. However, two state cases have been brought to the court's attention. In People v. Kevorkian, No. 93-11482 (Wayne Cty. Cir. Ct., Mich. 1993) defendant physician was prosecuted for violating a Michigan statute making it a felony to provide the physical means, or to participate in a physical act, by which another person commits suicide. On December 13, 1993, the Circuit Court for Wayne County, Michigan found that the Michigan statute prohibiting assisted suicide was unconstitutional insofar as it infringed on a person's Fourteenth Amendment liberty interest in committing "rational suicide," which the court defined as existing:

> when a person's quality of life is significantly impaired by a medical condition and the medical condition is extremely unlikely to improve, and that person's decision to commit suicide is a reasonable response to the condition causing the quality of life to be significantly impaired, and the decision to end one's life is freely made without undue influence . . . .

Id. at 34-35. The case is now pending before the Michigan Court of Appeals.

Another case cited by the defendants is Donaldson v. Lundgren, 2 Cal.App. 4th 1614, 4 Cal.Rptr.2d 59 (2d Dist. 1992). Plaintiff in that case suffered from an incurable brain disease and wished to commit suicide with the assistance of a third person so that his body could be cryogenically preserved and brought back to life in the future when a cure for his disease had been found. The court refused to find that plaintiff had a constitutional right to commit assisted suicide under the circumstances presented. Given the very unusual facts in Donaldson, this court does not find the case helpful.

constitute an "undue burden." 112 S. Ct. at 2830. Defendants in this case respond that since plaintiffs are bringing a facial challenge to the validity of RCW 9A.36.060, the applicable standard is set forth in United States v. Salerno, 481 U.S. 739, 745 (1987), which requires plaintiffs to show that "no set of circumstances exists under which the [law] would be valid." The court concludes that the Casey "undue burden" standard, set forth by the Supreme Court five years after Salerno, controls in this case.

In Casey, the joint opinion by Justice O'Connor, Justice Kennedy and Justice Souter held that the appropriate test for a facial challenge to the constitutionality of abortion regulations was whether the "state regulation imposes an undue burden on a woman's ability to make [a] decision" concerning whether or not to procure an abortion. Casey, 112 S. Ct. at 2819. In his partial concurrence, Justice Stevens enunciated the following two-part test which must be met for the regulation to survive constitutional scrutiny: "A burden may be 'undue' either because the burden is too severe or because it lacks a legitimate, rational justification." Id. at 2843 (footnote omitted). Justice Blackmun, according to his partial concurrence, would have required that "a State's abortion restrictions be subjected to the strictest of judicial scrutiny." Id. at 2845-46. Thus, five of the Justices in Casey found the "undue burden" standard to be appropriate or would have applied an even higher level of scrutiny to the abortion restrictions at issue in that case.

The Supreme Court in Casey stated that "[i]t is settled now . . . that the Constitution places limits on a State's right to interfere with a person's most basic decision about family . . . as well as bodily integrity," id. at 2806 (citations omitted), and that "the undue burden standard is the appropriate means of reconciling the State's interest

with the woman's constitutionally protected liberty." Id. at 2820. As in Casey, this case concerns matters "involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, . . . central to the liberty protected by the Fourteenth Amendment." Id. at 2807. As in Casey, the liberty interest at issue in this case is similarly "a right 'to be free from unwarranted governmental intrusion into matters . . . fundamentally affecting a person.'" Id. at 2819 (quoting Eisenstadt v. Baird, 405 U.S. 438, 453 (1972)). In addition, the Court in Casey referred to the undue burden standard as "a standard of general application to which we intend to adhere." 112 S. Ct. at 2820.

Since the Supreme Court's decision in Casey, three Circuit Courts of Appeals have addressed the possible contradiction between Salerno and Casey concerning the applicable standard for a facial challenge to the constitutionality of a statute. In addition, Justices O'Connor and Souter have had two occasions to discuss the applicability of the Casey undue burden standard.

In Barnes v. Moore, 970 F.2d 12 (5th Cir.), cert. denied, ___ U.S. ____, 113 S. Ct. 656 (1992), the Fifth Circuit followed the Salerno standard, although it acknowledged that this might not be consistent with the standard applied in the joint opinion in Casey. Indeed, the Barnes court cited Justice Rehnquist's dissent in Casey in which he disputes the appropriateness of the undue burden standard set out by the joint opinion. Barnes, 970 F.2d at 14.

In contrast, the Third Circuit in Casey v. Planned Parenthood, 14 F.3d 848 (3rd Cir.1994) ("Casey II"), stated that the Supreme Court in Casey had "set a new standard for facial challenges to pre-viability abortion laws." Id. at 863, n.21. The Third Circuit court

concluded that "Casey requires only that a plaintiff show an abortion regulation would be an undue burden 'in a large fraction of the cases.'" Id.

In denying the application for a stay of the Third Circuit's mandate in Casey II, Justice Souter noted that the Third Circuit "Court of Appeals's construction of the opinion and mandate . . . is the correct one." Planned Parenthood v. Casey, ___ U.S. ____, 114 S. Ct. 909, 911 (1994). Justice Souter stated that he

> join[ed] the applicants and the courts below in treating the joint opinion in Casey, . . . to be controlling, as the statement of the Members of the Court who concurred in the judgment on the narrowest grounds.

Id. at 910, n.2 (citations omitted).

In Fargo Women's Health Org. v. Schafer, ___ U.S. ____, 113 S. Ct. 1668 (1993), an application for a stay and injunction was filed with the Supreme Court while the case was pending on appeal before the Eighth Circuit. In denying the application for a stay, Justice O'Connor, joined by Justice Souter, concurred but wrote separately "to point out that [the] denial of relief should not be viewed as signaling agreement with the lower courts' reasoning." Id. at 1669. Justice O'Connor stated:

> In my view, the approach taken by the lower courts is inconsistent with Casey. In striking down Pennsylvania's spousal-notice provision, we did not require petitioners to show that the provision would be invalid in all circumstances. Rather, we made clear that a law restricting abortions constitutes an undue burden, and hence is invalid, if, "in a large fraction of the cases in which [the law] is relevant, it will operate as a substantial obstacle to a woman's choice to undergo an abortion. . . .

> While I express no view as to whether the particular provisions at issue in this case constitute an undue burden, I believe the lower courts should have undertaken the same analysis.

Id. at 1669 (citation omitted) (emphasis in original).[6]

Because the constitutional rights at issue in this case are analogous to those in Casey and other decisions using an undue burden standard[7] for facial constitutional challenges, this court is convinced that the undue burden standard set out in Casey is the appropriate standard for determining the constitutional validity of RCW 9A.36.060.[8]

C. UNDUE BURDEN ANALYSIS

Pursuant to the standard set forth in Casey, the court will first examine the alleged State interests in maintaining

---

[6] Despite the language of Justices O'Connor and Souter in the denial of the applications for stays in Fargo Women's Health Org. v. Schafer and in Casey II, the Eighth Circuit Court of Appeals, in its decision on the merits in the Fargo case, analyzed the case before it under both the Salerno standard and the Casey standard. The Eighth Circuit concluded that, on the facts presented in that case, the result would be the same under either standard. Fargo Women's Health Org. v. Schafer, No. 93-1579, 1994 U.S. App. LEXIS 2141 (8th Cir. 1994).

[7] See e.g., Maher v. Roe, 432 U.S. 464, 473-474 (1977) ("[The constitutional right declared in Roe v. Wade] protects the woman from unduly burdensome interference with her freedom to decide whether to terminate her pregnancy."); Doe v. Bolton, 410 U.S. 179, 198 (1973) ("[T]he interposition of the hospital abortion committee is unduly restrictive of the patient's rights."); Bellotti v. Baird, 428 U.S. 132, 147 (1976) (state may not "impose undue burdens upon a minor capable of giving an informed consent").

[8] This court is persuaded that the Supreme Court analysis in Casey applies to the circumstances at issue in this case. However, this court need not address whether the Casey undue burden standard is applicable outside the realm of personal liberties of this type.

a total prohibition on all assisted suicides, and then will determine whether the challenged statute in this case places a substantial obstacle in the path of individuals seeking to exercise a constitutionally protected right.

1. State's Interests

Defendants cite two primary interests furthered by the challenged statute: preventing suicide and protecting those at risk of suicide from undue influence from others who would aid them in completing the act.

a. Preventing suicide

In support of the first interest, prevention of suicide,[9] defendants point to statistics concerning the rate of suicide in Washington among various age groups, particularly the young. Obviously, the State has a strong, legitimate

---

[9] Notably, the statute at issue does not bar suicide, nor does any other Washington statute. See Washington Laws of 1975, 1st Ex.Sess. ch. 260, § 9A.36.060, which amended the Washington statute governing suicide by repealing the prohibition against attempting suicide, but retained the prohibition against assisting another in committing suicide. Needless to say, this change in the law did not suggest approval of the act of suicide, but rather a determination that the person compelled to attempt it should not be punished if the attempt proved unsuccessful. See Legislative Council's Judiciary Committee, Report on the Revised Washington Criminal Code 153 (Dec. 3, 1970); and Report of the Task Force of the Washington State Bar Association Concerning the Proposed Criminal Code (Sept. 6, 1974). Thus, a terminally ill patient who commits suicide with a doctor's help has not performed an illegal act; only the doctor's actions are subject to legal censure.

As for the law in other jurisdictions, there is no criminal prohibition against attempting suicide in any state. According to defendants, twenty-eight other states besides Washington currently have statutes barring assisted suicide. Defs.' Memo. in Opp. to Pls. Mot. for Summ. J. and in Supp. of Summ. Judg. for Defs., pp. 6-7 n.15. Thus, twenty-one states have no legislation specifically criminalizing assisted suicide.

interest in deterring suicide by young people and others with a significant natural life span ahead of them.

But this case is not about people for whom suicide would abruptly cut life short. Plaintiffs in this case are people suffering through the final stage of life with no hope of recovery. As to them, preventing suicide simply means prolonging a dying person's suffering, an aim in which the State can have no interest. In other words, the State's legitimate interest in preventing suicide is not abrogated by allowing mentally competent, terminally ill patients to freely and voluntarily commit physician-assisted suicide.

The State's interest in preventing suicide by prohibiting any manner of assisted suicide in actuality arises out of its apprehension of the "slippery slope" problem. The State is concerned that allowing any exception to a total ban will encourage the gradual development of a more permissive attitude toward suicide. That attitude, the State fears, will in turn erode the societal constraints now hindering people from committing suicide themselves or countenancing the thought as an appropriate course of action for others, and will result in more suicides by those temporarily depressed, distraught or mentally disturbed.

The court recognizes the tragedy involved when, for example, suicide ends a young life that, with timely and appropriate counseling, could have continued. But despite the general validity of the State's concern, the slippery slope argument cannot prevail in this instance. It may be difficult to define the kinds of assistance which are necessary and should be permitted in order to honor terminally ill patients' protected liberty interest in hastening their death. However, that is not a sufficient excuse for precluding entirely the exercise of a constitutional right. The court has no doubt that the legislature can devise regulations which will define the appropriate boundaries of

physician- assisted suicide for terminally ill individuals, and at the same time give due recognition to the important public policy concerns regarding the prevention of suicide.

b. Preventing Undue Influence and Abuse

The State's second stated interest, protecting people from committing suicide due to undue influence or duress, is also unquestionably a legitimate consideration. But it is undisputed that plaintiffs in this case are mentally competent individuals who have reached a decision to commit physician-assisted suicide free of any undue influence. Thus, the plaintiffs and others who make knowing and voluntary choices to commit physician-assisted suicide by definition fall outside the realm of the State's concern.

Moreover, Washington State law permits an individual to refuse or require the withdrawal of life-sustaining treatment. See the Natural Death Act, RCW 70.122 et seq., which outlines the legal requirements for executing a written directive refusing all life-sustaining medical treatment in the event of terminal illness or permanent unconscious condition. See also In re Guardianship of Grant, 109 Wash.2d 545, 747 P.2d 445 (1987); and In re Guardianship of Hamlin, 102 Wash.2d 810, 689 P.2d 1372 (1984), in which the Washington Supreme Court recognized the right of a competent, terminally ill adult to refuse life-sustaining medical treatment. Finally, Washington law also recognizes that decisions about life-sustaining medical treatment may be exercised by an authorized representative holding a durable power of attorney for health care. RCW 70.122.010.

The potential risk of abuse and undue influence is often just as great and may be greater in certain cases for a patient who requests to be disconnected from a life support system. The risk of abuse is especially present if

the patient is incompetent and a surrogate is making the decision.[10]

2. Existence of Undue Burden

As discussed above, the court must determine pursuant to the Casey undue burden standard whether the challenged statute "has the purpose or effect of placing a substantial obstacle in the path" of a person seeking to commit physician-assisted suicide. 112 S. Ct. at 2820. According to the Casey standard, a statute with this purpose is invalid because the means chosen by the state to further its interest in preventing undue influence "must be calculated to inform the person's free choice, not hinder it." Id. Moreover, "a statute which, while furthering . . . [a] valid state interest, has the effect of placing a substantial obstacle in the path of a woman's choice cannot be considered a permissible means of serving its legitimate ends." Id.

In this case, the challenged statute not only places a substantial obstacle in the path of a terminally ill, mentally competent person wishing to commit physician-assisted suicide, but entirely prohibits it. There is no question that such a total ban places an undue burden on the exercise of a constitutionally protected liberty interest.

The court finds that neither of the two alleged State interests, preventing suicide and protecting people against undue influence from others, would be impeded by allowing physician-assisted suicide for mentally competent, terminally ill adult patients. By reaching this conclusion,

---

[10] If the State's concern is determining whether a decision is coerced, the court notes that the law regularly deals with the question of evaluating the voluntariness of decisions. Undoubtedly the legislature can devise regulations which would set up a mechanism for ensuring that people who decide to commit physician-assisted suicide are not acting pursuant to abuse, coercion or undue influence from third parties.

the court does not mean to dismiss the importance or legitimacy of the State's interests in deterring suicide or to suggest that the State has no ability to regulate assisted suicide. Clearly, the State can regulate in this area as long as the regulation does not constitute an undue burden on the exercise of a constitutional right and is reasonably related to a legitimate state interest. Casey, 112 S. Ct. at 2821.

In this case specifically, the court recognizes the legitimacy of the State's interest in preventing undue influence by third parties who may seek to coerce or manipulate a person into committing suicide. But this concern can be answered by devising safeguards and imposing restrictions on physician-assisted suicide to ensure the knowing and voluntary nature of the decision. It is well within the legislative prerogative to enact regulations and restrictions which will ensure that undue influence from third parties plays no part in the choice of physician-assisted suicide.

D. EQUAL PROTECTION

Plaintiffs also assert that RCW 9A.36.060 denies them equal protection of the law as guaranteed by the United States Constitution. The Equal Protection Clause of the Fourteenth Amendment "is essentially a direction that all persons similarly situated should be treated alike." City of Cleburne v. Cleburne Living Ctr., Inc., 473 U.S. 432, 439 (1984) (citing Plyler v. Doe, 457 U.S. 202, 216 (1982)). When state laws infringe on constitutionally protected personal rights of some people, but not others similarly situated, those laws are subjected to strict scrutiny and will be sustained only if the classifications are suitably tailored to serve a compelling state interest. Cleburne, 473 U.S. at 440; see also Shapiro v. Thompson, 394 U.S. 618, (1969) (one-year residency requirement for welfare benefits held

to violate equal protection); Skinner v. Oklahoma, 316 U.S. 535 (1942) (statute providing for sterilization of "habitual criminals" for "felonies involving moral turpitude" which contained an exception for embezzlers violated equal protection as applied to defendant); Kramer v. Union Free School Dist., 395 U.S. 621 (1969) (striking down school district election voter qualifications as violative of equal protection). Government action burdening the fundamental rights of one group more than that of another group subjects the classification to strict scrutiny. Loving v. Virginia, 388 U.S. 1 (1967) (anti-miscegenation law held to violate equal protection guarantee); Eisenstadt v. Baird, 405 U.S. 438 (1972) (law prohibiting sale of contraceptives to single persons, but not to married persons, was invalid as underinclusive, invidious distinction).

Plaintiffs in this case contend that Washington State law unconstitutionally distinguishes between two similarly situated groups of mentally competent, terminally ill adults. Under current state law, those terminally ill persons whose condition involves the use of life-sustaining equipment may lawfully obtain medical assistance in terminating such treatment, including food and water, and thereby hasten death, while those who also suffer from terminal illnesses, but whose treatment does not involve the use of life support systems, are denied the option of hastening death with medical assistance.[11]

---

[11] The parties agree that the Washington State Supreme Court has recognized the right of competent, terminally ill adults to refuse life-sustaining treatment. See Grant, 109 Wash.2d 545, 747 P.2d 445 (1987); Hamlin, 102 Wash.2d 810, 689 P.2d 1372 (1984); In re Guardianship of Bowman, 94 Wash.2d 407, 617 P.2d 731 (1980). See also In re Guardianship of Colyer, 99 Wash.2d 114, 119-21, 660 P.2d 738 (1983) (guardian may assert an incompetent individual's personal right to refuse life-sustaining treatment).

Defendants argue that the distinction between the two groups of competent, terminally ill adults does not violate the Fourteenth Amendment's guarantee of equal protection because death resulting from the removal of life support systems is "natural" and death resulting from medical assistance other than removal of life support is "artificial." Defs.' Mem. in Opp. at 21-22. Defendants assert that the governmental interest in preventing suicide is "not implicated in an individual's refusal of life sustaining treatment," id. at 21, but is implicated in the context of physician-assisted suicide, and that the compelling state interest requirement is therefore satisfied. The court finds the two groups of mentally competent, terminally ill adults at issue here to be similarly situated. While the court recognizes that the governmental interest in preventing suicide is a compelling state interest, Washington caselaw and the Washington Natural Death Act have already carved out an exception for terminally ill patients, and others,[12] wishing to terminate life support. Thus, the State has already recognized that its interest in preventing suicide does not require an absolute ban.

This court is not persuaded that the distinction between "natural" and "artificial" death justifies disparate treatment

---

In addition, the Washington Natural Death Act, RCW 70.122 et seq., states that:

> adult persons have the fundamental right to control the decisions relating to the rendering of their own health care, including the decision to have life-sustaining treatment withheld or withdrawn, in instances of a terminal condition or permanent unconscious condition, . . .

RCW 70.122.010.

[12] RCW 70.122 et seq., the Natural Death Act, is not limited to termination of life support for patients who are terminally ill, but also includes patients who are in a "permanent unconscious state." RCW 70.122.010.

of these similarly situated groups. The distinction between the terminally ill patient who requests that her physician remove the life support systems necessary to maintain her life, and the terminally ill patient whose condition does not require life support systems but who seeks physician-administered aid to end her life, is not a narrowly-drawn classification tailored to serve a compelling state interest. Both patients may be terminally ill, suffering pain and loss of dignity and subjected to a more extended dying process without some medical intervention, be it removal of life support systems or the prescription of medication to be self-administered.

Washington law, by creating an exception for those patients on life support, yet not permitting competent, terminally ill adult patients such as plaintiffs the equivalent option of exercising their rights to hasten their deaths with medical assistance, creates a situation in which the fundamental rights of one group are burdened while those of a similarly situated group are not. Therefore, this court finds that RCW 9A.36.060 violates the equal protection guarantee of the Fourteenth Amendment.

E. CLAIMS BY PLAINTIFF PHYSICIANS AND COMPASSION IN DYING

The five physician plaintiffs and Compassion in Dying have all asserted claims on their own behalf in the complaint. However, none of these claims is discussed in the briefs now before the court on the parties' summary judgment motions. Since plaintiffs have failed to brief these issues, the court will not address them.

IV. CONCLUSION

The court declares RCW 9A.36.060 unconstitutional because it places an undue burden on the exercise of a protected Fourteenth Amendment liberty interest by terminally ill, mentally competent adults acting knowingly

and voluntarily, without undue influence from third parties, who wish to commit physician-assisted suicide. The court further declares RCW 9A.36.060 unconstitutional because it violates the right to equal protection under the Fourteenth Amendment by prohibiting physician-assisted suicide while permitting the refusal or withdrawal of life support systems for terminally ill individuals.

The motion for summary judgment filed by plaintiffs Jane Roe, John Doe and James Doe is accordingly GRANTED, and defendants' cross-motion for summary judgment as to those claims is DENIED. The physician plaintiffs' motion for summary judgment is GRANTED insofar as the physicians purport to raise claims on behalf of their terminally ill patients. The physician plaintiffs' motion for summary judgment is DENIED as to their own claims on the grounds that the basis for those claims has not been adequately addressed. For the same reason, plaintiff Compassion in Dying's claim on its own behalf is DENIED at this time.

As for the injunctive relief requested by plaintiffs, the court declines to enter an injunction barring defendants from enforcing RCW 9A.36.060.[13]

DATED at Seattle, Washington this 3rd day of May, 1994.

/s/
BARBARA J. ROTHSTEIN
CHIEF UNITED STATES DISTRICT JUDGE

---

[13] Defendants also point out that the county prosecuting attorneys, and not defendant Attorney General, have primary responsibility for prosecuting violations of the criminal laws. Therefore, enjoining the Attorney General would be a largely useless exercise. Defs.' Mem. in Opp., pp. 23-24.

Re: Washington and Christine O. Gregoire, Attorney General of Washington
v. Harold Glucksberg, et al.
Application No. A-919

Dear Mr. Williams:

The application for an extension of time within which to file a petition for a writ of certiorari in the above-entitled case has been presented to Justice O'Connor, who on May 14, 1996, extended the time to and including July 4, 1996.

This letter has been sent to those designated on the attached notification list.

Sincerely,

WILLIAM K. SUTER, Clerk

By /s/

Jeffrey D. Atkins
Assistant Clerk

Sec. 135. *Aiding Suicide.*

Every person who, in any manner, shall wilfully advise, encourage, abet or assist another in taking his own life shall be guilty of manslaughter.

Sec. 136. *Abetting Attempt at Suicide.*

Every person who, in any manner, shall wilfully advise, encourage, abet or assist another in attempting to take the latter's life shall be punished by imprisonment in the state penitentiary for not more than ten years.

WASHINGTON LAWS OF 1975,
FIRST EXTRAORDINARY SESSION

CHAPTER 260

NEW SECTION. Sec. 9A.36.060 PROMOTING A SUICIDE ATTEMPT. (1) A person is guilty of promoting a suicide attempt when he knowingly causes or aids another person to attempt suicide.

(2) Promoting a suicide attempt is a Class C felony.

APPENDIX H

INITIATIVE MEASURE 119

AN ACT Relating to the natural death act; and amending RCW 70.122.010, 70.122.020, 70.122.030, 70.122.040, 70.122.050, 70.122.060, 70.122.070, 70.122.080, 70.122.090, 70.122.100, and 70.122.900.

BE IT ENACTED BY THE PEOPLE OF THE STATE OF WASHINGTON:

Sec. 1. Section 2, chapter 112, Laws of 1979 and RCW 70.122.010 are each amended to read as follows:

The ((~~legislature~~)) people find((s)) that adult persons have the fundamental right to control the decisions relating to the rendering of their own medical care, including the decision to have all life-sustaining procedures withheld or withdrawn in instances of a terminal condition, and including the right to death with dignity through voluntary aid-in-dying if suffering from a terminal condition.

The ((~~legislature~~)) people further find((s)) that modern medical technology has made possible the artificial prolongation of human life beyond natural limits.

The ((~~legislature~~)) people further find((s)) that, in the interest of protecting individual autonomy, such prolongation of life for persons with a terminal condition may cause loss of patient dignity, and unnecessary pain and suffering, while providing nothing medically necessary or beneficial to the patient.

The ((~~legislature~~)) people further find((s)) that there exists considerable uncertainty in the medical and legal professions as to the legality of terminating the use or application of life-sustaining procedures where the patient

has voluntarily and in sound mind evidenced a desire that such procedures be withheld or withdrawn.

The people further find that existing law does not allow willing physicians to render aid-in-dying to qualified patients who request it.

In recognition of the dignity and privacy which patients have a right to expect, the ((~~legislature~~)) people hereby declare((s)) that the laws of the state of Washington shall recognize the right of an adult person to make a written directive instructing such person's physician to withhold or withdraw life-sustaining procedures in the event of a terminal condition, and/or to request and receive aid-in-dying under the provisions of this chapter.

Sec. 2. Section 3, chapter 112, Laws of 1979 and RCW 70.122.020 are each amended to read as follows:

Unless the context clearly requires otherwise, the definitions contained in this section shall apply throughout this chapter.

(1) "Attending physician" means the physician selected by, or assigned to, the patient who has primary responsibility for the treatment and care of the patient.

(2) "Directive" means a written document voluntarily executed by the declarer in accordance with the requirements of RCW 70.122.030.

(3) "Health facility" means a hospital as defined in RCW ((~~70.38.020(7) or~~)) 70.41.020(2), a nursing home as defined in RCW ((~~70.38.020(8)~~)) 18.51.010, or a home health agency or hospice agency as defined in RCW 70.126.010.

(4) "Life-sustaining procedure" means any medical or surgical procedure or intervention which utilizes mechanical or other artificial means to sustain, restore, or supplant a vital function, which, when applied to a qualified patient, would serve only to artificially prolong the moment of death ((~~and where, in the judgment of the~~

~~attending physician, death is imminent whether or not such procedures are utilized~~)). "Life-sustaining procedure" includes, but is not limited to, cardiac resuscitation, respiratory support, and artificially administered nutrition and hydration, but shall not include the administration of medication to relieve pain or the performance of any medical procedure deemed necessary to alleviate pain.

(5) "Physician" means a person licensed under chapters 18.71 or 18.57 RCW.

(6) "Qualified patient" means a patient diagnosed and certified in writing to be afflicted with a terminal condition by two physicians one of whom shall be the attending physician, who have personally examined the patient.

(7) "Terminal condition" means an incurable ((~~condition caused by injury, disease, or illness, which, regardless of the application of life sustaining procedures, would within reasonable medical judgment, produce death, and where the application of life sustaining procedures serve only to postpone the moment of death of the patient.~~)) or irreversible condition which, in the written opinion of two physicians having examined the patient and exercising reasonable medical judgment, will result in death within six months, or a condition in which the patient has been determined in writing by two physicians as having no reasonable probability of recovery from an irreversible coma or persistent vegetative state.

(8) "Adult person" means a person attaining the age of majority as defined in RCW 26.28.010 and 26.28.015.

(9) "Aid-in-dying" means aid in the form of a medical service provided in person by a physician that will end the life of a conscious and mentally competent qualified patient in a dignified, painless and humane manner, when requested voluntarily by the patient through a written directive in accordance with this chapter at the

time the medical service is to be provided.

Sec. 3. Section 4, chapter 112, Laws of 1979 and RCW 70.122.030 are each amended to read as follows:

(1) Any adult person may execute at any time a directive directing the withholding or withdrawal of life-sustaining procedures and/or requesting the provision of aid-in-dying when in a terminal condition. The directive shall be signed by the declarer in the presence of two witnesses not related to the declarer by blood or marriage and who would not be entitled to any portion of the estate of the declarer upon declarer's decease under any will of the declarer or codicil thereto then existing or, at the time of the directive, by operation of law then existing. In addition, a witness to a directive shall not be the attending physician, an employee of the attending physician or a health facility in which the declarer is a patient, or any person who has a claim against any portion of the estate of the declarer upon declarer's decease at the time of the execution of the directive. The directive, or a copy thereof, shall be made part of the patient's medical records retained by the attending physician, a copy of which shall be forwarded to the health facility upon the withdrawal of life-sustaining procedures, and/or provision of aid-in-dying. No person shall be required to execute a directive in accordance with this chapter. Any person who has not executed such a directive is ineligible for aid-in-dying under any circumstances. The directive shall be essentially in the following form, but in addition may include other specific directions:

DIRECTIVE TO PHYSICIANS

Directive made this _____ day of _____(month, year).

I_____, being of sound mind, wilfully, and voluntarily make known my desire that my life shall not be artificially prolonged under the circumstances set forth below, and do hereby declare that:

(a) If at any time I should have an incurable injury, disease, or illness certified to be a terminal condition by two physicians, and where the application of life-sustaining procedures would serve only to artificially prolong the moment of my death ((~~and where my physician determines that my death is imminent whether or not life sustaining procedures are utilized~~)).

Declarant must initial one or both of the following:

____I direct that such procedures be withheld or withdrawn, and that I be permitted to die naturally.

____I direct that upon my request my physician provide aid-in-dying so that I might die in a dignified, painless and humane manner.

(b) In the absence of my ability to give directions regarding the use of such life-sustaining procedures, such as while in an irreversible coma or persistent vegetative state, it is my intention that this directive shall be honored by my family and physician(s) as the final expression of my legal right to refuse medical or surgical treatment and I accept the consequences of such refusal.

(c) If I have been diagnosed as pregnant and that diagnosis is known to my physician, this directive shall have no force or effect during the course of my pregnancy.

(d) I understand the full import of this directive and I am emotionally and mentally competent to make this directive.

(e) I understand that I may add to or delete from or otherwise change the wording of this directive before I sign it, and that I may revoke this directive at any time.

Signed_____

City, County and State of Residence.

The declarer has been personally known to me and I believe him or her to be of sound mind.

Witness_____

Witness_____

(2) Prior to effectuating a directive the diagnosis of a terminal condition by two physicians shall be verified in writing, attached to the directive, and made a permanent part of the patient's medical records.

(3) Similar directives to physicians lawfully executed in other states shall be recognized within Washington state as having the same authority as in the state where executed.

Sec. 4. Section 5, chapter 112, Laws of 1979 and RCW 70.122.040 are each amended to read as follows:

(1) A directive may be revoked at any time by the declarer, without regard to declarer's mental state or competency, by any of the following methods:

(a) By being canceled, defaced, obliterated, burned, torn, or otherwise destroyed by the declarer or by some person in declarer's presence and by declarer's direction.

(b) By a written revocation of the declarer expressing declarer's intent to revoke, signed, and dated by the declarer. Such revocation shall become effective only upon communication to the attending physician by the

declarer or by a person acting on behalf of the declarer. The attending physician shall record in the patient's medical record the time and date when said physician received notification of the written revocation.

(c) By a verbal expression by the declarer of declarer's intent to revoke the directive. Such revodation [sic] shall become effective only upon communication to the attending physician by the declarer or by a person acting on behalf of the declarer. The attending physician shall record in the patient's medical record the time, date, and place of the revocation and the time, date, and place, if different, of when said physician received notification of the revocation.

(2) There shall be no criminal, civil, or administrative liability on the part of any person for failure to act upon a revocation made pursuant to this section unless that person has actual or constructive knowledge of the revocation.

(3) If the declarer becomes comatose or is rendered incapable of communicating with the attending physician, the directive shall remain in effect for the duration of the comatose condition or until such time as the declarer's condition renders declarer able to communicate with the attending physician.

Sec. 5. Section 6, chapter 112, Laws of 1979 and RCW 70.122.050 are each amended to read as follows:

No physician or health facility which, acting in good faith in accordance with the requirements of this chapter, causes the withholding or withdrawal of life-sustaining procedures from a qualified patient, shall be subject to civil liability therefrom. No licensed health personnel, acting under the direction of a physician, who participates in good faith in the withholding or withdrawal of life-sustaining procedures in accordance with the provisions of this chapter shall be subject to any civil liability. No physician,

or licensed health personnel acting under the direction of a physician, or health facility ethics committee member who participates in good faith in the withholding or withdrawal of life-sustaining procedures and no physician who provides aid-in-dying to a qualified patient in accordance with the provisions of this chapter shall be subject to prosecution for or be guilty of any criminal act or of unprofessional conduct.

Sec. 6. Section 7, chapter 112, Laws of 1979 and RCW 70.122.060 are each amended as follows:

(1) Prior to effectuating a withholding or withdrawal of life-sustaining procedures from or provision of aid-in-dying to a qualified patient pursuant to the directive, the attending physician shall make a reasonable effort to determine that the directive complies with RCW 70.122 .030 and, if the patient is mentally competent, that the directive and all steps proposed by the attending physician to be undertaken are currently in accord with the desires of the qualified patient.

(2) The directive shall be conclusively presumed, unless revoked, to be the directions of the patient regarding the withholding or withdrawal of life-sustaining procedures and/or the provision of aid-in-dying. No physician, and no licensed health personnel acting in good faith under the direction of a physician, shall be criminally or civilly liable for failing to effectuate the directive of the qualified patient pursuant to this subsection, and no health facility may be required to permit the provision of aid-in-dying within its facility. If the physician or health care facility refuses to effectuate the directive, such physician or facility shall make a good faith effort to transfer of the qualified patient to another physician who will effectuate the directive of the qualified patient or to another facility.

Sec. 7. Section 8, chapter 112, Laws of 1979 and RCW 70.122.070 are each amended to read as follows:

(1) The withholding or withdrawal of life-sustaining procedures from or the provision of aid-in-dying to a qualified patient pursuant to the patient's directive in accordance with the provisions of this chapter shall not, for any purpose, constitute a suicide.

(2) The making of a directive pursuant to RCW 70.122.030 shall not restrict, inhibit, or impair in any manner the sale, procurement, or issuance of any policy of life insurance, nor shall it be deemed to modify the terms of an existing policy of life insurance. No policy of life insurance shall be legally impaired or invalidated in any manner by the withholding or withdrawal of life-sustaining procedures from or the provision of aid-in-dying to an insured qualified patient, notwithstanding any term of the policy to the contrary.

(3) No physician, health facility, or other health provider, and no health service plan, insurer issuing disability insurance, self-insured employee welfare benefit plan, or nonprofit hospital service plan, shall require any person to execute a directive as a condition for being insured for, or receiving, health care services.

Sec. 8. Section 10, chapter 112, Laws of 1979 and RCW 70.122.080 are each amended to read as follows:

The act of withholding or withdrawing life-sustaining procedures or providing aid-in-dying, when done pursuant to a directive described in RCW 70.122.030 and which causes the death of the declarer, shall not be construed to be an intervening force or to affect the chain of proximate cause between the conduct of any person that placed the declarer in a terminal condition and the death of the declarer.

Sec. 9. Section 9, chapter 112, Laws of 1979 and RCW 70.122.090 are each amended to read as follows:

Any person who willfully conceals, cancels, defaces, obliterates, or damages the directive of another

without such declarer's consent shall be guilty of a gross misdemeanor. Any person who falsifies or forges the directive of another or willfully conceals or withholds personal knowledge of a revocation as provided in RCW 70.122.040, with the intent to cause a withholding or withdrawal of life-sustaining procedures or the provision of aid-in-dying contrary to the wishes of the declarer and thereby, because of any such act, directly causes life-sustaining procedures to be withheld or withdrawn or aid-in-dying to be provided and death to thereby be hastened, shall be subject to prosecution for murder in the first degree as defined in RCW 9A.32.030.

Sec. 10. Section 11, chapter 112, Laws of 1979 and RCW 70.122.100 are each amended to read as follows:

Nothing in this chapter shall be construed to condone, authorize, or approve mercy killing, or to permit any affirmative or deliberate act or omission to end life other than to permit the natural process of dying and to permit death with dignity through the provision of aid-in-dying only by a physician when voluntarily requested in writing as provided in this chapter by a conscious and mentally competent qualified patient at the time aid-in-dying is to be provided.

Sec. 11. Section 1, chapter 112, Laws of 1979 and RCW 70.122.900 are each amended to read as follows:

This act shall be known and may be cited as the "((~~Natural~~)) Death With Dignity Act."

NEW SECTION. Sec. 12. If any provision of this act or its application to any person or circumstance is held invalid, the remainder of the act or the application of the provision to other persons or circumstances is not affected.

APPENDIX I

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	No. C94-119
Plaintiffs,	)	JUDGMENT
v.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

Pursuant to 28 U.S.C. 2201, declaratory judgment is hereby entered in favor of plaintiffs Harold Glucksberg, M.D., Abigail Halperin, M.D., Thomas A. Preston, M.D., and Peter Shalit, M.D., Ph.D. insofar as they raise claims

on behalf of their terminally ill patients, and in favor of plaintiffs Jane Roe, John Doe and James Poe, as follows:

RCW 9A.36.060 is unconstitutional because it places an undue burden on the exercise of a protected Fourteenth Amendment liberty interest by terminally ill, mentally competent adults acting knowingly and voluntarily, without undue influence from third parties, who wish to commit physician-assisted suicide. Further, RCW 9A.36 .060 is declared unconstitutional because it violates the right to equal protection under the Fourteenth Amendment by prohibiting physician-assisted suicide while permitting the refusal or withdrawal of life support systems for terminally ill individuals.

Entered at Seattle, Washington this 20th day of May, 1994.

HAROLD GLUCKSBERG, M.D., ET AL.,

ORDERS IN PENDING CASES

The application for a stay of the issuance of the mandate of the United States Court of Appeals for the Ninth Circuit, case No. 94-35534, issued on May 29, 1996, presented to Justice O'Connor and by her referred to the Court is granted pending the timely filing and disposition by this Court of a petition for writ of certiorari. Should the petition for a writ of certiorari be denied, this stay terminates automatically. In the event the petition for a writ of certiorari is granted, this stay shall continue pending the sending down of the judgment of this Court.

QUESTION PRESENTED

Should this Court grant certiorari to decide whether the Fourteenth Amendment's guarantee of liberty protects the decision of a mentally competent, terminally ill adult to hasten impending death in a certain, humane, and dignified manner when

1. the only federal appellate court other than the Ninth Circuit to consider the constitutional validity of a statute prohibiting assisted suicide also struck down the prohibition as constitutionally infirm;

2. the single conflicting state court decision on the validity of a statute prohibiting assisted suicide addresses different facts and a statute that has expired;

3. the law continues to be developed by the lower courts; and

4. the Ninth Circuit properly applied this Court's due process precedent?

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

OPPOSITION TO PETITION FOR WRIT OF CERTIORARI

STATEMENT OF THE CASE

I. FACTUAL BACKGROUND

The State of Washington allows individuals to commit suicide and recognizes a liberty interest in choosing to end a painful and futile existence, at least where that can be done by terminating medical treatment. On the other hand, the State makes it a crime for any person to assist in any way, other than the removal of life-sustaining treatment, in a terminally

ill, mentally competent person's choice to hasten inevitable death and end suffering.

Respondents contend that the United States Constitution's guarantee of liberty protects the right of competent, terminally ill adults to choose to hasten inevitable death and that this necessarily entails medical assistance — in particular, drugs prescribed for that purpose. In addition, respondents contend that the exception to Washington's prohibition, recognized by court and legislature, in the case of persons who can choose to hasten death by directing the termination of medical treatment violates the Equal Protection Clause.

The record in this case establishes the following undisputed facts regarding the original patient plaintiffs and respondents:

At the time this case was filed, Dr. Jane Roe, 69, was dying of breast cancer.[1] Her cancer had metastasized widely into her bones and was growing rapidly throughout her entire skeleton. She had undergone surgery, chemotherapy, and radiation therapy, but the cancer prevailed. Dr. Roe suffered chronic, intractable pain, which she attempted to alleviate with large and increasing doses of morphine; however, she still experienced frequent and severe pain. Dr. Roe was confined to bed for the seven months prior to the filing of this action. Movement was intensely painful, and her weakened muscles could not support her. She was anemic, incontinent, and vulnerable to infections.

Dr. Roe was a mentally competent retired physician. She had been advised and understood that there was no chance of recovery and that despite excellent medical care she faced severe and unrelenting suffering. Dr. Roe wished to hasten her

---

[1] Dr. Roe died prior to the district court's decision. *Compassion in Dying v. Washington*, 79 F.3d 790, 794-95 (9th Cir. 1996) (en banc).

inevitable death by taking drugs of a type and in an amount prescribed by her doctor for that purpose. *Compassion*, 79 F.3d at 794-95.

At the time this action was filed, John Doe, 44, was dying of AIDS.[2] His doctors had advised him that there was no chance of recovery and that he faced severe and continuous suffering. John Doe was vulnerable to all manner of infections with almost no natural ability to fight them. Mr. Doe had cytomegalovirus retinitis, which caused him to lose approximately 70% of his vision at the time this action was filed and was anticipated to result in complete blindness. Loss of vision was fatal to Mr. Doe's vocation and avocation, painting. Mr. Doe had been hospitalized for AIDS-related pneumonia on several occasions, suffered from chronic skin infections, sinusitis, and grand mal seizures related to AIDS, and experienced extreme fatigue and a rapidly diminishing ability to care for himself. Mr. Doe had served as the primary caregiver for his long-term companion who died of AIDS at home in Mr. Doe's care. Mr. Doe witnessed firsthand the pain, suffering, and loss of bodily function, integrity, and personal dignity the disease causes at the end of life.

John Doe was mentally competent and understood his diagnosis and prognosis. John Doe wished to hasten his inevitable death by taking drugs of a type and in an amount prescribed by his doctor for that purpose. *Id.*

At the time this case was filed, James Poe, 69, was dying of chronic, end-stage emphysema.[3] His doctors had advised

---

[2] Mr. Doe died prior to the district court's decision. *Compassion*, 79 F.3d at 794-95.

[3] Mr. Poe died prior to the decision by the three-judge panel of the Ninth Circuit. *Compassion*, 79 F.3d at 794-95.

him that his future held no chance of recovery, only terrible pain and suffering. Every breath was a struggle. He was supplied oxygen through a tube to his nose 24 hours a day and spent hours each day aspirating medications to facilitate breathing. He was terrified by his inability to get enough air. He regularly took medications, including morphine, to calm the panic associated with the sensation of suffocation. He also suffered from associated heart failure, which resulted in painful swelling of his extremities and loss of mobility.

James Poe was mentally competent and understood his diagnosis and prognosis. James Poe desired the right to choose to hasten his inevitable death by taking drugs of a type and in an amount prescribed by his doctor for that purpose when his suffering became unbearable. *Id.*

Respondents Glucksberg, Halperin, Preston, and Shalit are physicians who regularly treat terminally ill patients. Each encounters mentally competent, terminally ill patients who understand their condition, diagnosis, and prognosis and who desire physician assistance in hastening their deaths to avoid prolonged suffering. Each encounters cases in which his or her professional responsibilities dictate that he or she honor mentally competent, terminally ill patients' requests for medication to hasten death. The physicians present both their own claims and the claims of their patients in this action.[4] *Id.* at 794-96.

In the physicians' professional judgment, the desire of such patients to hasten inevitable death and avoid suffering can be rational. In these cases the appropriate procedure is to ensure competence, to confirm the terminal diagnosis, and to

---

[4] The Ninth Circuit correctly held that the physicians had standing to present the claims of their patients. *Compassion*, 79 F.3d at 795-96. *See Doe v. Bolton*, 410 U.S. 179, 187-89 (1973).

prescribe the proper drugs that will allow the patient to decide whether to live, and suffer, any longer. It was undisputed below that patients who cannot receive this medical assistance cannot hasten their deaths in a certain and humane manner and that some cannot hasten their death in any manner without such assistance. The physicians, however, know that prescribing drugs for this purpose exposes them to criminal prosecution under RCW 9A.36.060. *Compassion in Dying v. Washington*, 850 F. Supp. 1454, 1457-58 (W.D. Wash. 1994).

II. THE LOWER COURTS' DECISIONS

Respondents concur in petitioners' statement of the proceedings below.

REASONS FOR DENYING THE PETITION

I. THERE IS NO CONFLICT AMONG THE LOWER COURTS

A. There Is No Conflict Between Federal Circuits

Aside from the Ninth Circuit, the only other federal appellate court to consider the issues presented in this case is the Second Circuit, which also determined that mentally competent, terminally ill patients are constitutionally entitled to seek physician assistance in hastening death in the form of medications prescribed for that purpose. *Quill v. Vacco*, 80 F.3d 716, 727 (2d Cir. 1996), *petition for cert. docketed*, 65 U.S.L.W. 3052 (May 16, 1996) (No. 95-1858). In its decision, the Second Circuit struck down statutes similar to the Washington statute challenged in this case.

Both the Second Circuit and the Ninth Circuit were presented with Fourteenth Amendment liberty and equal protection claims. The Ninth Circuit found that the right to physician assistance in hastening death fell within the bounds

of the liberty interest demarcated by this Court in the reproductive rights cases and *Cruzan v. Director, Mo. Dep't of Health*, 497 U.S. 261 (1990). *Compassion*, 79 F.3d at 813-16. Having found a protected liberty interest, the Ninth Circuit declined to address the equal protection claim. *Id.* at 838.[5]

In a unanimous decision, the Second Circuit ruled that New York's law prohibiting physician-assisted suicide violates the Equal Protection Clause. *Quill*, 80 F.3d at 727. The Second Circuit briefly considered the liberty claim and declined to find a constitutionally protected liberty interest absent explicit guidance from this Court.[6]

---

[5] Because there is no equal protection ruling to review, the third question presented by petitioners — whether a rational basis exists for distinguishing between the refusal and withdrawal of life-sustaining treatment and the provision of lethal medication such that equal protection guarantees are not impinged — and the related discussion (Petition at 22-26) are not before this Court and cannot be a basis for discretionary review.

Nevertheless, in considering the equal protection issue it is fair to recognize that the Ninth Circuit appreciated the lack of an "ethical or constitutionally cognizable" basis upon which to distinguish between physician assistance in hastening death by the act of prescribing medications for that purpose and the act of withdrawing or withholding life support. *Compassion*, 79 F.3d at 821-24. This recognition is consistent with the reasoning of the only other federal circuit to consider the issue. *See Quill*, 80 F.3d at 727.

[6] The Second Circuit's reluctance to find a liberty interest was premised upon its conclusion that *Bowers v. Hardwick*, 478 U.S. 186 (1986), directed lower courts to refrain from recognizing previously unrecognized liberty interests, even where this Court's analytical standards have been met. *Quill*, 80 F.3d at 725 ("Our position in the judicial hierarchy constrains us to be even more reluctant than the Court to undertake an expansive approach in this unchartered area.").

Thus, there is no conflict in the results reached by the two federal appellate courts that have considered the constitutionality of state laws that operate to prevent mentally competent, terminally ill adults from choosing to hasten death in a certain, humane, and dignified manner. Rather, there is simply a distinction between the constitutional grounds employed to reach the same result. There is no need for this Court to referee such a theoretical "conflict."

B. There Is No True Conflict Between a Federal Court and a State Court of Last Resort

The Michigan Supreme Court ruling identified by petitioners as giving rise to a conflict is meaningless for purposes of this Court's decision whether to grant review. *See People v. Kevorkian*, 527 N.W.2d 714 (Mich. 1994), *cert. denied*, 115 S. Ct. 1795 (1995).[7]

Hardwick did not stand for the absolute admonition perceived by the Second Circuit. As the Ninth Circuit noted, *Planned Parenthood v. Casey*, 505 U.S. 833, 852 (1992), explicitly reiterates the principle that the fact that a right has not previously been recognized is no barrier to its recognition. *Compassion*, 79 F.3d at 805. This principle was again reaffirmed just this past term in *United States v. Virginia*, 64 U.S.L.W. 4638, 4650 (June 26, 1996) ("A prime part of the history of our Constitution . . . is the story of the extension of constitutional rights and protections to people once ignored or excluded."), and is also evident from the rulings subsequent to *Hardwick* that *have* recognized previously unrecognized liberty interests or reaffirmed previously recognized liberty interests. *See, e.g., Casey*, 505 U.S. 833 (reaffirming the liberty interest in terminating a pre-viable pregnancy); *Cruzan*, 497 U.S. 261 (recognizing a liberty interest in the deeply personal area of end-of-life decision-making); *Washington v. Harper*, 494 U.S. 210 (1990) (recognizing a liberty interest in being free from the arbitrary administration of antipsychotic drugs).

[7] The only other decision that petitioners rely on as creating a conflict on the liberty issue is a state appellate court decision. Petition at 21.

First, the consolidated cases involving Dr. Jack Kevorkian did not involve the narrow liberty interest recognized here. Dr. Kevorkian's assistance in the deaths of patients has not been limited either to mentally competent or to terminally ill patients, much less patients who are both competent and terminally ill.

Second, the Michigan statute reviewed by the Michigan Supreme Court has since expired by its own terms. Mich. Comp. Laws § 752.1027. Thus, any conflict that existed has evaporated. This point was made by the State of Michigan itself in its opposition to a petition for writ of certiorari: "The challenged statute no longer exists. In these circumstances, an order declaring its unconstitutionality and enjoining its enforcement would be meaningless." *Hobbins v. Michigan*, No. 94-1473 (October Term 1994), Brief for Respondent in Opposition at 13.

Finally, the need for review by this Court is less than compelling where, as here, a state court ruling that refuses to recognize federal constitutional rights is followed by federal court rulings that consistently protect the asserted federal constitutional rights.

Without even discussing the patently distinguishable nature of that case, it simply does not create a conflict worthy of this Court's attention. Supreme Court Rule 10.1(a).

Petitioners' attempt to create a conflict between the decision below and various state court decisions on the equal protection issue (Petition at 25-26) is misleading. *See supra* note 5. None of the state court decisions involved the constitutional claim of mentally competent, terminally ill adults to choose a humane hastened death by means of self-administering medications prescribed for that purpose. None of the cases reviewed discrimination in that context or held that there is no such equal protection right.

II. REVIEW BY THIS COURT AT THIS TIME IS PREMATURE

In an effort to obtain review, petitioners identify a variety of broad ramifications that may flow from the Ninth Circuit's decision. Petition at 10-11. In fact, however, most of the issues raised, which petitioners themselves argue require consideration by this Court, were not finally resolved by the Ninth Circuit. Issues surrounding patient choice and physician assistance in hastening death continue to be reviewed by lower courts. For example, respondents are aware that at least one case raising similar issues is pending. *McIver v. Krischer*, CL96-1504AF, Palm Beach Circuit Court, 15th Judicial Circuit, Florida.

Sound principles of judicial restraint counsel against granting review at this time. As recognized in *McCray v. New York*, 461 U.S. 961, 963 (1983), denial of certiorari is proper where an issue requires "further study" in lower courts "before it is addressed by this Court." Moreover, this Court need not grant review simply because an issue is important. *See, e.g., Texas v. Hopwood*, 64 U.S.L.W. 3868 (July 1, 1996) (certiorari denied notwithstanding fact that case presented important constitutional questions); *Gilliard v. Mississippi*, 464 U.S. 867, 869 (1983) (Marshall, J., dissenting from denial of certiorari to "those of my colleagues who agree with me that . . . these cases present important constitutional questions, but believe that this Court should postpone consideration of the issue until more state supreme courts and federal circuits have experimented with substantive and procedural solutions to the problem"); *California ex rel. Cooper v. Mitchell Bros.' Santa Ana Theater*, 454 U.S. 90, 98 (1981) (Stevens, J., dissenting from grant of certiorari on

grounds of traditional practice of avoiding premature adjudication of constitutional principles).[8]

III. THE NINTH CIRCUIT CORRECTLY DECIDED THAT WASHINGTON'S PROHIBITION OF ASSISTED SUICIDE VIOLATES THE FOURTEENTH AMENDMENT'S GUARANTEE OF LIBERTY

The Ninth Circuit carefully reviewed this Court's substantive due process precedent and correctly applied principles developed in those cases. Although petitioners would like to cabin the principles recognized by this Court in the reproductive rights and withdrawal of life support cases to those specific factual contexts, there is no principled way to do so. As the court below recognized, this Court "has carved out certain key moments and decisions in individuals' lives and placed them beyond the general prohibitory authority of the state." *Compassion*, 79 F.3d at 812-13 (citing *Pierce v. Society of Sisters*, 268 U.S. 510 (1925) (child rearing and education); *Skinner v. Oklahoma*, 316 U.S. 535 (1942) (procreation); *Prince v. Massachusetts*, 321 U.S. 158 (1944) (family relationships); *Griswold v. Connecticut*, 381 U.S. 479 (1965); *Eisenstadt v. Baird*, 405 U.S. 438 (1972) (whether to bear or beget a child); *Roe v. Wade*, 410 U.S. 113 (1973) (abortion)). *See also Zablocki v. Redhail*, 429 U.S. 1089

---

[8] Denial of review at this time, of course, would suggest no expression upon the merits of the case. *See, e.g., Maryland v. Baltimore Radio Show, Inc.*, 338 U.S. 912, 919 (1950); *United States v. Carver*, 260 U.S. 482, 490 (1923).

The absence of true conflict and the prematurity of review might be overlooked if the Ninth Circuit had clearly gone astray. But, as discussed below, that is not the case. The Ninth Circuit acted en banc and eleven respected judges carefully and exhaustively addressed the issue. Only three judges dissented. Moreover, all three judges on the Second Circuit concurred with the result reached by the Ninth Circuit.

(1977) (marriage); *Moore v. City of East Cleveland*, 431 U.S. 494 (1977) (family living arrangements). The constitutional tenets developed in these cases are of general application. They can and must be applied to the facts of this case.

A. *Cruzan* Supports the Liberty Interest Recognized Below

The pertinent principle recognized in *Cruzan* is that decisions regarding the end of one's life are "deeply personal" and should be safeguarded from usurpation. 497 U.S. at 281. That principle directly applies here. When a dying patient is mentally competent, as all of the patients represented in this case were and are, and is able to make known his or her wishes regarding the continuation of life, these wishes are entitled to respect and are protected against blanket state suppression.[9]

Ignoring the basic test for determining the existence of a liberty interest set forth by the Court in *Cruzan*, petitioners leap to language in the opinion that suggests a countervailing state interest in preserving life. Petitioners point out that this interest is reflected in state laws banning assisted suicide. Petition at 14. This Court's recognition of a general state interest in preserving life, however, does not suggest that the weight of that interest is the same in cases where a patient is at the threshold of death due to the progress of terminal disease as it is in cases involving the preservation of life for the general population.

---

[9] Thus, the real question is whether any state interest outweighs the patient's interest. The Ninth Circuit properly concluded that the state's interests do not outweigh the mentally competent, terminally ill patient's liberty interest in choosing to hasten impending death in a humane and dignified manner. *Compassion*, 79 F.3d at 816-37.

No judgment by the state as to the *quality* of such a patient's life is necessary to recognize that the state's interest does not outweigh the patient's when the patient is terminally ill and mentally competent. This case is limited to patients with a severely diminished life expectancy — a limited *quantity* of life — due to the advance of disease. In recognizing that the state's interest in preserving life is "substantially diminished" in the terminal phase of illness, the court below provided a construct under which relative state and patient interests may be weighed. *Compassion*, 79 F.3d at 820. Petitioners' concern that the court provided no structure (Petition at 15) is unwarranted.

The principle that the state's interest in preserving life weakens as the patient's prognosis dims has been recognized since the seminal case of *In re Quinlan*, 355 A.2d 647, 664 (N.J.), *cert. denied*, 429 U.S. 922 (1976). This concept is fully consistent with the principle, well established in the reproductive rights cases, that, as the potential for life increases, the state's interest in preserving life increases. *See, e.g., Casey*, 505 U.S. at 846, 860; *Webster v. Reproductive Health Servs.*, 492 U.S. 490, 516 n.14 (1989); *Roe v. Wade*, 410 U.S. at 163.

B. The Reproductive Rights Cases Support the Liberty Interest Recognized Below

The reproductive rights cases, among others, recognize that "there is a realm of personal liberty which the government may not enter." *Casey*, 505 U.S. at 847. These cases acknowledge that decisions concerning one's own body, one's own medical care, and one's own future life course fall within that realm. *See, e.g., id.* at 851. The considerations that led to this conclusion in the reproductive rights context are plainly present in the end-of-life context as well.

The decision regarding the end of one's life is even more personal and significant to an individual than the decision regarding reproduction. Indeed, eight Ninth Circuit judges agreed that "few decisions are more personal, intimate or important than the decision to end one's life, especially when the reason for doing so is to avoid excessive and protracted pain," *Compassion*, 79 F.3d at 813, and that "no decision is more painful, delicate, personal, important, or final than the decision how and when one's life shall end." *Id.* at 837. The court further recognized that

> Prohibiting a terminally ill patient from hastening his death may have an even more profound impact on that person's life than forcing a woman to carry a pregnancy to term. . . . For such patients, wracked by pain and deprived of all pleasure, a state-enforced prohibition on hastening their deaths condemns them to unrelieved misery or torture. Surely, a person's decision whether to endure or avoid such an existence constitutes one of the most, if not the most, "intimate and personal choices a person may make in a life-time," a choice that is "central to personal dignity and autonomy."

Id. at 814 (quoting *Casey*, 505 U.S. at 851).[10]

The judgment below properly followed *Casey*'s direction that a state may regulate to protect its legitimate interests, and

---

[10] The district court also recognized this: "the suffering of a terminally ill person cannot be deemed any less intimate or personal, or any less deserving of protection from unwarranted governmental interference, than that of a pregnant woman." *Compassion*, 850 F. Supp. at 1460.

explicitly recognized that the state may protect its interests by regulation of the practice of physician-assisted suicide. *Compassion*, 79 F.3d at 816 ("[W]e explicitly recognize that some prohibitory and regulatory state action is fully consistent with constitutional principles."); *id.* at 833 ("[T]he state should enact regulatory measures that ensure . . . that all necessary safeguards have been provided."); *id.* at 837 ("[T]he process itself [of physician-assisted suicide] can be carefully regulated and rigorous safeguards adopted.").

Petitioners' suggestion that *Casey* is nothing more than a creature of stare decisis is disrespectful to the agonizing effort in *Casey* to craft a reliable middle course for the future and to the values that inform the stare decisis doctrine. The Court in *Casey* did not just blindly apply *Roe v. Wade*; it analyzed fully the constitutional arguments and resolved them with logic that applies with full force to this case. Petitioners' offhand approach in no way avoids the fact that stare decisis requires the application of *Casey* to cases that raise issues it addresses.[11]

C. Petitioners' Overstatement of the Scope of the Decision Below Is Misguided

As noted above, without a conflict to merit review, petitioners resort to the alarmist tactic of overstating the scope of the Ninth Circuit's decision in order to suggest that terrible

[11] Petitioners' argument that abortion is a "unique" act (Petition at 17) does not advance their position. The "unique" aspect of abortion is the decision to terminate a potential life that has no voice in the decision. The related interests and concerns that make the abortion issue difficult and complex are absent here. Foremost among these, the interest of the separate "life that is aborted," *Casey*, 505 U.S. at 852, has no counterpart in the decision of a dying person to hasten his or her own death.

consequences will flow from it.[12] Petitioners suggest that the court's decision affirmatively permits (1) assistance by non-physicians; (2) patients to choose to hasten death solely out of financial motivation; (3) surrogates to direct the hastened death of a mentally incompetent patient; and (4) physician assistance in a form other than prescribing medications for patient self-administration. Petition at 10-11. Each of these contentions is flawed, but they exemplify the wisdom of allowing further development of the law in the lower courts.

1. Assistance by Non-Physicians

In recognizing that a mentally competent, terminally ill patient has a right to choose a certain, humane, and dignified death by self-administering medications prescribed for that purpose, the court below appropriately acknowledged that ancillary actors "whose services are essential" to the exercise of this option "and who act under the supervision or direction of a physician are necessarily covered by our ruling." *Compassion*, 79 F.3d at 838 n.140.

Given the broad wording of the challenged statute, this was necessary to permit patients to exercise the right recognized. The actors within this protected sphere are specifically described and include the pharmacist filling the prescription, the health care workers facilitating the patient's request, and family or loved ones doing such minor acts as

[12] This tactic is often employed by those opposing the recognition of constitutional rights. *See, e.g., United States v. Virginia*, 64 U.S.L.W. at 4645-46 (reviewing history of opposition to women's admission to military schools and observing that none of the forecast terrible consequences had actually occurred).

providing liquid with which to swallow pills.[13] Nothing in the decision below indicates that non-physicians would be empowered to otherwise assist a suicide or provide the means for hastening death.[14]

2. Financial Motivation

The notion that the decision below establishes a liberty interest in hastening death for financial reasons is specious. The Ninth Circuit recognized simply that, among many factors, a patient might consider the economic welfare of his or her family. Current law permits patients to choose to hasten death by refusing (or directing the withdrawal of) life support, notwithstanding the fact that the decision might be motivated by financial concerns. It is not at all clear why the same ability to consider family finances in end-of-life decision-

---

[13] Allowing loved ones to be present with the patient at the time he or she hastens impending death eliminates the terrible tragedy of forcing patients who choose to hasten death to act, and die, alone. *See, e.g.*, Timothy E. Quill, *A Case of Individualized Decision-Making*, 324 N. Eng. J. Med. 691, 694 (1991) ("I wonder whether the image of Diane's final aloneness will persist in the minds of her family. . . . I wonder why Diane, who gave so much to so many of us, had to be alone for the last hour of her life.")

[14] In the abortion context, this Court has held that non-physicians who provide abortions could be subject to prosecution. *Connecticut v. Menillo*, 423 U.S. 9 (1975) (criminal abortion statutes can continue to be enforced against non-physicians). The abortion cases and the entire history of restricting the practice of medicine and the power to prescribe medications demonstrate that legislatures have the capacity to use physician-only requirements to protect individuals from abuse. Although it is difficult to determine when such requirements are appropriate, the abortion cases hold that blanket state prohibitions may not deny doctors the freedom to respond to requests from competent patients in narrowly tailored circumstances. Any consideration of broader claims is premature at this juncture.

making should not be available for patients whose conditions do not involve life-sustaining treatment.[15]

3. Surrogate Decision-Making for Mentally Incompetent Patients

This case involves only the claims of mentally competent, terminally ill patients, and the Ninth Circuit addressed only the claims of such patients.[16] Contrary to the suggestion of petitioners, however, existing law regarding patients who have lost mental competency does not permit surrogates to make all of the decisions that a competent person could make. For example, a competent patient could direct the withdrawal of life support, regardless of whether he or she was terminally ill. This was the holding in *Cruzan*. By contrast, under Washington law a surrogate can direct the withdrawal of life support from a patient *only* when the patient either is terminally ill or has become permanently unconscious, and

---

[15] A physician requested to assist in hastening the death of a patient will necessarily inquire into the patient's motivation. In the case of a terminal patient who is neither suffering nor experiencing pain, a physician might well question the competency of a patient making such a request. In addition, safeguards could be set by the legislature to ensure that decisions to hasten death are not the product of coercion.

[16] The court below explicitly limited the protected interest to mentally competent patients. *Compassion*, 79 F.3d at 793 ("We hold that insofar as the Washington statute prohibits physicians from prescribing life-ending medication for use by terminally ill, competent adults who wish to hasten their own deaths, it violates the Due Process Clause of the Fourteenth Amendment."); *id.* at 834 ("[W]hen a mentally competent adult is terminally ill, and wishes, free of any coercion, to hasten his death because his remaining days are an unmitigated torture, that person's liberty interest is at its height."); *id.* at 837 ("[W]e hold that the 'or aids' provision of Washington statute RCW 9A.36.060 is unconstitutional as applied to terminally ill competent adults who wish to hasten their deaths with medication prescribed by their physicians.").

only following requisite confirmation of the patient's condition. *In re Grant*, 109 Wn.2d 545, 747 P.2d 445 (1987) (surrogate may direct withdrawal of life support when patient is terminally ill); *In re Hamlin*, 102 Wn.2d 810, 689 P.2d 1372 (1984) (surrogate may direct withdrawal of life support when patient is permanently unconscious).[17] The language cited by petitioners simply recognizes that once a surrogate is empowered to act on behalf of a patient, the decision of the surrogate "is for all legal purposes the decision of the patient himself." *Compassion*, 79 F.3d at 832 n.120.

4. Expansion to Other Forms of Assistance

Far from "telegraphing the possibility" of the expansion of medical assistance in hastening death to euthanasia, Petition at 10, the Ninth Circuit explicitly stated: "[W]e place euthanasia, as we define it, on the opposite side of the constitutional line we draw for purposes of this case . . . ." *Id.* In the constitutional balancing of state and patient interests, the state would appear to be able to articulate significantly greater interests in the case of physician-administered lethal medications.

D. The Ninth Circuit's Analysis of the As Applied Challenge Is Correct

This case focuses on specific conduct by individuals with distinguishing characteristics: the decision of mentally competent, terminally ill adults to hasten death by self-administering medications prescribed for that purpose. This

---

[17] Although the issue was not before the court below, *Cruzan* instructs that if a future case presented the question of a surrogate's ability to direct a hastened death for an incompetent patient, the state's interest in protecting against the usurpation of the personal element of patient choice might well outweigh the asserted interest of the patient.

constitutional challenge was brought because Washington's statute criminalizes the action of a physician assisting a patient in the exercise of this choice. As such, the statute operated to prevent patient plaintiffs Roe, Doe, and Poe — and operates to prevent the mentally competent, terminally ill patients of the physician plaintiffs/respondents — from exercising the option of a humane hastened death. Likewise, those doctors are prevented from providing the care and assistance necessary for their mentally competent, terminally ill patients to exercise this personal choice. *Id.* at 794-95.

Thus, petitioners' contention that this case does not involve the application of the challenged statute to "identified individuals" or "particular fact situations" (Petition at 19) is patently untrue.[18] The court below properly considered whether the application of the challenged statute to the individuals identified above infringed a constitutionally protected right and held that it did.[19] Because the Ninth Circuit resolved this case as an as applied challenge, the *Salerno* test for some facial challenges has no application here and does not create an issue for review by this Court.[20]

---

[18] Petitioners in effect suggest that any suit for anticipatory relief is a facial challenge because it necessarily involves some degree of speculation. This is not, nor has it ever been, the conventional understanding of a facial challenge.

[19] Having found the statute unconstitutional as applied to these identified individuals, the court below indicated that the constitutional infirmity would exist in the case of individuals similarly situated as well. *Compassion*, 79 F.3d at 798 n.9.

[20] The Ninth Circuit correctly noted that even if the facial validity of the statute had been ruled on, the *Salerno* test, as articulated in *United States v. Salerno*, 481 U.S. 739, 745 (1987), would not have been applicable. *Compassion*, 79 F.3d at 798 n.9 ("[W]e believe that the

E. The Proper Respective Roles for the Judiciary and the Legislature Are Respected in the Decision Below

Petitioners' argument that the protection of this liberty interest should be left to the legislative process (Petition at 26-28) is fundamentally misguided. Where constitutional rights are infringed it is the essential purpose of the judiciary to protect those rights against majority will and the political process. *See, e.g., Schweiker v. Wilson*, 450 U.S. 221, 230 (1981) (where the democratic process impinges on constitutional rights, "the judiciary then has a duty to intervene in the democratic process"); *Marshall Field & Co. v. Clark*, 143 U.S. 649, 670 (1892) (recognizing "duty of this court, from the performance of which it may not shrink, to give full effect to the provisions of the Constitution"); *Marbury v. Madison*, 5 U.S. (1 Cranch) 137 (1803).[21] As the Ninth Circuit painstakingly delineated, the decision at issue is a highly personal one that must be left to the individual and protected by the courts from legislative action that intrudes excessively into the decision-making realm. The court reiterated the time-honored principle: "The Constitution and the courts stand as a bulwark between individual freedom and arbitrary and intrusive governmental power." *Compassion*, 79 F.3d at 839. On the basis of that constitutional mandate, the Ninth Circuit concluded: "Under our constitutional system, neither the state

---

Salerno test would not in any event be the appropriate one for adjudicating a facial challenge to Washington's prohibition on assisted suicide.").

[21] None of the cases cited by petitioners (Petition at 27-28) suggest otherwise. Those cases deal exclusively with the regulation of industrial and business conditions, not the suppression of individual liberties. Moreover, those cases recognize that states do not have the power to regulate even commercial affairs when their laws "run afoul of" the Constitution. *See, e.g., Ferguson v. Skupra*, 372 U.S. 726, 729-31 (1963).

nor the majority of the people in a state can impose its will upon the individual in a matter so highly 'central to personal dignity and autonomy.'" *Id.* (quoting *Casey*, 505 U.S. at 851).

CONCLUSION

The judgment below does not present a conflict that merits review by this Court, and review at this time would be premature. The Court has recognized that the constitutional right of liberty stands as a barrier against laws that deny individuals the right to make the most fundamental choices affecting their values and lives. The Ninth Circuit correctly applied this Court's precedent in finding that the Fourteenth Amendment protects the liberty to choose between a tortured death and a humane one, while at the same time recognizing the role of legislative involvement in crafting safeguards to protect the legitimate state interests. For these reasons, the Court should deny the Petition for Writ of Certiorari.

I. RESPONDENTS' ATTEMPTS TO EXPLAIN AWAY CLEAR CONFLICTS BETWEEN THE DECISION BELOW AND THOSE OF OTHER FEDERAL AND STATE COURTS ARE FACILE, BUT INEFFECTIVE

Plaintiffs argue that no conflict exists between the unprecedented decision below and the decisions of both federal and state appellate courts that have reached a different conclusion than did the Ninth Circuit. Opp'n at 5-9. They are wrong.

A. The Second Circuit Conflict

The Ninth Circuit concluded below that mentally competent, terminally ill patients have interests under the Due Process Clause that include physician assistance in ending their lives. App. A-116. As pointed out in the Petition, the Second Circuit has explicitly rejected this conclusion.

> "The right to assisted suicide finds no cognizable basis in the Constitution's language or design, even in the very limited cases of those competent persons who, in the final stages of terminal illness, seek the right to hasten death."

Quill v. Vacco, 80 F.3d 716, 724-25 (2d Cir. 1996), *petition for cert. docketed*, 65 U.S.L.W. 3052 (May 16, 1996) (No. 95-1858).

The Second Circuit's decision, issued 27 days *after* that of the Ninth Circuit, presents a direct conflict with the decision below. Contrary to Plaintiffs' argument, the conflict is not lessened by the fact that the Second Circuit developed a different approach—under the Equal Protection

Clause—as a basis to strike down New York statutes prohibiting assisted suicide.[1]

Nor is the conflict lessened by the Second Circuit's recognition that this Court's prior opinions, combined with the Second Circuit's "position in the judicial hierarchy", dictated that it "be even more reluctant than the [Supreme] Court to undertake an expansive approach in this unchartered area". *Quill*, 80 F.3d at 725.

The Ninth Circuit, of course, showed no such reluctance. The decision below is broad in both language and import, creating a new approach to liberty interest analysis under the Due Process Clause and imposing new limitations on state legislative discretion in making public policy decisions. Notwithstanding the similarity of result reached by the two panels, their approaches present a significant conflict, one only this Court can resolve.

B. The Michigan Supreme Court Conflict

Plaintiffs do not deny that the decision below conflicts with that of the Michigan Supreme Court in *People v. Kevorkian*, 447 Mich. 436, 527 N.W.2d 714 (1994), *cert. denied* 115 S. Ct. 1795 (1995). Rather, they claim that the conflict has "evaporated" because "the statute reviewed by the Michigan Supreme Court has since expired by its own terms". Opp'n at 8. An examination of the *Kevorkian* opinion reveals that Plaintiffs' argument is without merit.

---

[1] The diversity of approaches taken by the Second and Ninth Circuits to get to similar results doesn't necessarily strengthen either court's decision. "The fact that the courts could not even agree on which part of the constitution creates the 'right to die' exposes the shaky basis of both arguments." *A faint message from the founders*, The Economist, April 20, 1996, at 19.

The Michigan Supreme Court opinion addressed four cases. Three of the four involved a time-limited statute specifically prohibiting assisted suicide; two of those three were appeals of dismissed indictments naming Dr. Jack Kevorkian, and the third was a declaratory judgment challenge to the statute on both state and federal grounds.

Michigan, unlike most states, did not have a statute specifically prohibiting assisted suicide until late 1992. The Michigan Legislature passed legislation[2] including such a prohibition and establishing a commission to study the issue. The statute, including the specific prohibition, expired six months after the commission issued its recommendations. All three cases challenging this statute included an argument that the statute violated the Michigan Constitution because it included multiple subjects. The Michigan Supreme Court rejected this argument. 447 Mich. at 463.

The Michigan Supreme Court also considered—and rejected—the same arguments advanced in the instant case, that such a statute violates the Due Process and Equal Protection Clauses:

> "We conclude [that] the United States Constitution does not prohibit a state from imposing criminal penalties on one who assists another in committing suicide."

447 Mich. at 446.

---

[2] 1992 Mich Pub. Acts 270, adopted December 15, 1992, effective March 31, 1993, codified as Mich. Comp. Laws § 752.1027. The law was subsequently amended to become effective February 25, 1993. 1993 Mich. Pub. Acts 3. *See People v. Kevorkian*, 447 Mich. 436, 450-53, 527 N.W.2d 714 (1994), *cert. denied* 115 S. Ct. 1795 (1995).

The fourth case resolved by the Michigan Supreme Court opinion in *Kevorkian* was an appeal from a murder indictment involving conduct that occurred before the specific assisted suicide statute had become effective. The defendant—again Dr. Kevorkian—had been charged with murder under the authority of *People v. Roberts*, 211 Mich. 187, 178 N.W. 690 (1920), which held that assisting a suicide could be charged as a form of murder. The issue in this fourth case was whether assisting a suicide was a crime even without a specific statute.

The Michigan Supreme Court, noting the evolution of the "interpretation of causation in criminal cases" (447 Mich. at 493), overruled *People v. Roberts* "to the extent that it can be read to support the view that the common-law definition of murder encompasses the act of intentionally providing the means by which a person commits suicide". 447 Mich at 494.

However, the Michigan Court also held that assisted suicide continued to be a crime in Michigan:

> "[E]ven absent a statute that specifically proscribes assisted suicide, prosecution and punishment for assisting in a suicide would not be precluded. Rather, such conduct may be prosecuted as a separate common-law offense under [Michigan's common law] saving[s] clause of [Mich. Comp. Laws] § 750.505".

447 Mich. at 495.[3]

Any fair reading of the *Kevorkian* opinion makes it clear that the Michigan Supreme Court concluded that (1) Michigan has a law remaining in effect imposing criminal penalties for assisting a suicide and (2) such laws do not violate the Fourteenth Amendment.[4] This latter conclusion is directly in conflict with the decision below. Plaintiffs' argument that the conflict has somehow "evaporated" because assisting a suicide is today punishable under a different statute is, at best, sophistry.

Plaintiffs also attempt to distinguish the Michigan cases because their central actor—Dr. Jack Kevorkian—has

---

[3] Mich. Comp. Laws § 750.505 reads as follows:

> "Any person who shall commit any indictable offense at the common law, for the punishment of which no provision is expressly made by any statute of this state, shall be guilty of a felony, punishable by imprisonment in the state prison not more than 5 years or by a fine of not more than $10,000.00, or both in the discretion of the court."

[4] Any doubts that these two conclusions remain the law in Michigan dissolve in light of the *Kevorkian* Court's observation that

> "[w]hen a court of last resort intentionally takes up, discusses, and decides a question germane to, though not necessarily decisive of, the controversy, such decision is not a dictum but it is a judicial act of the Court which it will thereafter recognize as a binding decision."

444 Mich. at 487 n.65 (quotations and citations omitted). The Michigan Supreme Court's rejection of a constitutional right to assisted suicide was clearly "germane" to its decision that assisted suicide is punishable as a common law crime. Thus, under this principle, the Court's holding in *Kevorkian* continues to be the law in Michigan, and the conflict with the decision below remains.

not limited his "assistance in the deaths of patients . . . either to mentally competent or to terminally ill patients, much less patients who are both mentally competent and terminally ill". Opp'n at 8.[5]

This argument ignores the fact that the *legal* arguments advanced by Dr. Kevorkian and his supporters to the Michigan Supreme Court—and rejected by that Court—were essentially the same as those advanced by Plaintiffs to the courts below. Indeed, the Court explicitly rejected the reasoning of the District Court ruling that was upheld by the Ninth Circuit limited *en banc* panel. *See generally* 447 Mich. at 469-81.

Moreover, a finding of a constitutional right to assisted suicide arguably cloaks at least some of Dr. Kevorkian's actions with the mantle of constitutional protection. His apparent unwillingness to limit his activities to mentally competent, terminally ill individuals demonstrates the difficulty—if not the impossibility—of limiting the new constitutional right created by the Court below to such individuals as well. If anything, Dr. Kevorkian's activities illustrate in very real terms the need for this Court to determine whether a State's ability to regulate such activities is limited by the Constitution.

C. Conflicts With Other Courts

Plaintiffs do not deny that the Ninth Circuit's explicit holding also conflicts with at least one other state court decision, or that its implicit holding diverges from

---

[5] It is not clear that Dr. Kevorkian would agree with Plaintiffs' characterization. He recently filed a petition with this Court seeking a writ of certiorari in which he argues, *inter alia*, that "the Due Process Clause encompass[es] the right of a mentally competent, suffering adult to hasten their [sic] own death". Petition for Writ of Certiorari, *Kevorkian v. Michigan*, Case No. 96-135, p. 6.

that of almost every other court that has considered the issue. *See* Petition at 21 n.84, 25-26.

Rather, they contend that the cases cited in the petition are either distinguishable or not "worthy of this Court's attention". Opp'n at 7-8 n.7. Contrary to Plaintiffs' contention, these cases demonstrate just how far from the mainstream of judicial thought the decision below has strayed. The Ninth Circuit is not merely the first court to rule as it did—it is the only appellate court, federal or state, to do so.

Even the Ninth Circuit acknowledged that its decision was a "step beyond what the courts have previously approved". Pet. App. A-8. This Court should accept review to determine whether the Ninth Circuit has indeed gone a step too far.

II. THE TIME FOR THIS COURT TO DETERMINE WHETHER THERE IS A CONSTITUTIONAL RIGHT TO ASSISTED SUICIDE IS NOW

Plaintiffs argue that this Court should decline certiorari "until more state supreme courts and federal circuits have experimented with substantive and procedural solutions to the problem". Opp'n at 9 (quotations and citations omitted). They acknowledge that denial of review "would suggest no expression of the merits" of the decision below. Opp'n at 10 n.8. It would simply leave the question open for resolution on another day.

However, as demonstrated in the Petition, this case presents important issues of public policy potentially affecting every person and issues of federalism certainly affecting every state legislature. These issues cry out for a definitive resolution, a resolution only this Court can give.

Plaintiffs have previously acknowledged the significance of this case. After the panel decision rejected their arguments (*Compassion in Dying* I, Pet. App. D), Plaintiffs argued that the issues in this case "are of exceptional importance [raising] significant federal questions of first impression that are likely to reoccur". Pet. for Reh'g, Suggestions for Reh'g *En Banc* at 9. The issues are no less important, and no less in need of resolution, because Plaintiffs happen to have prevailed in the latest round.

The Court below, with uncharacteristic understatement, recognized that its decision "leaves unresolved a large number of . . . troublesome issues that will require resolution in the years ahead". Pet. App. A-116.

The questions left open by the decision below include at least these:

- The definition of terminal illness for purposes of exercising this newly created right;
- Whether the newly created right is or can be limited to the terminally ill;
- The procedural limitations, if any, a State may establish to determine whether an individual is in fact terminally ill;
- Whether the newly created right is or can be limited to the mentally competent;
- The standard for determining mental competence for the purpose of exercising this new right;

- The procedural limitations, if any, a State may establish to determine whether an individual is in fact mentally competent;
- The procedural limitations, if any, a State may establish to determine that an individual's decision to commit suicide is in fact voluntary;
- Whether the newly created right is limited to physician prescription of medications or may also include a right to physician administration of medications or to assistance involving neither physicians nor medications.

Were Plaintiffs' approach adopted, the next several years would see a vast expenditure of legislative and judicial energies devoted to answering these and related questions. Then, at some future point, this Court would decide whether the alleged right really exists and whether all this activity was necessary in the first place. Plaintiffs' suggestion that such an approach serves "[s]ound principles of judicial restraint" can most charitably be described as disingenuous.

Petitioners agree that it would have been best not to inject the judiciary into the hotly debated policy question of whether some form of physician assisted suicide should be allowed. However, Plaintiffs' decision to move the debate to the courtroom, coupled with the Ninth Circuit's willingness to become the central decision-maker, require this Court to likewise become involved, at least to determine whether this hotly debated social policy question has but one constitutionally compelled answer.

III. CONCLUSION

For these reasons, and the reasons set forth in the Petition for Writ of Certiorari and amicus briefs in support thereof, this Court should grant the Petition for Writ of Certiorari and reverse the decision of the United States Court of Appeals for the Ninth Circuit.

Respectfully submitted this 28th day of August, 1996.

Attorneys for Respondents

Pursuant to Supreme Court Rule 15.7, Respondents submit this supplemental brief in response to the brief submitted by several states as amici curiae. *Brief of Amici Curiae States of California, et al.*[1]

I. THE AMICUS BRIEF FAILS TO MEET THE STANDARD FOR AN AMICUS SUBMITTAL

The amicus brief fails to meet the standard set forth in Supreme Court Rule 37.1, which requires that amicus briefs bring to the attention of the Court relevant matter that has not already been brought to its attention by the parties. Petitioners have already addressed at length the issues briefed by these amici. Respondents have addressed each argument in their opposition brief and will not restate these arguments here, but will simply respond to two points raised by amici.

II. AMICI'S FEDERALISM ARGUMENT IS MISGUIDED

Amici contend that the decision below offends principles of federalism. Amici Br. at 17. This argument is misguided. Where constitutional rights are infringed by state legislative action, it is the duty of the judiciary to intervene and protect such rights.[2] *See, e.g., Schweiker v. Wilson*, 450 U.S. 221, 230 (1981) (where the democratic process impinges on constitutional rights, "the judiciary then has a duty to intervene in the democratic process"); *Marshall Field & Co. v.*

---

[1] The amicus brief presents the views of less than one-third of the states. The vast majority of states do not urge that review be granted.

[2] A recent, cogent refutation of the flawed federalism argument advanced by the states is set forth in R. Dworkin's *Freedom's Law* (Harvard University Press 1996).

Clark, 143 U.S. 649, 670 (1892) (recognizing "duty of this court, from the performance of which it may not shrink, to give full effect to the provisions of the Constitution"); *Marbury v. Madison*, 5 U.S. (1 Cranch) 137 (1803).

Moreover, rather than usurping the states' role, the decision below respects the proper role of the state in regulating physician assisted dying. The Second Circuit's analysis relies on basic equal protection principles in ruling that New York, having passed legislation permitting physician assisted death in a variety of circumstances, cannot deny physician assistance in the narrow circumstances presented here. That is, having granted the right to medically assisted death to its dying citizens, New York cannot constitutionally deny some dying citizens an equivalent exercise of that right.

States that have granted and continue to grant the right to physician assistance in dying are free to, and indeed should, develop regulatory schemes addressing physician assisted death. Current state laws pertaining to living wills and health proxies begin to do just that. Far from ignoring states' autonomy in this area, the decision below explicitly acknowledges that states will continue to play an important role in regulating physician assisted dying. *Quill v. Vacco*, 80 F.3d 716, 731 (2d Cir. 1996).

States cannot reasonably claim ignorance with regard to what further regulatory schemes might be appropriate. Proposed schemes abound in both legal and medical literature. *E.g.*, Charles Baron et al., *A Model State Act to Authorize and Regulate Physician-Assisted Suicide*, 33 Harvard J. on Legis. 1 (Winter 1996); Timothy E. Quill, *Care of the Hopelessly Ill: Proposed Clinical Criteria for Physician-Assisted Suicide*, 327 N. Eng. J. Med. 1380 (1992); N.Y. A.B. 6333, 219th Leg., 2d Sess. (1995).

III. STATE POLICE POWER DOES NOT TRUMP THE EQUAL PROTECTION CLAUSE

Contrary to amici's argument, the police power of states does not trump states' obligation to remain within the bounds of the Equal Protection Clause. Here, the police power does not extend to disallowing a dignified death to an arbitrary subgroup of dying citizens.

Historically, in every case in which a state has sought to constrain equal rights and liberties of individuals, the state has defended its action as within its police power. This was true where individuals sought desegregation of schools, *Brown v. Board of Education*, 347 U.S. 483 (1954), where individuals desired access to contraceptives, *Griswold v. Connecticut*, 381 U.S. 479 (1965), where individuals of different races sought to marry, *Loving v. Virginia*, 385 U.S. 986 (1966), where women sought access to abortion services, *Roe v. Wade*, 410 U.S. 113 (1973), and where families sought to arrange the composition of their homes, *Moore v. City of East Cleveland*, 431 U.S. 494 (1977). The state's argument in support of its power to act in the context of this case is far weaker than in many of the cases where this Court has determined that the police power is not as expansive as the state urged. As the Court below recognized, the proper scope of state action is limited to reasonable regulation designed to protect legitimate state interests.

QUESTIONS PRESENTED FOR REVIEW

Whether there is a liberty interest under the Due Process Clause of the Fourteenth Amendment to commit suicide and, if so, whether it includes an interest to receive the assistance of another to do so?

Whether, balancing asserted interests in suicide and assisted suicide against relevant state interests, respondent's constitutional rights are violated by Washington's absolute prohibition of assisted suicide?

TABLE OF CONTENTS

Page

I. INTEREST OF THE AMICI CURIAE 1

II. REASONS FOR GRANTING THE WRIT 3

A. Certiorari Should be Granted to Establish That There is No Liberty Interest Under The Due Process Clause of the Fourteenth Amendment To Commit Suicide or To Receive The Assistance of Another To Do So 5

1. The Constitutional Analysis Utilized by the Ninth Circuit in *Compassion in Dying II* was Fundamentally Flawed 7

2. The Due Process Clause of the Fourteenth Amendment Does Not Encompass A Liberty Interest To Commit Suicide Or To Receive the Assistance of Another to Do So 9

3. The Ninth Circuit's Reliance on *Casey* and *Cruzan* in Declaring the Existence of New Liberty Interests in Suicide and Assisted Suicide Was Entirely Misplaced 13

4. Relevant State Interests Clearly Outweigh the Alleged Liberty Interests in Suicide and Assisted Suicide 16

B. Certiorari Should be Granted to Reaffirm the States' Essential Role in our Federal System of Government and the Power of the People to Directly Govern Their Own Affairs 19

III. CONCLUSION 20

I. INTEREST OF THE AMICI CURIAE

For over two centuries, federalism has stood as the cornerstone of our republican form of government. Indeed, as this Court has declared, "the preservation of the States, and the maintenance of their governments, are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National Government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States." *Texas v. White*, 74 U.S. (7 Wall.) 799, 725 (1869). Respect for state sovereignty and the power of the people to directly govern their own affairs, unless excluded by the Constitution or valid Act of Congress, is the embodiment of our federalism.[1] It is this understanding of federalism which ensured ratification of the Constitution and, until the case below, safeguarded the essential role of the States in our federal system.

In the history of our Nation, no court of final jurisdiction has ever declared the existence of a constitutional right or interest to commit suicide or assisted suicide.[2] However, in a radical departure from our Nation's history and tradition, and contrary to the laws of a majority of States, the Ninth Circuit has announced its discovery of new rights to commit suicide and assisted suicide imbedded in the Due Process Clause of the Fourteenth Amendment.[3] The Ninth Circuit's holding

---

[1] "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." U.S. Const. amend. X.

[2] The Second Circuit has rejected the claim that there is a liberty interest in assisted suicide under the Due Process Clause of the Fourteenth Amendment. *Quill v. Vacco*, 80 F.3d 716, 723-725 (2d Cir. 1996) (hereinafter "*Quill*"). The Second Circuit did, however, invalidate New York's prohibition of assisted suicide on equal protection grounds. *Quill*, 80 F.3d at 725-731. On May 16, 1996, a petition for certiorari was filed by Dennis C. Vacco, Attorney General of the State of New York, *et al.*, seeking review of the Second Circuit's opinion in the *Quill* case.

[3] *Compassion in Dying v. State of Washington*, 79 F.3d 790, 793-794 (9th Cir. 1996) (*en banc*) (hereinafter "*Compassion in Dying II*"). A limited eleven-judge *en banc* panel vacated the previous decision of the three-

strikes at the very heart of this Court's federalism jurisprudence and, upon review, falls far short of overcoming the "great resistance" to expansion of the substantive content of the Due Process Clause.[4] *Bowers v. Hardwick*, 478 U.S. 186, 195 (1986). The Ninth Circuit's opinion also "calls for some judgment about the limits of the [Judiciary's] role in carrying out its constitutional mandate." *Bowers*, 478 U.S. at 190.

If allowed to stand, the Ninth Circuit's opinion will precipitate a fundamental change in the long-standing policies of a majority of States to prevent suicide and assisted suicide. "[A]ll states provide for the involuntary commitment of persons who may harm themselves as the result of mental illness, and a number of states allow the use of nondeadly force to thwart suicide attempts." *People v. Kevorkian*, 447 Mich. 436, 479, 527 N.W.2d 714, 732 (1994) (footnotes omitted), *cert. denied*, 115 S.Ct. 1795 (1995). A majority of States impose criminal penalties on those who assist another to commit suicide.

At stake in this case are, first and foremost, the lives of the people, both those who wish to die and those who wish to live no matter what their circumstances. Also at stake is the sovereign power of the States to protect and preserve those lives *without* a federal requirement that the State "make judgments about the 'quality' of life that a particular individual may enjoy, . . . " *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 282 (1990). The resolution of this

---

judge panel, reported at *Compassion in Dying v. State of Washington*, 49 F.3d 586 (9th Cir. 1995) (hereinafter "*Compassion in Dying I*"), which had voted 2-1 to reverse the district court decision, reported at 850 F.Supp. 1454 (W.D. Wash. 1994). Thereafter, an active judge *sua sponte* requested that the full court *en banc* rehear the case, however, that request failed to receive a majority of the votes of the non-recused active judges and was rejected. Dissenting opinions from the order rejecting the request for rehearing were filed by Circuit Judges O'Scannlain and Trott. *Compassion in Dying v. State of Washington*, 85 F.3d 1440 (9th Cir. 1996).

[4] Unless otherwise noted, the term "Due Process Clause" as used herein refers to the Due Process Clause of the Fourteenth Amendment to the United States Constitution.

question will arguably affect more lives than any case which this Court will confront in the foreseeable future. It will also determine whether "the States *as States* have [any] legitimate interests which the National Government is bound to respect even though its laws are supreme." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 581 (1985) (O'Connor, J., dissenting) (italics original, citation omitted, insert added).

II. REASONS FOR GRANTING THE WRIT

Perhaps the best evidence of the extent of the Ninth Circuit's departure from our Nation's historical and traditional treatment of suicide and assisted suicide is the number of conflicts created by the decision. In *Compassion in Dying II*, the Ninth Circuit announced its discovery of a new "constitutionally-protected liberty interest in determining the time and manner of one's own death . . . " *Compassion in Dying II*, 79 F.3d at 793. That decision is in direct conflict with the Second Circuit's recent holding in *Quill v. Vacco* that:

> "The right to assisted suicide finds no cognizable basis in the Constitution's language or design, even in the very limited cases of those competent persons who, in the final stages of terminal illness, seek the right to hasten death. We therefore decline the plaintiffs' invitation to identify a new fundamental right, in the absence of a clear direction from the Court whose precedents we are bound to follow." *Quill*, 80 F.3d at 724-725.

The Ninth Circuit's opinion also squarely conflicts with the recent decision of the Michigan Supreme Court in *People v. Kevorkian* where, on the identical substantive due process issue, the Court held that:

> "On the basis of the foregoing analysis, we would hold that the right to commit suicide is neither implicit in the concept of ordered liberty nor deeply rooted in this nation's history and tradition. It would be an impermissibly radical departure from existing tradition, and from the principles that underlie that tradition, to declare that there is such a

fundamental right protected by the Due Process Clause."[5]

Like its holding, the rationale utilized by the Ninth Circuit also creates numerous conflicts. In *Compassion in Dying II*, the Ninth Circuit found no difference between the withdrawal of life support, on the one hand, and the act of suicide, on the other. *Compassion in Dying II*, 79 F.3d at 821-824. However, "those courts that have found a right to refuse to begin or to continue life-sustaining medical treatment have done so only after concluding that such refusal is wholly different from the act of suicide."[6] Numerous state legislatures have likewise recognized this fundamental distinction.[7]

---

[5] *People v. Kevorkian*, 447 Mich. 436, 481, 527 N.W.2d 714, 733 (1994), *cert. denied*, 115 S.Ct. 1795 (1995). The Ninth Circuit's opinion also conflicts with the holding of the California Court of Appeals in *Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1619-1623, 4 Cal.Rptr.2d 59, 61-64 (1992), wherein the court considered whether a terminally ill individual's constitutional rights to privacy and to refuse medical treatment under the United States and California Constitutions included a right to an assisted suicide. After balancing Donaldson's interests against those of the State, the court concluded that he had "no constitutional right to a state-assisted death." *Donaldson*, 2 Cal.App.4th at 1623. While the court in *Donaldson* considered whether a right to an assisted suicide was encompassed by a generalized constitutional right of privacy, like the issue in *Cruzan*, "this issue is more properly analyzed in terms of a Fourteenth Amendment liberty interest." *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 279 n.7 (1990).

[6] *People v. Kevorkian*, 447 Mich. 436, 480, 527 N.W.2d 714, 732 (1994) (footnote omitted), *cert. denied*, 115 S.Ct. 1795 (1995). *See, e.g., Von Holden v. Chapman*, 87 A.D.2d 66, 450 N.Y.S.2d 623, 627 (1982) ("essential dissimilarity" between right to decline medical treatment and any right to end one's life); *In re Conroy*, 98 N.J. 321, 351, 486 A.2d 1209, 1224 (1985); *Bouvia v. Superior Court*, 179 Cal.App.3d 1127, 1145, 225 Cal.Rptr. 297, 306 (1986); *Bartling v. Superior Court*, 163 Cal.App.3d 186, 196, 209 Cal.Rptr. 220, 225-226 (1984); *People v. Adams*, 216 Cal.App.3d 1431, 1440, 265 Cal.Rptr. 568, 573-574 (1990); *Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1619-1623, 4 Cal.Rptr.2d 59, 61-64 (1992) and cases cited therein; *Thor v. Superior Court*, 5 Cal.4th 725, 742, 21 Cal.Rptr.2d 357, 367-368 (1993); *DeGrella v. Elston*, 858 S.W.2d 698, 706-707 (Ky. 1993). *Cf. In re Quinlan*, 70 N.J. 10, 51-52 and n.9, 355 A.2d 647, 669-670 and n.9 (neither attempted nor aiding suicide implicated in circumstances similar to those presented), *cert. denied*, 429 U.S. 922 (1976). *See also* Thomas J. Marzen, et al., *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 10 n.34 (1985), and cases cited therein.

Finally, in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), this Court "assume[d] that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition" but, at the same time, recognized Missouri's important interest in the protection and preservation of human life, noting that "the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan*, 497 U.S. at 279-280 (footnote omitted, insert added). As Circuit Judge Noonan, writing for the majority in *Compassion in Dying I*, astutely observed, "[w]hatever difficulty the district court [and, likewise, the *en banc* panel] experienced in distinguishing one situation from the other, it was not experienced by the majority in *Cruzan*." *Compassion in Dying I*, 49 F.3d 586, 591 (9th Cir. 1995) (insert added), *superseded by* 79 F.3d 790 (9th Cir. 1996). These conflicts, involving an issue of such exceptional and profound nationwide importance, can only be resolved – indeed, must be resolved – by the final authoritative voice of this Court.

A. Certiorari Should be Granted to Establish That There is No Liberty Interest Under The Due Process Clause of the Fourteenth Amendment To Commit Suicide or To Receive The Assistance of Another To Do So

The issue presented in this case is whether there is a liberty interest under the Due Process Clause of the Fourteenth Amendment to commit suicide and, if so, whether it includes an interest to receive the assistance of another to do

---

[7] *See* Thomas J. Marzen, *"Out, Out Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Constitutional Law Quarterly, No. 3, 799, 806 n.25 (1994) ("legislatures that have codified the right to refuse treatment in the same legislation reject any affirmative act to end life."), *citing* natural death/living will statutes of forty States.

so. Resolution of this issue, like all substantive due process adjudication, must begin with the cautionary note expressed by this Court in *Bowers v. Hardwick*, 478 U.S. 186 (1986):

> "Nor are we inclined to take a more expansive view of our authority to discover new fundamental rights imbedded in the Due Process Clause. The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution. That this is so was painfully demonstrated by the face-off between the Executive and the Court in the 1930's, which resulted in the repudiation of much of the substantive gloss that the Court had placed on the Due Process Clauses of the Fifth and Fourteenth Amendments. There should be, therefore, great resistance to expand the substantive reach of those Clauses, particularly if it requires redefining the category of rights deemed to be fundamental. Otherwise, the Judiciary necessarily takes to itself further authority to govern the country without express constitutional authority. . . . " *Bowers*, 478 U.S. at 194-195.

This Court recently reaffirmed that "great resistance" in *Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992), declaring that "[a]s a general matter, the Court has always been reluctant to expand the concept of substantive due process because guideposts for responsible decisionmaking in this unchartered area are scarce and open-ended. [citation omitted]" Mindful of that "great resistance", it is of critical importance that lower courts carefully adhere to the principles established by this Court when construing the substantive content of the Due Process Clause. Unfortunately, the Ninth Circuit failed in this regard. Certiorari should be granted to overrule *Compassion in Dying II* and, equally important, to reaffirm those principles, established by this Court, which govern substantive due process adjudication.

1. The Constitutional Analysis Utilized by the Ninth Circuit in *Compassion in Dying II* was Fundamentally Flawed

In the perilous waters of substantive due process adjudication, a carefully focused approach helps to eliminate the irrelevant, illuminate the pertinent, and insure that the discovery of new rights is "much more than the imposition of the Justices' own choice of values on the States and Federal Government, . . . ". *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986). Indeed, this Court has made clear that " '[s]ubstantive due process' analysis must begin with a careful description of the asserted right, for '[t]he doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field." *Reno v. Flores*, 507 U.S. 292, 302 (1993) (further citation omitted). Thus, in *Bowers v. Hardwick*, 478 U.S. 186 (1986), this Court carefully focused on the specific conduct at issue when it framed the question presented as "whether the Federal Constitution confers a fundamental right upon homosexuals to engage in sodomy . . . " *Bowers*, 478 U.S. at 190. The focus of the Court's inquiry was not whether one has a right to engage in sexual conduct of one's choice but, rather, whether the specific conduct at issue, *i.e.*, homosexual sodomy, was entitled to constitutional protection. Likewise, in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), this Court carefully focused on whether Nancy Cruzan had "a right under the United States Constitution which would require the hospital to withdraw life-sustaining treatment from her under [her] circumstances." *Cruzan*, 497 U.S. at 269 (insert added). This carefully focused approach allowed the Court to first identify the specific conduct at issue (*i.e.*, the withdrawal or withholding of unwanted medical treatment), and then the relevant historical traditions (*i.e.*, the doctrines of informed consent and bodily integrity) protecting or denying protection to that conduct. *Cf. Michael H. v. Gerald D.*, 491 U.S. 110, 127-128 n.6 (1989) (Scalia, J.).

Rather than carefully focusing on suicide and assisted suicide, the Ninth Circuit broadly framed the question presented as "whether there is a liberty interest in determining

the time and manner of one's death." *Compassion in Dying II*, 79 F.3d at 800. By doing so, it opened the door to consideration of a host of activities which are wholly dissimilar from suicide and which plainly involve different considerations. Indeed, even the Ninth Circuit acknowledged that "[t]he liberty interest we examine encompasses a whole range of acts that are generally not considered to constitute 'suicide.'" *Compassion in Dying II*, 79 F.3d at 802.

In sharp contrast to the Ninth Circuit's broad approach, other courts which have considered this identical question have utilized a carefully focused approach consistent with the precedents of this Court.[8] The Ninth Circuit's rationale for broadly framing the question presented was its belief that "it is the end and not the means that defines the liberty interest." *Compassion in Dying II*, 79 F.3d at 801. If true, however, the issues framed by this Court in both *Bowers* and *Cruzan* were far too narrow. Rather, under the Ninth Circuit's new "end-result" standard for defining liberty interests, the issue in *Bowers* should have been whether there is a "liberty interest in sexual pleasure" and, in *Cruzan*, whether there is a "liberty interest to determine the time and manner of one's death." Entirely inconsistent with the precedents of this Court, the Ninth Circuit's new "end-result" standard is also inimical to the principles of federalism which underlie that "great resistance" to expansion of the substantive content of the Due Process Clause.

---

[8] *See, e.g., Quill*, 80 F.3d at 723 (Second Circuit carefully focusing on plaintiffs' argument "for a right to assisted suicide as a fundamental liberty under the substantive component of the Due Process Clause of the Fourteenth Amendment.") and *People v. Kevorkian*, 447 Mich. 436, 464, 527 N.W.2d 714, 724 (1994) (Michigan Supreme Court carefully focusing its inquiry on "whether the [Due Process Clause] encompasses a fundamental right to commit suicide and, if so, whether it includes a right to assistance."), *cert. denied*, 115 S.Ct. 1795 (1995).

2. The Due Process Clause of the Fourteenth Amendment Does Not Encompass A Liberty Interest To Commit Suicide Or To Receive the Assistance of Another to Do So

The Due Process Clause of the Fourteenth Amendment provides that no State shall "deprive any person of life, liberty, or property, without due process of law; . . . " U.S. Const. amend. XIV, § 1. Nowhere in the plain language of the Clause is an interest in committing suicide or assisted suicide expressly granted. Nor does the *design* of the Clause support any such contention.[9] The design of the Clause establishes life as the first interest to be accorded substantive and procedural protection, liberty the second, and property the third. The reason for this design is manifest: without life, liberty cannot exist and property cannot be acquired. Any finding of a "liberty interest" to extinguish the life of a "person" inverts the order and is directly contradicted by, and inconsistent with, the design of the Clause itself.[10] Unsupported by the plain language of the Clause and antithetical to its design, there must necessarily be a strong presumption against the contention that such an interest can nevertheless be implied in the substantive content of the Clause itself.[11]

This Court has established the principles to be used by the Judiciary when identifying "rights that have little or no textual

---

[9] "The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language *or design* of the Constitution." *Bowers v. Hardwick*, 478 U.S. 186, 194 (1986) (emphasis added).

[10] *See* Thomas J. Marzen, *"Out, Out Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Constitutional Law Quarterly, No. 3, (1994) at p. 807. Of course, this conflict was not presented in the abortion context since, under *Roe*, "the word 'person,' as used in the Fourteenth Amendment does not include the unborn. [footnote omitted]." *Roe v. Wade*, 410 U.S. 113, 158 (1973).

[11] Individual interests are not afforded any less protection simply because the government, rather than the individual, is defending them. *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 282 n.10 (1990).

support in the constitutional language." *Bowers*, 478 U.S. at 191 (further citation omitted).

> "In *Palko v. Connecticut*, 302 U.S. 319, 325, 326 (1937), it was said that this category includes those fundamental liberties that are 'implicit in the concept of ordered liberty,' such that 'neither liberty nor justice would exist if [they] were sacrificed.' A different description of fundamental liberties appeared in *Moore v. East Cleveland*, 431 U.S. 494, 503 (1977) (opinion by Powell, J.), where they are characterized as those liberties that are 'deeply rooted in this Nation's history and tradition.' [citations omitted]" *Bowers*, 478 U.S. at 191-192.

In approaching an historical analysis to determine whether a particular practice has been accepted by our people, it is important to remember that it is *this* Nation's history and tradition which is dispositive. *Cf. Bowers*, 478 U.S. at 191-194. An analysis, such as that engaged in by the Ninth Circuit in *Compassion in Dying II*, which centers primarily on "ancient attitudes" having little, if any, relevance to America's historical and traditional treatment of suicide and assisted suicide cannot establish that such practices have been accepted by our Nation. *Cf. Stanford v. Kentucky*, 492 U.S. 361, 369 n.1 (1989).

Opposition to suicide is deeply rooted in *this* Nation's history and tradition. "At common law suicide was a felony, punished by forfeiture of property to the king and ignominious burial. Essentially, suicide was considered a form of murder." *In re Joseph G.*, 34 Cal.3d 429, 433, 194 Cal.Rptr. 163, 165 (1983) (citations omitted). While no State has a statute imposing criminal penalties for a successful suicide,

> "abolition of such 'punishments' as ignominious burial for suicide and then the decriminalization of both suicide and attempted suicide did not come about because suicide was deemed a 'human right' or even because it was no longer considered reprehensible. These changes occurred, rather, because punishment was seen as unfair to innocent relatives of the suicide and because those

> who committed or attempted to commit the act were thought to be prompted by mental illness."[12]

In the United States, suicide continues " 'to be considered an expression of mental illness.' "[13] Indeed, the New York State Task Force on Life and the Law found that "[s]tudies that examine the psychological background of individuals who kill themselves show that 95 percent have a diagnosable mental disorder at the time of death."[14] "[A]ll states provide for the involuntary commitment of persons who may harm themselves as the result of mental illness, and a number of states allow the use of nondeadly force to thwart suicide attempts." *People v. Kevorkian*, 447 Mich. 436, 479, 527 N.W.2d 714, 732 (1994) (footnotes omitted), *cert. denied*, 115 S.Ct. 1795 (1995). Simply stated, as Justice Scalia pointed out in his concurring opinion in *Cruzan*, " 'there is no significant support for the claim that a right to suicide is so rooted in our tradition that it may be deemed 'fundamental' or 'implicit in the concept of ordered liberty.' "[15]

Logically, if there is no liberty interest to commit suicide, there can be no liberty interest in receiving the assistance of another to do so. *People v. Kevorkian*, 447 Mich. 436, 468 n.35, 527 N.W.2d 714, 726 n.35 (1994), *cert. denied*, 115 S.Ct. 1795 (1995). However, an independent analysis of the issue provides even more evidence that no such derivative interest exists. At

[14] New York State Task Force Report, *When Death is Sought – Assisted Suicide and Euthanasia in the Medical Context* (hereinafter "*New York State Task Force Report*") (May 1994) at 11.

[15] *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 295 (1990) (Scalia, J., concurring) (citation omitted). *See also* Thomas J. Marzen, et al., *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 100 (1985) (reaching identical conclusion); and *New York State Task Force Report*, at 54-54 and 67-75.

common law, a person who assisted another to commit suicide was guilty of murder. *In re Joseph G.*, 34 Cal.3d 429, 434, 194 Cal.Rptr. 163, 165 (1983).

> "At the time the Fourteenth Amendment was ratified, at least twenty-one of the thirty-seven existing states (including eighteen of the thirty ratifying states) proscribed assisted suicide either by statute or as a common-law offense." *People v. Kevorkian*, 447 Mich. 436, 478, 527 N.W.2d 714, 731 (1994) (citation omitted), *cert. denied*, 115 S.Ct. 1795 (1995).

Today, while a few states continue to classify assisted suicide as murder or manslaughter, "the predominant statutory scheme is to create a sui generis crime of aiding and abetting suicide." *In re Joseph G.*, 34 Cal.3d 429, 434, 194 Cal.Rptr. 163, 165 (1983). At least forty States, Puerto Rico and the Virgin Islands, impose criminal penalties on those who assist another to commit suicide.[16]

---

[16] The following states and territories have statutes which impose criminal penalties for aiding, assisting, causing, or promoting suicide: Alaska Stat., § 11.41.120(a)(2); Ariz. Rev. Stat. Ann., § 13-1103(A)(3); Ark. Stat. Ann., § 5-10-104(a)(2); Cal. Pen. Code, § 401; Colo. Rev. Stat., § 18-3-104(1)(b); Conn. Gen. Stat., § 53a-56(a)(2); Del. Code Ann., tit. 11, § 645; Fla. Stat. Ann., § 782.08; Ga. Code Ann. § 16-5-5(b); Ill. Comp. Stat. ch. 720, 5/12-31; Ind. Stat. Ann., § 35-42-1-2.5(b); Iowa Code, §§ 707A.1, 707A.2 and 707A.3, as amended by Acts of the 76th General Assembly, 1996 Session; Kan. Stat. Ann., § 21-3406; Ky. Rev. Stat., § 216:302; La. Rev. Stat., § 14:32.12; Me. Rev. Stat. Ann., tit. 17-A, § 204; Minn. Stat. Ann., § 609.215; Miss. Code Ann., § 97-3-49; Mo. Ann. Stat., § 565.023(1)(2); Mont. Code Ann., § 45-5-105; Neb. Rev. Stat., § 28-307; N.H. Rev. Stat. Ann., § 630:4; N.J. Stat. Ann., § 2C:11-6; N.M. Stat. Ann., § 30-2-4; N.Y. Penal Law, §§ 120.30, 125.15(3); N.D. Cent. Code, § 12.1-16-04; Okla. Stat. Ann., tit. 21, §§ 813-818; 18 Pa. Cons. Stat. Ann., § 2505; P.R. Laws Ann., tit. 33, § 4009; S.D. Codified Laws Ann., § 22-16-37; Tenn. Code Ann., § 39-13-216; Tex. Penal Code Ann., § 22.08; V.I. Code Ann., tit. 14, § 2141; Wash. Rev. Code Ann., § 9A.36.060; and Wis. Stat. Ann., § 940.12. The following states have statutes which impose criminal penalties for negligent homicide which are broad enough to encompass aiding, assisting, causing or promoting suicide: Ala. Code, § 13A-6-1; and Wyo. Stat., § 6-2-107. The following states impose criminal penalties by case law for assisting a suicide: *Commonwealth v. Mink*, 123 Mass. 422, 428-429 (1877); *People v. Kevorkian*, 447 Mich. 436, 493-497, 527 N.W.2d 714, 738-739 (1994), *cert. denied*, 115 S.Ct. 1795 (1995); *Blackburn v. State*, 23 Ohio St. 146, 163 (1872); *State v. Jones*, 86 S.C. 17, 22, 47, 67 S.E. 160, 162, 165 (1910); and *State v. Willis*, 255 N.C. 473, 477, 121 S.E.2d 854, 856-857 (1961).

Against this background, the contention that assisted suicide is "deeply rooted in this Nation's history and tradition" or "implicit in the concept of ordered liberty" is entirely devoid of merit. *Cf. Bowers v. Hardwick*, 478 U.S. 186, 192-194 (1986).

3. The Ninth Circuit's Reliance on *Casey* and *Cruzan* in Declaring the Existence of New Liberty Interests in Suicide and Assisted Suicide Was Entirely Misplaced

Neither *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), nor *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), support the Ninth Circuit's discovery of new liberty interests to commit suicide and assisted suicide. In *Casey*, the Court was not called upon to decide whether some newly asserted liberty interest to choose an abortion was entitled to constitutional protection. Rather, the primary question presented was whether the fundamental holding of *Roe v. Wade*, 410 U.S. 113 (1973), should be overruled. *Casey*, 505 U.S. at 844-846. Thus, the Court had no reason to discuss, and did not discuss, the well-established principles for construing the substantive content of the Due Process Clause.

Notwithstanding this fact, the Ninth Circuit found *Casey* to be "highly instructive and almost prescriptive for determining what liberty interest may inhere in a terminally ill person's choice to commit suicide." *Compassion in Dying II*, 79 F.3d at 813 (citation and internal quotes omitted). This was error. Contrary to the Ninth Circuit's reasoning, the three sentences in *Casey* it relied upon – broad generalities on the nature of the liberty protected by the Fourteenth Amendment – did not establish a new standard for construing the substantive content of the Due Process Clause. *Compassion in Dying II*, 79 F.3d at 813, *quoting Casey*, 505 U.S. at 851. Moreover, if allowed to stand, the Ninth Circuit's interpretation of these three sentences would virtually eliminate the "guideposts for responsible decisionmaking in this unchartered

area" (*Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992)) since many activities which are plainly not entitled to constitutional protection can nevertheless be characterized as "intimate", "personal" or involving "choices central to personal dignity and autonomy".

The Ninth Circuit's reliance on *Casey* was also predicated on the mistaken notion that simply because a decision may involve "choices central to personal dignity and autonomy", one is free to do whatever one wants with one's body. However, this is precisely the sort of "unlimited right to do with one's body as one pleases" which this Court has consistently and soundly rejected. *See Roe v. Wade*, 410 U.S. 113, 154 (1973); *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986); and *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 (1973), *citing*, *inter alia*, constitutionally unchallenged laws against suicide. The Ninth Circuit's reliance on *Casey* also ignores the fundamental differences between abortion and suicide. This Court has held that abortion does not extinguish the life of a "person" in the context of the Fourteenth Amendment.[17] Certainly, it cannot be denied that suicide does. Under *Roe*, abortion concerns the choice of a woman, the decision-maker, to live her life without the dangers and unwanted conditions associated with pregnancy.[18] Suicide, on the other hand, is about death, *i.e.*, the death of the decision-maker. As Justice O'Connor observed in her opinion in *Casey*, "[a]bortion is a unique act" and "the liberty interest of the woman is at stake in a sense unique to the human condition and so unique to the law." *Casey*, 505 U.S. at 852. It is error to seek to discover new constitutional rights to commit suicide and assisted suicide by analogizing to the unique abortion rights jurisprudence. There is no indication in *Casey*, or the precedent from which it

---

[17] *Roe v. Wade*, 410 U.S. 113, 158 (1973) ("the word 'person,' as used in the Fourteenth Amendment, does not include the unborn. [footnote omitted]"). While not a "person", it is of course well-settled that States have "legitimate interests from the outset of the pregnancy in protecting . . . the life of the fetus that may become a child." *Casey*, 505 U.S. at 846.

[18] *Roe v. Wade*, 410 U.S. 113, 153 (1973) (listing factors a woman and her physician would necessarily consider when considering an abortion).

evolved, of an intention to expand the liberty interests previously identified by this Court in the manner utilized by the Ninth Circuit.

Nor does this Court's decision in *Cruzan* support the Ninth Circuit's discovery of new liberty interests to commit suicide and assisted suicide. In *Cruzan*, this Court observed that "[t]he principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." *Cruzan*, 497 U.S. at 278. Later in the opinion, the Court stated that "*for purposes of this case*, we *assume* that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Cruzan*, 497 U.S. at 279 (emphasis added). Careful examination of this portion of the *Cruzan* opinion reveals two critical points. First, the Court *assumed*, but did not expressly hold, that there is a constitutionally protected interest to refuse life-sustaining medical treatment. Second, this assumption was expressly limited to the *Cruzan* case. Notwithstanding this clear language, the Ninth Circuit read *Cruzan* as "necessarily recogniz[ing] a liberty interest in hastening one's own death." *Compassion in Dying II*, 79 F.3d at 816 (footnote omitted, insert added). Such a reading of *Cruzan* assumes far too much. It is error to attempt to construe *Cruzan's* limited assumption of an interest to refuse medical treatment as acceptance by this Court of a far broader interest to commit suicide and, broader still, assisted suicide. Indeed, the error of such an attempt is plainly evidenced by the majority's recognition in *Cruzan* that, even in the face of a right to refuse medical treatment, the States may properly assert important interests in the protection and preservation of human life, and in the prevention of both suicide and assisted suicide.[19] *Cruzan*, 497 U.S. at 280-282. In summary, suicide and assisted suicide are so significantly different from the refusal of unwanted medical treatment, and its legal underpinnings, that an interest in

---

[19] Unlike suicide, "[t]he right to refuse medical treatment meets the 'ordered liberty' and the 'historical underpinnings' tests because it is rooted in the common-law doctrine of informed consent, which embodies the notion of bodily integrity." *People v. Kevorkian*, 447 Mich. 436, 480 n.59, 527 N.W.2d 714, 732 n.59 (1994), *cert. denied*, 115 S.Ct. 1795 (1995).

committing suicide or assisted suicide simply cannot be inferred from *Cruzan*.

4. Relevant State Interests Clearly Outweigh the Alleged Liberty Interests in Suicide and Assisted Suicide

In order to determine whether Washington's prohibition of assisted suicide violates the Due Process Clause, the asserted interests in suicide and assisted suicide must be balanced against relevant state interests.[20] *Cruzan*, 497 U.S. at 261. The wide range of circumstances within which these newly discovered interests to commit suicide and assisted suicide could be exercised implicate several important state interests, including, but not limited to: (1) the protection and preservation of human life;[21] (2) the prevention of suicide;[22] (3) preventing the fraud, errors and abuse which

---

[20] Since respondents have not even attempted to demonstrate that there is no set of circumstances under which Washington's prohibition of assisted suicide would be valid, their facial challenge to the statute must necessarily fail under *United States v. Salerno*, 481 U.S. 739, 745 (1987). The district court characterized respondents' challenge to Washington's statute as "facial". *Compassion in Dying v. State of Washington*, 850 F.Supp. 1454, 1459 (W.D. Wash. 1994). Upon review, a majority of the three-judge panel found the district court's facial invalidation of the statute to be "wholly unwarranted" under both *Salerno* and *Casey*. *Compassion in Dying I*, 49 F.3d 586, 591 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996). However, the *en banc* panel held respondents' challenge to be "as-applied", declaring that "[s]ince the claimed liberty issue in this case is in many respects similar to the liberty issue involved in *Casey*, . . . we believe that the *Salerno* test would not in any event be the appropriate one for adjudicating a facial challenge to Washington's prohibition on assisted suicide." *Compassion in Dying II*, 79 F.3d 790, 798 n.9 (9th Cir. 1996). Certiorari should be granted to decide whether the *Salerno* test applies outside the abortion context to what the amici States maintain is a facial challenge to Washington's statutory prohibition of assisted suicide.

[21] *Cruzan*, 497 U.S. at 280.

[22] "Suicide is the eighth leading cause of death in the United States." *New York State Task Force Report*, at 9 (footnote omitted). "Studies that examine the psychological background of individuals who kill themselves show that 95 percent have a diagnosable mental disorder at the time of death." *Id.*, at 11. Furthermore, "[l]ike other suicidal individuals, patients who desire suicide or an early death during a terminal illness are usually suffering from a treatable mental illness, most commonly depression." *Id.*, at 13 (footnote omitted).

would accompany acceptance of suicide and assisted suicide;[23] (4) maintaining the ethical integrity of the medical profession;[24] (5) protecting the poor and minorities from exploitation;[25] (6) protecting handicapped persons from societal indifference;[26] and (7) protecting innocent third parties.[27]

---

[23] *Cruzan*, 497 U.S. at 281 ("[E]ven where family members are present, [t]here will, of course, be some unfortunate situations in which family members will not act to protect a patient. A State is entitled to guard against potential abuses in such situations. [citation omitted, internal quotes omitted]"). *See also Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr. 59, 64 (1992) ("The state's interest must prevail over the individual because of the difficulty, if not the impossibility, of evaluating the motives of the assister or determining the presence of undue influence."), and *Donaldson*, 2 Cal.App.4th at 1624 ("Third parties, even family members, do not always act to protect the person whose life will end.").

[24] *Cf. Middlesex Ethics Committee v. Garden State Bar Association*, 457 U.S. 423, 434 (1982) (important state interest in "maintaining and assuring the professional conduct of professional attorneys it licenses"). *See also Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1620, 4 Cal.Rptr.2d 59, 62 (1992) (recognizing state interest in maintaining the ethical integrity of the medical profession). In reaffirming its long-standing opposition to physician assisted suicide, the American Medical Association has declared that physician-assisted suicide "threatens the very core of the medical profession's ethical integrity" and is "fundamentally inconsistent with the physician's professional role." American Medical Association, Council on Ethical and Judicial Affairs, *Code of Medical Ethics Reports*, Vol. V, No. 2 (July 1994), Report 59, *Physician-Assisted Suicide*, 269 and 274, respectively.

[25] *Quill*, 80 F.3d at 730, *citing Compassion in Dying I*, 49 F.3d 586, 592 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996).

[26] *Quill*, 80 F.3d at 730, *citing Compassion in Dying I*, 49 F.3d 586, 592-593 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996).

[27] *Application of President & Directors of Georgetown College, Inc.*, 118 U.S.App.D.C. 80, 331 F.2d 1000, 1008 (1964), *cert. denied*, 377 U.S.

While the Ninth Circuit acknowledged, at least to some extent, some of these interests, its application of the balancing test was fundamentally flawed by the improper insertion of quality-of-life considerations which it used to discount the strength of various important state interests.[28] Such quality-of-life considerations are directly contrary to this Court's holding in *Cruzan* that "a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life to be weighed against the constitutionally protected interests of the individual." *Cruzan*, 497 U.S. at 282.

Moreover, the dangers inherent in using such quality-of-life considerations are well-recognized. "Were quality of life at issue, persons with all manner of handicaps might find the state seeking to terminate their lives." *Cruzan v. Harmon*, 760 S.W.2d 408, 422 (Mo. banc 1988), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990). Such an analysis also disregards the irrefutable principle that all lives, from beginning to end and irrespective of physical or mental condition, are under the full protection of the law. *Cruzan*, 497 U.S. at 295 (Scalia, J., concurring), citing *Blackburn v. State*, 23 Ohio St. 146, 163 (1873). Properly weighed, without the insertion of improper quality-of-life considerations, the States' interests, individually and collectively,

---

978 (1964). *See also Bartling v. Superior Court*, 163 Cal.App.3d 186, 195 n.6, 209 Cal.Rptr. 220, 225 n.6 (1984).

[28] *Compassion in Dying II*, 79 F.3d at 817 (strength of the state's important interest in the preservation of human life "is dependent on relevant circumstances, including the medical condition and the wishes of the patient whose life is at stake."); *Id.*, at 820 (state interest in preventing suicide, "like the state's interest in preserving life, is substantially diminished in the case of terminally ill, competent adults who wish to die. [footnote omitted]"); *Id.*, at 825 (state interest in preventing involvement of third persons at a minimum "when the assistance is provided by or under the supervision or direction of a doctor and the recipient is a terminally ill patient."); and *Id.*, at 827 (state interest in protecting innocent third parties "is of almost negligible weight when the patient is terminally ill and his death is imminent and inevitable.").

clearly outweigh any individual interests in committing suicide and assisted suicide.

B. Certiorari Should be Granted to Reaffirm the States' Essential Role in our Federal System of Government and the Power of the People to Directly Govern Their Own Affairs

With the ever-increasing power of medical science to prolong life, even in the face of what would otherwise be terminal illness, the States have had to strike a balance between the rights of the individual and the demands of organized society. That balance is grounded in the States' recognition of their responsibility to protect both individual rights and, at the same time, the lives of those who wish to live-no matter what their circumstances. In striking that balance, the States have drawn a line between an individual's "right to be let alone",[29] on the one hand, and intentionally killing oneself, with or without assistance, on the other. That balance, now a national consensus, is represented by statutes in a majority of states which codify an individual's right to refuse unwanted medical treatment and, in the same legislation, reject any affirmative act to end life. Whether that balance should be abandoned and the line redrawn to permit an individual to commit suicide without state interference, and then redrawn yet again to permit assisted suicide, is a matter appropriately left for the people to decide, through their duly elected representatives or by initiative ballot.[30] The principles of federalism embodied in our Constitution require no less.

As the States continue to grapple with the difficult questions presented by the ever-increasing ability of medical technology to prolong life, the corresponding need to allow the States to serve as

---

[29] *Olmstead v. United States*, 277 U.S. 438, 478 (1928) (Brandeis, J., dissenting), *overruled by Katz v. United States*, 389 U.S. 347, 352-353 (1967).

[30] *See People v. Kevorkian*, 447 Mich. 436, 481-482, 527 N.W.2d 714, 733 (1994), *cert. denied*, 115 S.Ct. 1795 (1995), and *Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr.2d 59, 64 (1992). *See also, Cruzan v. Harmon*, 760 S.W.2d 408, 426 (Mo. banc 1988) ("Broad policy questions bearing on life and death issues are more properly addressed by representative assemblies."), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990).

laboratories for change becomes paramount. Indeed, as this Court has recognized, "[t]he science of government . . . is the science of experiment, . . . " *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985) (citation and internal quotes omitted). However, if allowed to stand, the Ninth Circuit's opinion will effectively extinguish the power of the States to continue to serve as laboratories for change on an issue that arguably will affect more lives than any issue the States will face in the foreseeable future. *See New State Ice Co. v. Liebmann*, 285 U.S. 262, 311 (1932) (Brandeis, J., dissenting). It will also "invite[ ] an unelected federal judiciary to make decisions about which state policies it favors and which ones it dislikes." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985). At the same time, it will "relegate the States to precisely the trivial role that opponents of the Constitution feared they would occupy." *Garcia*, 469 U.S. at 575 (Powell, J., dissenting) (footnote omitted).

> "The Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions would be decided by the judiciary." *Compassion in Dying II*, 79 F.3d 790, 858 (9th Cir. 1996) (Kleinfeld, C.J., dissenting).

III. CONCLUSION

For all the foregoing reasons, amici States respectfully request that the Court grant certiorari in this case.

Respectfully submitted,

Supreme Court of the United States

OCTOBER TERM, 1996

No. 96-110

STATE OF WASHINGTON, CHRISTINE O. GREGOIRE,
Attorney General of Washington,
Petitioners,

v.

HAROLD GLUCKSBERG, M.D.,
ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D.,
and PETER SHALIT, M.D., PH.D.,
Respondents.

**On Petition for Writ of Certiorari to the
United States Court of Appeals
for the Ninth Circuit**

MOTION FOR LEAVE TO FILE BRIEF AS *AMICI CURIAE*

Pursuant to Rule 37.2 of the Rules of this Court, the American Medical Association ("AMA"), the California Medical Association ("CMA"), and the Society of Critical Care Medicine ("SCCM") respectfully move for leave to file the attached brief as *amici curiae* in support of the petition for a writ of certiorari submitted by the State of Washington. The respondents, Drs. Harold Glucksberg, Abigail Halperin, Thomas Preston, and Peter Shalit, have refused to consent to the filing of this brief.

The AMA is a private, voluntary, non-profit organization of physicians. It was founded in 1846 to promote the science and art of medicine and to improve the public

health. Its 290,000 members practice in all states and in all fields of medical specialization.

The CMA is a statewide professional organization dedicated to the health of Californians. With 34,000 members, it is the largest state medical association in the country.

The SCCM is the premier professional international organization devoted exclusively to the advancement of multidisciplinary critical care through excellence in patient care, education, research and advocacy. The nearly 9,000 members of SCCM—the intensivists, nurses and allied health professionals involved in the care of the critically ill and injured—blend their knowledge, skill, and expertise into a coordinated effort to achieve the best possible outcome for the patient.

Many of *amici*'s members are deeply interested in, and may be directly affected by, the Ninth Circuit's holding that laws prohibiting physician-assisted suicide are unconstitutional. The decision directly affects not only the Washington statute that was held invalid as applied in this case, but also the similarly worded California, Alaska, Arizona, and Montana statutes,* as well as the common law in the remaining four states of that circuit. Moreover, the statutory prohibitions in these states apparently are comparable to those in force in at least 27 other states (see Pet. App. at A-135 to A-136 n.10) (Beezer, J., dissenting) (citing state statutes).

---

* *See* Wash. Rev. Code § 9A.36.060 (felony if a person "knowingly causes or aids another person to attempt suicide"); Alaska Stat. § 11.41.120 (felony if a person "intentionally aids another person to commit suicide"); Ariz. Stat. § 13-1103 (felony for "intentionally aiding another to commit suicide"); Cal. Penal Code § 401 (felony if a person "deliberately aids, or advises, or encourages another to commit suicide"); Mont. Stat. § 45-5-105 (felony if a person "purposely aids or solicits another to commit suicide").

The interest of *amici* in the Ninth Circuit's holding emerges from their role not only in representing American medical professionals but also in developing standards for defining the ethical practice of medicine. For example, at the first official meeting of the AMA in 1847, one of the two principal items of business was the establishment of a code of professional ethics. Since then, generations of physicians have volunteered countless hours to maintain, revisit, and, where appropriate, revise that code. Such efforts resulted, for example, in the 1989 decision of the AMA's Council on Ethical and Judicial Affairs ("Council") to affirm that it was not unethical for physicians to honor the wishes of patients that life-prolonging medical treatment be withheld or withdrawn. See AMA Council on Ethical and Judicial Affairs, *Code of Medical Ethics: Current Opinions* ("*Code of Medical Ethics*") § 2.20 (App. 12a-13a).

In the same tradition, the Council in 1991 began a detailed reassessment of the longstanding ethical prohibition of physician-assisted suicide. The Council's conclusions were set forth in two reports, *Decisions Near the End of Life*, 267 J.A.M.A. 2229 (1992), and *Physician-Assisted Suicide* (Dec. 1993), *reprinted in* 10 Issues in L. & Med. 91 (1994) (App. 2a-11a). This work, in turn, formed the basis for the Council's decision in 1994 to adopt Opinion 2.211, which confirms and clarifies the AMA's position that physicians should not assist patients in committing suicide. *Code of Medical Ethics* § 2.211 (App. 1a). On June 25, 1996, the AMA's House of Delegates voted to affirm that position by a wide margin. *AMA Delegates Vote Overwhelmingly to Oppose Physician-Assisted Suicide*, 5 Health L. Rep. (BNA) 1033 (July 4, 1996).

The CMA, similarly, has vigorously opposed the legalization of physician-assisted suicide, which is prohibited by California law. Notably, CMA's Board of Trustees voted in 1992 to oppose California's "Physician-Assisted Death" initiative (Proposition 161) and, since then, has

consistently affirmed that position. Because California's law prohibiting physician-assisted suicide is threatened directly by the Ninth Circuit's holding, CMA members have an especially significant interest in the disposition of this case.

SCCM's involvement in ethical issues is a long-standing priority of the organization. Position papers and articles on patient triage, appropriateness of life-sustaining treatment and other ethical issues—developed by the SCCM Ethics Committee—have been published in SCCM's peer-reviewed journal, *Critical Care Medicine*, and other prestigious journals. SCCM's initiative to address care at the end of life includes contacting critical care professionals (SCCM members and others) at hospitals and medical centers nationwide to encourage frank discussion about end of life care; expediting the adoption of the multidisciplinary team model of critical care; ensuring that hospital ethics committees are accessible to patients, families, and health care practitioners; and convening "Critical Caring: A Consensus Conference on Care at the End of Life" in Washington, D.C.

The AMA, CMA, and SCCM seek to participate as *amici* in order to ensure that our nation's laws are informed by reasoned and time-tested ethical standards. The AMA has expressed its position before this Court on issues of similar concern, see, *e.g.*, Brief of the AMA *et al.* as *Amici Curiae* in Support of Petitioners, *Cruzan* v. *Director, Mo. Dep't of Health*, 497 U.S. 261 (1990) (No. 88-1503), and it submitted an *amicus* brief below in support of the State of Washington's position in this case, Brief of the AMA as *Amicus Curiae*, *Compassion in Dying* v. *State of Washington*, 79 F.3d 790 (9th Cir. 1996) (No. 94-35534). The Ninth Circuit, moreover, devoted a significant portion of the decision below to responding to the AMA's position, Pet. App. A-80 to A-81, A-90 to A-96, and to evaluating, more generally, the potential impact of its holding on the medical profession, Pet. App. A-77 to A-81. For all of these reasons, the AMA, CMA, and SCCM seek the opportunity to present their views as to why this case merits this Court's review. Accordingly, *amici* urge the Court to grant leave to file the *amici curiae* brief that accompanies this motion.

Respondents.

On Petition for Writ of Certiorari to the United States Court of Appeals for the Ninth Circuit

---

BRIEF OF THE AMERICAN MEDICAL ASSOCIATION, THE CALIFORNIA MEDICAL ASSOCIATION, AND THE SOCIETY OF CRITICAL CARE MEDICINE AS *AMICI CURIAE* IN SUPPORT OF PETITIONERS

INTEREST OF THE *AMICI CURIAE*

Descriptions of *amici* and their long and continued involvement in considering and setting ethical standards for the medical profession, and in participating in and stimulating debate both within and outside the medical profession on the difficult issues of caring for patients with serious illness and depression, are set forth in the accompanying motion for leave to file this brief. That motion also sets forth a number of reasons why this case is of particular interest to *amici*, including *amici*'s desire to

respond to the Ninth Circuit's extended discussion of the AMA's submission below regarding the impact of this decision upon the medical profession, the AMA's participation before this Court in its consideration of *Cruzan* v. *Director, Missouri Department of Health*, 497 U.S. 261 (1990), the CMA's direct interest in the fate of California's statutory prohibition of physician-assisted suicide, and the SCCM's longstanding efforts to address and educate physicians and patients regarding medical care at the end of life. Most fundamentally, *amici* are interested in this case because of the profound and harmful impact that the Ninth Circuit's decision will have on the trust between physician and patient that is crucial to the physician-patient relationship and to the integrity of the medical profession.

Amici recognize the imperative of developing adequate medical and social responses to the needs of patients at the end of life. As discussed below, however, they believe that physician-assisted suicide is incompatible not only with the ethical traditions of medical practice but with the long-term interests of patients and physicians. In reaching that conclusion, the AMA, CMA, and SCCM struggled with many of the profound and troubling issues that the court below addressed and that are inherent in the questions presented by the petition. *Amici* respectfully submit that this case, like the parallel case pending on petition for writ of certiorari to the United States Court of Appeals for the Second Circuit (see note 2, *infra*), raises issues of vital importance to physicians and, more broadly, to the nation. Accordingly, *amici* urge the Court to grant the petition.

BACKGROUND—PHYSICIAN-ASSISTED SUICIDE

1. Physician-assisted suicide occurs "when a physician facilitates a patient's death by providing the necessary means and/or information to enable the patient to perform the life-ending act." AMA Council on Ethical and Judicial Affairs, *Code of Medical Ethics*: *Current Opinions* § 2.211 ("*Code of Medical Ethics*") (App. 1a); see also AMA Council on Ethical and Judicial Affairs, *Physician-Assisted Suicide* (Dec. 1993), *reprinted in* 10 Issues in L. & Med. 91, 92 (1994) (App. 3a-4a). What makes physician-assisted suicide distinct from treatments that may result in loss of life is that the physician provides medical assistance *for the purpose* of killing the patient. As such, it is an action fundamentally different from two other types of physician action involving the loss of life.

The first is the provision of palliative treatment that may have the consequence of hastening death, but that is provided to the patient for the purpose of easing the patient's pain. The second is the withholding or withdrawal of life-sustaining treatment at the request of the patient or appropriate surrogate. In each of these two cases, although death is the consequence of the physician's action, the purpose of the action is not to cause death. In the case of palliative care, the purpose of the physician's action is to ease the patient's physical pain. In the case of withdrawal of treatment, the purpose is to respect the patient's wishes that the patient's underlying disease be allowed to take its course without further medical intervention. In neither case does the physician employ the instruments of medicine for the purpose of ending the patient's life. The distinctions between these cases preserve both the physician's role as healer and the patient's right to self-determination. Their recognition is crucial to the definition of the ethical practice of medicine.

2. The ethical injunction against physician-assisted suicide has origins at least as ancient as the Hippocratic Oath, which states that "physicians shall give no deadly drug to any, though it be asked of [them], nor will they counsel such." The profession's modern prohibition is, however, no mere vestige of history. As the AMA's Council on Ethical and Judicial Affairs has stated,

physician-assisted suicide is "fundamentally incompatible with the physician's role as healer, would be difficult or impossible to control, and would pose serious societal risks." *Code of Medical Ethics* § 2.211 (App. 1a). For example, as healer, the physician's role is to provide the patient with appropriate medical treatment when the patient desires it and to relieve pain and provide care designed to comfort the patient, even if further medical treatment is unwanted by the patient. The physician's commitment to support the patient creates a foundation for patient trust that the physician will do whatever possible, consistent with the patient's informed wishes, to promote the patient's health and well-being and to ease the patient's pain.

Permitting a physician to certify a patient as belonging to a death-eligible class, and then to assist that patient in taking his or her life, is incompatible with the physician's healing role. The willingness of many patients to seek medical care is founded on their trust that physicians are committed to preserving life and health. The knowledge that some physicians would willingly assist patients in killing themselves would undermine that trust and would, for example, likely deter or delay some individuals from seeking medical care. Physician-assisted suicide thus ultimately undermines the trust that is essential to the physician-patient relationship.

The consequences to the physician-patient relationship and to the public health of destroying that trust should not be underestimated. As two accomplished bioethicists have concluded,

> 'The prohibition of killing is an attempt to promote a solid basis for trust in the role of caring for patients and protecting them from harm. This prohibition is both instrumental and symbolically important, and its removal would weaken a set of practices and restraints that we cannot easily replace.'

Decisions Near the End of Life, 267 J.A.M.A. 2229, 2232 (quoting T.L. Beauchamp & J.F. Childress, *Principles of Biomedical Ethics* (3d ed. 1989)).[1]

By way of example, the legalization of assisted suicide could intensify the pressure on gravely ill patients to choose to die in order to relieve their families and friends of the financial and emotional burdens of their illnesses. Recent studies indicate that it is these concerns—rather than intractable pain—that most often motivate patients' requests for physician-assisted suicide. See *"Physician-Assisted Suicide in the United States": Hearing Before the Subcomm. on the Const. of the House Comm. on the Judiciary*, 104th Cong., 2d Sess. (1996) (written testimony of Lonnie Bristow, M.D., President of the American Medical Association); see also Nancy J. Osgood, *Assisted Suicide and Older People—A Deadly Combination: Ethical Problems in Permitting Assisted Suicide*, 10 Issues in L. & Med. 415, 426-27 (1995). These pressures may be keenly felt by the least-privileged members of our society. As John Pickering, the Chair of the ABA Commission on Legal Problems, noted recently,

---

[1] Another noted ethicist recently expressed the same concerns in starker terms:

> Do we really want our doctors to be licensed agents of death? Should they be permitted or encouraged to prescribe (and, later, to inject) poison? Shall the mantle of privacy that protects the doctor-patient relationship, in the service of life, now also cloak decisions for death? Do you want your doctor deciding, on the basis of his own private views, when you still deserve to live and when you now deserve to die, when you should be offered death as a "therapeutic option"? And what about the doctor you would never go to: do you want him also licensed to kill? In short, shall the healing profession become also the death-dealing profession?

"Physician Assisted Suicide in the United States": Hearing Before the Subcomm. on the Const. of the House Comm. on the Judiciary, 104th Cong., 2d Sess. (1996) (written testimony of Leon R. Kass, M.D., Addie Clark Harding Professor, University of Chicago, pp. 2-3).

> [b]efore there can be such truly voluntary choice to terminate life, there must be universal access to affordable health care. The lack of access to or the financial burdens of health care can hardly permit voluntary choice for many. What may be voluntary in Beverly Hills is not likely to be voluntary in Watts.

Yale Kamisar, *Against Assisted Suicide—Even a Very Limited Form*, 72 U. Det. Mercy L. R. 735, 738-39 & n.17 (1995) (quoting John H. Pickering, *The Continuing Debate Over Active Euthanasia*, Bioethics Bulletin (ABA) 1, 2 (Summer 1994)). The interpersonal and subjective nature of these pressures, moreover, makes them particularly difficult to address through state regulation.

Medical studies further call into question the voluntariness of many requests for assisted suicide. Contrary to the suggestion of the court of appeals, Pet. App. A-74, the desire to hasten death is not a necessary concomitant of serious illness. A physician and leading author on suicide reports that "many patients and physicians displace anxieties about death onto the circumstances of dying"; by assisting dying patients not in suicide but in directly confronting the fear of death, the physician "may focus a patient on what he can achieve in whatever life can still offer." Herbert Hendin, *Seduced by Death: Doctors, Patients, and the Dutch Cure*, 10 Issues in L. & Med. 123, 128 (1994). Notably, one study of hospice patients found that the majority "did not want to die; and all those who desired death were suffering from major depression." Osgood, *supra*, at 427; see also Yeates Conwell & Eric D. Caine, *Rational Suicide and the Right to Die: Reality and Myth*, 325 New Eng. J. Med. 1100, 1101 (1991); James H. Brown *et al.*, *Is It Normal for Terminally Ill Patients to Desire Death?*, 143 Am. J. Psychiatry 208 (1986). Because most physicians have not received extensive psychiatric training, Osgood, *supra*, at 430, there is a significant possibility that they will fail to diagnose treatable mental illness and, consequently,

will assist patients to commit suicide even though their psychological condition could be treated.

The option to assist a patient's suicide also will likely divert the attention of some physicians from providing therapeutic counseling, care, and comfort to their patients. Peter A. Singer & Mark Siegler, *Euthanasia—A Critique*, 322 New Eng. J. Med. 1881, 1883 (1990). If assisting suicide were legitimated, some physicians might be reluctant "to invest their energy and time serving patients whom they believe would benefit more from a quick and easy death." *Decisions Near the End of Life*, *supra*, at 2232. Assisted suicide also could become for physicians an inappropriate "way of dealing with the frustration of being unable to cure the disease." Herbert Hendin, *Seduced by Death*, 10 Issues in L. & Med. at 128. "[B]y making death a medical decision," assisted suicide gives the physician "the illusion of mastery over the disease and the accompanying feelings of helplessness." *Id.* Moreover, in view of the escalating pressures on health care professionals to reduce the costs of treatment, see generally Ezekiel Emanuel, *Cost Savings at the End of Life*, 275 J.A.M.A. 1907 (1996), lifting the prohibition of physician-assisted suicide could reduce the countervailing pressure that would otherwise exist to improve the ability to treat patients with acute pain and depression.

Finally, the needs of the vast majority of patients with serious illnesses can be addressed in ways more compatible with the physician's role as healer. As the AMA's Council on Ethical and Judicial Affairs stated in 1994,

> Instead of participating in assisted suicide, physicians must aggressively respond to the needs of patients at the end of life. Patients should not be abandoned once it is determined that cure is impossible. Patients near the end of life must continue to receive emotional support, comfort care, adequate pain control, respect for patient autonomy, and good communication.

Code of Medical Ethics § 2.211 (App. 1a). A number of studies point out that physicians often fail adequately to manage their patients' pain, Osgood, *supra*, at 428 & nn.36-39, and that most patients who seek to hasten death change their minds when their pain is successfully controlled, *id.* at 429. Indeed, experts in the field of pain control have shown that "almost all terminally ill patients can experience adequate relief with currently available treatments." Judith Ahronheim & Doron Weber, *Final Passages: Positive Choices for the Dying and Their Loved Ones* 102 (1992); see also Robert D. Truog, *Barbiturates in the Care of the Terminally Ill*, 327 New Eng. J. Med. 1678, 1680 (1992); *Physician-Assisted Suicide*, *supra*, at 94 (App. at 6a). Through aggressive treatment of pain, which physicians ethically may and should provide even if the medication were to hasten the patient's death, physicians can ease the pain that prompts certain patients to consider suicide. The increasing availability of hospice care and techniques of patient-controlled analgesia, moreover, will likely help significantly to restore patients' sense of autonomy.

REASONS FOR GRANTING THE PETITION

The Ninth Circuit's lengthy decision below is a sweeping and unprecedented constitutional ruling. It is controlling authority for the laws of nine states and, if widely followed, would partially invalidate the laws of most states. See Pet. App. at A-135 to A-136 nn.10-12. Yet the decision lacks solid grounding in the decisions of this Court and conflicts at numerous points with decisions of other courts of appeals and state supreme courts.

Furthermore, the decision rejects as insubstantial one of the core, long-established, and defining principles of ethical medical practice. The opinion's broad language and mischaracterization of existing medical practice has already caused significant confusion and concern within the medical community. If left to stand by this Court, the decision will seriously compromise the ethical practice of

medicine and cause irreparable harm to patients. The Court should therefore grant the petition in this case.[2]

I. THE COURT OF APPEALS' FINDING THAT TERMINALLY ILL PATIENTS HAVE A CONSTITUTIONALLY PROTECTED LIBERTY INTEREST IN PHYSICIAN-ASSISTED SUICIDE MERITS THIS COURT'S REVIEW

The Ninth Circuit, sitting *en banc*, invalidated a Washington statute that makes it a felony to "aid[]" another's suicide to the extent the statute applies to physicians who prescribe lethal drugs to patients for the purpose of enabling them to commit suicide. Under the Due Process Clause of the Fourteenth Amendment, the court held that the statute unreasonably interfered with what the court identified as a fundamental liberty interest of terminally ill patients in "the choice of how and when one dies," and, in particular, "in hastening what might otherwise be a protracted, undignified, and extremely painful death." Pet. App. A-9 to A-11, A-113, A-114, A-116. In so holding, the Ninth Circuit misconstrued this Court's decisions in *Planned Parenthood* v. *Casey*, 505 U.S. 833 (1992), and *Cruzan* v. *Director, Missouri Department of Health*, 497 U.S. 261 (1990), and reached a result on this issue that conflicts with the analysis of the Second Circuit, see *Quill* v. *Vacco*, 80 F.3d 716 (2d Cir. 1996), *pet. for cert. pending*, No. 95-1858 (filed May 16, 1996), and with the holding of the Michigan Supreme Court in *People* v. *Kevorkian*, 527 N.W.2d 714 (Mich. 1994),

---

[2] For the same reasons, the Court also should grant the petition of the State of New York to review the decision in *Quill* v. *Vacco*, 80 F.3d 716 (2d Cir. 1996), *pet. for cert. pending*, No. 95-1858 (filed May 16, 1996). The Second Circuit, although disagreeing with the Ninth Circuit about the existence of a liberty interest in physician-assisted suicide under the Due Process Clause, employs reasoning similar to the Ninth Circuit's analysis of the state's interests to invalidate a comparable New York statute under the Equal Protection Clause of the Fourteenth Amendment.

cert. denied sub nom. Hobbins v. *Kelley*, 115 S. Ct. 1795 (1995), that no such liberty interest exists.

Neither *Cruzan* nor *Casey* provides a basis for finding a constitutional liberty interest in obtaining a physician's assistance to commit suicide. The liberty interest discussed in *Cruzan* is grounded in the common law protection afforded to every person to refuse unwanted medical treatment. 497 U.S. at 269-70. Medical treatment performed without the patient's consent historically has been treated as a battery—a physical invasion of bodily integrity—excusable only in emergency circumstances. *Id.*; see W. Page Keeton, *Prosser & Keeton on the Law of Torts* 39-42, 190 (5th ed. 1984). The right to refuse treatment is the "logical corollary" of this longstanding common law prohibition against medical treatment without the patient's informed consent. *Cruzan*, 497 U.S. at 270.

Physician-assisted suicide has no comparable common law foundation. It has no antecedent, for example, in the common law right to avoid a physical invasion of bodily integrity. Assisted suicide, moreover, has been unlawful in most states for decades, further undermining the view that it is a legitimate form of medical treatment. See Pet. App. A-135 to A-136 & nn.10-13. Given the courts' historic reluctance to recognize a right to obtain medical treatment, see, *e.g.*, *New York State Ophthalmological Soc'y* v. *Bowen*, 854 F.2d 1379, 1389-92 (D.C. Cir. 1988), *cert. denied*, 490 U.S. 1098 (1989), it would be extraordinary if the first medical treatment to be recognized as a constitutional entitlement were a course of drugs intended to kill the patient. The logic of *Cruzan*, therefore, lends no support to the lower court's judgment here.

The Ninth Circuit's reliance on *Casey* also is misplaced. Although *Casey* contains language that, taken out of context, would support not only the liberty interest claimed here but an almost infinite array of interests, see generally Pet. App. A-56 to A-58 (quoting *Casey*, 505 U.S. at 851-53), it is unlikely that the Court intended to bind itself to such a sweeping expansion of the scope of personal liberty. This is particularly true given that the Court elsewhere noted that the liberty interest at issue in *Casey* was "unique," 505 U.S. at 852, and that the Court's judgment only narrowly reaffirmed, chiefly on grounds of *stare decisis*, a previously recognized liberty interest, *id.* at 854-71.

Nor is there any sound basis, factually or legally, for defining a fundamental liberty interest possessed only by those who are "terminally ill." As an initial matter, this class of individuals cannot accurately be defined. The Ninth Circuit's *en banc* decision leaves the definition of this class to the states. Pet. App. A-98 to A-99. As the Ninth Circuit three-judge panel noted, however, "[t]here is wide disagreement in definition of terminally ill among the states." Pet. App. D-18.[3] Moreover, because uncertainty remains an ineluctable aspect of medicine, it is all too often impossible as a practical matter to determine when a person meets any given criteria for terminal illness. And even if, contrary to experience, physicians could meaningfully and reliably identify a class of "terminally ill" patients (however defined), the Ninth Circuit offers no principled constitutional basis for granting only to individuals in that class the right to a physician-assisted suicide. The Ninth Circuit's reliance on the abortion cases, for example, would certainly support the right of any competent individual to obtain a physician-assisted suicide.

---

[3] The varying criteria that states employ are vague and unenforceable. For example, Washington law states,

> "Terminal condition" means an incurable and irreversible condition caused by injury, disease, or illness, that, within reasonable medical judgment, will cause death within a reasonable period of time in accordance with accepted medical standards, and where the application of life-sustaining treatment serves only to prolong the process of dying.

Wash. Rev. Code § 70.122.020(9).

It is therefore not surprising that the Second Circuit in *Quill* and the Michigan Supreme Court in *Kevorkian* expressly disagreed with the proposition that "either *Cruzan* or *Casey* preordains that the Supreme Court would find that any persons, including the terminally ill, have a liberty interest in suicide that is protected by the Fourteenth Amendment." *People* v. *Kevorkian*, 527 N.W.2d at 728; see *Quill* v. *Vacco*, 80 F.3d at 725 (declining "to identify a new fundamental right, in the absence of direction from the [United States Supreme] Court."); *id.* at 737 (Calabresi, J., concurring) ("[N]either Cruzan, nor Casey, nor the language of our Constitution, nor our constitutional tradition clearly makes these laws [prohibiting physician-assisted suicide] invalid"). The conflict on this point alone merits this Court's review. See Pet. at 20-22.

II. THE COURT OF APPEALS' HOLDING THAT STATES LACK A JUSTIFIABLE INTEREST IN PROHIBITING PHYSICIAN-ASSISTED SUICIDE ALSO MERITS REVIEW

The decision below also merits review insofar as it dismisses the interests relied upon by the State of Washington in support of its prohibition against physician-assisted suicide. The interests and policy concerns that support a continued ban on physician-assisted suicide are numerous and compelling. The Ninth Circuit's result-driven analysis improperly casts them aside in favor of the court's own policy analysis. *Amici* would particularly draw the Court's attention to the tone of the opinion, by turns hostile, sarcastic, and disparaging, as the court rejects the views submitted by the AMA below.[4]

[4] *See, e.g.*, Pet. App. A-80 to A-81 n.95 (chiding the AMA for "sugarcoat[ing]" the facts; suggesting that the AMA's ethical opinions contain "euphemistic" language to "salve the conscience of the AMA" at the expense of the "realities of the practice of medicine"); *id.* at A-95 (deriding "tradition-bound AMA members" for citing to the Hippocratic Oath in view of some of its "preposterous" positions).

Two aspects of the lower court's ruling deserve particular attention. First, central to the Ninth Circuit's analysis (and the linchpin of the Second Circuit's equal protection holding in *Quill*) is the view that there is no meaningful distinction between physician-assisted suicide on one hand and withdrawal of life-prolonging treatment, or the provision of life-shortening analgesia, on the other. Second, the Ninth Circuit expressed confidence that the state and medical profession could protect the public from any adverse consequences that might otherwise ensue from the legalization of physician-assisted suicide. Both conclusions are unwarranted.

1. The Ninth Circuit could "see no ethical or constitutionally cognizable difference between a doctor's pulling the plug on a respirator and his prescribing drugs which will permit a terminally ill patient to end his own life" because "the death of the patient is the intended result as surely in one case as in the other." Pet. App. A-82.[5] Surely the law can be informed by more careful reasoning. It is true that, in each case, death is the result. But it is only the latter act, involving the prescription of a lethal drug, of which it can fairly be said that both the doctor and patient intend to use medical means to cause the death of the patient. By contrast, in the withdrawal of treatment, the patient intends to let the underlying illness take its course *without* further medical intervention. Out of respect for the patient's long-recognized right to be free of unwanted medical intervention, the physician must acquiesce in the patient's judgment. Examples of such judgments include that of the Jehovah's Witness to refuse a necessary blood transfusion, or of a Christian Scientist to refuse life-saving surgery. "To call these judgments [to refuse or withdraw treatment], and the ensuing omission of treatment, 'intending' death distorts what actually hap-

[5] The rejection of these distinctions also formed the basis for the Second Circuit's finding that New York's prohibition of physician-assisted suicide violated the Equal Protection Clause of the Fourteenth Amendment. *See Quill*, 80 F.3d at 727-29.

pens. . . . [I]f I stop shovelling my driveway in a heavy snowstorm because I cannot keep up with it, am I thereby intending a driveway full of snow?" Kamisar, *supra*, at 755 & n.90 (quoting Daniel Callahan, *The Troubled Dream of Life* 77-78 (1993)); see, *e.g.*, *McKay* v. *Bergstedt*, 801 P.2d 617, 626 (Nev. 1990) (noting difference between "choosing a natural death summoned by an uninvited illness or calamity and deliberately seeking to terminate one's life by resorting to death-inducing measures unrelated to the natural process of dying"); Pet. App. C-10 n.12 (noting numerous judicial decisions that distinguish withdrawal of treatment from suicide).

The importance of the distinction, and the Ninth Circuit's analytic failure, can be seen in the court's discussion of Nancy Cruzan. In the Ninth Circuit's view, Nancy Cruzan "did not die of an underlying disease" but rather "was allowed to starve to death." Pet. App. A-79 & n.91. From this, the court reasoned more broadly that, when a doctor authorizes withdrawal of life-sustaining treatment, he "intends that, as a result of his action, the patient will die an earlier death than he otherwise would." *Id.*

The court simply missed the crucial point about Nancy Cruzan's case. Our society does not, and never has, forced people to accept medical treatment that would prolong their lives merely because the treatment is available. That principle has taken on added importance as life-prolonging medical technology has become more sophisticated and potentially intrusive. Until recently, an accident victim like Nancy Cruzan, who was comatose and could no longer take food or fluids by mouth, would have died from injuries sustained in that accident. Advances in medical treatment, such as tube feeding, now permit persons so afflicted to survive. But the fact that such treatment is available to those who want it does not mean that, when a person refuses such treatment, the person's death is not caused by the underlying disease or injury. Nancy Cruzan's feeding tube was administered to give her a chance to survive and recover consciousness. When,

after eight years, it became clear that she would never recover, the physicians who removed her feeding tube did so out of respect for her right to stop receiving such assistance.

For similar reasons, the Ninth Circuit also erred in failing to recognize that the administration of aggressive pain control, even when it may have the consequence of hastening death, also differs ethically from physician-assisted suicide. Typically, the provision of medication in doses strong enough to relieve pain will not bring about a patient's death. See Truog, *supra*, at 1680-81. But even in a case where palliative treatment might be said to hasten death or increase the risk of death, where the intention behind the treatment is to alleviate pain, the provision of such treatment is ethical and fully consistent with a physician's role as healer.

Here, too, the Ninth Circuit confused the issue of intent, asserting cavalierly that "doctors are generally permitted to administer death-inducing medication, as long as they can point to a concomitant pain-relieving purpose." Pet. App. A-77. This is incorrect. Where a physician prescribes treatment for the purpose of causing death, the physician has exceeded the bounds of ethical medical practice regardless of what other purpose the physician may "point to." Judge Kleinfeld understood the crucial ethical distinction, and expressed it well by analogy: In deciding to order American soldiers onto the beaches of Normandy, General Eisenhower knew full well "he was sending many American soldiers to certain death," yet he intended by this order not to kill the soldiers but to "liberate the beaches, liberate France, and liberate Europe from the Nazis." Pet. App. A-163 (Kleinfeld, J., dissenting).

2. The Ninth Circuit also underestimated the danger of adverse consequences likely to flow from its decision and overstated the state's ability to cope with them through methods short of prohibiting assisted suicide.

First, by blurring the distinction between aggressive pain management on the one hand and euthanasia on the other, the Ninth Circuit decision may lead many physicians who believe assisting in suicide to be unethical to be unduly cautious in managing their patients' pain. Ironically, because many terminally ill patients do not receive enough analgesia, such a reaction would only increase the number of patients that would seek, needlessly and tragically, to end their pain by ending their lives. In view of the need more aggressively to combat the acute pain suffered by some patients, it is imperative that states be permitted to confirm and reestablish this sound ethical distinction in our nation's laws.

Similarly, the court's ruling that there is no meaningful distinction between honoring a patient's request to withdraw treatment and writing a prescription for lethal drugs may increase some physicians' reluctance to honor patients' requests to withdraw treatment. Such a result would be particularly unfortunate given the years of effort devoted to increasing physicians' acceptance of the patient's right to refuse life-sustaining treatment, and the importance to the medical profession and to the public that such wishes be honored.

More fundamentally, the decision may well lead to significant numbers of cases in which lethal medications are administered to patients without their consent. In this regard, the Netherlands' experience is instructive. Although the Dutch law prohibiting physician-assisted suicide has not been repealed, the Netherlands has permitted its physicians to provide such assistance so long as certain express guidelines and safeguards developed by the medical profession are followed. In 1990, the Dutch Government appointed a committee, chaired by the Attorney General of the Supreme Court, Prof. J. Remmelink, to investigate the administration of euthanasia-related medical practices in the Netherlands. After conducting three large-scale studies, each involving hundreds of physicians, the Remmelink Commission reported that over

1,000 cases of active involuntary euthanasia—that is, the administration of fatal drugs with the intent to kill, performed without the knowledge or consent of the patient—took place in the Netherlands each year, even though medical guidelines specifically prohibited the practice.[6] The Netherlands' experience calls seriously into question the possibility of limiting abuse through mere regulation of physician-assisted suicide.

Moreover, the Ninth Circuit's decision, if upheld, is likely to increase significantly the number of suicides of persons with treatable mental depression and physical pain or who are not terminally ill. Studies report that a number of Dutch physicians assisted in the suicides of patients who were neither physically ill nor suffering from untreatable pain.[7] Of course, one need not look abroad for examples. Cases of physician-assisted suicide carried out under similar circumstances have also been reported in the United States.[8]

The above examples alone should be sufficient to justify a state's decision to prohibit assisted suicide. That evidence confirms that a state at a minimum could rationally decide that physician-assisted suicide provides far more potential for abuse than does withdrawal of un-

---

[6] *See* Richard Fenigsen, Comment, *The Report of the Dutch Governmental Committee on Euthanasia*, 7 Issues in L. & Med. 339, 340-42 (1991).

[7] *E.g.*, Herbert Hendin, *Seduced by Death*, 10 Issues in L. & Med. at 123, 129 (discussing assisted suicide of "physically healthy fifty year old [Dutch] woman who had lost her two sons and who had been recently divorced from her husband").

[8] *See, e.g.*, Richard Leiby, *Just How Sick Was Rebecca Badger?*, Washington Post A-1 (July 29, 1996) (reporting county medical examiner's conclusion that autopsy of woman who committed suicide with Dr. Kevorkian's assistance showed no "evidence of medical disease"); Kamisar, *supra*, at 740 (observing that Dr. Kevorkian's first suicide "patient", Janet Adkins, "might easily have lived for many more years" since she was in only initial stages of Alzheimer's disease).

wanted life-prolonging medical treatment. It suggests that physician-assisted suicide cannot and will not, in practice, be limited only to competent patients whose death is imminent and whose request for a prescription for life-ending medication can confidently be described as voluntary. Rather, it strongly suggests that—regardless of the safeguards imposed—assisted suicide may become routine, may involve many patients who are not ill and who are not (or need not be) wracked with pain, may be prompted by displaced anxiety over the fear of death that psychiatric treatment could address, and may result from the decisions of physicians or families rather than patients that such treatment is in the patient's interest.

Although the Ninth Circuit professed concern about "abuse," Pet. App. A-102, the court's purported solution to these profound problems is ironic and unsatisfactory. After riding roughshod for pages over the medical profession's adherence to longstanding ethical principles, the Ninth Circuit blandly asserted "that sufficient protections can and will be developed by the various states with the assistance of the medical profession . . . to ensure that the possibility of error will be remote." Pet. App. A-103 to A-104. Experience to date suggests, however, that such safeguards are not likely to be effective. Moreover, the very fact that the court thought them necessary calls into question its rejection of the seriousness of the state's interest in an outright prohibition.

Even more fundamentally, the lower court's willingness to cast aside a longstanding ethical norm itself seriously undermines the likelihood that professional standards will operate to keep the exercise of the court's newly announced liberty interest from spinning out of control. For example, in one of the Ninth Circuit's most misguided passages, the court suggests that patients would be better off if physicians were given "a choice" as to which ethical standards they will adhere to, thereby enabling patients to seek out physicians who offered the

services they wanted. Pet. App. A-96 & n.112. This view is incompatible with the existence of meaningful ethical standards which, if they are to serve the policing role that the Ninth Circuit envisions in the future, must be applicable to all within the profession.

At bottom, the Ninth Circuit's cynical approach to medical ethics threatens the integrity of medical practice. "No human being can escape the reality of being sick and being cared for. All must seriously contemplate what a divided profession without a common set of moral commitments would mean." Edmund D. Pellegrino, *Rethinking the Hippocratic Oath*, 275 J.A.M.A. 1807, 1809 (1996). Ultimately, uncertainty regarding the vitality of even some physicians' central ethical commitment to preserve the life and health of patients can serve only to undermine the public's trust and confidence in physicians and in the medical profession.

* * * * *

Physician-assisted suicide, appropriately defined, is contrary to basic tenets of the medical profession and to the laws of most states. The Ninth Circuit's faulty case analysis and poorly reasoned assessment of the states' interests strongly suggest that it erred in concluding that patients have a constitutional right to such assistance. But regardless of the merits, the question is of such exceptional national importance that, if the longstanding prohibition, both ethical and legal, on assisted suicide is now to be declared unconstitutional, such a declaration should come only from this Court after plenary consideration of this issue.

APPENDICES

APPENDIX A

American Medical Association Opinion 2.211: Physician-Assisted Suicide

Physician assisted suicide occurs when a physician facilitates a patient's death by providing the necessary means and/or information to enable the patient to perform the life-ending act (e.g., the physician provides sleeping pills and information about the lethal dose, while aware that the patient may commit suicide).

It is understandable, though tragic, that some patients in extreme duress—such as those suffering from a terminal, painful, debilitating illness—may come to decide that death is preferable to life. However, allowing physicians to participate in assisted suicide would cause more harm than good. Physician assisted suicide is fundamentally incompatible with the physician's role as healer, would be difficult or impossible to control, and would pose serious societal risks.

Instead of participating in assisted suicide, physicians must aggressively respond to the needs of patients at the end of life. Patients should not be abandoned once it is determined that cure is impossible. Patients near the end of life must continue to receive emotional support, comfort care, adequate pain control, respect for patient autonomy, and good communication. (I, IV)

Issued June 1994 based on the reports "Decisions Near the End of Life," issued June 1991, and "Physician-Assisted Suicide," issued December 1993. (*JAMA*. 1992; 267: 2229-2233)

APPENDIX B

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS OF THE AMERICAN MEDICAL ASSOCIATION

Subject: Physician-Assisted Suicide (Resolution 3, A-93)

Presented by: John Glasson, M.D., Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws (Louis R. Zako, M.D., Chair)

Introduction*

Physician-assisted suicide presents one of the greatest contemporary challenges to the medical profession's ethical responsibilities. Proposed as a means toward more humane care of the dying, assisted suicide threatens the very core of the medical profession's ethical integrity.

While the Council on Ethical and Judicial Affairs has long-standing policy opposing euthanasia, it did not expressly address the issue of assisted suicide until its June 1991 report, "Decisions Near the End of Life." In that report, the Council concluded that physician-assisted suicide is contrary to the professional role of physicians and that therefore physicians "must not . . . participate in assisted suicide." Previously, the Council had issued reports rejecting the use of euthanasia. In June 1977, the Council stated that "mercy killing or euthanasia—is contrary to public policy, medical tradition, and the most

---

* In accordance with the Joint Report of the Council on Ethical and Judicial Affairs and the Council on Constitution and Bylaws (I-91), this report may be adopted, not adopted, or referred. It may only be amended, with the concurrence of the Council, to clarify its meaning.

fundamental measures of human value and worth." Similarly, in June 1988, the Council reaffirmed "its strong opposition to 'mercy killing.' "

Broad public debate of assisted suicide was sparked in June 1990, when Dr. Jack Kevorkian assisted in the suicide of Janet Adkins. The debate was advanced in March 1991 when Dr. Timothy Quill disclosed his assistance in the suicide of Diane Trumbull. Other public events quickly followed. Physician-assisted suicide, together with euthanasia, was placed on the public ballot in Washington state, in November 1991, and in California, in November 1992. Both times, voters turned down proposals to legalize physician-assisted dying. In September 1993, by a vote of 5-4, Canada's Supreme Court denied a woman's request to end her life by assisted suicide. In 1994, voters in Oregon will decide whether to legalize assisted suicide in their state.

Resolution 3, introduced at the 1993 Annual Meeting by the Medical Student Section and referred to the Board of Trustees by the House of Delegates, requested an ethical study of assisted suicide. In this report, the Council revisits the issue of physician-assisted suicide.

Definitions

Assisted suicide occurs when a physician provides a patient with the medical means and/or the medical knowledge to commit suicide. For example, the physician could provide sleeping pills and information about the lethal dose, while aware that the patient is contemplating suicide. In physician-assisted suicide, the patient performs the life-ending act, whereas in euthanasia the physician administers the death-causing drug or other agent.

Assisted suicide and euthanasia should not be confused with the provision of a palliative treatment that may hasten the patient's death ("double effect"). The intent of the palliative treatment is to relieve pain and suffering,

not to end the patient's life, but the patient's death is a possible side effect of the treatment. It is ethically acceptable for a physician to gradually increase the appropriate medication for a patient, realizing that the medication may depress respiration and cause death.

Assisted suicide also must be distinguished from withholding or withdrawing life-sustaining treatment, in which the patient's death occurs because the patient or the patient's proxy, in consultation with the treating physician, decides that the disadvantages of treatment outweigh its advantages and therefore that treatment is refused.

Ethical Considerations

Inappropriate Extension of the Right to Refuse Treatment

In granting patients the right to refuse life-sustaining medical treatment, society has acknowledged the right of patients to self-determination on matters of their medical care even if the exercise of that self-determination results in the patient's death. Because any medical treatment offers both benefits and detriments, and people attach different values to those benefits and detriments, only the patient can determine whether the advantages of treatment outweigh the disadvantages. As the Council has previously concluded, "[t]he principle of patient autonomy requires that physicians must respect the decision to forgo life-sustaining treatment of a patient who possesses decision-making capacity."

Although a patient's choice of suicide also represents an expression of self-determination, there is a fundamental difference between refusing life-sustaining treatment and demanding a life-ending treatment. The right of self-determination is a right to accept or refuse offered interventions, but not to decide what should be offered. The right to refuse life-sustaining treatment does not automatically entail a right to insist that others take action to bring on death.

When a life-sustaining treatment is declined, the patient dies primarily because of an underlying disease. The illness is simply allowed to take its natural course. With assisted suicide, however, death is hastened by the taking of a lethal drug or other agent. Although a physician cannot force a patient to accept a treatment against the patient's will, even if the treatment is life-sustaining, it does not follow that a physician ought to provide a lethal agent to the patient. The inability of physicians to prevent death does not imply that physicians are free to help cause death.

For a number of reasons, the medical profession has rejected assisted suicide as fundamentally inconsistent with the professional role of physicians as healers. Indeed, according to the Hippocratic Oath, physicians shall "give no deadly drug to any, though it be asked of [them], nor will [they] counsel such." Physicians serve patients not because patients exercise self-determination but because patients are in need. Therefore, a patient may not insist on treatments that are inconsistent with sound medical practices. Rather, physicians provide treatments that are designed to make patients well, or as well as possible. The physician's role is to affirm life, not to hasten its demise.

Permitting assisted suicide would compromise the physician's professional role also because it would involve physicians in making inappropriate value judgments about the quality of life. Indeed, with the refusal of life-sustaining treatment, society does not limit the right to refuse treatment only to patients who meet a specific standard of suffering. With refusal of treatment, the state recognizes that the patient (or the patient's proxy) alone can decide that there no longer is a meaningful quality of life.

Objections to causing death also underlie religious views on assisted suicide. Most of the world's major religions oppose suicide in all forms and do not condone physician-

assisted suicide even in cases of suffering or imminent death. In justification of their position, religions generally espouse common beliefs about the sanctity of human life, the appropriate interpretation of suffering, and the subordination of individual autonomy to a belief in God's will or sovereignty.

The Physician's Role

The relief of suffering is an essential part of the physician's role as healer, and some patients seek assisted suicide because they are suffering greatly. Suffering is a complex process that may exist in one or several forms, including pain, loss of self-control and independence, a sense of futility, loss of dignity, and fear of dying. It is incumbent upon physicians to discuss and identify the elements contributing to the patient's suffering and address each appropriately. The patient, and family members as well, should participate with the physician to ensure that measures to provide comfort will be given the patient in a timely fashion.

One of the greatest concerns reported by patients facing a terminal illness or chronic debilitation is the fear that they will be unable to receive adequate relief for their pain. Though there is some basis for this fear in a small number of cases, for most patients pain can be adequately controlled. Inadequate pain relief is only rarely due to the unavailability of effective pain control medications; more often, it may be caused by reluctance on the part of physicians to use these medications aggressively enough to sufficiently alleviate the patient's pain. Further efforts to educate physicians about advanced pain management techniques, both at the undergraduate and graduate levels, are necessary to overcome any shortcomings in this area.

Pain control medications should be employed in whatever dose necessary, and by whatever route necessary, to fully relieve the patient's pain. The patient's treatment

plan should be tailored to meet the particular patient's needs. Some patients will request less pain control in order to remain mentally lucid; others may need to be sedated to the point of unconsciousness. Ongoing discussions with the patient, if possible, or with the patient's family or surrogate decisionmaker will be helpful in identifying the level of pain control necessary to relieve the patient's suffering in accordance with the patient's treatment goals. Techniques of patient controlled analgesia (PCA) enhance the sense of control of terminally ill patients and, for this reason, are particularly effective. Often, it is the loss of control, rather than physical pain, that causes the most suffering for dying patients.

The first priority for the care of patients facing severe pain as a result of a terminal illness or chronic condition should be the relief of their pain. Fear of addiction to pain medications should not be a barrier to the adequate relief of pain. Nor should physicians be concerned about legal repercussions or sanctions by licensing boards. The courts and regulatory bodies readily distinguish between use of narcotic drugs to relieve pain in dying patients and use in other situations. Indeed, it is well accepted both ethically and legally that pain medications may be administered in whatever dose necessary to relieve the patient's suffering, even if the medication has the side effect of causing addiction or of causing death through respiratory depression.

Relieving the patient's phychosocial and other suffering is as important as relieving the patient's pain. When the treatment goals for a patient in the end stages of a terminal illness shift from curative efforts to comfort care, the level of physician involvement in the patient's care should in no way decrease. Patients in these circumstances must be managed "in a setting of [the patient's] own choosing, as free as possible from pain and other burdensome symptoms, and with the optimal phychological and spiritual

support of family and friends." Because the loss of control may be the greatest fear of dying patients, all efforts should be made to maximize the patient's sense of control.

Accomplishing these goals requires renewed efforts from physicians, nurses, family members, and other sources of psychological and spiritual support. Often, the patient's despair with his or her quality of life can be relieved by psychiatric intervention. Seriously ill patients contemplating suicide may develop a renewed desire to live as a result of counseling and/or antidepressant medications. When requests for assisted suicide occur, it is important to provide the patient with an evaluation by a health professional with expertise in psychiatric aspects of terminal illness.

The hospice movement has made great strides in providing comfort care to patients at the end of life. In hospice care, the patient's symptoms, including pain, are aggressively treated to make the patient as comfortable as possible, but efforts to extend the patient's life are usually not pursued. Hospice patients are often cared for at home, or, if their condition requires care to be delivered in an institutional setting, intrusive medical technology is kept to a minimum. The provision of a humane, low technology environment in which to spend their final days can go far in alleviating patients' fears of an undignified, lonely, technologically dependent death.

Physicians must not abandon or neglect the needs of their terminally ill patients. Indeed, the desire for suicide is a signal to the physician that more intensive efforts to comfort and care for the patient are needed. Physicians, family, and friends can help patients near the end of life by their presence and by their loving support. Patients may feel obligated to die in order to spare their families the emotional and financial burden of their care or to spare limited societal resources for other health care needs. While patients may rationally and reasonably be concerned about the burden on others, physicians and family members must reassure patients that they are under no obligation to end their lives prematurely because of such concerns.

In some cases, terminally ill patients voluntarily refuse food or oral fluids. In such cases, patient autonomy must be respected, and forced feeding or aggressive parenteral rehydration should not be employed. Emphasis should be placed on renewed efforts at pain control, sedation, and other comfort care for the associated discomfort.

"Slippery Slope" Concerns

Permitting assisted suicides opens the door to policies that carry far greater risks. For example, if assisted suicide is permitted, then there is a strong argument for allowing euthanasia. It would be arbitrary to permit patients who have the physical ability to take a pill to end their lives but not let similarly suffering patients die if they require the lethal drug to be administered by another person. Once euthanasia is permitted, however, there is a serious risk of involuntary deaths. Given the acceptance of withdrawal of life-sustaining treatment by proxies for incompetent patients, it would be easy for society to permit euthanasia for incompetent patients by proxy.

The Dutch experience with euthanasia demonstrates the risks of sanctioning physician-assisted suicide. In the Netherlands, there are strict criteria for the use of euthanasia that are similar to the criteria proposed for assisted suicide in the United States. In the leading study of euthanasia in the Netherlands, however, researchers found that, in about 28% of cases of euthanasia or physician-assisted suicide, the strict criteria were not fulfilled, suggesting that some patients' lives were ended prematurely or involuntarily. In a number of cases, the decision to end the patient's life was made by a surrogate decision-maker, since the patient had lost decision-making capacity by the time the decision to employ euthanasia was made.

Recommendations

In lieu of Resolution 3, A-93, the Council on Ethical and Judicial Affairs recommends that the following statements be adopted and the remainder of this report be filed:

1. Physician-assisted suicide is fundamentally inconsistent with the physician's professional role.
2. It is critical that the medical profession redouble its efforts to ensure that dying patients are provided optimal treatment for their pain and other discomfort. The use of more aggressive comfort care measures, including greater reliance on hospice care, can alleviate the physical and emotional suffering that dying patients experience. Evaluation and treatment by a health professional with expertise in the psychiatric aspects of terminal illness can often alleviate the suffering that leads a patient to desire assisted suicide.
3. Physicians must resist the natural tendency to withdraw physically and emotionally from their terminally ill patients. When the treatment goals for a patient in the end stages of a terminal illness shift from curative efforts to comfort care, the level of physician involvement in the patient's care should in no way decrease.
4. Requests for physician-assisted suicide should be a signal to the physician that the patient's needs are unmet and further evaluation to identify the elements contributing to the patient's suffering is necessary. Multidisciplinary intervention, including specialty consultation, pastoral care, family counseling, and other modalities, should be sought as clinically indicated.
5. Further efforts to educate physicians about advanced pain management techniques, both at the undergraduate and graduate levels, are necessary to overcome any shortcomings in this area. Physicians should recognize that courts and regulatory bodies readily distinguish between use of narcotic drugs to relieve pain in dying patients and use in other situations.

APPENDIX C

AMERICAN MEDICAL ASSOCIATION

Opinion 2:20 Withholding or Withdrawing Life-Prolonging Medical Treatment (formerly Opinion 2.18)

Reprinted from Council on Ethical and Judicial Affairs, American Medical Association, *Current Opinions* 13 (1989)

The social commitment of the physician is to sustain life and relieve suffering. Where the performance of one duty conflicts with the other, the preferences of the patient should prevail. If the patient is incompetent to act in his own behalf and did not previously indicate his preferences, the family or other surrogate decisionmaker, in concert with the physician, must act in the best interest of the patient.

For humane reasons, with informed consent, a physician may do what is medically necessary to alleviate severe pain, or cease or omit treatment to permit a terminally ill patient to die when death is imminent. However, the physician should not intentionally cause death. In deciding whether the administration of potentially life-prolonging medical treatment is in the best interest of the patient who is incompetent to act in his own behalf, the surrogate decisionmaker and physician should consider several factors, including: the possibility for extending life under humane and comfortable conditions; the patient's values about life and the way it should be lived; and the patient's attitudes toward sickness, suffering, medical procedures, and death.

Even if death is not imminent but a patient is beyond doubt permanently unconscious, and there are adequate safeguards to confirm the accuracy of the diagnosis, it is not unethical to discontinue all means of life-prolonging medical treatment.

Life-prolonging medical treatment includes medication and artificially or technologically supplied respiration, nutrition or hydration. In treating a terminally ill or permanently unconscious patient, the dignity of the patient should be maintained at all times. (I,III,IV,V)

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	COMPLAINT FOR DECLARATORY JUDGMENT AND INJUNCTIVE RELIEF
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

INTRODUCTION

This action seeks a declaratory judgment of unconstitutionality and an injunction barring enforcement of the assisted suicide provision of RCW 9A.36.060. The relevant portion of the statute provides: "A person is guilty of promoting a suicide attempt when he knowingly . . . aids another person to attempt suicide." The statute--by making assistance by physicians, family, or others a felony--prevents competent, terminally ill adults from exercising the right to choose to hasten inevitable death and thus avoid a lingering, painful death. The statute denies these individuals the liberty and privacy to decide what to do with their own bodies and lives and forces them to endure pain, anguish, and loss of dignity.

I. JURISDICTION AND VENUE

1.1 This action is brought under the United States Constitution and 42 U.S.C. § 1983 for violation of rights secured by the Fourteenth Amendment. The action seeks a declaratory judgment under 28 U.S.C. § 2201 and an order enjoining enforcement of the assisted suicide provision of the statute.

1.2 This Court has jurisdiction under 28 U.S.C. § 1331. Venue in this district is proper under 28 U.S.C. §§ 1391 and 2201.

II. PARTIES AND INTERESTS AFFECTED

2.1 Compassion in Dying ("Compassion") is a Washington nonprofit corporation. Compassion assists competent, terminally ill adults who choose to hasten their deaths. Plaintiff Jane Roe has requested the assistance of Compassion. Compassion provides information, counseling, emotional support, and personal presence at the time of death. Compassion operates pursuant to a stringent protocol, one requirement being that the medications be self-administered by the individual seeking to hasten death.

Compassion fears that a criminal prosecution could be brought against it for its activities in assisting dying persons to exercise their choice to hasten inevitable death.

2.2 Jane Roe is a mentally competent, terminally ill adult. Jane Roe is a 69-year-old resident of King County, Washington, who is dying of cancer. Jane Roe is a physician and understands her condition and prognosis. Her cancer has metastasized into her bones and is growing rapidly throughout her entire skeleton. She has undergone surgery, chemotherapy, and radiation therapy, but the cancer is incurable. Jane Roe has been almost entirely confined to bed for the past seven months. Movement is intensely painful and her muscles have become so weak they cannot support her. To attempt to alleviate the extreme pain associated with bone cancer, Jane Roe relies on increasing doses of morphine. Even so, she is frequently in severe pain. Jane Roe has been advised and understands that her illness is a terminal one, that she is in the terminal phase of disease and that there is no chance of recovery. Jane Roe is fully aware of the ravages the disease wreaks and the prospect she faces of progressive loss of bodily function and integrity and increasing pain and suffering. Jane Roe seeks necessary medical assistance in the form of medications prescribed by her doctor to be self-administered for the purpose of hastening her death. Jane Roe desires the presence of members of plaintiff Compassion when she acts to hasten her death.

2.3 John Doe is a 44-year-old artist, living in King County, Washington suffering from AIDS. Mr. Doe has a T-cell count of four, leaving him vulnerable to all manner of infections with almost no natural ability to fight them. Mr. Doe has cytomegalovirus retinitis, which has caused him to lose approximately 70% of his vision to date and will result in blindness. Loss of vision is fatal to Mr. Doe's vocation and avocation, painting. Mr. Doe has

been hospitalized for AIDS-related pneumonia on several occasions. Mr. Doe suffers from chronic skin infections, sinusitis and grand mal seizures related to AIDS. Mr. Doe experiences extreme fatigue and his ability to care for himself is rapidly diminishing. Mr. Doe served as the primary caregiver for his long-term companion who recently died of AIDS at home in Mr. Doe's care. Mr. Doe witnessed firsthand the pain, suffering and loss of bodily function, integrity and personal dignity the disease causes. John Doe has been advised and understands that his illness is a terminal one, that he is in the terminal phase of the disease and that there is no chance of recovery. John Doe desires medical assistance in the form of medications prescribed by his doctor to be self-administered for the purpose of hastening his death.

2.4 James Poe is a mentally competent, terminally ill adult. James Poe is a 69-year-old resident of King County, Washington, who suffers from chronic obstructive pulmonary disease ("COPD") involving emphysema, bronchitis, and asthma. James Poe also suffers from heart failure caused in part by his COPD. The COPD makes it extremely difficult for James Poe to get enough air. He is connected to an oxygen tank at all times and is required to aspirate medications for hours each day to assist his breathing. He regularly experiences panic attacks associated with the sensation of suffocating and must take medication to calm this terror. James Poe's heart failure causes swelling of his lower extremities, resulting in lost mobility and pain. James Poe's only comfortable moments in life are when he is asleep; however, he can only sleep for two to three hours at a time. James Poe saw his mother die a slow, agonizing death and desires to avoid such a death himself. James Poe has been advised and understands that his illness is a terminal one, that his illness is incurable, and that he is, or soon will be, in the terminal

phase of the disease. When death is imminent and his suffering too great, James Poe wants the right to choose to hasten his inevitable death with medications prescribed by his doctor for that purpose.

2.5 Harold Glucksberg, M.D., is a physician licensed in the State of Washington who practices medicine in a major medical center in Seattle. Dr. Glucksberg specializes in the care of patients with cancer. Many of his patients are terminally ill and suffer severe and chronic pain. Approximately five to ten percent of his patients have cancer related to AIDS. In the regular course of his medical practice, Dr. Glucksberg encounters competent, terminally ill patients who express interest in the voluntary self-termination of life. Under certain circumstances, it would be consistent with Dr. Glucksberg's medical practice standards to assist these patients' decision to hasten death through the prescription of medications. RCW 9A.36.060 prevents Dr. Glucksberg from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths. Dr. Glucksberg asserts his own constitutional rights and those of his patients.

2.6 Abigail Halperin, M.D., is a physician licensed in the State of Washington who practices family medicine in Seattle. Some of Dr. Halperin's patients are terminally ill. On occasion she encounters competent, terminally ill patients who express interest in the voluntary self-termination of life. Under certain circumstances, it would be consistent with Dr. Halperin's medical practice standards to assist these patients' decision to hasten death through the prescription of medications. RCW 9A.36.060 prevents Dr. Halperin from exercising her best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own

deaths. Dr. Halperin asserts her own constitutional rights and those of her patients.

2.7 Thomas A. Preston, M.D., is a physician licensed in the State of Washington who practices medicine in Seattle. Dr. Preston is a cardiologist and is Chief of the Cardiology Division at a major medical center. Dr. Preston treats patients who are terminally ill and, on occasion, encounters competent, terminally ill patients who express interest in the voluntary self-termination of life. Under certain circumstances, it would be consistent with Dr. Preston's medical practice standards to assist these patients' decision to hasten death through the prescription of medications. RCW 9A.36.060 prevents Dr. Preston from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths. Dr. Preston asserts his own constitutional rights and those of his patients.

2.8 Peter Shalit, M.D., Ph.D., is a physician licensed in the State of Washington who practices internal medicine in Seattle. Approximately thirty percent of his patients suffer from AIDS, an incurable disease. AIDS patients typically suffer from recurrent infections that wear the body down. Many AIDS patients develop cancer. Cancer of the lungs is common among AIDS patients, causing extreme shortness of breath and the terrifying sensation of suffocating. AIDS patients have typically witnessed the deaths of other persons from AIDS and are aware of the course the disease takes. Many of Dr. Shalit's competent, terminally ill patients express interest in voluntary self-termination of life. Under certain circumstances, it would be consistent with Dr. Shalit's medical practice standards to assist these patients' decision to hasten death through the prescription of medications. RCW 9A.36.060 prevents Dr. Shalit from exercising his best professional judgment to prescribe medications to these patients in dosages that

would enable them to act to hasten their own deaths. Dr. Shalit asserts his own constitutional rights and those of his patients.

2.9 The State of Washington is a governmental entity.

2.10 The Attorney General of the State of Washington, Christine Gregoire, is the chief law enforcement officer of the State of Washington and acts under color of the law in enforcing RCW 9A.36.060. She is sued in her official capacity and as representative of all law enforcement officers in the State.

2.11 There exists an actual, justiciable controversy among these parties as to the validity of the statute.

III. CAUSES OF ACTION

3.1 The Fourteenth Amendment protects the right of competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs and thereby avoid pain and suffering. The right to make this choice is a fundamental right and is entitled to the strongest degree of constitutional protection.

3.2 The Fourteenth Amendment protects the right of physicians to practice medicine consistent with their best professional judgment, including using their skills and powers to facilitate the exercise of the decision of competent, terminally ill adults to hasten inevitable death by prescribing suitable medications for the patient to self-administer for that purpose.

3.3 RCW 9A.36.060 denies plaintiffs the equal protection of the laws by denying them the right to choose to hasten inevitable death, while terminally ill persons whose treatment includes life support are able to exercise

this choice, with necessary medical assistance, by directing termination of such treatment.

3.4 Plaintiffs have no adequate remedy at law and face imminent and irreparable loss of their rights. Plaintiffs continue to undergo unnecessary pain and anguish. Absent expedited consideration and prompt injunction against enforcement of RCW 9A.36.060, plaintiffs will continue to suffer substantial and irreparable harm and their rights will be finally and fully denied before this Court can rule.

IV. PRAYER FOR RELIEF

WHEREFORE, plaintiffs request that this Court grant the following relief:

4.1 A declaration that the assisted suicide provision of RCW 9A.36.060 is invalid under the United States Constitution.

4.2 A declaration that the assisted suicide provision of RCW 9A.36.060 violates 42 U.S.C. § 1983.

4.3 An order permanently enjoining defendants, and all who act in concert with them, from enforcing the assisted suicide provision of RCW 9A.36.060.

4.4 An award of plaintiffs' costs, expenses, and reasonable attorneys' fees pursuant to 42 U.S.C. § 1988.

4.5 Such other and further relief as this Court deems just.

DATED: January 24, 1994.

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	DECLARATION OF RALPH MERO, M.DIV., D.D.
Defendants.	)	

RALPH MERO declares:

1. I am the Executive Director of Compassion in Dying, a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am an ordained Unitarian Universalist minister with graduate degrees from Meadville Lombard Theological School at the University of Chicago. I have been employed in parish ministry with a local congregation and also in community miniseries in health care administration. I am an experienced counselor and trainer of counselors, and have extensive experience in dealing with the personal, familial, and societal aspects of death and dying.

3. Compassion in Dying is a nonprofit charitable organization incorporated in Washington State in April 1993 for the purpose of providing information and counseling to mentally competent, terminally ill adult patients--and their families--in situations where the patients are considering the option of hastening inevitable death. These services are provided at no charge.

4. Terminally ill patients contact Compassion in Dying seeking assistance in shortening the period of suffering before death, and all end-of-life decisions are made by the patient. The family must concur with the patient's decision to hasten death in order for Compassion to be involved. These hastened deaths are facilitated by drugs obtained by, and self-administered by, the patient.

5. Compassion in Dying has stringent eligibility requirements and provides its services only to individuals who are determined by independent medical judgment to be mentally competent and in the end stage of their disease. The eligibility criteria of Compassion are contained in our Guidelines and Safeguards and are set forth as Exhibit 1.

6. Compassion in Dying has stringent Protocol describing the process for assisting with the hastened deaths

of eligible individuals. That Protocol is set forth as Exhibit 2.

7. With members of our Board of Directors, I have been present at several hastened deaths when requested by terminally ill patients and their families. Our presence is provided so that these patients do not have to die alone or to provide emotional support for any family members who are also present.

8. Plaintiff Jane Roe has requested my presence and that of one of our Board members at the time she acts to hasten her death. She is eligible under our criteria. An interview I conducted with Jane Roe on January 20, 1994, about her medical condition and her desires regarding her dying process was video recorded. Plaintiff Jane Roe is very desirous that her true identity not be divulged to the press and public. A complete and unedited copy of that recording will be submitted as soon as a protective order is entered prohibiting disclosure of Jane Roe's true identity.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, WA, this 1st day of February, 1994.

/s/
RALPH MERO, M.Div., D.D.

COMPASSION IN DYING
PO Box 16483 - Seattle, WA 98116 - 202/624-2775

GUIDELINES AND SAFEGUARDS FOR ASSISTED SUICIDE

A. GUIDELINES

1. Who is eligible?
   a. The patient's condition must be considered terminal in the judgment of the patient's primary-care physician; i.e., the patient suffers from an incurable condition which, according to reasonable medical judgment, will result in death within a reasonable period of time, regardless of continued treatment.
   b. The patient's condition must cause severe, unrelenting suffering which the patient finds unacceptable and intolerable.
   c. The patient must understand the condition, prognosis, and types of comfort care which are available as alternatives to suicide.
   d. The patient's condition and prognosis must be confirmed by one or more physicians who review the records and examine the patient, to the extent that these are possible without compromising the dignity of the patient.
2. Quality of care being received.
   a. It must be clear that the patient's suffering and request for assisted suicide are not the result of inadequate hospice or comfort care.

   b. It must also be clear that the patient's request for assisted suicide is not motivated by lack of adequate health insurance or other economic concerns.
3. The process of requesting assistance.
   a. The request for assistance with suicide must originate with the patient. The request must be made in writing or on videotape on three (3) occasions, with an interval of at lest 48 hours between the second and third requests.
   b. All requests and records will be kept confidential.
   c. Any indication of uncertainty or ambivalence on the part of the patient will cancel the process leading toward assisted suicide.
   d. Requests may not be made through advance directives or by a health-care surrogate, attorney-in-fact, or any other person.
4. Mental health considerations.
   a. Evaluation by a mental-health professional may be obtained to ensure that the patient's request is not motivated by depression, emotional distress, or mental illness.
   b. The patient must be capable of understanding the decision and its implications and must take responsibility for the decision.
5. Family and religious considerations.
   a. If the patient has family members or others with whom he or she is in close personal relationship, their approval must be obtained. Assistance with suicide will not be provided

if there is expressed disapproval by members of the immediate family.

b. Spiritual and emotional counseling may be offered or arranged, depending on the patient's background and beliefs.

6. Who can assist?

The patient may ask for and receive assistance from the individuals in whom he or she has the most confidence and with whom he or she is the most comfortable. Volunteer health-care personnel and others will develop a relationship with the patient in order to become assured that a hastened death is the most appropriate outcome, given the condition and suffering of this particular patient.

B. <u>SAFEGUARDS</u>

1. Terminally ill persons who meet the medical, emotional, and situational criteria for assisted suicide, as outlined in the Guidelines for Assisted Suicide, must make a documented request for assistance with their own suicide, stating in detail the nature of the assistance they need.

2. Three requests must be made. The patient's initial request for assistance must be made in writing or on videotape. This must be followed by two additional requests in writing or on videotape, with at least 48 hours between the second and third requests. Such requests cannot be made through advance directives or by health-care surrogates, family members, or persons other than the patient.

3. COMPASSION representatives trained in working with the terminally ill will meet with the patient making the application--and his or her immediate family, if possible. Copies of the patient's medical records and other pertinent information will be requested.

4. The consulting physician will, through examination of the patient and review of the medical records, verify both the terminal prognosis and the patient's decision-making capacity. This may include consultation with the patient's primary-care physician. The consulting physician will be Board certified or will have equivalent professional experience.

5. If the physician reviewing the case determines a need to rule out depression or any other emotional factors which may indicate confused judgment, the physician shall request an evaluation by a qualified mental-health professional. In such an instance, no effort to assist with suicide will proceed until the assessment has been made and has confirmed the patient's capacity to understand the situation, and until the physician is convinced that the decision is both voluntary and rational. During the course of this process, the patient may receive in-depth counseling and emotional support, but there shall be no effort to assist with suicide during this review.

6. The reviewing physician will ascertain that the request for assistance with suicide does not result from inadequate hospice, palliative, or comfort care, or from inadequate efforts to control pain. If unmanaged pain is an issue, alternative or more intensive palliative care will be recommended.

7. Any sign of indecision or uncertainty on the part of the patient, or opposition on the part of the immediate family, will cancel the process leading toward assisted suicide.
8. The physician and others who have reviewed the records and interviewed the patient will meet in case conference to consider if assistance is needed and warranted. The decision of this group to proceed with assistance must be unanimous.
9. The patient may request that representatives of COMPASSION be present during his or her suicide to provide emotional support and assist with the patient's predetermined plan for ending life. If this is requested, two representatives of COMPASSION will be present. One will keep a written record of the times and events leading up to the moment of death.
10. The actual means of suicide will vary according to the underlying condition of the terminally ill patient and the types of medication available. Assistance with suicide under these safeguards will not involve any means of hastening death which rely on violence.
11. Following an assisted suicide, ongoing emotional and/or spiritual support will be offered to surviving family members or others who so request. Information may also be provided about grief and bereavement resources available in the community.
12. To assure that the process of dying is humane and respectful of the patient's innate sense of human dignity, there shall be no breach of confidentiality disclosing the identity of a patient who has

received assistance with suicide or the identity of persons who provided assistance.

COMPASSION IN DYING

PO Box 16483 - Seattle, WA 98116 - 202/624-2775

PROTOCOL FOR ASSISTED DYING

1. Receipt of initial request for information from patient or family, usually by phone.

2. Personal interview with patient, and family if possible, by Executive Director or Board member to explore alternatives and make preliminary determination that patient meets the requirements for assistance from COMPASSION. During this interview, the patient may complete the **FIRST FORMAL REQUEST FOR ASSISTANCE**, in writing or videorecorded.

3. Assignment of Case Review Team (CRT) consisting of:

    1. Executive Director or substitute from Board of Directors
    2. Nurse, mental health professional, or other person experienced in working with the terminally ill.
    3. Trained volunteer, selected to serve as primary liaison with patient, plus physician from Advisory Committee to serve as consultant to CRT.

4. Provision of counseling and emotional support, with second exploration of alternatives.

    Patient must continue determination to commit suicide as only appropriate course of action.

5. **MEDICAL REVIEW.** Examination of patient and medical records by an independent physician to confirm that patient meets medical requirements for assistance from COMPASSION. Consultation with primary care physician, if at all possible.

6. First review by CRT and report to Executive Director or a Board Review Committee appointed for this purpose.

7. **SECOND FORMAL REQUEST FOR ASSISTANCE** from patient, followed by further counseling and emotional support. Third exploration of alternatives. Discussion of specific plan for suicide by prescription medications.

8. Second review by CRT and report to Board Review Committee, if patient plans to continue with suicide.

9. **THIRD FORMAL REQUEST FOR ASSISTANCE** from patient. *At least 48 hours must transpire between 2nd and 3rd requests.*

10. Third review by CRT and report to Board Review Committee.

    Development of plan for assistance, with clear understanding of COMPASSION'S limits and agreement of family members.

11. Further counseling to be sure that patient wishes to proceed with suicide.

    Fourth review of alternatives.

12. Presence at the time of death if patient is determined to commit suicide and so requests.

COMPASSION IN DYING PROTOCOL FOR ASSISTED SUICIDE

1. Receipt of initial request for information from patient or family, probably by phone.
2. Personal interview with patient, and family if possible, by Executive Director or Board member to explore alternatives and make preliminary determination that patient meets the requirements for assistance from COMPASSION. During this interview, the patient may complete the FIRST FORMAL REQUEST FOR ASSISTANCE, in writing or videorecorded.
3. Assignment of three person Case Review Team (CRT) consisting of:
    1. Executive Director or substitute from Board of Directors
    2. Nurse, mental health professional, or other person experienced in working with the terminally ill.
    3. Trained volunteer, selected to serve as primary liaison with patient, plus physician from Advisory Committee to serve as consultant to CRT.
4. Provision of counseling and emotional support, with second exploration of alternatives.
   Patient must continue determination to commit suicide as only appropriate course of action.
5. **MEDICAL REVIEW.** Examination of patient and medical records by an independent physician to confirm that patient meets medical requirements for assistance from COMPASSION. Consultation with primary care physician, if at all possible.

6. First review by CRT and report to Executive Director or a Board Review Committee appointed for this purpose.
7. **SECOND FORMAL REQUEST FOR ASSISTANCE** from patient, followed by further counseling and emotional support. Third exploration of alternatives. Discussion of specific plan for suicide by prescription medications.
8. Second review by CRT and report to Board Review Committee, if patient plans to continue with suicide.
9. **THIRD FORMAL REQUEST FOR ASSISTANCE** from patient. *At least 48 hours must transpire between 2nd and 3rd requests.*
10. Third review by CRT and report to Board Review Committee. Development of plan for assistance, with clear understanding of COMPASSION'S limits and agreement of family members.
11. Further counseling to be sure that patient wishes to proceed with suicide.
    Fourth review of alternatives.
12. Presence at the time of death if patient is determined to commit suicide and so requests.
13. On-going emotional support for the family, if requested.

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C91-119
Plaintiffs,	)	DECLARATION OF JANE ROE
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

JANE ROE declares:

1. I am a plaintiff in this matter, am competent to testify, and do so of my own personal knowledge.

2. Jane Roe is not my real name; I use this fictitious name in this lawsuit to protect my privacy.

3. I am 69 years old and am a pediatrician. I received my medical degree from Vanderbilt Medical School in 1953. I have been married for 38 years to my husband who is also a physician. We have 2 grown children.

4. In 1973 a lump in my right breast was determined to be malignant. I underwent surgery to remove my right breast. I then underwent chemotherapy to further treat the breast cancer.

5. To my knowledge, I was free of cancer until the fall of 1988. Efforts to stop the cancer since then have not succeeded. At this time, the cancer has metastasized into my bones and is now found throughout my skeleton, including my skull, spine, rib cage and pelvis.

6. I underwent radiation therapy with fairly good results until early 1993, at which point the cancer became much more painful. Surgery is not an option and chemotherapy cannot be repeated due to bone marrow depression.

7. Beginning in June 1993 and continuing to the present, I have been almost entirely bedridden due to a combination of pain associated with the cancer in my bones and the diminishing strength in my muscles as I use them less and less. I am now unable to walk or use the commode or a bed pan without assistance. My legs are swollen with severe edema and I can scarcely use them. I have developed bed sores as a result of being bed bound. My appetite is poor and I take medications to prevent nausea and vomiting. My vision is often impaired. My left hand is weak. Drowsiness is a frequent problem. I

have an indwelling urinary catheter and am sometimes incontinent of bowel.

8. The pain associated with this cancer is unrelenting. It is a constant, dull pain, interspersed with sharp, severe pain provoked by movement. The site of pain moves as the disease advances.

9. I take a variety of medications to manage pain. There is a tension between taking enough medication to alleviate the pain and retaining an alert mental state. It is not possible to eliminate my pain and for me to retain an alert state.

10. I have experienced a variety of adverse side effects with each treatment regimen. Chemotherapy caused bone marrow depression, fatigue, severe bladder irritation, diarrhea and nausea. Radiation caused further bone marrow depression, requiring repeated blood transfusions; severe bleeding; diarrhea; fatigue; severe sore throat; and first degree skin burns. My medications cause severe constipation, drowsiness, difficulty concentrating, and dry mouth.

11. Since the cancer was diagnosed to the present I have pursued medical treatment. The fact that both I and my spouse are doctors has enhanced my understanding of my condition and options. I believe that I have received good treatment and have benefited from it. At this point, it is clear to me, and based on the advice of my doctors, that I am in the terminal phase of this disease. It has been explained to me and I understand that there are no cures. The sole medical treatment available is pain relief, which is not able to eliminate my frequent and severe pain.

12. In November 1993 my doctor referred me for hospice care, and I am receiving home hospice care. To be eligible to receive hospice care I must have no more than six months life expectancy.

13. At the point at which I can no longer endure the pain and suffering associated with my cancer I want to have drugs available for the purpose of hastening my death. I no longer am licensed to prescribe drugs myself, and do not know the best combination of substance and dosage.

14. At the time I act to hasten my death I would like members of Compassion in Dying to be with me and members of my family to provide counseling, emotional support, and any necessary ancillary assistance, such as mixing the drugs to be consumed. I do not want to have to die alone and unsupported. I have made three formal written requests to Compassion in Dying for their assistance as is required by that organization. I participated in a video-taped interview conducted by Ralph Mero of Compassion in Dying on January 20, 1994, which I understand will be submitted in this proceeding. That interview also accurately describes my medical condition and my desires with regard to my dying process.

15. I am mentally competent. I have no current or historical mental health problems that would impair my decision-making powers regarding end-of-life decisions.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Mercer Island, this 1st day of February, 1994.

_____

A/K/A JANE ROE

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	DECLARATION OF JOHN DOE
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

JOHN DOE declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. John Doe is not my real name; I use this fictitious name in this lawsuit to protect my privacy.

3. I am 44 years old and am an artist.

4. I was diagnosed HIV positive in 1988 and diagnosed with AIDS in 1991. I have a T-cell count of 4, which means I have almost no immune system function.

5. My first major illness associated with AIDS was pneumocystic carinii pneumonia, which caused me to be hospitalized for approximately six weeks in the summer of 1992.

6. I experienced a second bout with AIDS-related pneumonia, nocardia, in January 1994. This illness required hospitalization for a period of almost two weeks.

7. I have had cytomegalovirus (CMV) retinitus [sic] since May 1993. This is destroying my retinas, and I am losing my vision. At the present time, I have lost 70% of my vision. I have been advised that I will lose 100% of my vision from this condition.

8. Loss of vision is fatal to my ability to paint.

9. I suffer chronic, severe sinus infections which I am unable to overcome because of my compromised immune state.

10. Also related to my AIDS, I suffer chronic skin infections and grand mal seizures.

11. In addition, my medical conditions leave me extremely fatigued. I live alone and I have noticed that my ability to care for myself is rapidly diminishing.

12. My long-term companion died of AIDS in June 1991. He was bedridden for six months prior to his death. He remained at home throughout his illness, and I was his

primary caregiver. He suffered from wasting syndrome, and at the time of his death he weighed only 60 pounds. I cared for his every physical need. I witnessed first-hand the pain, suffering, anguish, and loss of dignity of dying from AIDS. That experience, as well as my observation of my grandfather's death from diabetes, which included multiple amputations, loss of vision and loss of hearing, have led me to decide that when my inevitable dying process becomes unbearable, I wish to hasten that process.

13. My doctor has advised me that I am in the terminal phase of this disease. It has been explained to me and I understand that there are no cures.

14. It is my desire that my physician prescribe suitable drugs for me to consume for the purpose of hastening my death.

15. I am mentally competent. I have no current or historical mental health problems that would impair my decision-making powers regarding end-of-life decisions.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at [not legible], this 1st day of February, 1994.

_____

A/K/A JOHN DOE

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	
vs.	)	DECLARATION OF JAMES POE
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

JAMES POE declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. James Poe is not my real name; I use this fictitious name to protect my privacy.

3. I am 69 years old. I was a sales representative in the steel industry for all of my working life. My hobby of choice was fishing and, until my illness, I was an avid fisherman year-round.

4. I have suffered from emphysema for approximately nine years. My emphysema makes it extremely difficult for me to breathe. I have a constant sensation of suffocation.

5. In 1990, I underwent lung capacity testing and my doctor advised me that I had only 10 to 20 percent of lung function at that time.

6. I am connected to an oxygen tank at all times and I aspirate medications through a nebulizer for hours every day to facilitate my breathing.

7. Notwithstanding these measures to improve my breathing, I continue to be unable to get enough air and suffer panic associated with air hunger. I take medications, including morphine, regularly to calm the terror associated with the sensation of suffocation.

8. In addition to my emphysema, I suffer from heart failure related to my pulmonary disease. This condition obstructs the flow of blood to my extremities. I experience extreme leg pain and discomfort and am housebound.

9. The only comfortable times are when I am asleep. However, I have difficulty sleeping longer than two to three hours at a time.

10. Because of my condition, I am restricted to my home and have been for the past year.

11. I am not eligible for lung transplant because of my heart condition.

12. My doctors have advised me that I am in the terminal phase of this disease. It has been explained to me that there are no cures.

13. When my condition becomes unbearable, I wish to take drugs prescribed by my doctor for the purpose of hastening my death.

14. I am mentally competent. I have no current or historical mental health problems that would impair my decision-making powers regarding end of life decisions.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, Wa., this 1 day of Feb. 1., [sic] 1994.

_____

A/K/A JAMES POE

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	DECLARATION OF HAROLD GLUCKSBERG, M.D.
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

HAROLD GLUCKSBERG declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor specializing in oncology, which is the treatment of persons with cancer.

3. I received my medical education at the Buffalo Medical School in the State of New York, graduating in 1964.

4. I completed a Fellowship in hematology and oncology in the Department of Medicine at the University of Washington School of Medicine in Seattle, Washington in 1970.

5. I then completed a Senior Fellowship in oncology in the Department of Medicine at the University of Washington School of Medicine in Seattle, Washington in 1971.

6. I served as an Instructor and Senior Fellow in Medicine at the University of Washington School of Medicine in Seattle, Washington from 1971 through 1973.

7. During the years 1973 through 1975, I served as Assistant Professor of Medicine at the University of Washington School of Medicine.

8. From the years 1975 through 1976, I served as a Senior Lecturer in the Department of Medicine at the University of Dar Es Salaam in Tanzania, Africa.

9. I then served as Assistant Professor in Medicine at the University of Washington School of Medicine in Seattle, Washington and held that position through 1979.

10. During the years 1976 through 1979, I was an Assistant Member of the Fred Hutchinson Cancer Research Center in Seattle, Washington.

11. I served as an Attending Physician in the emergency departments of three New York hospitals during the years 1980 through 1982.

12. I acted as Regional Medical Officer for the Peace Corps in Senegal, Mali, Gambia, and Mauritania during the years 1982 through 1984.

13. Since 1985, I have practiced primary care adult medicine specializing in medical oncology at the Pacific Medical Center in Seattle, Washington. During this period, I have also served as Clinical Assistant Professor at the University of Washington School of Medicine.

14. I am certified by the National Board of Medical Examiners (1965), the American Board of Internal Medicine (1974), and the American Board of Medical Oncology (1979). I am licensed to practice medicine in Washington, New York and New Jersey.

15. I have published numerous articles and papers in medical journals. My full curriculum vitae is attached hereto as Exhibit 1.

16. Dying of cancer is usually very slow, occurring over months rather than days or weeks. General problems faced by most cancer patients include progressive loss of appetite, weight, and independence, and increasing pain and fatigue. In addition, there are a myriad of other problems related to the specific sites of the cancer. Those with cancer of the lung, for example, face terrible shortness of breath and cough. Those with a brain cancer often have excruciating headaches, seizures and progressive loss of brain function. Cancer usually progresses steadily and slowly. The cancer patient is fully aware of his or her present suffering and anticipates certain future suffering. The terminal cancer patient faces a future that can be terrifying. Near the end, the cancer patient is usually bedridden, rapidly losing mental and physical functions, often in excruciating, unrelenting pain. Pain management at this stage often requires the patient to choose between enduring unrelenting pain or surrendering an alert mental

state because the dose of drugs adequate to alleviate the pain will impair consciousness. Many patients will choose one or the other of these options; however, some patients do not want to end their days either wracked with pain or in a drug-induced stupor. For some patients pain cannot be managed even with aggressive use of drugs.

17. I occasionally encounter patients dying of cancer who have no chance of recovery, whom I know to be mentally competent and able to understand their condition, diagnosis, and prognosis who desire to hasten their deaths and avoid prolonged suffering. These patients cannot hasten their death without assistance or could do so but only at the risk of increased pain and anguish to themselves and their families.

18. It is my professional judgment that the decision of such a patient to shorten the period of suffering before death can be rational and on occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death.

19. Under the statute prohibiting assisting suicide, fulfillment of this professional responsibility might expose me to criminal prosecution. The statute deters me from treating these patients as I believe I should.

20. One patient of mine, whom I will call Jones, a fictitious name, was a 34-year old man dying of AIDS and lymphoma. I treated him during the last year of his life, the final four months of which were excruciatingly painful. Patient Jones had wasted away and suffered from CMV retinitis, which causes blindness. Patient Jones did not want to end his days in a lingering drug-induced stupor, the option available to him if he entered the hospital and was given continuously increasing amounts of morphine intravenously. Patient Jones requested that I prescribe drugs that he could take to hasten his inevitable death. As his

treating doctor, it was my professional opinion that patient Jones was competent to choose to shorten his period of suffering before death by taking drugs prescribed for that purpose. I felt that I should accommodate his request by prescribing such drugs. However, because of the statute I was unable to assist him in this way. Patient Jones ended his life by jumping from the West Seattle bridge. His physical condition was such that he could not have accomplished this without assistance, and it is my belief that he was aided by close family members. Such a violent end of life is inhumane for the patient and for his loved ones. In my opinion, patient Jones suffered more by dying in this manner than he would have if he had been able to self-administer drugs prescribed for the purpose of hastening his death.

21. Furthermore, patient Jones ran the risk of failing in his effort to hasten his death without medical assistance and could have suffered grievously if his effort had been unsuccessful.

22. Another patient of mine, whom I will call Smith, a 60-year-old man dying of metastatic lung cancer, was suffering terribly and requested that I prescribe drugs that he could take to hasten his inevitable death. Patient Smith was opposed to experiencing a lingering death with consciousness impaired by morphine. As his treating doctor, it was my professional opinion that patient Smith was competent to choose to shorten his period of suffering before death by taking drugs prescribed for that purpose. I felt that I should accommodate his request by prescribing such drugs. However, because of the statute, I was unable to assist him. Patient Smith's death dragged on for seven days, most of which was spent in a morphine-induced stupor, exactly as he had feared and desired to avoid.

23. The statute kept these patients from making fundamental decisions about medical care, their lives, their suffering and their dignity. The statute kept me from fulfilling my right and duty as a physician to relieve suffering and provide all the care in my professional power.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, Washington, this 2nd day of February, 1994.

HAROLD GLUCKSBERG, M.D.

Name: Harold Glucksberg, M.D.

Birthdate:	October 18, 1939
Birthplace:	Montreal, Canada
Domestic Status	Married, 2 children
Citizenship:	Naturalized, 1957, Brooklyn, New York

Education:

1956 - 1957:	City College of New York
1957 - 1960:	Queens College of New York
1960 - 1964:	M.D., Buffalo Medical School, New York

Research and Professional Experience:

1964 - 1965:	Internship in Medicine, King Country Hospital,New York City
1965 - 1966:	Resident in Medicine, King Country Hospital New York City
1966 - 1969:	Internal Medicine, U.S. Army
1969 - 1970:	Fellow in Hematology and Oncology, Department of Medicine, University of Washington School of Medicine, Seattle, Washington
1970 - 1971:	Senior Fellow in Onocology [sic], Department of Medicine, University of Washington School of Medicine, Seattle, Washington

EXHIBIT 1

1971 - 6/73:	Instructor and Senior Fellow in Medicine, University of Washington School of Medicine, Seattle, Washington
7/73 - 6/75:	Assistant Professor of Medicine, University of Washington School of Medicine
7/75 - 6/76:	Senior Lecturer, Department of Medicine, University of Dar Es Salaam, Tanzania, Africa, (Sabbatical)
7/76 - 12/79:	Assistant Professor of Medicine, University of Washington School of Medicine, Seattle, Washington
8/76 - 12/79:	Assistant Member, Fred Hutchinson Cancer Research Center, Seattle, Washington
4/80 - 10/80:	Assistant Professor of Nutrition, Tulane Medical School, Co-Director National Nutrition Center of Zaire
10/80 - 7/81:	Attending Physician, Emergency Center Maimonides Medical Center, Brooklyn, New York
9/81 - 7/82:	Attending Physician, Emergency Center, Coney Island Hospital, Brooklyn, New York
1/82 - 7/82:	Attending Physician, Emergency Department, Brooklyn Jewish Hospital, Brooklyn, New York
8/82 - 11/84:	Regional Medical Officer for Peace Corps (Senegal, Mali, Gambia and Mauritania)
1/85 - Present:	Primary Care, Adult Medicine, Medical Oncology Pacific Medical Center, Seattle, Washington

Clinical Assistant Professor University of Washington, School of Medicine

Military Status:

1966 - 1969: Internal Medicine, U.S. Army

Honors:

Gibson Honor Society; Mosby Book Award

Board Certification:

1965	Diploma of the National Board of Medical Examiners
1974	American Board of Internal Medicine
1979	American Board of Medical Oncology

Licensure:

Washington, New York, New Jersey

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	DECLARATION OF ABIGAIL HALPERIN, M.D.
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

ABIGAIL HALPERIN declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor specializing in family medicine and practice in Seattle, Washington.

3. I received my medical education at Albert Einstein College of Medicine in New York, completing my degree in 1983. Following graduation from medical school I completed a family practice residency at Swedish Hospital Medical Center in Seattle, Washington.

4. I then served as a staff physician at an international clinic in Kathmandu, Nepal from 1986 until 1987.

5. In 1987 I became a staff physician at Pacific Medical Clinic in Bellevue, Washington.

6. In 1988 I moved my practice to Uptown Family Practice in Seattle, Washington, which became Providence Uptown Medical Care Center in May 1992, where I continue to practice. I hold the position of Medical Director and Staff Physician.

7. I am licensed to practice medicine in the state of Washington; am certified by the American Board of Family Practice (1988); and am a member of the King County Medical Society and the American Academy of Family Physicians.

8. I hold an appointment as a Clinical Faculty member at the University of Washington School of Medicine, a position I have held since 1990.

9. In my medical practice, I occasionally treat patients with terminal illnesses, including cancer and AIDS.

10. Patients dying of both these diseases experience a steady degeneration of functional ability, increasing pain, fatigue and mental anguish.

11. At a certain point in the progression of many cancer patients' illness, there are no further curative treatment options. There are no curative treatment options for AIDS patients.

12. When curative treatments are not available, a variety of care options to maximize the patient's well being and comfort are available, however, at a certain point in the course of these diseases most patients are not able to be kept comfortable while maintaining a clear consciousness; the amount of pain medication necessary to resolve the pain causes loss of mental alertness and sometimes consciousness. Thus, these patients face the choice of enduring intractable pain or surrendering an alert mental state. Many patients will choose one or the other of these options; however, some patients do not want to end their days either wracked with pain or in a drug-induced stupor.

13. For some terminally ill patients, physical pain is a concern secondary to their mental anguish over their helplessness and loss of independence, dignity and autonomy.

14. I occasionally encounter terminally ill patients who have no chance of recovery whom I know to be mentally competent and able to understand their condition, diagnosis, and prognosis who desire to shorten the period of suffering before death. These patients either cannot hasten their death without assistance or could do so only at the risk of increased anguish and pain to themselves and their families.

15. It is my professional judgment that the decision of such a patient to shorten the period of suffering before inevitable death can be rational and on rare occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death as

an alternative to continuing palliative care if the patient so chooses.

16. Under the statute prohibiting assisted suicide, my fulfillment of this professional responsibility might expose me to criminal prosecution. The statute deters me from treating these patients as I believe I should and deprives my patients of their freedom to choose this type of medical care.

17. I recently had an experience where, in my professional judgment, a terminally ill patient of mine should have been able to choose to hasten her inevitable death with drugs prescribed for that purpose but was denied that option by the statute:

a. Patient Smith (a fictitious name) was a woman in her eighties with metastatic breast cancer.

b. Patient Smith had surgeries to remove both breasts and two courses of chemotherapy.

c. Notwithstanding this aggressive surgical and medical treatment, the cancer metastasized and was causing progressive weakness, fatigue and loss of functional abilities.

d. Patient Smith had always been active and independent; she expressed that she did not want to lose her independence and end her life in a hospital, subject to futile medical care; she desired the ability to control the manner and time of her death and requested that I prescribe drugs that she could take to hasten her inevitable death.

e. As patient Smith's primary care doctor, it was my professional opinion that she was mentally competent to choose to shorten the

period of suffering before death. I felt that I should accommodate her request by prescribing such drugs. However, I was deterred from assisting this patient by the statute.

f. Patient Smith acted on her own to hasten her death, by securing a plastic bag over her head and suffocating.

g. In my opinion it is likely that patient Smith suffered more by dying in this manner than she would have if she had been able to self-administer drugs prescribed for the purpose of hastening her death.

h. Furthermore, patient Smith ran the significant risk of failing in her effort to hasten her death without medical assistance and could have suffered disastrous consequences if her effort had been unsuccessful, such as oxygen deprivation-induced brain damage, which would have left her significantly mentally impaired and dependent on the type of intensive, invasive medical care and technology she most feared.

i. The statute kept patient Smith from making fundamental decisions about her medical care, her life and autonomy, her suffering, her dignity, and her death. The statute kept me from fulfilling my right and duty as a physician to relieve suffering and provide all the care in my professional power.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, WA, this 2 day of February, 1994.

ABIGAIL HALPERIN, M.D.

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	
vs.	)	DECLARATION OF THOMAS A. PRESTON, M.D.
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

THOMAS A. PRESTON declares:

1. I am a plaintiff in this matter, am competent to testify, and do so of my own personal knowledge.

2. I am a medical doctor specializing in cardiology and am Chief of Cardiology at Pacific Medical Center in Seattle, Washington.

3. I received my medical education at the University of Pennsylvania, graduating in 1962.

4. Following graduation from medical school I completed an internship, residency and fellowship at the University of Michigan.

5. I served as a Special Research Fellow at the National Heart Hospital Institute of Cardiology in London, England, during 1967 and 1968.

6. Upon my return to the United States in 1968 I served as an Instructor of Internal Medicine, specializing in cardiology, at the University of Michigan through 1969. I then became Assistant Professor of Medicine at the University of Michigan and served in this capacity through 1972.

7. I served as Chief of the Cardiology Section at the Veterans Administration Hospital in Ann Arbor, Michigan, from 1968 through 1972.

8. From 1973 until 1980 I served as Associate Professor of Medicine at the University of Washington. Since 1980 I have held the position of Professor of Medicine at the University of Washington.

9. I served as Co-Director of the Division of Cardiology at Harborview Medical Center, Seattle, Washington from 1973 through 1975.

10. From 1975 through 1980 I served as Co-Director of cardiology at the United States Public Health Service Hospital in Seattle, Washington.

11. From 1980 through the present I have been Chief of the Cardiology Division at Pacific Medical Center in Seattle, Washington.

12. I have received numerous honors for medical teaching and writing and have published numerous articles and books in my field of professional expertise. My complete curriculum vitae is attached hereto as Attachment 1.

13. I am board certified in Internal Medicine (1971) and Cardiovascular Medicine (1974).

14. I am currently licensed to practice medicine in Washington. I am a Fellow of the American College of Cardiology and the American Heart Association Council on Clinical Cardiology.

15. In my medical practice I regularly treat patients dying from cardiopulmonary illnesses. Such patients commonly experience chest pain, breathlessness, dizziness, fainting and extreme weakness. The heart of this type of patient is so weak it can work no harder than it does at rest, rendering the patient unable to accomplish the smallest physical task or able to do so only with extraordinary effort, gasping for air. It is not uncommon, for example, for such patients to be unable to change position in bed. There is no chance of recovery for such patients unless a heart transplant, a treatment option available to only a small subset of patients, is performed. The terminal phase of heart failure can last for several months, and most patients know during that time that they are not eligible for a transplant.

16. I occasionally encounter terminally ill patients who have no chance of recovery, whom I know to be mentally competent and able to understand their condition, diagnosis, and prognosis, who desire to hasten their deaths and avoid prolonged suffering, and who cannot do so without

assistance or could do so but only at the risk of increased anguish and pain to themselves and their families.

17. It is my professional judgment that the decision of such a patient to shorten the period of suffering before inevitable death can be rational and on occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death.

18. Under the statute prohibiting assisted suicide, fulfillment of this professional responsibility might expose me to criminal prosecution. The statute has caused me to do less than I otherwise would for these patients.

19. The statute has resulted in patients of mine dying tortured deaths.

20. The following example is illustrative of situations I have experienced in my career:

a. Patient Jones (a fictitious name) had been in my care for approximately four years.

b. Patient Jones suffered for three months in the final stages of heart disease, unable to get enough air, gasping even under an oxygen mask worn at all times.

c. Patient Jones requested my assistance in hastening his inevitable death by prescribing drugs he could take for that purpose.

d. Patient Jones was not eligible for a transplant, and had no chance of recovery. The patient understood this.

e. Patient Jones was suffering terribly, and the suffering could not be relieved. It was my professional opinion as his treating doctor that patient Jones was mentally competent to make a choice with respect to shortening his

period of suffering before inevitable death. I felt I should accommodate his request.

f. Nonetheless, I was deterred from assisting patient Jones by the statute.

g. The statute kept the patient from making fundamental decisions about the patient's own medical care, his life, his suffering and his dignity. The statute kept me from fulfilling my right and duty as a physician to relieve suffering and provide all the care in my professional power.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, this 1 day of February, 1994.

THOMAS A. PRESTON, M.D.

CURRICULUM VITAE

THOMAS A. PRESTON, M.D.
SSN# 198-24-8933

Birth Date: June 17, 1933

Birthplace: Philadelphia, Pennsylvania

Citizenship: U.S.A.

Education:		
	Swarthmore College Swarthmore, Pennsylvania,	1951-55
	University of Pennsylvania Philadelphia, Pennsylvania	1958-62
	B.S. Electrical Engineering	1955
	M.D. University of Pennsylvania	1962

Marital: Married (Molly), two daughters

Military Service:

U.S. Army	1956-58

Postgraduate Training:

Internship:	University of Michigan Medical Center	1962-63
Residency:	University of Michigan Internal Medicine	1963-66
Fellowship:	University of Michigan	1966-67
Specialty:	Special Research Fellow National Heart Hospital Institute of Cardiology London, England	1967-68

ATTACHMENT 1

Faculty Positions:

Instructor in Internal Medicine (Cardiology), University of Michigan	1968-69
Assistant Professor of Medcicine [sic] University of Michigan	1969-1972
Associate Professor of Medicine University of Washington	1973-1980
Professor of Medicine University of Washington	1980-

Hospital Positions:

Chief, Cardiology Section Veterans Administration Hospital Ann Arbor, Michigan	1968-1972
Co-Director, Division of Cardiology Harborview Medical Center Seattle, Washington	1973-1975
Co-Director, Cardiology U.S.P.H.S. Hospital Seattle, Washington	1975-80
Chief, Cardiology Division Pacific Medical Center Seattle, Washington	1980-

Honors:

American College of Cardiology Young Investigator Award Second Place	1966
University of Michigan Medical Center Resident Achievement Award	1966
University of Michigan Medical School Senior Class Award for Best Teacher	1970, 1972
University of Michigan	1971

Distinguished Service Award	
University of Michigan Medical Center Resident Award to Outstanding Faculty Teacher	1972
University of Washington Medical School Senior Class Award to Outstanding Clinical Teacher	1974,75, 1977,78
The National Association of Science Writers "Science-in-Society" Journalism Award	1983

Administrative Service:

University of Michigan Medical School Senior Counselor	1970-72
University of Michigan Medical School Mentor, Class of 1974	

Board Certification:

Diplomate, American Board of Internal Medicine	1971
Subspecialty Board Certification: Cardiovascular	1974

Licensure:

Pennsylvania (inactive)	1963
Michigan (inactive)	1964
Washington	1973

Organizations:

Fellow
American College of Cardiology

Fellow, American Heart Association
Council on Clinical Cardiology

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	DECLARATION OF PETER SHALIT, M.D., Ph.D.
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

PETER SHALIT declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor and received my medical degree from the University of Washington in 1985.

3. Prior to obtaining my medical degree, I received a Ph.D. in Genetics from the University of Washington in 1981. While pursuing my Ph.D. I served as a National Science Foundation Fellow and a National Institute of Health Trainee.

4. After obtaining my medical degree I completed an internship in the Department of Psychiatry and a residency in the Department of Medicine at the University of Washington in Seattle, Washington.

5. From 1989 to 1990 I served as Chief Medical Resident at Providence Medical Center in Seattle, Washington.

6. Since 1990 I have been in private practice specializing in general internal medicine in Seattle, Washington. I hold staff privileges at Swedish Hospital Medical Center and Providence Medical Center.

7. I am certified by the American Board of Internal Medicine (1989) and am licensed to practice medicine in the State of Washington.

8. I have served as the Medical Director of the Seattle Gay Clinic since 1989.

9. I have served as a Clinical Instructor in Medicine in the Division of Allergy and Infectious Diseases, Department of Medicine, University of Washington since 1990.

10. I have served as Attending Physician at the Madison Clinic, an HIV clinic affiliated with Harborview Medical Center in Seattle, Washington, since 1990.

11. A substantial portion of my private practice involves treatment and care of persons with HIV infection and AIDS.

12. Infection with HIV, the Human Immunodeficiency Virus, produces progressive destruction of the immune system, leading to a condition known as the Acquired Immune Deficiency Syndrome, or AIDS, which is inevitably fatal. Persons with AIDS are vulnerable to a variety of unusual infections, cancers, and other syndromes such as dementia (progressive loss of cognitive function), wasting (chronic diarrhea/weight loss), and peripheral neuropathy (nerve damage causing burning or shooting pain in the limbs). Death is often preceded by a prolonged period of illness and debility, especially as medical science becomes better at preventing and treating AIDS-related infections.

13. Patients with AIDS may die in many different ways. Many suffer from Kaposi's Sarcoma, a common AIDS-related cancer. These patients frequently die from invasion of this cancer into the lungs, causing progressive difficulty breathing and ultimately death by suffocation. Many die of pneumonia, which also causes the patient to essentially suffocate. Many with wasting or dementia basically die of starvation and dehydration, a process that can take weeks and can be excruciating; some of the patients lose so much weight that they appear skeletal and their bones may break through their skin. Still others die as the result of some massive infection that resists treatment.

14. Many AIDS patients who will die of the above-described causes also suffer from conditions which themselves cause extreme pain and suffering. Examples include CMV retinitis, which leads to loss of vision and eventually blindness; neuropathy, which sometimes causes

pain so agonizing that it can be relieved only by a dosage of narcotics which impairs consciousness; Kaposi's Sarcoma of the skin, which can produce severe disfigurement and pain from swollen tissues and open, weeping skin lesions.

15. Medicines can palliate the dying process in many cases. The majority of the time, I am able to ameliorate the symptoms of a dying patient so that the patient can be relatively free from pain and discomfort while dying. However, in some cases, the pain, discomfort, and loss of dignity can be relieved only with drugs which render the patient unconscious; in some cases even such aggressive use of drugs does not bring relief. In my five years of practice I have had numerous AIDS patients receiving hospice care who repeatedly express frustration at how long the process is taking, and how painful, uncomfortable, and humiliating it is. Some of these patients have made repeated requests that their dying process be hastened.

16. I occasionally encounter terminally ill patients who have no chance of recovery whom I know to be mentally competent and able to understand their condition, diagnosis, and prognosis who desire to hasten their death and avoid prolonged suffering. These patients cannot hasten their death without assistance, or could do so but only at the risk of increased anguish and pain to themselves and their families.

17. It is my professional judgment that the decision of such a patient to shorten the period of suffering before death can be rational and on occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death.

18. Under the statute prohibiting assisted suicide, fulfillment of this professional responsibility might expose

me to criminal prosecution. The statute deters me from treating these patients as I believe I should.

19. The statute has resulted in patients of mine dying tortured deaths.

20. One patient of mine, whom I will call Smith, a fictitious name, lingered in the hospital for weeks, his lower body so swollen from oozing Kaposi's lesions that he could not walk, his genitals so swollen that he required a catheter to drain his bladder, his fingers gangrenous from clotted arteries. Patient Smith's friends stopped visiting him because it gave them nightmares. Patient Smith's agonies could not be relieved by medication or by the excellent nursing care he received. Patient Smith begged for assistance in hastening his death. As his treating doctor, it was my professional opinion that patient Smith was mentally competent to make a choice with respect to shortening his period of suffering before inevitable death. I felt that I should accommodate his request. However, because of the statute, I was unable to assist him and he died after having been tortured for weeks by the end-phase of his disease.

21. Such a prolonged dying period is inhumane to the patient, who must suffer against his wishes, and to the loved ones, who frequently express the belief that "we are kinder to our pets than we are to the terminally ill." After death, the survivors have guilt about the suffering their dying loved-one endured, and the doctor feels remorse that the patient's suffering could not have been better relieved.

22. More than once I have had an AIDS patient commit suicide relatively early in the course of the disease, apparently fearing that a death like patient Smith's will be their fate. Feeling unable to discuss their fears with me or with their family, and anticipating an illness which will end in unrelieved suffering without the possibility of assisted

voluntary exit, these individuals prematurely end their lives on their own, usually through a violent means. They leave behind grief-stricken family members who have not had the opportunity to say good-bye, and a doctor who wishes he could have prevented their premature death by committing to help them through the subsequent stages of their illness, including the promise of provision of the means of release from unbearable suffering should they so choose at that time.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, WA, this 1st day of February, 1994.

THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

KATHRYN L. TUCKER declares:

1. I am counsel to plaintiffs in this matter, am competent to testify and do so of my own personal knowledge.

2. The three terminally ill plaintiffs in this lawsuit appear with fictitious names. These individuals desire that their true identities not be revealed.

3. In support of Plaintiffs' Motion for Summary Judgment, declarations of each of the terminally ill plaintiffs are submitted.

4. The signature page of the declaration of each terminally ill plaintiff has been redacted to conceal the true name of the plaintiff. The originals of each of these signature pages are maintained at my office. This is necessary to maintain the privacy of the terminally ill plaintiffs.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, WA, this 2 day of February, 1994.

/s/
KATHRYN L. TUCKER

No. 88-605

IN THE

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1988

WILLIAM L. WEBSTER, et al.,
Appellants,

v.

REPRODUCTIVE HEALTH SERVICES, et al.,
Appellees.

On Appeal from the United States Court of Appeals for the Eighth Circuit

BRIEF OF THE AMERICAN MEDICAL ASSOCIATION, AMERICAN ACADEMY OF CHILD AND ADOLESCENT PSYCHIATRY, AMERICAN ACADEMY OF PEDIATRICS, AMERICAN COLLEGE OF OBSTETRICIANS AND GYNECOLOGISTS, AMERICAN FERTILITY SOCIETY, AMERICAN MEDICAL WOMEN'S ASSOCIATION, AMERICAN PSYCHIATRIC ASSOCIATION AND AMERICAN SOCIETY OF HUMAN GENETICS AS *AMICI CURIAE* IN SUPPORT OF APPELLEES

Of Counsel:

KIRK B. JOHNSON
EDWARD B. HIRSHFELD
DAVID ORENTLICHER
AMERICAN MEDICAL ASSOCIATION
535 N. Dearborn Street
Chicago, Illinois 60610

* Counsel of Record

EXHIBIT A

Accordingly, the statute is unconstitutional. See *Colautti v. Franklin*, 439 U.S. 379 (1979).

B. Section 188.205 of the Missouri statute, which the court of appeals held literally precludes a physician from "consulting," i.e., making any comment, about having an abortion unless necessary to save the mother's life, is unconstitutional. The statute clearly interferes with a physician's ethical obligations to discuss fully and accurately all information necessary to permit the patient to make an informed treatment choice. By mandating "a state-imposed blackout on the information necessary to make a decision" (851 F.2d at 1080), Section 188.205 forces a constitutionally impermissible "straightjacket" upon the physician's efforts fully to inform his or her patient. *City of Akron*, 462 U.S. at 445; *Planned Parenthood v. Danforth*, 428 U.S. 52 (1976).

ARGUMENT

I. INDIVIDUALS HAVE A FUNDAMENTAL RIGHT TO MAKE DECISIONS ABOUT THEIR MEDICAL CARE, AND STATE LAWS WHICH INTERFERE WITH THAT RIGHT CAN BE JUSTIFIED ONLY IF THEY ARE NARROWLY TAILORED TO FURTHER A COMPELLING STATE INTEREST.

Appellants and their *amici curiae*--particularly the United States--ask this Court to overrule a decision interpreting the Constitution: *Roe v. Wade*, 410 U.S. 113 (1973). In so doing, they ask the Court to take two major steps. First, they propose altering the balance struck previously by the Court between the interests of the pregnant woman and those of the state. Second, they ask the Court to declare that no fundamental privacy right exists in this case at all. They make this second, extraordinary request because they believe that the privacy right

recognized in *Roe* cannot properly be derived from the Constitution. See U.S. Brief at 9-24.

Given the diversity of views of *amici's* members, this brief does not take a position on whether the balance of interests struck in *Roe* should be modified. However, *amici* firmly believe that the Court should reject the invitation of the federal government to deny constitutional protection to the well-established right of privacy that this Court applied in *Roe v. Wade*.

In the first place, the holding of this Court on the privacy issue was a common sense application of settled constitutional principles to a situation where a woman must make an individual choice about a matter which the Court found would have profound implications for her health and life. Since the same profound individual implications the Court identified in 1973 still exist (see *supra* at 3-23), the decision should be reaffirmed. Second, the holding on the privacy issue simply reflected the historic tradition, embodied in our common law, of recognizing that all medical treatment decisions ordinarily should be made by the patient, after consultation with a physician concerning the risks and benefits of treatment. Third, the holding on the privacy issue is fully consistent with the holdings of this Court in applying other abstract constitutional principles to medical treatment situations, where the Court has always respected the dignity of the individual and his or her right to obtain desired medical care. Each of these reasons independently supports the Court's holding that the decision to terminate a pregnancy implicates a fundamental right.

A. The Individual's Fundamental Privacy And Liberty Right To Be Free Of Governmental Interference Extends To Medical Treatment Decisions.

This Court has long recognized that, as part of the "liberty" protected by the Constitution's Due Process Clauses, the Constitution guarantees to each individual certain areas or zones of privacy which remain free from unjustified government interference or intrusion. See *Carey v. Population Serv. Int'l*, 431 U.S. 678, 684 (1977). The Court's privacy rulings rest on the theory that the constitutional text does not, on its face, specify all rights that warrant constitutional protection from executive or legislative intervention.[27]

The essence of the liberty interest denominated as the right to privacy is the concept that an individual in certain circumstances has a right to be let alone, *Olmstead v. United States*, 277 U.S. 438, 478 (1928) (Brandeis, J., dissenting), and that the individual must thus have "independence in making certain kinds of important decisions."

---

[27] The concept of "liberty" in the Due Process Clause of the Fourteenth Amendment is a "broad" one. *Board of Regents v. Roth*, 408 U.S. 564, 572 (1972). For this reason, it has long been recognized as protecting certain personal choices. *See, e.g., Pierce v. Society of Sisters*, 268 U.S. 510, 534-535 (1925); *Meyer v. Nebraska*, 262 U.S. 390, 399-400 (1923).

Moreover, privacy is hardly the only value that has received constitutional recognition without being expressly specified in the constitutional text. For example, this Court found a right to travel in the Constitution without requiring any explicit textual basis. *Shapiro v. Thompson*, 394 U.S. 618 (1969). In addition, although "federalism" is nowhere mentioned in the Constitution, the doctrine is part of the constitutional scheme. *See Coyle v. Smith*, 221 U.S. 559, 565 (1911); *Garcia v. San Antonio Metro. Transit Auth.*, 469 U.S. 528 (1985).

Whalen v. Roe, 429 U.S. 589, 599-600 (1977). As this Court has recognized, that right encompasses matters concerning marriage and procreation. The specter of governmental agents unnecessarily interfering with such inherently private, individual decisions is antithetical to basic concepts of individual liberty in a free society. See *Griswold v. Connecticut*, 381 U.S. 479 (1965); *Loving v. Virginia*, 388 U.S. 1 (1967); *Eisenstadt v. Baird*, 405 U.S. 438 (1972). See also *Skinner v. Oklahoma ex rel. Williamson*, 316 U.S. 535, 541 (1942).[28]

Moreover, and of particular significance to *amici* and their members, the right to privacy which is derived from the concept of liberty also encompasses the right of an individual to make decisions about his or her medical care and treatment. As our discussion of the health implications of pregnancy and abortion makes clear, the Court's assumptions about the importance of this particular medical treatment decision are as true today as they were in 1973. Women face physiological and psychological risks and burdens when they become pregnant. Under this Court's decisions, individual choices become fundamental rights because they have a powerful and perhaps irreversible

---

[28] The United States seems to accept *Griswold v. Connecticut*, 381 U.S. 479 (1965), as a legitimate decision on the ground that enforcement of a statute prohibiting the use of contraceptives would require wholly impermissible governmental prying into the private lives of individuals. (U.S. Brief at 12 n.9.) Having accepted *Griswold*, however, the government's textual theory (U.S. Brief at 23-28) for rejecting *Roe v. Wade* collapses, because this Court did not locate the right recognized in *Griswold* in a specific constitutional provision and could not, as the United States suggests, have located it in the Fourth Amendment alone. *See Carey v. Population Serv. Int'l*, 431 U.S. 678, 687 (1977). The United States' brief therefore bears "witness that the right of privacy which passes for recognition here is a legitimate one." *Griswold*, 381 U.S. at 485.

impact on who we are and who we will become. See *Fitzgerald v. Porter*, 523 F.2d 716, 719-20 (7th Cir. 1975): "These cases do not deal with the individuals' interest in protection from unwarranted public attention, comment, or exploitation. They deal, rather, with the individual's right to make certain unusually important decisions that will affect his own, or his family's destiny." Accordingly, it seems plain that the health effects of pregnancy and abortion, by themselves, should be sufficient to support the holding in *Roe* that the woman's choice should be constitutionally protected.

In holding that the abortion decision involved a fundamental right, the Court correctly noted that considerations of protecting the woman's health were vital. Specifically, the Court observed that:

> The detriment that the State would impose upon the pregnant woman by denying this choice altogether is apparent. Specific and direct harm medically diagnosable even in early pregnancy may be involved.

Roe, 410 U.S. at 153. Similarly, in explaining the basis for the protections afforded first trimester abortions, the Court identified the important health concerns implicated by the woman's choice. "[U]ntil the end of the first trimester mortality in abortion may be less than mortality in normal childbirth . . . . This means . . . that . . . the attending physician, in consultation with his patient, is free to determine, without regulation by the State, that, in his medical judgment, the patient's pregnancy should be terminated." *Id.* at 163. See also *City of Akron v. Akron Center for Reproductive Health, Inc.*, 462 U.S. 416, 429 n.11 (1983).

The full extent of the importance attached to the pregnant woman's interest in being able to preserve her life and health is perhaps most apparent, however, in the

context of third trimester abortions. At this stage, the State's interest in protecting fetal life is considered compelling. *Roe*, 410 U.S. at 163-165. Nonetheless, this Court has recognized that protection of the pregnant woman's health interests is still considered "paramount." *Thornburgh v. American College of Obstetricians and Gynecologists*, 476 U.S. 747, 769 (1986). Consequently, while *Roe* otherwise permitted proscription of third trimester abortions, it did not do so in instances where abortion "is necessary to preserve the life or health of the mother." *Roe*, 410 U.S. at 163-164.

The importance of the health considerations underlying *Roe's* holdings has led this Court to observe:

> In concluding that the freedom of a woman to decide whether to terminate her pregnancy falls within the personal liberty protected by the Due Process Clause, the Court in *Wade* emphasized the fact that the woman's decision carries with it significant personal health implications--both physical and psychological. . . . [I]t could be argued that the freedom of a woman to decide whether to terminate her pregnancy for health reasons does in fact lie at the core of the constitutional liberty identified in *Wade*.

Harris v. McRae, 448 U.S. 297, 316 (1980).

To the extent that the right in this case depends upon the importance to the woman of the consequences of her choice (see *supra* at 3-23), the decision whether or not to have an abortion should be considered a fundamental right.

B. This Court's Recognition That Every Individual Has A Fundamental Right To Make Decisions About His Or Her Medical Treatment Is Supported By The History And Traditions Of This Nation.

The Court's treatment of the woman's choice as a protected interest under the Constitution is supported by more than a common sense application of this Court's liberty and privacy rulings to the medical facts surrounding abortions. The Court's handling of the constitutional status of a medical treatment decision by the individual is also supported independently by the traditional respect this nation has always granted to the individual's interest in making personal medical treatment decisions in consultation with a physician.

The substantive guarantees afforded by the Due Process Clause encompass the protection of interests that are "deeply rooted in this Nation's history and tradition." *Moore v. City of East Cleveland*, 431 U.S. 494, 503 (1977) (opinion of Powell, J.). In deciding whether a particular interest is so embedded, the Court's judgment has historically been informed by whether the interest was protected at common law. The Court has stated that the liberty guaranteed by the Fourteenth Amendment encompasses "the right of the individual . . . to enjoy those privileges long recognized in common law as essential to the orderly pursuit of happiness by free men." *Meyer v. Nebraska*, 262 U.S. 390, 399 (1923).

In this regard, it is significant that: "No right is held more sacred, [n]or is more carefully guarded, by the common law, than the right of every individual to the possession and control of his own person." *Union Pacific Ry. v. Botsford*, 141 U.S. 250, 251 (1891). An individual's interest in being permitted to make personal decisions

affecting bodily security, free from government coercion, is thus a traditionally protected interest.[29]

The interest in protecting the physical security and health of one's body is an ancient one. Blackstone classified this interest as one of the three principal articles--later embodied in our Constitution as "life, liberty and property" --constituting the "rights of the people of England." "[T]he preservation of a man's health from such practices as may prejudice or annoy it . . . are rights to which every man is entitled. . . ." W. Blackstone, *Commentaries* 1:134 (1765).

Indeed, both the common and statutory law of this country have consistently recognized the importance of the individual's interest in being able freely to make decisions designed to limit risks to his or her own health. In the law of torts, this interest is reflected, for example, in the requirement of informed consent to medical treatment. The principle which supports this doctrine is that the patient has a right to weigh whatever risks attend the particular treatment and to decide if they are intolerable.

---

[29] Our general tradition of protecting the individual against coerced medical decisions posing a threat to health is more relevant than the narrow history of abortion regulation for determining the fundamental rights issue before this Court. That history of abortion is misleading because restrictions on the practice arose during an era when the procedure was dangerous. As noted in *Roe*, 410 U.S. at 148-49, "when most criminal abortion laws were first enacted, the procedure was a hazardous one for women . . .[;] [a]bortion mortality was high." Even then, abortion was frequently permitted when superceding [sic] health risks were present, *e.g.*, when necessary to preserve the life of the woman. *Id.* at 138-39. However, "[m]odern medical techniques have altered this situation," as this Court recognized in *Roe*, *id.* at 149, so that abortion restrictions that once served to protect the woman's health could now jeopardize her health. *See supra* at 8-13.

> The root premise is the concept, fundamental in American jurisprudence, that '[e]very human being of adult years and sound mind has a right to determine what shall be done with his own body. . . .'

Canterbury v. Spence, 464 F.2d 772, 780 (D.C. Cir.), *cert. denied*, 409 U.S. 1064 (1972) (quoting *Schloendorff v. Society of New Hosp.*, 211 N.Y. 125, 129, 105 N.E. 92, 93 (1914) (Cardozo, J.)). Accord *Natanson v. Kline*, 186 Kan. 393, 410, 350 P.2d 1093, 1106, *clarified*, 187 Kan. 186, 354 P.2d 670 (1960); F. Harper & F. James, *The Law of Torts* § 17.1 (2d ed. 1986).

Similarly, in order to guard the patient's ability to take steps essential to protecting his or her health, virtually every state in this country has recognized a physician-patient privilege. "The rationale of this privilege is to promote health by encouraging a patient to fully and freely disclose all relevant information which may assist the physician in treating the patient." *Huzjak v. United States*, 118 F.R.D. 61, 63 (N.D. Ohio 1987). See 8 J. Wigmore, *Evidence* § 2380a (McNaughton ed. 1961).

These examples illustrate this country's long-standing tradition of treating potential infringements upon an individual's ability to protect his or her health and autonomy with the utmost seriousness. That tradition is, in turn, constitutionally reflected in the Due Process Clause's substantive protection of life and liberty. "[T]he right to personal security constitutes a 'historic liberty interest' protected substantively by the Due Process Clause." *Youngberg v. Romeo*, 457 U.S. 307, 315 (1982). Accord *Ingraham v. Wright*, 430 U.S. 651, 673 (1977) ("Among the historic liberties so protected was a right to be free from, and to obtain judicial relief for, unjustified intrusions on personal security"). For that reason, the right to protect

one's bodily security, and to make medical decisions to that end, has always been deemed to require more than a mere minimal justification for government infringements. Under those principles, a woman's choice whether or not to terminate her pregnancy should be deemed a fundamental liberty interest protected by the Due Process Clause.

C. This Court's Recognition That Every Individual Has A Fundamental Right To Make Decisions About His Or Her Medical Treatment Is Supported By This Court's Approach To The Protection Of Health Under Specific Constitutional Provisions.

The United States criticizes (U.S. Brief at 12) the holding that a woman has a fundamental right embodied in the liberty component of the Due Process Clause to choose the medical treatment that she wishes her physician to provide as not "rooted in accepted principles." But the legal reasoning that supports the right in this context is essentially the same as the approach taken by this Court in applying other constitutional provisions, with language that is equally inexact, to issues concerning the provision of medical treatment generally. Thus, in the Fourth Amendment context, this Court has held that "our society recognizes a significantly heightened privacy interest" when government interference in medical decisions creates any increased risk to individual health. *Winston v. Lee*, 470 U.S. 753, 767 (1985).

In *Winston*, the government sought to perform a surgical procedure to remove a bullet from a criminal defendant's body. Presented with conflicting evaluations of the risk of the surgery, the court of appeals concluded that "the statistical risk of actual physical harm . . . is . . . very low [and could] be considered minimal." *Lee v. Winston*,

717 F.2d 888, 900 (4th Cir. 1983). Nonetheless, this Court reasoned:

> The operation sought will intrude substantially on respondent's protected interests. The medical risks of the operation, although apparently not extremely severe, are a subject of considerable dispute; *the very uncertainty militates against finding the operation to be "reasonable."*

Winston, 470 U.S. at 766 (emphasis supplied). The Court held that, in the absence of compelling countervailing interests, the very possibility of even marginal medical risk precluded the endangering government action. *Id.* As a matter of constitutional interpretation, the *Winston* Court's derivation of a privacy interest from the Fourth Amendment's general protection against "unreasonable searches and seizures" to protect a patient's medical treatment choice cannot be distinguished from the *Roe* Court's derivation of a privacy interest from the liberty clause to protect a conceptually identical right to make a medical treatment choice.

Similarly, the constitutional value attached to protection of personal health is also evident in this Court's decisions under the Eighth Amendment. This Court has held that the Eighth Amendment's proscription of cruel and unusual punishments is violated by "deliberate indifference to serious medical needs of prisoners." *Estelle v. Gamble*, 429 U.S. 97, 104 (1976). Thus, even an individual whose liberty interest has been constitutionally abridged retains a privacy right to receive medical care as part of the abstract protection against cruel and unusual punishment. Again, there is no basis for arguing that the process of recognizing this fundamental right of a prisoner to receive medical care is derived from anything more concrete or more settled

than the right to make an individual treatment decision which can be drawn from the Due Process Clause.

Not only is the process of analysis under these other provisions similar to what *amici* propose here for the Due Process Clause, but also the entire fabric of the Court's holdings regarding medical treatment decisions reflects a basic pattern in the Constitution which supports the right asserted in this case. See *Memorial Hosp. v. Maricopa County*, 415 U.S. 250, 259 (1974) (medical care constitutes "a basic necessity of life"). Repeated protection for a right under disparate sections of the Constitution indicates that the right is fundamental to and underlies the design of the Constitution itself. That is the case here.

The consistent close scrutiny by this Court of government attempts to interfere with personal interests in health and bodily security is not inadvertent. Rather, it demonstrates that these interests warrant the "fundamental" constitutional status that they have been granted throughout this Court's decisions. In sum, the Court should reaffirm both that there is a right of privacy generally incorporated into the "liberty" component of the Due Process Clauses and that the right extends to individual medical treatment decisions, including whether or not to terminate a pregnancy.

D. State Interference With A Fundamental Right Triggers Searching Judicial Examination Pursuant To The Compelling State Interest Test.

State "interference" with or "infringement" of a fundamental right triggers a searching judicial examination pursuant to the compelling state interest test. See *Roe v. Wade*, 410 U.S. at 155; *City of Akron*, 462 U.S. at 427. See also, *Shapiro v. Thompson*, 394 U.S. 618 (1969); *Miami Herald Publishing Co. v. Tornillo*, 418 U.S. 241

(1974). A state law which infringes a fundamental right is "presumptively unconstitutional," *Harris v. McRae*, 448 U.S. 297, 312 (1980) (quoting *Mobile v. Bolden*, 446 U.S. 55, 76 (1980)). It cannot withstand judicial scrutiny unless the state has a "compelling interest" and, in the abortion context, two elements of the compelling state interest test are met: the specific means chosen must be "reasonably related" to the state's compelling goals and thus consistent with sound medical practice; and those specific requirements must be carefully tailored to the state's purposes. Failure to satisfy either of these elements is fatal to the state's effort to infringe the woman's fundamental right. *City of Akron*, 462 U.S. at 426-31.

In much fundamental rights adjudication, a holding of infringement will doom a law because the state has no constitutionally recognized "compelling interest" in such an infringing enactment. In the abortion context, however, this Court has clearly recognized two "compelling" goals which can justify regulation of the decision whether or not to terminate a pregnancy. Thus, the state has a compelling interest in protecting the mother's health. *Roe v. Wade*, 410 U.S. at 162-163; *City of Akron*, 462 U.S. at 428. Similarly, the state has a compelling interest in preserving the potential life of the fetus. *Roe v. Wade*, 410 U.S. at 162-163; *City of Akron*, 462 U.S. at 428.

However, the presence of a compelling purpose does not, *ipso facto*, ensure the constitutionality of the state's particular infringement of the fundamental right. As the Court explained in *City of Akron*, 462 U.S. at 434, "the existence of a compelling state interest in health, however, is only the beginning of the inquiry." Thus, a state's requirements must be "reasonably relate[d]" to the compelling goals. *Roe v. Wade*, 410 U.S. at 163; *City of Akron*, 462 U.S. at 434 n.19 (quoting *Doe v. Bolton*, 410 U.S. 179, 194 (1973). Typically, this "reasonably related"

element of the test involves an inquiry into whether the state's requirements have a reasonable medical basis. "The State's discretion to regulate . . . does not, however, permit it to adopt abortion regulations that depart from accepted medical practice." *City of Akron*, 462 U.S. at 431. See *Planned Parenthood v. Ashcroft*, 462 U.S. 476, 487 (1983) (Powell, J.); *Planned Parenthood v. Danforth*, 428 U.S. 52, 78-79 (1976).

Second, state laws that interfere with or burden the right must be carefully tailored to the state's objective. See *Roe v. Wade*, 410 U.S. at 165; *Planned Parenthood v. Ashcroft*, 462 U.S. at 485 n.8; *City of Akron*, 462 U.S. at 438. The law must, in other words, not be overbroad and must, therefore, advance the compelling state interest without any additional and unnecessary interference with the fundamental right. *City of Akron*, 462 U.S. at 438-439.

Application of the compelling state interest test and its elements, and the striking of any balance between fundamental rights and compelling state interests, ultimately turns, of course, on the nature of the fundamental rights that are involved. The United States, however, proposes that in determining the permissible scope of state interference with the abortion decision, under either a "compelling interest" or "undue burden" analysis, this Court should only take account of the effects of such interference on the woman's "interest in procreational choice." U.S. Brief at 22 n.16. This proposed approach is deeply flawed. It suggests that the Court should ignore the woman's fundamental interest in medical treatment decisions. Instead, abortions would be permitted only if the woman was "coerced" into becoming pregnant.

The United States' proposed analysis leaves no room for the woman to terminate a pregnancy to protect her own health or even to save her life. Obviously, denying her an

abortion at that point is wholly irrelevant to the prior decision "whether or not to beget or bear a child," U.S. Brief at 22 (quoting *Carey v. Population Serv. Int'l*, 431 U.S. 678, 685 (1977)), which the government asserts should be the only "liberty interest" at stake. But, this Court already has held that the state cannot insist that there be a "trade-off" between the life of the mother and the survival of the fetus. *Thornburgh v. American College of Obstetricians and Gynecologists*, 476 U.S. 747, 768 (1986), *Colautti v. Franklin*, 439 U.S. 379, 400 (1979).[30]

It is difficult to accept that the government believes that serious threats to a woman's health or even her life are not relevant in assessing the balance between the woman's right and the state's interests. The manifest shortsightedness of the government's reasoning undermines completely its proposed approach. In our view, it would be inconsistent with any reasonable notion of a "narrowly tailored" statute to hold that, in order to protect its interest in potential life, a state may, regardless of circumstances and irrespective of the severity of the threat to the woman's life or health, flatly prohibit all women from choosing, in consultation with their physicians, to have an abortion performed.

---

[30] The direct one-to-one trade-off is what distinguishes this case from *Jacobson v. Massachusetts*, 197 U.S. 11 (1905). It is one thing to hold that the state can compel an individual to face a limited health risk in order to protect a significant number of other individuals and where even the specific individual's health is placed at significant risk if he or she is allowed to "opt out." It is fundamentally different to say that society can impose a direct and immediate burden and risk on one individual in order to benefit another.

II. SECTIONS 188.029 AND 188.205 OF THE MISSOURI STATUTE UNCONSTITUTIONALLY INFRINGE THE FUNDAMENTAL RIGHT OF PATIENTS TO MAKE MEDICAL DECISIONS IN CONSULTATION WITH THEIR PHYSICIANS.

Given the fundamental nature of the woman's right in being able to decide whether to terminate a pregnancy, there are two types of state action which trigger heightened judicial scrutiny. First, heightened scrutiny is required when state laws interfere with the *woman's* decisions whether to enter into a physician-patient relationship with respect to abortion and whether or not to terminate her pregnancy. This Court has recognized specific situations when the compelling interest test should be applied: when a state abortion law imposes certain additional health risks on the woman; when a state law attempts to influence the woman's informed choice between abortion or childbirth through the physician-patient relationship; or when a state law imposes costs on a woman unique to the abortion procedure and out of proportion to any health benefits.[31]

Second, heightened scrutiny is appropriate when state laws interfere with a *physician's* ability to enter into a physician-patient relationship, to counsel the patient and to provide medically indicated care and treatment pertaining to the patient's pregnancy termination decision. Thus, there is infringement when a state law interferes with a physician's best medical judgment or is otherwise inconsistent with the state of medical knowledge and sound

---

[31] *See, e.g., Harris v. McRae*, 448 U.S. at 328 (White, J., concurring) (additional health risks); *City of Akron*, 462 U.S. at 444 (influence woman's choice); *Planned Parenthood v. Danforth*, 428 U.S. at 69 (share decision-making authority); and *City of Akron*, 462 U.S. at 435, 438, 447 (costs unique to abortion).

IN THE
SUPREME COURT OF THE UNITED STATES
OCTOBER TERM, 1988

No. 88-605

WILLIAM L. WEBSTER, et al.,
Appellants,

v.

REPRODUCTIVE HEALTH SERVICES, et al.,
Appellees.

On Appeal from the United States Court of Appeals For the Eighth Circuit

BRIEF FOR BIOETHICISTS FOR PRIVACY AS AMICUS CURIAE SUPPORTING APPELLEES

Interest of Amicus

Amicus is an ad hoc group of 57 philosophers, theologians, attorneys, and physicians from 20 states and the District of Columbia who teach medical ethics to medical students and/or physicians, or who have a major professional interest in medical ethics. Although the precise beliefs and practices of the members of this group vary, as do their professional and religious backgrounds, the members believe that permitting competent adults to make important, personal medical decisions in consultation with their physician is a fundamental principle of medical ethics, and that the doctor-patient relationship deserves the constitutional protection this Court has afforded it under the right of privacy. Medical ethics, individual autonomy, and professional accountability will all be fostered by preserv-

ing the right of privacy. Compromising the right of privacy, and substituting the state as the decisionmaker in the doctor-patient relationship, would undermine principles of medical ethics and compromise principles of good patient care and good medical practice to the detriment of physicians and patients alike.

Summary of Argument

I

Missouri asks this Court to renounce a right of privacy which this Court has described as "older than the Bill of Rights." This Court has provided lawmakers with a consistent and coherent set of parameters for identifying what the right of privacy protects, especially with respect to decisions about abortion. Abandonment of the right of privacy would permit state legislatures to control personal decisions that are now made in the doctor-patient relationship. Without the protection of the right of privacy, each legislature would be free to impose its values by dictating the outcome of what are and should be personal medical care decisions.

II

A. As this Court has recognized, a woman's right to decide to terminate a pregnancy is exercised within the context of the doctor-patient relationship. The ancient tradition of safeguarding the privacy and freedom of unfettered communication between doctor and patient is embodied in ethical precepts which the law recognizes and supports. The Missouri legislation is a direct, governmental attack on this relationship, thereby jeopardizing patients' rights, and compromising physicians' ethical obligations to their patients.

B. Both legal and ethical principles require physicians to discuss health risks that are caused or exacerbated by pregnancy and information concerning possible fetal genetic

or congenital disorders. The Missouri statutes prohibit such discussions by publicly-funded physicians if they may lead to a decision to abort. Physicians' speech is censored and patients are deprived by the state of critical information on which to base decisions about pregnancy. The ethical practice of medicine is made unlawful and the health and well-being of pregnant patients is likely to be seriously jeopardized as a result. Missouri gives "any taxpayer" of the state standing to enforce its restrictions in the courts. Thus, whatever is said or done in the privacy of the doctor-patient relationship is subject to public scrutiny at any time.

C. Without the constitutional right of privacy, there would be no constitutional principle that would prevent a state from prohibiting patients from using *any* medically recognized and accepted treatments which a majority of legislature happens to disfavor. Worse, a state would be free to prevent physicians from even telling their patients about such treatment. This differs dramatically from a state's merely refusing to pay for certain treatments.

Advances in medical science have made possible new methods of treatment for a wide variety of medical conditions, often controversial, and with the potential for profound consequences for the patient. Scientific progress has increased the importance of the doctor-patient relationship, for it is only in this context that difficult personal medical decisions can be made taking into consideration all of the medical and personal consequences that may ensue. Thus there is even more reason today to uphold the constitutional protection of decisions made in the privacy of the doctor-patient relationship than when *Roe v. Wade* was decided. For these reasons the decision of the court of appeals should be affirmed.

Argument

I. THE CONSTITUTIONAL RIGHT OF PRIVACY WHICH PROTECTS THE RIGHT TO MAKE PERSONAL MEDICAL DECISIONS IS A FUNDAMENTAL RIGHT AND A CENTRAL AMERICAN VALUE WHICH IS "IMPLICIT IN THE CONCEPT OF ORDERED LIBERTY" AND THE COURT SHOULD CONTINUE TO PROTECT IT.

In *Griswold v. Connecticut*, 381 U.S. 479 (1965), this Court, in striking down a state statute forbidding married couples from using contraceptives, stated, "We deal with a right of privacy older than the Bill of Rights--older than our political parties, older than our school system." *Id.* at 486. In explaining this fundamental constitutional right of privacy, the Court recognized that there are decisions that are so personal, so private, and that so profoundly affect the individuals who must live with the consequences, that the state has no power to interfere in those decisions, absent a compelling interest. Since *Griswold*, this Court has applied the right of privacy to protect an unmarried person's right to decide "whether to bear or beget a child," *Eisenstadt v. Baird*, 405 U.S. 438, 453 (1972), and decisions whether or not to terminate a pregnancy. *Roe v. Wade*, 410 U.S. 113 (1973).

When the State of Missouri and the United States as amicus curiae ask this Court to overrule *Roe v. Wade*, they are asking that the most private decision that can be made by any individual be removed from that affected individual and turned over to a state legislature. We respectfully submit that this Court should not take such action.

In *Griswold* this Court recognized that the private relationship between a husband and wife prevented the state from intruding on their contraceptive decisions. In *Roe* the Court recognized the privacy of the doctor-patient relationship. While *Roe* further defined a woman's right to make

reproductive decisions, it also recognized that the pregnant woman required the advice and counsel of a licensed physician. Thus, in *Roe* the Court concluded that during the first trimester "the attending physician, in consultation with his patient, is free to determine, without regulation by the State, that, in his medical judgment, the patient's pregnancy should be terminated." 410 U.S. at 163. Later the Court stated that during the first trimester "the abortion decision and its effectuation must be left to the medical judgment of the pregnant woman's attending physician." *Id.* at 164. The Court also pointed out that its decision "vindicates the right of the physician to administer medical treatment according to his professional judgment" up until the point that compelling state interests justify intervention. *Id.* at 165-66. Finally, the Court pointed out that the abortion decision is 'inherently, and primarily, a medical decision" for which "basic responsibility" rests with the physician. *Id.* at 166.

Thus, as *Griswold* protected the privacy of the marital relationship, *Roe* protected the privacy of the physician-patient relationship. "The right of privacy has no more conspicuous place than in the physician-patient relationship . . ." *Doe v. Bolton*, 410 U.S. 179, 219 (1973) (Douglas, J., concurring). In this relationship both the physician and the pregnant woman must agree that termination of pregnancy is appropriate in order to have this medical procedure performed. Whether abortion is an appropriate option for a *particular* patient is, by definition, a decision that must be made by the doctor and the patient in each case. It is the right to make particularized personal decisions that is at the core of *Roe* and its progeny, and it

is this right that Missouri and the United States desire to destroy.[1]

In *Doe v. Bolton*, the court found that the restrictions Georgia had placed on abortion violated both the patient's and physician's freedom. For example, Georgia's requirement that two licensed physicians must agree with a woman's personal physician's judgment that an abortion is appropriate, and that a hospital committee of at least three other doctors must concur in the abortion decision violated the privacy protection of both the doctor and patient. In the Court's words, "The woman's right to receive medical care in accordance with her licensed physician's best judgment and the physician's right to administer it are substantially limited by this statutorily imposed overview." 410 U.S. at 197.

Since *Roe* this Court has reviewed a large body of legislation designed to deny patients and physicians their right to make personal and professional judgments about how best to deal with a patient's pregnancy. As even the United States concedes, "Roe and its progeny have resolved most of the central questions about the permissible scope of abortion regulation. . . ." Brief for the United States as Amicus Curiae Supporting Appellants at 21, n. 15. Through sixteen years of constitutional adjudication this Court has provided lawmakers with a consistent and

---

[1] Justice Douglas, concurring in *Doe v. Bolton*, 410 U.S. at 211, described the right of privacy as "*freedom of choice in the basic decisions of one's life respecting marriage, divorce, procreation, contraception, and the education and upbringing of children.*" He also thought of it as "*freedom to care for one's health and person, [and] freedom from bodily restraint or compulsion . . .*" *Id.* at 213.

coherent set of constitutional guidelines in this area.[2] Laws that recognized and protected the physician-patient relationship have been upheld, and laws designed to weaken or destroy that decision-making unit have been struck down. Thus, in *Planned Parenthood of Missouri v. Danforth*, 428 U.S. 52 (1976), the Court readily upheld a general informed consent provision, even as it applied to the first trimester, because not only did it not burden the abortion decision, it enhanced the physician-patient relationship. On the other hand, the Court has struck down a provision requiring physicians to recite a "parade of horribles" because it intruded "upon the discretion of the pregnant woman's physician." *Akron v. Akron Center for Reproductive Health*, 462 U.S. 416, 445 (1983). Under this statute every physician was made an agent of the state who was required to recite the state's anti-abortion message

---

[2] A review of the Court's abortion decisions indicate that it has used the following "tests" in various combinations to evaluate the constitutionality of abortion statutes:

1. Has the state placed an obstacle in front of the woman or otherwise significantly burdened the pregnant woman's ability to choose or obtain an abortion?
2. Is abortion being treated differently from other similar medical or surgical procedures?
3. Does the regulation interfere with the treating physician's exercise of professional judgment?
4. Does the regulation conflict with, or is it stricter than, accepted medical and scientific norms?
5. Is the regulation designed to protect maternal health where no less intrusive or less expensive alternative will do?
6. If a postviability rule, does the regulation protect the fetus without putting the mother in jeopardy?

Annas, *Webster and the Politics of Abortion*, 19 Hastings Center Report 36 (March/April 1989), citing Glantz, "Abortion: A Decade of Decisions," in *Genetics and the Law III* 305 (A. Milunsky & G. Annas, eds. 1985).

to every patient, regardless of her individual need or desire.

A similar statute was involved in this Court's most recent case on abortion law. The Court reiterated that forcing a physician to provide prescribed information "makes him or her in effect an agent of the State in treating the woman and places his or her imprimatur upon both the materials and the list." *Thornburgh v. American College of Obstetricians and Gynecologists*, 476 U.S. 747, 763 (1986). The Court summarized the situation aptly: "All this is, or comes close to being, state medicine imposed upon the woman, not the professional medical guidance she seeks, and it officially structures--as it obviously was intended to do--the dialogue between the woman and her physician." *Id.*

The controversy that ranges over abortion is not resolvable through reason, logic, or majority vote. It is an emotional issue governed by one's background, religious upbringing, and moral beliefs. The post-*Roe* state statutes were not health or safety laws, but rather means to control physicians and their patients so that a particular legislature's philosophical position could be imposed on pregnant women and their physicians. The Court in *Roe* recognized this problem when it pointed out that there is great diversity of opinion among philosophers, theologians and scientists about when life begins. It further recognized that the judiciary is certainly in no position to resolve this issue. 410 U.S. at 159. This is equally true of legislatures. As a result, the Court concluded that "we do not agree that, by adopting one theory of life Texas may override the rights of the pregnant woman that are at stake." *Id.* at 162.

Justice Stevens, concurring in *Thornburgh*, made a similar point: "In a sense, the basic question is whether

the 'abortion decision' should be made by the individual or by the majority 'in the unrestrained imposition of its own, extraconstitutional value preferences.'" 476 U.S. at 777-78. That is also the issue posed in this case. Justice Stevens was correct in pointing out that without the safeguards in *Roe*, there is essentially no way to restrain what the state may do in imposing its value judgments on the individual:

> . . . if federal judges must allow the State to make the abortion decision, presumably the State is free to decide that a woman may *never* abort, may *sometimes* abort, or as in the People's Republic of China, must *always* abort if her family is already too large. In contrast, our cases represent a consistent view that the individual is primarily responsible for reproductive decisions, whether the state seeks to prohibit reproduction or to require it.

Id. at 778, n. 6 (emphasis in original, citations omitted).

The pre-*Roe* world to which Missouri and the United States would like us to return is a world in which the State would have essentially absolute discretion to permit or outlaw abortions. Thus, women who were pregnant as a result of rape could be required to maintain their pregnancies and be forced to go through labor and delivery with the rapist's unwanted child. Women who would become blind, paralyzed or suffer other grave injury as a result of the continuation of their pregnancy could be compelled by state legislatures to suffer such harm. Parents who, as a result of genetic counseling and testing, know that their child will be born with a genetic disease that will cause it to die a slow, painful death, could be required to carry that pregnancy to term. These examples are not based on wild speculation about what the state of the law *might* be if *Roe* were overruled--it is based on what the state of the law

actually was at the time of *Roe*. Prior to *Roe*, abortions were outlawed in a majority of states unless the *life* (not health) of the pregnant woman was jeopardized by the continuation of the pregnancy. *Roe*, 410 U.S. at 118.[3]

The abortion cases are not just about abortion, but about the very basis of what it means to be a free person in a free society.[4] If the state can make reproductive decisions on behalf of any individual, what decision is it precluded from making? If legislatures are allowed to impose without restraint value judgments that deeply and directly affect individual citizens, what is left of personal freedom? Without the right of privacy, what constitutional principle would prevent states from reimposing restrictions on contraceptive distribution and use, since unfertilized ova constitute *potential* human life? *Doe v. Bolton*, 410 U.S. at 217 (Douglas, J. concurring). Indeed, since both Missouri and the United States argue that the state should

---

[3] In its brief, the United States readily admits that states have passed "inflammatory" abortion statutes since *Roe* was decided. Brief for the United States as Amicus Curiae Supporting Appellants at 21, n.15. What is remarkable is that the United States blames the existence of *Roe* for the "inflammatory" nature of these statutes, rather than legislators' hostility to the right of pregnant women and their physicians to make decisions concerning termination of pregnancy. Should *Roe* be overruled, the tendency of legislatures to pass such inflammatory statutes will continue. What will be absent is the constitutional protection from such legislative excesses.

[4] In *Whalen v. Roe*, 429 U.S. 589, 599-600 (1977), the Court noted that the constitutional right of privacy protects an individual's "interest in independence in making certain kinds of important decisions." In that case the Court upheld a New York statute requiring physicians to report to a state agency the prescription of certain controlled substances, because under the statute "the decision to prescribe, or to use, is left entirely to the physician and the patient." *Id.* at 603.

be free to determine when life begins, a state could choose any point in time it pleases-conception, live birth, the time the ovum develops, or three years of age.[5] Since there is no scientific answer to this question, any value judgment on this point is as "rational" as any other. However, just as this Court found that "Constitutional rights do not mature and come into being magically only when one attains the state-defined age of majority," *Planned Parenthood v. Danforth*, 428 U.S. at 74, it should also conclude that one's constitutional rights are not destroyed magically because of an arbitrarily state-defined point at which "life begins."

The problem with providing the state with the essentially unlimited power sought by Missouri and the United States is that the state's actions have such a potentially profound impact on the lives of citizens. It must be kept in mind that the State is attempting to impose its values on individual citizens in order to control their decisional rights. Under *Roe* no one's values are imposed on anyone else; people are free to make the decisions that they believe are best for themselves. As Justice Stevens put it,

> In the final analysis, the holding in *Roe v. Wade* presumes that it is far better to permit some individuals to make incorrect decisions than to deny all individuals the right to make decisions that have a profound effect upon their destiny. Arguably a very primitive society would have been protected from evil by a rule against eating apples; a majority familiar with Adam's

---

[5] *See*, Brief for The New England Christian Council as Amicus Curiae at 12. Therein is described an effort to place on the ballot in Massachusetts the following referendum question: "In *Biological Terms*, when does an individual human life begin?" The choices the voters could check off included "A. Conception" "B. Viability" "C. Birth" "D. Write In - specify a different term___."

> experience might favor such a rule. But the lawmakers who placed a special premium on the protection of individual liberty have recognized that certain values are more important than the will of a transient majority.

Thornburgh, 476 U.S. at 781-82 (concurring opinion).

II. The Right Of Privacy Protects The Rights Of Individuals To Make Personal Medical Decisions In A Doctor-Patient Relationship

A. *The Doctor-Patient Relationship, not the Legislature, is the Proper Locus for Medical Care Decisions*

The central question before the Court is whether personal medical care decisions should be made by patients and their physicians, or by the state. The doctor-patient relationship is highly valued in our society.[6] The importance of the doctor-patient relationship to individual citizens increases in proportion to advances in medical science. These advances have made the consequences of many medical interventions increasingly dramatic in the lives and deaths of individual citizens and their families. The importance of who makes the treatment decision increases as the complexity of the options and the severity of the impact of treatment on the individual patient increases. *Roe* properly took full account of changing medical science. The central premise of *Roe* and *Doe*, that inherently personal medical decisions, including those

[6] Indeed, protecting the ethical integrity of the medical profession in ways consistent with the individual autonomy of patients has been deemed a "compelling state interest" by courts since *Roe v. Wade*. *E.g.*, *In re Quinlan*, 70 N.J. 10, 355 A.2d 647 (1976), *cert. den. sub nom. Garger v. New Jersey*, 429 U.S. 922 (1976); *Superintendent of Belchertown v. Saikewicz*, 373 Mass. 728, 370 N.E.2d 417 (1977).

involving abortion, should be made in the context of a doctor-patient relationship protected from governmental dictates, remains sound jurisprudence.

The doctor-patient relationship has been a privileged and protected one throughout the history of Western civilization. Plato, for example, describes how in Ancient Greece slaves were treated as objects and that therefore no conversation between them and the physician occurred. The relationship between a free physician and a free citizen, by contrast, fit what it means to be a free person; that is, physicians talked to their patients:

> The free practitioner who, for the most part, attends free men, treats their disease by going into things thoroughly from the beginning in a scientific way, and takes the patient and his family into his confidence . . . He does not give his prescriptions until he has won the patient's support . . .

Laws, 4.720b-e.

The doctor-patient relationship between two free citizens that has become the cornerstone of Western medical ethics begins with an individual who determines that a condition requires medical attention. Medical attention is voluntarily sought, and the physician makes a decision as to whether or not medical care can be of benefit to the patient, and if so, recommends one or more alternatives. The doctor and patient then discuss these alternatives. Together they decide what course of action to pursue based on their perceptions of benefit in a private, confidential relationship which ethical principles of

autonomy, beneficence and justice have structured and the law has fostered and protected.[7]

The decision to continue or terminate a pregnancy is just one example albeit a dramatic one, of important, personal medical decisions made in this relationship. To insure that a mutually-acceptable decision is arrived at with full understanding, the common law has required physicians to share information with their patients under the doctrine of "informed consent."[8] Law and ethics, therefore, have now effectively merged. As the President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research concluded,

> Although the informed consent doctrine has substantial foundations in law, it is essentially an ethical imperative. . . . Ethically valid consent is a process of shared decisionmaking based upon mutual respect and participation . . . adults are entitled to accept or reject health care interventions on the basis of their own personal values in furtherance of their own personal goals.

Making Health Care Decisions 2-3 (1982).

B. *States Should Not be Permitted to Dictate or Censor the Content of Discussions that Occur in a Doctor-Patient Relationship*

It is in the informed consent context, and its respect both for the rights of individual patients and the integrity

---

[7] *See, e.g.*, Ad Hoc Committee on Medical Ethics, American College of Physicians, *American College of Physicians Ethics Manual*, Part I, 101 Annals of Internal Medicine 129, 130 (1984).

[8] Legal action to remedy instances of nondisclosure developed where the Platonic ideal was not being followed and physicians were withholding important information from their patients. R. Faden & T. Beauchamp, *A History and Theory of Informed Consent* (1986).

of the medical profession, that *Roe's* placement of the abortion decision with "the woman and her physician" is properly understood. Neither party has total or arbitrary power, but both must agree and consider the decision appropriate and reasonable before it can be acted on. *Roe* properly assumed that "states would subject the woman's wishes to interpersonal testing within a clinical relationship, by treating abortion as a medical procedure . . . A medical decision, at its best, is made between a patient and a doctor who acts pursuant to professional values, ones developed out of clinical encounters and subjected to peer criticism within a regimen of professional education, research, and ethical study." R. Goldstein, *Mother-Love and Abortion: A Legal Interpretation* 81 (1988); *see also* A. Jonsen, M. Siegler & W. Winslade, *Clinical Ethics* 62 (2d ed. 1986).

Of course, such an interpersonal dialogue can only take place in an atmosphere in which the physician is free to exercise his or her best professional judgment and discuss with a patient all of the information, including treatment options, relevant to the patient's decision. Section 188.205 of the Missouri statute before this Court, however, would prohibit such dialogue. That section makes it "unlawful for any public funds to be expended . . . for the purpose of encouraging or counseling a woman to have an abortion not necessary to save her life." The term "encourage or counsel" is so vague that reasonable people would be unable to distinguish between lawful and unlawful behavior. It does not merely prohibit coercing a woman to have an abortion. Rather, the state uses words that describe the personal discussions between a woman and her physician about the management of her pregnancy. Other

courts have agreed that this language prohibits physicians from talking to their patients.[9]

In section 188.210, Missouri attempted to make it "unlawful" for a publicly-employed physician or other health care personnel to "counsel or encourage a woman to have an abortion not necessary to save her life." In this appeal, Missouri has abandoned any defense of this direct prohibition against counseling of patients by physicians. Instead Missouri seeks to achieve the same result by a different means in section 188.205. This section certainly prohibits any publicly-employed physician from counseling or encouraging abortions because it is unlawful to expend public funds for that purpose, and the physician's salary is derived from state funds. Thus, its impact is identical with the second sentence of section 188.210. In fact this section has an even wider impact than 188.210 because it applies not just to public employees, but to anyone who receives state funds.

The statute both silences physicians and forces patients to remain ignorant, erecting a state-created barrier between a woman and her physician. Under the stature [sic], for example, a physician, public or private, who receives state funds would be unable to honestly respond to a pregnant

---

[9] Two federal district courts found that the Department of Health and Human Services regulations prohibiting family planning programs funded under Title X from counseling or referring for abortion, 53 Fed. Reg. 2922 (Feb. 2, 1988), violated the First Amendment rights of the programs and enjoined their enforcement. *Massachusetts v. Bowen*, 679 F. Supp. 137 (D. Mass. 1988), appeal docketed, No. 88-1279 (1st Cir. Mar. 24, 1988); *Planned Parenthood Federation v. Bowen*, 680 F. Supp. 1465 (D. Colo. 1988). A third district court agreed that the prohibition forbade speech but concluded (erroneously we believe) that granting Title X funds to support one idea and not another did not infringe free speech. *State of New York v. Bowen*, 690 F. Supp. 1261 (S.D.N.Y. 1988), *aff'd.*, 863 F.2d 46 (2d Cir. 1988).

woman whose health is endangered by the pregnancy when she asks, "Doctor, what do you think I should do?", if the honest answer were, "I would recommend you have an abortion."[10]

Prohibiting physicians who receive state funds from "encouraging or counseling" pregnant women consistent with their best medical judgment is contrary to good medical practice and jeopardizes patients' rights. Information concerning health risks that are caused or exacerbated by pregnancy and information concerning possible fetal genetic or congenital disorders are squarely among the categories of information that a physician is obligated by law and ethics to disclose to a pregnant woman in order to facilitate knowledgeable decisions about managing her pregnancy.[11] It is good and accepted medical practice to

---

[10] An analogous "gag rule" is apparently in effect in the Soviet Union in the area surrounding Chernobyl where it is reported that government authorities assure everyone that all is normal, "and then advise villagers not to bear children or each locally grown mushrooms." When the villagers take their children to special government clinics in Kiev for regular medical tests, "the doctors refuse to disclose the results." Gumbel, *Villagers Suffering Chernobyl's Fallout Face Soviet Silence*, Wall Street J., March 6, 1989, at 1, col. 4.

[11] The Federal Food and Drug Administration itself requires manufacturers of intrauterine devices to inform physicians that if a woman becomes pregnant with an I.U.D. in place, and removal of the I.U.D. is difficult, "termination of the pregnancy should be considered and offered the patient as an option..." 21 C.F.R. 310.502(b)(1). The physician's counseling obligation includes informing parents of the availability of prenatal diagnosis of genetic abnormalities. *E.g., Goldberg v. Ruskin*, 128 Ill. App. 3d 1029, 471 N.E.2d 530 (1984), *aff'd*, 113 Ill. 2d 482, 499 N.E. 2d 406 (1986) (failure to advise parents of tests designed to detect Tay-Sachs disease). Physicians also have an obligation to diagnose abnormalities with due care and disclose their findings. *E.g., Smith v. Cote*, 128 N.H. 231, 513 A.2d 341

inquire into the genetic and medical history of a prospective mother and father who consult any physician for advice or care concerning family planning, contraception, and pregnancy evaluation. *See* American College of Obstetricians and Gynecologists, *Standards for Obstetric-Gynecologic Services* 18-19 (5th ed. 1985); S. Elias and G.J. Annas, *Reproductive Genetics and the Law* (1987); President's Commission for the Study of Ethical Problems in Medicine, *Screening and Counseling for Genetic Conditions* 23-31 (1983).

By attempting to silence certain physicians, Missouri seeks to prevent them from performing their ethical and legal obligations to their patients consistent with existing medical science, and thereby deprive patients of information they need in order to decide whether to have a child. In this regard the state of Missouri promotes ignorance, viewing an uninformed patient as a desirable result. There are medical conditions for which abortion is one of the reasonable medical procedures that should be discussed. For example, Tay-Sachs disease is a genetic disorder that occurs in one in four pregnancies when both husband and wife are carriers of the gene. The disease "is characterized by motor weakness, usually beginning between 3 and 6 months of age. . . deafness, blindness, convulsions, and generalized spasticity are usually in evidence by 18 months of age . . . the child develops a state of decerebrate rigidity, with death usually resulting . . . by 3 years of

(1986) (failure to timely diagnose rubella and inform parents of consequences). So strongly have courts insisted on counseling, that they have held physicians liable for failing to offer information which might lead a patient to consider abortion even when abortion was statutorily proscribed in most states. *See e.g., Jacobs v. Theimer*, 519 S.W.2d 846 (Tex. 1975) (physician's failure to diagnose rubella in pregnant woman in 1958 and to advise her of risks to fetus held actionable wrong even though abortion was illegal in Texas).

age. No specific therapy for Tay-Sachs disease is available." S. Elias & G. Annas, *Reproductive Genetics and the Law* 63 (1987) and sources cited therein. Since abortion is the *only* way to prevent this tragedy, a physician who informs a couple of the existence of prenatal testing to detect it, and discusses the option of abortion with them would be violating the proscription against "counseling or encouraging" abortion. Without the option of prenatal screening, many at risk couples would simply choose to abort all pregnancies. "In fact, since more than 95% of all prenatal diagnostic tests are negative, the overwhelming majority of such testing helps lead to the birth of children that might not otherwise have been born." *Id.* at 83. Thus the irony is that any law that inhibits physicians from counseling pregnant women about the availability of genetic testing and the option of abortion may actually increase the number of abortions performed.

Since section 188.210 prohibits publicly-employed physicians from *performing* abortions, it is essential that they be permitted to refer a patient in need of abortion to a physician who is willing and able to do so. Yet, such a medically appropriate referral would violate the proscription against encouraging and counseling, since abortion is a probable outcome of the referral. At the same time, failure to refer the patient to the second physician would be negligent medical practice which could harm the patient.[12]

[12] *See, e.g., Jewson v. Mayo Clinic*, 691 F.2d 405 (8th Cir. 1982). If a physician determines, in the exercise of sound clinical judgment, that the pregnancy poses a threat to the health or well-being of his patient, he is not excused from disclosing that judgment simply because he may be unable to perform an abortion. If he is unwilling or unable to perform an abortion that he believes is medically indicated, he must also disclose that fact to the patient. *Manion v. Tweedy*, 257 Minn. 59, 100 N.W.2d 124, 128 (1959). In addition, the physician must immediately refer the patient to an appropriate provider, because

The fact that the physicians currently targeted by the Missouri statute are paid with state funds does not lessen either the extent of the invasion or the obligation such physicians have to counsel their patients.[13] Government-employed physicians who were not expected or obliged to render ongoing care to individuals have been found to owe a duty of disclosure to persons they examine. For example, in *Betesh v. United States*, 400 F. Supp. 238 (D.D.C. 1974), a selective service physician was found liable for failing to disclose a chest abnormality in a recruit during a pre-induction physical. The recruit later died of Hodgkins disease, which might have been successfully treated had treatment begun when the abnormality was first discovered. Even in the absence of a consensual doctor-patient relationship, concealment of the information was actionable, the court found, because "the Government physicians were under a duty to act carefully, not merely in the conduct of the examination, but also in subsequent communications to the examinee." *Id.* at 246. Thus, the legal and ethical obligation to counsel does not depend upon the nature of the physician's employer or source of payment.

---

delay could cause harm and make further treatment, including later termination of pregnancy, more risky and harmful. *See, e.g., Steele v. United States*, 463 F. Supp. 321, 330 (D. Alaska 1977); *Wells v. Billars*, 391 N.W.2d 668 (S.D. 1986).

[13] The source of payment does not excuse a physician from fulfilling his obligations to his patient. As the California Appeals Court said in *Wickline v. California*, 192 Cal. App. 3d 1630, 1645, 228 Cal. Rptr. 661 (1986), *app. dism'd*, 239 Cal. Rptr. 805, 741 P.2d 613 (1987): "[T]he physician who complies without protest with the limitations imposed by a third party payor, when his medical judgment dictates otherwise, cannot avoid his ultimate responsibility for his patient's care."

The Missouri legislation not only interferes with honesty on the party of the physician, it does so in the most intrusive fashion, sundering the curtain of privacy from the physician-patient relationship. Not only does the state claim the right to control what doctors say to patients, it encourages strangers to police what is said. Section 188.220 of the Missouri statute grants standing to "any taxpayer of [the] state" to enforce the provisions which prohibit encouraging or counseling a woman to have an abortion. Thus, perfect strangers are given the power of private attorneys general to scrutinize the highly personal information discussed in a physician's office. The statute can only be enforced by requiring physicians and their patients to publicly disclose the content of their discussions held in the privacy of the doctor-patient relationship. Having strangers invade this relationship is every bit as offensive and chilling as permitting "police to search the sacred precincts . . . of marital bedrooms." *Griswold v. Connecticut*, 381 U.S. at 485.[14]

---

[14] A recent New York case underscores the inappropriateness of encouraging strangers to intervene in these private decisions. The case, *In the Matter of Martin Klein*, Supreme Ct. of New York, Nassau Cty. No. 1736/89 (Feb. 7, 1989), involved a 32-year-old woman who was 17 weeks pregnant, and comatose as a result of an automobile accident. Her husband was advised by her physician that continuation of her pregnancy presented a serious threat to her life, and that termination of the pregnancy was indicated. He then petitioned the court for an order that he be appointed his wife's temporary guardian for the purpose of authorizing her physician to perform such medical procedures, including abortion, as may be necessary to preserve her life. Two total strangers with an anti-abortion agenda petitioned the court requesting to be made the guardian of the woman and the non-viable fetus, in an attempt to exclude the patient's husband and parents from making these decisions. Both trial court and Appellate Division decided for the husband. As the Appellate Division stated, "these absolute strangers to the Klein family, whatever their motivations, have no place in the

C. *Overruling the Constitutional Right of Privacy Would Seriously Undermine Individual Autonomy and Would Permit the State To Make Medical Care Decisions That Belong to Individuals*

A consistent series of decisions since *Roe v. Wade* permit individuals to refuse various medical interventions. Many of these decisions are based in part on the constitutional right of privacy which enables individuals to make important personal medical decisions for themselves. In a widely cited case, for example, the New Jersey Supreme Court decided that, were she competent, Karen Ann Quinlan, a young woman in a permanent coma, would have the authority under the constitutional right of privacy to decide to have the mechanical ventilator that sustained her life removed. *In re Quinlan*, 70 N.J. 10, 355 A.2d 647, 663 (1976), *cert. den. sub nom. Garger v. New Jersey*, 429 U.S. 922 (1976). Since she was incompetent, the court ruled that her parents could act in her behalf. In *Quinlan*, as in many similar cases decided since, the state argued that it, not the patient, should make the decision whether or not to employ an intrusive, and often futile, medical intervention.

Without the shield of the constitutional right of privacy, citizens would have no protection from such state interventions in private medical matters, because states would be free to legislate virtually any restrictions on individual treatment decisions that even a bare majority of legislators wished. This is particularly important today when new forms of medical treatment and knowledge require patients to make controversial choices. Since 1973, physicians have learned to fertilize human eggs in a petri

---

midst of this family tragedy." *Matter of Nancy Klein*, New York Appellate Division, Second Department, New York Law Journal, Feb. 14, 1989, at 21.

dish and transfer the resulting embryo to the wife for gestation; to accurately detect severe fetal handicaps such as anencephaly and neural tube defects; and to maintain patients who cannot breathe on their own in a permanent coma for months and even years.

It would not be far-fetched to hypothesize a state that would choose to outlaw the use of *all* prenatal diagnostic techniques by both public and private physicians. Legislators may feel that such tests lead couples either not to have children or to abort their pregnancies. Without the protection of the constitutional right of privacy, state legislatures would be empowered to control the knowledge and use of such medical techniques, and require couples to make their child-bearing decisions in ignorance.[15] What would prohibit states from outlawing new and "unnatural" means of conceiving a child such as *in vitro* fertilization techniques? What would prohibit states from requiring that *every* medical intervention must be used to keep a dying person alive as long a biologically possible, regardless of the desires of the patient or family, and no matter that the patient's physician agrees that this would not be good medical practice? No constitutional principle, other than the right of privacy, would protect these decisions, and others like them, from being made for patients by the state. Unfettered by the constitutional right of privacy, states

---

[15] Prohibitions against *payment* for treatment should not be confused with prohibitions against providing *information* about treatment. For example, the state of New Hampshire has the right not to pay for bone marrow transplants, as evidenced by its initial decision in the case of a six-year-old boy in February 1989. Hohler, *State Policy, Human Tragedy*, Boston Globe, Feb. 26, 1989, at 1. It would be astonishing, however, to even suggest that New Hampshire should be able to forbid the boy's physician, even if the physician were a state employee, from telling him that he needed a transplant and could get it elsewhere. Yet this is what Missouri claims it may do.

would have virtually unlimited power both to prohibit citizens from obtaining basic medical care from their physicians, and to require them to undergo medical procedures against their will.

We have already witnessed examples of how state power can be misused in a way that increases the suffering of its citizens when the right to make personal medical decisions is not treated as a fundamental constitutional right. In one example, a competent pregnant woman who was dying of cancer was forced to endure a cesarean section against her will, and that of her family and physicians, by a judge who thought that the state's interest in potential fetal life outweighed any interest she might have in refusing surgical intervention. *In re A.C.*, 533 A.2d 611 (App. D.C. 1987), *vacated* 539 A.2d 203 (App. D.C. 1988).[16] After the forced surgery--which was, in

[16] There are at least twenty-one orders by lower court judges that have required competent adult women to undergo cesarean section operations (a major surgical procedure which is substantially more life-threatening than abortion) instead of the normal delivery that they wished to have. Kolder, Gallagher & Parsons, *Court-Ordered Obstetrical Interventions*, 316 New Eng. J. Med. 1192 (1987). These orders were based on the notion that the state, through its judges, has a greater interest in the potential life of the fetus and the method of childbirth than the woman herself, and demeaned and dehumanized the pregnant woman by denying her the right to voluntarily choose the method of childbirth. Continued discussion with her physician, rather than hasty resort to emergency decisions by judges, is properly encouraged by recognizing the right to privacy in the doctor-patient relationship. Indeed, "By protecting the liberty of the pregnant patient and the integrity of the voluntary doctor-patient relationship, we not only promote autonomy; we also promote the well-being of the vast majority of fetuses." Annas, *Protecting the Liberty of Pregnant Patients*, 316 New Eng. J. Med. 1213, 1214 (1987). *And see* T. Engelhardt, *The Foundations of Bioethics* 224-27 (1985); and Nelson & Milliken, *Compelled Medical Treatment of Pregnant Women*, 259 J.A.M.A. 1060 (1988).

effect, a forced abortion of a non-viable fetus--both mother and child died.

In a second example, with facts virtually identical to those in *Quinlan*, a Missouri trial court found that it had sufficient evidence, based on the patient's prior statements and her family's testimony, that the patient would not wish to receive treatment if she were in a permanent coma, and ruled that treatment should therefore be stopped in accordance with her "constitutionally guaranteed liberty." *Cruzan v. Harmon*, 760 S.W.2d 408 (Mo. 1988). The Missouri Supreme Court overruled the trial court's finding and, disregarding the patient's previous statements and her parent's wishes, turned over her medical treatment decisions to employees of the state. This means that for the rest of her life the people who know and love her most are relegated to the role of passive observers. *See*, generally, Annas, *The Insane Root Takes Reason Prisoner*, 19 Hastings Center Report 29 (Jan./Feb. 1989). The Missouri Supreme Court's decision was based in part on its reading of the preamble of the abortion statute at issue in this case.

These examples demonstrate that state interference is not hypothetical. State medical treatment decisions are at best arbitrary and impersonal, and at worst cruelly at odds with a patient's wishes and well-being. This leads inexorably to the conclusion that personal medical decisions should be made by those who are most affected by them, in the context of a constitutionally-protected doctor-patient relationship.[17]

[17] Unlike the Missouri Supreme Court, in the vast majority of cases decided since *Roe*, courts have recognized that the constitutional right of privacy places control of personal medical decisions in the hands of patients or their guardians if the patient is incompetent. For example, courts have upheld the patient's right to decide whether to

If the state is given absolute control of a decision as personal and private as the decision whether or not to continue a pregnancy, based on its interest in "potential human life," then it could certainly control these other decisions. If this Court adopts such a statist notion of decisionmaking then the value of "personhood" will have been significantly demeaned for all citizens. Having control over these most important and private decisions is an essential element not only of freedom, but of being a person. As the Massachusetts Supreme Judicial Court put it: "The constitutional right to privacy, as we conceive it, is an expression of the sanctity of individual free choice and self-determination as fundamental constituents of life." *Saikewicz*, 370 N.E.2d at 426.

Missouri does not claim that its power is limited to prohibiting abortion. Their sole interest is in protecting *potential* life, rather than *existing* human life. What is most remarkable about virtually all of the briefs submitted to this Court on behalf of Missouri is that they imply that the United States is composed exclusively of state governments and fetuses; women and their physicians are treated as almost irrelevant, and the relationship between a pregnant woman and her physician is ignored.

Missouri seeks to reintroduce the Platonic ideal in a particularly pernicious manner: men are to be treated as "free citizens"; women are to be treated in a manner

---

accept or reject medical treatments such as surgery for breast cancer, *In re Yetter*, Northampton Co. Orphans Ct., No. 1973-533 (Williams, Jr.) (Pa. 1973); amputation, *Lane v. Candura*, 376 N.E.2d 1232 (Mass. App. 1978); kidney dialysis, *In the Matter of Spring*, 389 Mass. 629, 405 N.E.2d 115 (1980); respirators, *Satz v. Perlmutter*, 362 So.2d 160 (Fla. App. 1978), *aff'd*. 379 So.2d 359 (Fla. 1980); and artificial nutrition and hydration, *In the Matter of Jobes*, 108 N.J. 394, 529 A.2d 434 (1987).

similar to the way "slaves" were treated by free physicians in ancient Greece: conversation is to be censored and treatment decisions made without regard for the wishes of the patient. Such a situation is incompatible with both liberty and equal protection. As this Court has properly emphasized: "Our cases long have recognized that the Constitution embodies a promise that a certain private sphere of individual liberty will be kept largely beyond the reach of government . . . That promise extends to women as well as to men." *Thornburgh*, 476 U.S. at 772 (1986).

Conclusion

For the foregoing reasons, the judgment of the court of appeals should be affirmed.

Respectfully submitted,

ATTORNEY GENERAL
OF WASHINGTON

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	ANSWER TO COMPLAINT FOR DECLARATORY JUDGMENT AND INJUNCTIVE RELIEF
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

COME NOW the defendants in the above entitled cause, the State of Washington and Christine Gregoire, Attorney General of Washington, by and through their attorneys, Christine Gregoire, Attorney General, and William L. Williams, Senior Assistant Attorney General, and answer the complaint of the plaintiffs as follows:

1. In answer to paragraphs 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 2.7 and 2.8 of the plaintiffs' complaint, defendants are without knowledge sufficient to form a belief as to the truth of the allegations contained therein and therefore, neither admit nor deny those allegations, leaving plaintiffs to their proof.

2. Defendants admit the allegations contained in paragraph 2.9 of the plaintiffs' complaint.

3. Answering paragraph 2.10 of plaintiffs' complaint, defendants admit that the Attorney General is the chief legal officer of the State of Washington. Defendants affirmatively allege that the Office of the Attorney General was established in Article 3, § 21 of the Constitution of the State of Washington and further that the powers of the Attorney General are set forth in statute, primarily RCW 43.10. Defendants admit that the Attorney General is a proper party defendant to this lawsuit, but deny that she serves in any representative capacity with respect to other law enforcement officers in the state.

4. Paragraphs 1.1, 1.2 and 2.11 of the complaint appear to be assertions of legal theory and not factual allegations and therefore require no answer. To the extent an answer is required, defendants admit that 42 USC § 1983 may be a basis for a suit alleging violation of Fourteenth Amendment rights, but deny that the existence or operation of RCW 9A.36.060 violates, or threatens a violation of, any rights of any plaintiff; defendants admit

the second sentence of paragraph 1.1, and paragraphs 1.2 and 2.11.

5. Defendants deny the allegations contained in paragraphs 3.1, 3.2, and 3.3 of the plaintiffs' complaint.

6. In answer to paragraph 3.4 of the plaintiffs' complaint, defendants are without knowledge sufficient to form a belief as to the truth of the allegations contained therein and therefore, neither admit nor deny those allegations, leaving plaintiffs to their proof.

Defendants allege by way of affirmative defense that plaintiffs have failed to state a claim upon which relief can be granted.

WHEREFORE, having fully answered the complaint of the plaintiffs and having stated an affirmative defense, defendants request that judgment be entered as follows:

1. Dismissing the plaintiffs' complaint;

2. Awarding defendants costs and attorney's fees; and

3. Awarding defendants any additional or further relief which the court finds appropriate or just.

DATED this 11th day of February, 1994.

William L. Williams
Assistant Attorney General
Attorney for Defendants

REPORT OF THE COUNCIL ON ETHICAL AND JUDICIAL AFFAIRS

Report I-93-8

Subject: Physician Assisted Suicide
(Resolution 3. A-93--Medical Student Section)

Presented by: John Glasson, MD, Chair

Referred to: Reference Committee on Amendments to Constitution and Bylaws
(Louis R. Zako, MD, Chair)

Introduction*

Physician-assisted suicide presents one of the greatest contemporary challenges to the medical profession's ethical responsibilities. Proposed as a means toward more humane care of the dying, assisted suicide threatens the very core of the medical profession's ethical integrity.

While the Council on Ethical and Judicial Affairs has long-standing policy opposing euthanasia, it did not expressly address the issue of assisted suicide until its June 1991 report. "Decisions Near the End of Life."[1] In that report, the Council concluded that physician assisted suicide is contrary to the professional role of physicians and that therefore physicians "must not . . . participate in assisted suicide."[1] Previously, the Council had issued reports rejecting the use of euthanasia. In June 1977, the Council stated that "mercy killing or euthanasia--is contrary to

---

* In accordance with the Joint Report of the Council on Ethical and Judicial Affairs and the Council on Constitution and Bylaws (I-91), this report may be adopted, not adopted, or referred. It may only be amended, with the concurrence of the Council, to clarify its meaning.

public policy, medical tradition, and the most fundamental measures of human value and worth."[2] Similarly in June 1988, the Council reaffirmed "its strong opposition to 'mercy killing.'"[3]

Broad public debate of assisted suicide was sparked in June 1990, when Dr. Jack Kevorkian assisted in the suicide of Janet Adkins (NY Times, June 6, 1990:A1). The debate was advanced in March 1991 when Dr. Timothy Quill disclosed his assistance in the suicide of Diane Trumbull.[4] Other public events quickly followed. Physician assisted suicide, together with euthanasia, was placed on the public ballot in Washington State, in November 1991, and in California in November 1992. Both times, voters turned down proposals to legalize physician assisted dying (USA Today, August 9, 1993:13A). In September 1993, by a vote of 5-4, Canada's Supreme Court denied a woman's request to end her life by assisted suicide (NY Times, October 1, 1993:A8). In 1994, voters in Oregon will decide whether to legalize assisted suicide in their state.

Resolution 3, introduced at the 1993 Annual Meeting by the Medical Student Section and referred to the Board of Trustees by the House of Delegates, requested an ethical study of assisted suicide. In this report, the Council revisits the issue of physician assisted suicide.

Definitions

Assisted suicide occurs when a physician provides a patient with the medical means and/or the medical knowledge to commit suicide. For example, the physician could provide sleeping pills and information about the lethal dose, while aware that the patient is contemplating suicide. In physician assisted suicide, the patient performs the life-ending act, whereas in euthanasia, the physician administers the death-causing drug or other agent.[5]

Assisted suicide and euthanasia should not be confused with the provision of a palliative treatment that may hasten the patient's death ("double effect"). The intent of the palliative treatment is to relieve pain and suffering, not to end the patient's life, but the patient's death is a possible side effect of the treatment. It is ethically acceptable for a physician to gradually increase the appropriate medication for a patient, realizing that the medication may depress respiration and cause death.[1]

Assisted suicide also must be distinguished from withholding or withdrawing life-sustaining treatment, in which the patient's death occurs because the patient or the patient's proxy, in consultation with the treating physician, decides that the disadvantages of treatment outweigh its advantages and therefore that treatment is refused.[1]

Ethical Considerations

1. Inappropriate extension of the right to refuse treatment. In granting patients the right to refuse life-sustaining medical treatment, society has acknowledged the right of patients to self-determination on matters of their medical care even if the exercise of that self-determination results in the patient's death. Because any medical treatment offers both benefits and detriments, and people attach different values to those benefits and detriments, only the patient can determine whether the advantages of treatment outweigh the disadvantages. As the Council has previously concluded, "[t]he principle of patient autonomy requires that physicians must respect the decision to forgo life-sustaining treatment of a patient who possesses decision-making capacity."[1]

Although a patient's choice of suicide also represents an expression of self-determination, there is a fundamental difference between refusing life-sustaining treatment and demanding a life-ending treatment. The right of self-

determination is a right to accept or refuse offered interventions, but not to decide what should be offered. The right to refuse life-sustaining treatment does not automatically entail a right to insist that others take action to bring on death.[6(p.121)]

When a life-sustaining treatment is declined, the patient dies primarily because of an underlying disease. The illness is simply allowed to take its natural course. With assisted suicide, however, death is hastened by the taking of a lethal drug or other agent. Although a physician cannot force a patient to accept a treatment against the patient's will, even if the treatment is life-sustaining, it does not follow that a physician ought to provide a lethal agent to the patient. The inability of physicians to prevent death does not imply that physicians are free to help cause death.

For a number of reasons, the medical profession has rejected assisted suicide as fundamentally inconsistent with the professional role of physicians as healers. Indeed, according to the Hippocratic Oath, physicians shall "give no deadly drug to any, though it be asked of [them], nor will [they] counsel such." Physicians serve patients not because patients exercise self-determination but because patients are in need. Therefore, a patient may not insist on treatments that are inconsistent with sound medical practices. Rather, physicians provide treatments that are designed to make patients well, or as well as possible.[7] The physician's role is to affirm life, not to hasten its demise.

Permitting assisted suicide would compromise the physician's professional role also because it would involve physicians in making inappropriate value judgments about the quality of life. Indeed, with the refusal of life-sustaining treatment, society does not limit the right to

refuse treatment only to patients who meet a specific standard of suffering. With refusal of treatment, the state recognizes that the patient (or the patient's proxy) alone can decide that there no longer is a meaningful quality of life.

Objections to causing death also underlie religious views on assisted suicide. Most of the world's major religions oppose suicide in all forms and do not condone physician-assisted suicide even in cases of suffering or imminent death. In justification of their position, religions generally espouse common beliefs about the sanctity of human life, the appropriate interpretation of suffering, and the subordination of individual autonomy to a belief in God's will or sovereignty.[8]

2. <u>The physician's role</u>. The relief of suffering is an essential part of the physician's role as healer, and some patients seek assisted suicide because they are suffering greatly. Suffering is a complex process that may exist in one or several forms, including pain, loss of self-control and independence, a sense of futility, loss of dignity and fear of dying. It is incumbent upon physicians to discuss and identify the elements contributing to the patient's suffering and address each appropriately. The patient, and family members as well, should participate with the physician to ensure that measures to provide comfort will be given the patient in a timely fashion.

One of the greatest concerns reported by patients facing a terminal illness or chronic debilitation is the fear that they will be unable to receive adequate relief for their pain.[9] Though there is some basis for this fear in a small number of cases, for most patients pain can be adequately controlled.[10,11] Inadequate pain relief is only rarely due to the unavailability of effective pain control medications; more often, it may be caused by reluctance on the part of

physicians to use these medications aggressively enough to sufficiently alleviate the patient's pain. Further efforts to educate physicians about advanced pain management techniques, both at the undergraduate and graduate levels, are necessary to overcome any shortcomings in this area.

Pain control medications should be employed in whatever dose necessary, and by whatever route necessary to fully relieve the patient's pain.[9] The patient's treatment plan should be tailored to meet the particular patient's needs. Some patients will request less pain control in order to remain mentally lucid; others may need to be sedated to the point of unconsciousness. Ongoing discussions with the patient, if possible, or with the patient's family or surrogate decision maker will be helpful in identifying the level of pain control necessary to relieve the patient's suffering in accordance with the patient's treatment goals. Techniques of patient controlled analgesia (PCA) enhance the sense of control of terminally ill patients, and, for this reason, are particularly effective. Often, it is the loss of control, rather than physical pain, that causes the most suffering for dying patients.

The first priority for the care of patients facing severe pain as a result of a terminal illness or chronic condition should be the relief of their pain. Fear of addiction to pain medications should not be a barrier to the adequate relief of pain. Nor should physicians be concerned about legal repercussions or sanctions by licensing boards. The courts and regulatory bodies readily distinguish between use of narcotic drugs to relieve pain in dying patients and use in other situations. Indeed, it is well accepted both ethically and legally that pain medications may be administered in whatever dose necessary to relieve the patient's suffering, even if the medication has the side effect of causing addiction or of causing death through respiratory depression.[1]

Relieving the patient's psychosocial and other suffering is as important as relieving the patient's pain. When the treatment goals for a patient in the end stages of a terminal illness shift from curative efforts to comfort care, the level of physician involvement in the patient's care should in no way decrease. Patients in these circumstances must be managed "in a setting of [the patient's] own choosing, as free as possible from pain and other burdensome symptoms, and with the optimal psychological and spiritual support of family and friends."[12] Because the loss of control may be the greatest fear of dying patients, all efforts should be made to maximize the patient's sense of control.

Accomplishing these goals requires renewed efforts from physicians, nurses, family members and other sources of psychological and spiritual support. Often, the patient's despair with his or her quality of life can be relieved by psychiatric intervention.[13] Seriously ill patients contemplating suicide may develop a renewed desire to live as a result of counseling and/or anti-depressant medications. When requests for assisted suicide occur, it is important to provide the patient with an evaluation by a health professional with expertise in psychiatric aspects of terminal illness.

The hospice movement has made great strides in providing comfort care to patients at the end of life. In hospice care, the patient's symptoms, including pain, are aggressively treated to make the patient as comfortable as possible, but efforts to extend the patient's life are usually not pursued.[14,15,16] Hospice patients are often cared for at home, or, if their condition requires care to be delivered in an institutional setting, intrusive medical technology is kept to a minimum. The provision of a humane, low technology environment in which to spend their final days can

go far in alleviating patients' fears of an undignified, lonely, technologically dependent death.

Physicians must not abandon or neglect the needs of their terminally ill patients. Indeed, the desire for suicide is a signal to the physician that more intensive efforts to comfort and care for the patient are needed. Physicians, family and friends can help patients near the end of life by their presence and by their loving support. Patients may feel obligated to die in order to spare their families the emotional and financial burden of their care or to spare limited societal resources for other health care needs. While patients may rationally and reasonably be concerned about the burden on others, physicians and family members must reassure patients that they are under no obligation to end their lives prematurely because of such concerns.

In some cases, terminally ill patients voluntarily refuse food or oral fluids. In such cases, patient autonomy must be respected and forced feeding or aggressive parenteral rehydration should not be employed. Emphasis should be placed on renewed efforts at pain control, sedation and other comfort care for the associated discomfort.

3. "Slippery slope" concerns. Permitting assisted suicide opens the door to policies that carry far greater risks. For example, if assisted suicide is permitted, then there is a strong argument for allowing euthanasia. It would be arbitrary to permit patients who have the physical ability to take a pill to end their lives, but not let similarly suffering patients die if they require the lethal drug to be administered by another person. Once euthanasia is permitted, however, there is a serious risk of involuntary deaths. Given the acceptance of withdrawal of life-sustaining treatment by proxies for incompetent patients, it would be easy for society to permit euthanasia for incompetent patients by proxy.

The Dutch experience with euthanasia demonstrates the risks of sanctioning physician assisted suicide. In the Netherlands, there are strict criteria for the use of euthanasia that are similar to the criteria proposed for assisted suicide in the United States. In the leading study of euthanasia in the Netherlands,[17] however, researchers found that, in about 28% of cases of euthanasia or physician-assisted suicide, the strict criteria were not fulfilled, suggesting that some patients' lives were ended prematurely or involuntarily. In a number of cases, the decision to end the patient's life was made by a surrogate decision-maker since the patient had lost decision-making capacity by the time the decision to employ euthanasia was made.

Recommendations

1. Physician assisted suicide is fundamentally inconsistent with the physician's professional role.
2. It is critical that the medical profession redouble its efforts to ensure that dying patients are provided optimal treatment for their pain and other discomfort. The use of more aggressive comfort care measures, including greater reliance on hospice care, can alleviate the physical and emotional suffering that dying patients experience. Evaluation and treatment by a health professional with expertise in the psychiatric aspects of terminal illness can often alleviate the suffering that leads a patient to desire assisted suicide.
3. Physicians must resist the natural tendency to withdraw physically and emotionally from their terminally ill patients. When the treatment goals for a patient in the end stages of a terminal illness shift from curative efforts to comfort care, the level of physician involvement in the patient's care should in no way decrease.

4. Requests for physician assisted suicide should be a signal to the physician that the patient's needs are unmet and further evaluation to identify the elements contributing to the patient's suffering is necessary. Multidisciplinary intervention, including specialty consultation, pastoral care, family counseling and other modalities, should be sought as clinically indicated.
5. Further efforts to educate physicians about advanced pain management techniques, both at the undergraduate and graduate levels, are necessary to overcome any shortcomings in this area. Physicians should recognize that courts and regulatory bodies readily distinguish between use of narcotic drugs to relieve pain in dying patients and use in other situations.

Council Report

Decisions Near the End of Life [*][**]

Council on Ethical and Judicial Affairs
American Medical Association

OVER the last 50 years, people have become increasingly concerned that the dying process is too often needlessly protracted by medical technology and is consequently marked by incapacitation, intolerable pain, and indignity. In one public opinion poll, 68% of respondents believed that "people dying of an incurable painful disease should be allowed to end their lives before the disease runs its course."[1] A number of comparable surveys indicate similar public sentiment.[2]

Since the turn of the century, there has been a dramatic shift in the places where people die. Sixty years ago, the vast majority of deaths occurred at home. Now most people die in hospitals or long-term care facilities. Approximately 75% of all deaths in 1987 occurred in hospitals and long-term care institutions,[3] up from 50% in 1949, 61% in 1958, and 70% in 1977.[4] This transition from the privacy of the home to medical institutions has increased public awareness and concern about medical decisions near the end of life. "Since deaths which occur in institutions are more subject to scrutiny and official review, decisions for death made there are more likely to enter public consciousness."[5]

The development of sophisticated life support technologies now enables medicine to intervene and forestall death for most patients. Do-not-resuscitate orders are now commonplace.[6] The Office of Technology Assessment Task Force estimated in 1988 that 3775 to 6575 persons were dependent on mechanical ventilation and 1404 500 persons were receiving artificial nutritional support.[7] This growing capability to forestall death has contributed to the increased attention to medical decisions near the end of life.[5]

The Council has issued opinions on withdrawing and withholding life-prolonging treatment from patients who are terminally ill or permanently unconscious and has also published reports concerning do-not-resuscitate orders,[9,10] euthanasia,[11] and withdrawal of life--prolonging treatment from permanently unconscious patients.[12] This report will re-examine the Council's existing positions and will expand the analysis to include physician-assisted suicide and withdrawing or withholding life-sustaining treatment for patients who are neither terminally ill nor permanently unconscious. The report will focus on competent patients in nonemergency situations. The issue of decisions near

the end of life for incompetent patients is addressed in a separate report by the Council.[13]

DEFINITIONS

The decisions near the end of life examined in this report are those decisions regarding actions or intentional omissions by physicians that will foreseeably result in the deaths of patients. In particular, these decisions concern the withholding or withdrawing of life-sustaining treatment, the provision of a palliative treatment that may have fatal side effects, euthanasia, and assisted suicide.

Life-sustaining treatment is any medical treatment that serves to prolong life without reversing the underlying medical condition. Life-sustaining treatment may include, but is not limited to, mechanical ventilation, renal dialysis, chemotherapy, antibiotics, and artificial nutrition and hydration. At one time, the term *passive euthanasia* was commonly used to describe withholding or withdrawing life-sustaining treatment. However, many experts now refrain from using the term passive euthanasia.

The provision of a palliative treatment that may have fatal side effects is also described as *double-effect euthanasia*. The intent of the treatment is to relieve pain and suffering, not to end the patient's life, but the patient's death is a foreseeable potential effect of the treatment. An example is gradually increasing the morphine dosage for a patient to relieve severe cancer pain, realizing that large enough doses of morphine may depress respiration and cause death.

Euthanasia is commonly defined as the act of bringing about the death of a hopelessly ill and suffering person in a relatively quick and painless way for reasons of mercy. In this report, the term euthanasia will signify the medical administration of a lethal agent to a patient for the purpose

of relieving the patient's intolerable and incurable suffering.

Voluntary euthanasia is euthanasia that is provided to a competent person on his or her informed request. *Nonvoluntary euthanasia* is the provision of euthanasia to an incompetent person according to a surrogate's decision. *Involuntary euthanasia* is euthanasia performed without a competent person's consent. This report will not examine involuntary euthanasia further, since it clearly would never be ethically acceptable.

Euthanasia and assisted suicide differ in the degree of physician participation. Euthanasia entails a physician performing the immediate life-ending action (eg, administering a lethal injection). *Assisted suicide* occurs when a physician facilitates a patient's death by providing the necessary means and/or information to enable the patient to perform the life-ending act (eg, the physician provides sleeping pills and information about the lethal dose, while aware that the patient may commit suicide).

Discussions about life-ending acts by physicians often refer to the patient's "competence" or "decision-making capacity." The two terms are often used interchangeably. However, *competence* can also refer to a legal standard regarding a person's soundness of mind. *Decision-making capacity* signifies the ability to make a particular decision and is not considered a legal standard. "Competence" for the Council's purposes will mean "decision-making capacity."

The evaluation of a person's decision-making capacity is an assessment of the person's capabilities for understanding, communicating, and reasoning. Patients should not be judged as lacking decision-making capacity based on the view that what they decide is unreasonable." People are entitled to make decisions that others think are foolish

as long as their choices are arrived at through a competently reasoned process and are consistent with their personal values.

ETHICAL FRAMEWORK

Determining the ethical responsibilities of physicians when patients wish to die requires a close examination of the physician's role in society. Physicians are healers of disease and injury, preservers of life, and relievers of suffering. Ethical judgments become complicated, however, when these duties conflict. The four instances in which physicians might act to hasten death or refrain from prolonging life involve conflicts between the duty to relieve suffering and the duty to preserve life.

The considerations that must be weighed in each case are: (1) the principle of patient autonomy and the corresponding obligation of physicians to respect patients' choices; (2) whether what is offered by the physician is sound medical treatment; and (3) the potential consequences of a policy that permits physicians to act in a way that will foreseeably result in patients' deaths.

Patient Autonomy

The principle of patient autonomy requires that competent patients have the opportunity to choose among medically indicated treatments and to refuse any unwanted treatment. Absent countervailing obligations, physicians must respect patients' decisions. Treatment decisions often involve personal value judgments and preferences in addition to objective medical considerations. We demonstrate respect for human dignity when we acknowledge "the freedom [of individuals] to make choices in accordance with their own values."[15]

Sound Medical Treatment

The physician's obligation to respect a patient's decision does not require a physician to provide a treatment that is not medically sound. Indeed, physicians are ethically prohibited from offering or providing unsound treatments. Sound medical treatment is defined as the use of medical knowledge or means to cure or prevent a medical disorder, preserve life, or relieve distressing symptoms.

This criterion of soundness arises from the medical ethical principles of beneficence and nonmaleficence. The principle of *nonmaleficence* prohibits physicians from using their medical knowledge or skills to do harm, on balance, to their patients, while the principle of *beneficence* requires that medical knowledge and skills be used to benefit patients.

Generally, a treatment that is likely to cause the death of a patient violates the principle of nonmaleficence, and a failure to save a patient's life is contrary to beneficence. However, for these decisions near the end of life the patient does not consider his or her death to be an absolutely undesirable outcome.

Practical Considerations

Policies governing decisions near the end of life must also be evaluated in terms of their practical consequences. The ethical acceptability of a policy depends on the benefits and costs that result from the policy. In addition to the impact on individual cases (eg, patients will die according to their decision to have life supports withdrawn), there are likely to be serious societal consequences of policies regarding physicians' responsibilities to dying patients.

WITHHOLDING AND WITHDRAWING LIFE-SUSTAINING TREATMENT

The principle of patient autonomy requires that physicians respect a competent patient's decision to forgo any medical treatment. This principle is not altered when the likely result of withholding or withdrawing a treatment is the patient's death.[4] The right of competent patients to forgo life-sustaining treatment has been upheld in the courts (for example, *In re Brooks Estate,* 32 Ill2d 361, 205 NE2d 435 [1965]; *In re Osborne,* 294 A2d 372 [1972]) and is generally accepted by medical ethicists.[4]

Decisions that so profoundly affect a patient's well-being cannot be made independent of a patient's subjective preferences and values.[16] Many types of life-sustaining treatments are burdensome and invasive, so that the choice for the patient is not simply a choice between life and death.[7] When a patient is dying of cancer, for example, a decision may have to be made whether to use a regimen of chemotherapy that might prolong life for several additional months but also would likely be painful, nauseating, and debilitating. Similarly, when a patient is dying, there may be a choice between returning home to a natural death, or remaining in the hospital, attached to machinery, where the patient's life might be prolonged a few more days or weeks. In both cases, individuals might weigh differently the value of additional life vs the burden of additional treatment.

The withdrawing or withholding of life-sustaining treatment is not inherently contrary to the principles of beneficence and nonmaleficence. The physician is obligated only to offer sound medical treatment and to refrain from providing treatments that are detrimental, on balance, to the patient's well-being. When a physician withholds or withdraws a treatment on the request of a

patient, he or she has fulfilled the obligation to offer sound treatment to the patient. The obligation to offer treatment does not include an obligation to impose treatment on an unwilling patient. In addition, the physician is not providing a harmful treatment. Withdrawing or withholding is not a treatment, but the forgoing of a treatment.

Some commentators argue that if a physician has a strong moral objection to withdrawing or withholding life-sustaining treatment, the physician may transfer the patient to another physician who is willing to comply with the patient's wishes.[4] It is true that a physician does not have to provide a treatment, such as an abortion, that is contrary to his or her moral values. However, if a physician objects to withholding or withdrawing the treatment and forces unwanted treatment on a patient, the patient's autonomy will be inappropriately violated even if it will take only a short time for the patient to be transferred to another physician.

Withdrawing or withholding some life-sustaining treatments may seem less acceptable than others. The distinction between "ordinary" vs "extraordinary" treatments has been used to differentiate ethically obligatory vs ethically optional treatments.[17] In other words, ordinary treatments must be provided, while extraordinary treatment may be withheld or withdrawn. Varying criteria have been proposed to distinguish ordinary from extraordinary treatment. Such criteria include customariness, naturalness, complexity, expense, invasiveness, and balance of likely benefits vs burdens of the particular treatment.[17,18] The ethical significance of all these criteria essentially are subsumed by the last criterion--the balance of likely benefits vs the burdens of the treatment.[17]

When a patient is competent, this balancing must ultimately be made by the patient. As stated earlier, the evaluation of whether life-sustaining treatment should be initiated, maintained, or forgone depends on the values and preferences of the patient. Therefore, treatments are not objectively ordinary or extraordinary. For example, artificial nutrition and hydration have frequently been cited as an objectively ordinary treatment which, therefore, must never be forgone. However, artificial nutrition and hydration can be very burdensome to patients. Artificial nutrition and hydration immobilize the patient to a large degree, can be extremely uncomfortable (restraints are sometimes used to prevent patients from removing nasogastric tubes), and can entail serious risks (for example, surgical risks from insertion of a gastrostomy tube and the risk of aspiration pneumonia with a nasogastric tube).

Aside from the ordinary vs extraordinary argument, the right to refuse artificial nutrition and hydration has also been contested by some because the provision of food and water has a symbolic significance as an expression of care and compassion.[19] These commentators argue that withdrawing or withholding food and water is a form of abandonment and will cause the patient to die of starvation and/or thirst. However, it is far from evident that providing nutrients through a nasogastric tube to a patient for whom it is unwanted is comparable to the typical human ways of feeding those who are hungry.[18] In addition, discomforting symptoms can be palliated so that a death that occurs after forgoing artificial nutrition and/or hydration is not marked by substantial suffering.[20,21] Such care requires constant attention to the patient's needs. Therefore, when comfort care is maintained, respecting a patient's decision to forgo artificial nutrition and hydration will not constitute an abandonment of the patient, symbolic or otherwise.

There is also no ethical distinction between withdrawing and withholding life-sustaining treatment.[4,15,17] Withdrawing life support may be emotionally more difficult than withholding life support because the physician performs an action that hastens death. When life-sustaining treatment is withheld, on the other hand, death occurs because of an omission rather than an action. However, as most bioethicists now recognize, such a distinction lacks ethical significance.[4,15,17] First, the distinction is often meaningless. For example, if a physician fails to provide a tube feeding at the scheduled time, would it be a withholding or a withdrawing of treatment? Second, ethical relevance does not lie with the distinction between acts and omissions, but with other factors such as the motivation and professional obligations of the physician. For example, refusing to initiate ventilator support despite the patient's need and request because the physician has been promised a share of the patient's inheritance is clearly ethically more objectionable than stopping a ventilator for a patient who has competently decided to forgo it. Third, prohibiting the withdrawal of life support would inappropriately affect a patient's decision to initiate such treatment. If treatment cannot be stopped once it is initiated, patients and physicians may be more reluctant to begin treatment when there is a possibility that the patient may later want the treatment withdrawn.[4]

While the principle of autonomy requires that physicians respect competent patients' requests to forgo life-sustaining treatments, there are potential negative consequences of such a policy. First, deaths may occur as a result of uninformed decisions or from pain and suffering that could be relieved with measures that will not cause the patient's death. Further, subtle or overt pressures from family, physicians, or society to forgo life-sustaining treatment may render the patient's choice less than free.

These pressures could revolve around beliefs that such patients' lives no longer possess social worth and are an unjustifiable drain of limited health resources.

The physician must ensure that the patient has the capacity to make medical decisions before carrying out the patient's decision to forgo (or receive) life-sustaining treatment. In particular, physicians must be aware that the patient's decision-making capacity can be diminished by a misunderstanding of the medical prognosis and options or by a treatable state of depression. It is also essential that all efforts be made to maximize the comfort and dignity of patients who are dependent on life-sustaining treatment and that patients be assured of these efforts. With such assurances, patients will be less likely to forgo life support because of suffering or anticipated suffering that could be palliated.

The potential pressures on patients to forgo life-sustaining treatments are an important concern. The Council believes that the medical profession must be vigilant against such tendencies, but that the greater policy risk is of undermining patient autonomy.

PROVIDING PALLIATIVE TREATMENTS THAT MAY HAVE FATAL SIDE EFFECTS

Health care professionals have an ethical duty to provide optimal palliative care to dying patients. At present, many physicians are not informed about the appropriate doses, frequency of doses, and alternate modalities of pain control for patients with severe chronic pain. In particular, inappropriate concerns about addiction too often inhibit physicians from providing adequate analgesia to dying patients. Physicians should inform the patient and the family that concentrated efforts to relieve pain will be a priority in the care of the patient, since fear

of pain is "one of the most pervasive causes of anxiety among patients, families and the public."[2]

The level of analgesia necessary to relieve the patient's pain, however, may also have the effect of shortening the patient's life. The Council stated in its 1988 report on euthanasia that "the administration of a drug necessary to ease the pain of a patient who is terminally ill and suffering excruciating pain may be appropriate medical treatment even though the effect of the drug may shorten life."[11] The Council maintains this position and further emphasizes that a competent patient must be the one who decides whether the relief of pain and suffering is worth the danger of hastening death. The principle of respect for patient autonomy and self-determination requires that patients decide about such treatment.

The ethical distinction between providing palliative care that may have fatal side effects and providing euthanasia is subtle because in both cases the action that causes death is performed with the purpose of relieving suffering. The intent of the former is to relieve suffering despite the fatal side effects, while the intent of the latter is to cause death as a means by which relief of suffering is achieved. Most medical treatments entail some undesirable side effects. In general, the patient has a right to decide either to risk the side effects or to forgo the treatment. It does not follow from this reasoning that a patient also has a right to choose euthanasia as a medical treatment for their suffering.

An important concern is that patients who are not fully informed about their prognosis and options may make decisions that unnecessarily shorten their lives. In addition, severe pain might diminish the patient's capacity to decide whether to choose a treatment that risks death. Caution when determining decision-making capacity in this

situation, therefore, must be exercised, and patients should be fully informed.

EUTHANASIA

Euthanasia is the medical administration of a lethal agent in order to relieve a patient's intolerable and untreatable suffering. Whether or not a physician may use the skills or knowledge of medicine to cause an "easy" death for a patient who requests such assistance has been debated as early as the time of Hippocrates. Recently, euthanasia has been gaining support from the public and some in the medical profession. In the Netherlands, while physician-performed euthanasia remains illegal, physicians have not been prosecuted since 1984 when they follow certain criteria.[23] These criteria include that (1) euthanasia is explicitly and repeatedly requested by the patient and there is no doubt that the patient wants to die; (2) the mental and physical suffering is severe with no prospect for relief; (3) the patient's decision is well-informed, free, and enduring; (4) all options for alternate care have been exhausted or refused by the patient; and (5) the physician consults another physician.[24] The frequency of euthanasia in the Netherlands has been estimated to range from 2000 to 20000 persons per year.[23] Recently, the first nationwide study of the practice of euthanasia in the Netherlands estimated the incidence of euthanasia to be 1900 persons per year.[25]

In the United States there has been growing public support for legalized euthanasia. The Hemlock Society, an organization dedicated to legalizing voluntary euthanasia and assisted suicide, has doubled its membership in the past 5 years to approximately 33000.[26] Recently, an initiative in Washington State that would have legalized euthanasia for terminally ill patients was put to a vote. Although the

initiative was unsuccessful, 44% of the voters supported the initiative.[27]

Though the principle of patient autonomy requires that competent patients be given the opportunity to choose among offered medical treatments and to forgo any treatment, it does not give patients the right to have a physician perform a treatment to which the physician has objections. Though patients have a right to refuse life-sustaining treatment, they do not have a right to receive euthanasia. There is an autonomy interest in directing one's death, but this interest is more limited in the case of euthanasia than in the case of refusing life support.

The question remains whether it is ethical for a physician to agree to perform euthanasia. To approach this question one must look to the principles of beneficence and nonmaleficence and to the larger policy implications of condoning physician-performed euthanasia.

Can euthanasia ever constitute sound medical treatment? Any treatment designed to cause death is generally considered detrimental to the patient's well-being, and therefore unsound. However, proponents of euthanasia argue that euthanasia is a sound treatment of last resort for the relief of intolerable pain and suffering. From the perspective of competent patients who request euthanasia in the face of such suffering, death may be preferable, on balance, to continued life.

On the other hand, most pain and suffering can be alleviated. The technology of pain management has advanced to the point where most pain is now controllable. The success of the hospice movement illustrates the extent to which aggressive pain control and close attention to patient comfort and dignity can ease the transition to death.[22]

There may be cases, however, where a patient's pain and suffering is not reduced to a tolerable level and the patient requests a physician to help him or her die.[2,22] If a patient's pain and suffering are unrelievable and intolerable, using medical expertise to aid an easy death on the request of the patient might seem to be the humane and beneficent treatment for the patient.

However, there are serious risks associated with a policy allowing physician-performed euthanasia. There is a long-standing prohibition against physicians killing their patients, based on a commitment that medicine is a profession dedicated to healing, and that its tools should not be used to cause patients' deaths. Weakening this prohibition against euthanasia, even in the most compelling situations, has troubling implications.[28,29] Though the magnitude of such risks are impossible to predict accurately, the medical profession and society as a whole must not consider these risks lightly. Two noted ethicists have expressed the role of this prohibition:

> The prohibition of killing is an attempt to promote a solid basis for trust in the role of caring for patients and protecting them from harm. This prohibition is both instrumentally and symbolically important, and its removal would weaken a set of practices and restraints that we cannot easily replace.[17]

If euthanasia by physicians were to be condoned, the fact that physicians could offer death as a medical treatment might undermine public trust in medicine's dedication to preserving the life and health of patients.[26] Some patients may fear the prospect of involuntary or nonvoluntary euthanasia if their lives are no longer deemed valuable as judged by physicians, their family, or society.[30] Other patients who trust their physicians' judgments may not feel

free to resist the suggestion that euthanasia may be appropriate for them.[30-32]

Another risk is that physicians and other health care providers may be more reluctant to invest their energy and time serving patients whom they believe would benefit more from a quick and easy death. Caring for dying patients is taxing on physicians who must face issues of their own mortality in the process, and who often perceive such care as a reminder of their failure to cure these patients.[4,15] In addition, the increasing pressure to reduce health care costs may serve as another motivation to favor euthanasia over longer-term comfort care.

Allowing physicians to perform euthanasia for a limited group of patients who may truly benefit from it will present difficult line-drawing problems for medicine and society. In specific cases it may be hard to distinguish which cases fit the criteria established for euthanasia. For example, if the existence of unbearable pain and suffering was a criterion for euthanasia, the definition of unbearable pain and suffering could be subject to different interpretations.

Furthermore, determining whether a patient will benefit from euthanasia requires an intimate understanding of the patient's concerns, values, and pressures that may be prompting the euthanasia request. In the Netherlands, physicians who provide euthanasia generally have a lifelong relationship with the patient and the patient's family, which enables the physician to have access to this vital information.[33] In the United States, however, physicians rarely have the depth of knowledge about their patients that would be necessary for an appropriate evaluation of the patient's request for euthanasia.

More broadly, the line-drawing necessary for the establishment of criteria for euthanasia is also problematic.

If competent patients can receive euthanasia, can family members request euthanasia for an incompetent patient? Would it be acceptable for physicians to perform euthanasia on any competent individuals who request it? Furthermore, since it will be physicians and the state who ultimately answer these questions, value judgments about patients' lives will be made by a person or entity other than the patients.

Since it is unclear at this time where these lines should be drawn, the proposition of allowing euthanasia is particularly troublesome. A potential exists for a gradual distortion of the role of medicine into something that starkly contrasts with the current vision of a profession dedicated to healing and comforting.

Furthermore, in the United States there is currently little data regarding the number of euthanasia requests, the concerns behind the requests, the types and degree of intolerable and unrelievable suffering, or the number of requests that have been granted by health care providers. Before euthanasia can ever be considered a legitimate medical treatment in this country, the needs behind the demand for physician-provided euthanasia must be examined more thoroughly and addressed more effectively. A thorough examination would require a more open discussion of euthanasia and the needs of patients who are making requests. The existence of patients who find their situations so unbearable that they request help from their physicians to die must be acknowledged, and the concerns of these patients must be a primary focus of medicine. Rather than condoning physician-provided euthanasia, medicine must first respond by striving to identify and address the concerns and needs of dying patients.

PHYSICIAN-ASSISTED SUICIDE

Physician-assisted suicide has only recently become the focus of public attention. In June 1990, Dr Jack Kevorkian assisted the death of a person with the use of a "suicide machine," which he invented. This case has been criticized by many for the irresponsible way in which it was carried out by the physician.[26] Kevorkian has since used his suicide machine to assist the suicides of two more persons. Last March, an article was published in the *New England Journal of Medicine* by a physician who described his role in assisting his patient's suicide.[34] The care and compassion evidenced by the physician and the reasoned decision-making process of the patient marked this account as truly compelling. Besides these very public cases of physician-assisted suicide, there is reason to believe that it has been occurring for some time.[2]

There is an ethically relevant distinction between euthanasia and assisted suicide that makes assisted suicide an ethically more attractive option. Physician-assisted suicide affords a patient a more autonomous way of ending his or her life than does euthanasia. Since patients must perform the life-ending act themselves, they would have the added protection of being able to change their minds and stop their suicides up until the last moment.

However, the ethical objections to physician-assisted suicide are similar to those of euthanasia since both are essentially interventions intended to cause death. Physician-assisted suicide, like euthanasia, is contrary to the prohibition against using the tools of medicine to cause a patient's death. Physician-assisted suicide also has many of the same societal risks as euthanasia, including the potential for coercive financial and societal pressures on patients to choose suicide. Further, determining the criteria for assisting a patient's suicide and determining

whether a particular patient meets the criteria are as problematic as deciding who may receive euthanasia.

While in highly sympathetic cases physician-assisted suicide may seem to constitute beneficent care, due to the potential for grave harm the medical profession cannot condone physician-assisted suicide at this time. The medical profession instead must strive to identify the concerns behind patients' requests for assisted suicide, and make concerted efforts at finding ways to address these concerns short of assisting suicide, including providing more aggressive comfort care.

CONCLUSIONS

* The principle of patient autonomy requires that physicians must respect the decision to forgo life-sustaining treatment of a patient who possesses decision-making capacity. Life-sustaining treatment is any medical treatment that serves to prolong life without reversing the underlying medical condition. Life-sustaining treatment may include, but is not limited to, mechanical ventilation, renal dialysis, chemotherapy, antibiotics, and artificial nutrition and hydration.

* There is no ethical distinction between withdrawing and withholding life-sustaining treatment.

* Physicians have an obligation to relieve pain and suffering and to promote the dignity and autonomy of dying patients in their care. This includes providing effective palliative treatment even though it may foreseeably hasten death. More research must be pursued examining the degree to which palliative care reduces the requests for euthanasia or assisted suicide.

* Physicians must not perform euthanasia or participate in assisted suicide. A more careful examination of the issue is necessary. Support, comfort, respect for patient autonomy, good communication, and adequate pain control

may decrease dramatically the demand for euthanasia and assisted suicide. In certain carefully defined circumstances, it would be humane to recognize that death is certain and suffering is great. However, the societal risks of involving physicians in medical interventions to cause patients' deaths is too great in this culture to condone euthanasia or physician-assisted suicide at this time.

MODEL PENAL CODE

§ 210.5 Causing or Aiding Suicide

. . .

(2) **Aiding or Soliciting Suicide as an Independent Offense.** A person who purposely aids or solicits another to commit suicide is guilty of a felony of the second degree if his conduct causes such suicide or an attempted suicide, and otherwise of a misdemeanor.

STATE STATUTES

ALASKA

Sec. 1141.120. Manslaughter. (a) A person commits the crime of manslaughter if the person

. . .

(2) intentionally aids another person to commit suicide.

ARIZONA

§ 13-1103. Manslaughter; classification

A. A person commits manslaughter by:

. . .

3. Intentionally aiding another to commit suicide; or

ARKANSAS

5-10-104. Manslaughter.

. . .

(2) He purposely causes or aids another person to commit suicide;

CALIFORNIA

§ 401. Suicide; aiding, advising, or encouraging

Every person who deliberately aids, or advises, or encourages another to commit suicide, is guilty of a felony.

COLORADO

18-3-104. Manslaughter. (1) A person commits the crime of manslaughter if:

. . .

(b) Such person intentionally causes or aids another person to commit suicide; or

CONNECTICUT

§ 53A-56. Manslaughter in the second degree: Class C felony

(a) A person is guilty of manslaughter in the second degree when: . . . (2) he intentionally causes or aids another person, other than by force, duress or deception, to commit suicide.

Commission Comment--1971

Manslaughter in the second degree. This section covers two types of homicide: recklessly causing the death of another; and intentionally causing or aiding another person to commit suicide.

. . .

The second part, causing or aiding a suicide, is aimed at such situations as aiding, out of the feelings of sympathy, the suicide of one inflicted with a painful and incurable disease. While such conduct is blameworthy, the possible mitigating circumstances justify its treatment as manslaughter, rather than murder.

DELAWARE

§ 645. Promoting suicide; class F felony [Amendment effective with respect to crimes committed June 30, 1990, or thereafter].

A person is guilty of promoting suicide when he intentionally causes or aids another person to attempt suicide, or when he intentionally aids another person to commit suicide.

FLORIDA

782.08. Assisting self-murder

Every person deliberately assisting another in the commission of self-murder shall be guilty of manslaughter, a felony of the second degree, punishable as provided in s. 775.082, s. 775.083, or s. 775.084.

ILLINOIS

12-31. Inducement to commit suicide

§ 12-31. Inducement to Commit Suicide. (a) A person commits the offense of inducement to commit suicide when he coerces another to commit suicide and the other person commits suicide as a direct result of the coercion, and he exercises substantial control over the other person through (1) control of the other person's physical location or circumstances; (2) use of psychological pressure; or (3) use of actual or ostensible religious, political, social, philosophical or other principles.

INDIANA

35-42-1-2.5 Assisting suicide.--(a) This section does not apply to the following:

(1) A licensed health care provider who administers, prescribes, or dispenses medications or procedures to

relieve a person's pain or discomfort, even if the medication or procedure may hasten or increase the risk of death, unless such medications or procedures are intended to cause death.

(2) The withholding or withdrawing of medical treatment or life-prolonging procedures by a licensed health care provider, including pursuant to IC 16-8-11 (living wills and life-prolonging procedures), IC 16-8-12 (health care consent), or IC 30-5 (power of attorney).

(b) A person who has knowledge that another person intends to commit or attempt to commit suicide and who intentionally does either of the following commits assisting suicide, a Class C felony:

(1) Provides the physical means by which the other person attempts or commits suicide.

(2) Participates in a physical act by which the other person attempts or commits suicide.

KANSAS

21-3406. Assisting suicide. Assisting suicide is intentionally advising, encouraging or assisting another in the taking of the other's life which results in a suicide or attempted suicide.

Assisting suicide is a severity level 9, person felony.

MAINE

§ 204. Aiding or soliciting suicide

1. A person is guilty of aiding or soliciting suicide if he intentionally aids or solicits another to commit suicide, and the other commits or attempts suicide.

2. Aiding or soliciting suicide is a Class D crime.

Comment to former section 206--1975

There is no counterpart to this section in the present law. It is included in the code in order to deter conduct aimed at causing another to take his life. The participation of the victim in bringing about his own death does not make the forbidden conduct free from fault. The requirement that there be a successful or unsuccessful suicide attempt adds a safeguard designed to corroborate the defendant's intention. [Footnote omitted.]

MICHIGAN

AN ACT to ◆ [prohibit certain acts pertaining to the assistance of suicide]; to provide for the development of legislative recommendations concerning certain issues related to death and dying [, including assistance of suicide]; ◆ [to create the Michigan commission on death and dying]; [to prescribe its membership, powers, and duties;] to prescribe penalties; and to repeal certain parts of this act on a specific date.

§28.547(121) Commission on death and dying; creation.] Sec. 1. (1) The legislature finds that the voluntary self-termination of human life, with or without assistance, raises serious ethical and public health questions in the state. To study this problem and to develop recommendations for legislation, the Michigan commission on death and dying is created.

Effective date.] [(2) This section shall take effect February 25, 1993.] (MCL §752.1021.)

§28.547(122) Definitions.] Sec. 2. (1) As used in this act:

(a) "Commission" means the Michigan commission on death and dying created in section 3.

(b) "Legislative council" means the legislative council established under section 15 of article IV of the state constitution of 1963.

(c) "Licensed health care professional" means any of the following:

(i) A physician or physician's assistant licensed or authorized to practice under part 170 or 175 of the public health code [, being sections 333.17001 to 333.17088 and 333.17501 to 333.17556 of the Michigan Compiled Laws].

(ii) A registered nurse or licensed practical nurse licensed or authorized to practice under part 172 of the public health code [, being sections 333.17201 to 333.17242 of the Michigan Compiled Laws].

(iii) A pharmacist licensed under part 177 of the public health code[, being sections 333.17701 to 333.17770 of the Michigan Compiled Laws].

(d) "Patient" means a person who engages in an act of voluntary self-termination.

(e) "Public health code" means Act No. 368 of the Public Acts of 1978, being sections 333.1101 to 333.25211 of the Michigan Compiled Laws.

(f) "The voluntary self-termination of life", "voluntary self-termination", and "self-termination" mean conduct by which a person expresses the specific intent to end, and attempts to cause the end of, his or her life, but do not include the administration of medication or medical treatment intended by a person to relieve his or her pain or discomfort, unless that administration is also independently and specifically intended by the person to cause the end of his or her life.

Effective date.] [(2) This section shall take effect February 25, 1993.] (MCL §752.1022.)

§28.547(123) Nomination and appointment of members.] Sec. 3.(1) The Michigan commission on death and dying is created within the 'egislative council. In

accordance with its own rules and procedures, each of the following may nominate 2 persons for appointment to the commission:

(a) American association of retired persons.
(b) American civil liberties union of Michigan.
(c) Citizens for better care.
(d) Health care association of Michigan.
(e) Hemlock of Michigan.
(f) Michigan association for retarded citizens.
(g) Michigan association of osteopathic physicians and surgeons.
(h) Michigan association of suicidology.
(i) Michigan council on independent living.
(j) Michigan head injury survivor's council.
(k) Michigan hospice organization.
(l) Michigan hospital association.
(m) Michigan nonprofit homes association.
(n) Michigan nurses association.
(o) Michigan psychiatric society.
(p) Michigan psychological association.
(q) Michigan senior advocates council.
(r) Michigan state medical society.
(s) National association of social workers, Michigan division.
(t) Right to life of Michigan, inc.
(u) State bar of Michigan.
(v) Prosecuting attorneys association of Michigan.

Legislative council; selection of commission member and alternate.] (2) Within 30 days after receiving notice of the nominations of an organization listed in subsection (1), the chairperson and alternate chairperson of the legislative council shall select from the nominees of that organization a member and a person to serve as that member's alternate on the commission.

Majority of members to constitute quorum.] (3) A majority of commission members appointed constitute a quorum.

Initial meeting; election of officers; establishment of rules of proceeding; rights of alternate members.] (4) The commission shall convene its first meeting within 90 days after the effective date of this act, at which the members shall elect from members of the commission a chairperson, vice-chairperson, and secretary. The commission shall establish rules governing commission proceedings. These rules shall provide alternate members with full rights of participation, other than voting, in all commission proceedings.

Subsequent meetings; calling of meetings by chairperson or commission majority; notice.] (5) Following its first meeting, the commission shall meet as often as necessary to fulfill its duties under this act. Either the chairperson or a majority of the appointed members may call a meeting upon 7 days' written notice to the commission members.

Deliberations; involvement of members of the public and certain groups.] (6) In its deliberations, the commission shall provide for substantial involvement from the academic, health care, legal, and religious communities, as well as from members of the general public.

Death or absence of member; duties of alternate.] (7) Upon the death or resignation of a commission member, the person serving as his or her alternate shall succeed that member. If a member of the commission is absent from a commission meeting, the person serving as his or her alternate shall act as a member of the commission at that meeting.

Effective date.] [(8) This section shall take effect February 25, 1993.] (MCL §752.1023.)

§28.547(124) Recommendations to legislature; factors to consider.] Sec. 4. [(1)] Within 15 months after the effective date of this act, the commission shall develop and submit to the legislature recommendations as to legislation concerning the voluntary self-termination of life. In developing these recommendations, the commission shall consider each of the following:

(a) Current data concerning voluntary self-termination, including each of the following:

(i) The current self-termination rate in the state, compared with historical levels.

(ii) The causes of voluntary self-termination, and in particular each of the following:

(A) The role of alcohol and other drugs.

(B) The role of age, disease, and disability.

(iii) Past and current Michigan law concerning voluntary self-termination, including the status of persons who assist a patient's self-termination, and in particular the effect of any relevant law enacted during the 86th Legislature.

(iv) The laws of other states concerning voluntary self-termination, and in particular the effect of those laws on the rate of self-termination.

(b) The proper aims of legislation affecting voluntary self-termination, including each of the following:

(i) The existence of a societal consensus in the state on the morality of the voluntary self-termination of life, including the morality of other persons assisting a patient's self-termination.

(ii) The significance of each of the following:

(A) The attitudes of a patient's family regarding his or her voluntary self-termination.

(B) The cause of a patient's act of self-termination, including apprehension or existence of physical pain, disease, or disability.

(iii) Whether to differentiate among the following causes of voluntary self-termination:

(A) Physical conditions, as distinguished from psychological conditions.

(B) Physical conditions that will inevitably cause death, as distinguished from physical conditions with which a patient may survive indefinitely.

(C) Withdrawing or withholding medical treatment, as distinguished from administering medication, if both are in furtherance of a process of voluntary self-termination.

(iv) With respect to how the law should treat a person who assists a patient's voluntary self-termination, whether to differentiate based on the following:

(A) The nature of the assistance, including inaction; noncausal facilitation; information transmission; encouragement; providing the physical means of self-termination; active participation without immediate risk to the person assisting; and active participation that incurs immediate risk to the person assisting, such a suicide pacts.

(B) The motive of the person assisting, including compassion, fear for his or her own safety, and fear for the safety of the patient.

(C) The patient's awareness of his or her true condition, including the possibility of mistake or deception.

(v) The relevance of each of the following:

(A) The legal status of suicide.

(B) The legal status of living wills.

(C) The right to execute a durable power of attorney for health care, as provided in section 496 of the revised probate code, Act No. 642 of the Public Acts of 1978, being section 700.496 of the Michigan Compiled Laws.

(D) The common-law right of a competent adult to refuse medical care or treatment.

(E) Constitutional rights of free speech, free exercise of religion, and privacy, and constitutional prohibitions on the establishment of religion.

(c) The most efficient method of preventing voluntary self-terminations, to the extent prevention is a proper aim of legislation. In particular, the commission shall consider each of the following:

(i) The costs of various methods of preventing voluntary self-terminations, including the use of any of the following:

(A) Public health measures, such as crisis therapy and suicide counseling services.

(B) Tort law.

(C) Criminal law, including the desirability of criminalizing suicide or attempted suicide.

(D) Civil sanctions, including the denial of inheritance and requirements of community service and mandatory counseling.

(ii) The likely effect of any of the methods listed in subparagraph (i) on the self-termination rate, and in particular the probability that a particular method might cause the self-termination rate to increase.

(iii) The impact of any of the methods listed in subparagraph (i) on the practice of medicine and the availability of health care in the state.

(iv) Whether current state law is adequate to address the question of voluntary self-termination in the state.

(d) Appropriate guidelines and safeguards regarding voluntary self-terminations the law should allow, including the advisability of allowing, in limited cases, the administering of medication in furtherance of a process of voluntary self-termination.

(e) Any other factors the commission considers necessary in developing recommendations for legislation concerning the voluntary self-termination of life.

Effective date.] [(2) This section shall take effect February 25, 1993.] (MCL §752.1024.)

§28.547(125) Open meetings act; applicability.] Sec. 5. [(1)] The business of the commission shall be conducted in compliance with the open meetings act, Act No. 267 of the Public Acts of 1976, being sections 15.261 to 15.275 of the Michigan Compiled Laws.

§28.547(126) Freedom of information act; applicability; writings prepared or possessed by commission.] Sec. 6. [(1)] A writing prepared, owned, used, in the possession of, or retained by the commission in the performance of an official function shall be made available to the public in compliance with the freedom of information act, Act No. 442 of the Public Acts of 1976, being sections 15.231 to 15.246 of the Michigan Compiled Laws.

§28.547(127) Assistance to suicide; felony; penalty.] Sec. 7. (1) A person who has knowledge that another person intends to commit or attempt to commit suicide and who intentionally does either of the following is guilty of criminal assistance to suicide, a felony punishable by imprisonment for not more than 4 years or by a fine of not more than $2,000.00, or both:

(a) Provides the physical means by which the other person attempts or commits suicide.

(b) Participates in a physical act by which the other person attempts or commits suicide.

Exception; withholding or withdrawing medical treatment.] (2) Subsection (1) shall ◆ [not apply to withholding or withdrawing medical treatment].

Exception; medications and procedures not intended to cause death.] (3) ◆ [Subsection (1) does not apply to prescribing, dispensing, or administering medications or procedures if the intent is to relieve pain or discomfort and

not to cause death, even if the medication or procedure may hasten or increase the risk of death.]

Effective date.] [(4) This section shall take effect February 25, 1993.]

Prospective repeal.] [(5)] ◆ This section is repealed effective 6 months after the date the commission makes its recommendations to the legislature pursuant to section 4. (MCL §752.1027.)

MINNESOTA

609.215. Suicide

Subdivision 1. Aiding suicide. Whoever intentionally advises, encourages, or assists another in taking the other's own life may be sentenced to imprisonment for not more than 15 years or to payment of a fine of not more than $30,000, or both.

Subd. 2. Aiding attempted suicide. Whoever intentionally advises, encourages, or assists another who attempts but fails to take the other's own life may be sentenced to imprisonment for not more than seven years or to payment of a fine of not more than $14,000, or both.

Subd. 3. Acts or omissions not considered aiding suicide or aiding attempted suicide. (a) A health care provider, as defined in section 145B.02, subdivision 6, who administers, prescribes, or dispenses medications or procedures to relieve another person's pain or discomfort, even if the medication or procedure may hasten or increase the risk of death, does not violate this section unless the medications or procedures are knowingly administered, prescribed, or dispensed to cause death.

(b) A health care provider, as defined in section 145B.02, subdivision 6, who withholds or withdraws a life-sustaining procedure in compliance with chapter 145B or in

accordance with reasonable medical practice does not violate this section.

Subd. 4. Injunctive relief. A cause of action for injunctive relief may be maintained against any person who is reasonably believed to be about to violate or who is in the course of violating this section by any person who is:

(1) the spouse, parent, child, or sibling of the person who would commit suicide;

(2) an heir or a beneficiary under a life insurance policy of the person who would commit suicide;

(3) a health care provider of the person who would commit suicide;

(4) a person authorized to prosecute or enforce the laws of this state; or

(5) a legally appointed guardian or conservator of the person who would have committed suicide.

Subd. 5. Civil damages. A person given standing by subdivision 4, clause (1), (2), or (5), or the person would have committed suicide, in the case of an attempt, may maintain a cause of action against any person who violates or who attempts to violate subdivision 1 or 2 for compensatory damages and punitive damages as provided in section 549.20. A person described in subdivision 4, clause (4), may maintain a cause of action against a person who violates or attempts to violate subdivision 1 or 2 for a civil penalty of up to $50,000 on behalf of the state. An action under this subdivision may be brought whether or not the plaintiff had prior knowledge of the violation or attempt.

Subd. 6. Attorney fees. Reasonable attorney fees shall be awarded to the prevailing plaintiff in a civil action brought under subdivision 4 or 5.

MISSISSIPPI

§ 97-3-49. Suicide--aiding.

A person who wilfully, or in any manner, advises, encourages, abets, or assists another person to take, or in taking, the latter's life, or in attempting to take the latter's life, is guilty of felony and, on conviction, shall be punished by imprisonment in the penitentiary not exceeding ten years, or by fine not exceeding one thousand dollars, and imprisonment in the county jail not exceeding one year.

MONTANA

45-5-105. Aiding or soliciting suicide. (1) A person who purposely aids or solicits another to commit suicide, but such suicide does not occur, commits the offense of aiding or soliciting suicide.

(2) A person convicted of the offense of aiding or soliciting a suicide shall be imprisoned in the state prison for any term not to exceed 10 years or be fined an amount not to exceed $50,000, or both.

NEBRASKA

28-307. Assisting suicide, defined; penalty. (1) A person commits assisting suicide when, with intent to assist another person in committing suicide, he aids and abets him in committing or attempting to commit suicide.

(2) Assisting suicide is a Class IV felony.

NEW HAMPSHIRE

630:4 Causing or Aiding Suicide.

I. A person is guilty of causing or aiding suicide if he purposely aids or solicits another to commit suicide.

II. Causing or aiding suicide is a class B felony if the actor's conduct causes such suicide or an attempted suicide. Otherwise it is a misdemeanor.

NEW JERSEY

2C:11-6. Aiding suicide

A person who purposely aids another to commit suicide is guilty of a crime of the second degree if his conduct causes such suicide or an attempted suicide, and otherwise of a crime of the fourth degree.

NEW MEXICO

30-2-4. Assisting suicide.

Assisting suicide consists of deliberately aiding another in the taking of his own life. Whoever commits assisting suicide is guilty of a fourth degree felony.

NEW YORK

§ 120.30 Promoting a suicide attempt

A person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide.

Promoting a suicide attempt is a class E felony.

§ 120.35 Promoting a suicide attempt; when punishable as attempt to commit murder

A person who engages in conduct constituting both the offense of promoting a suicide attempt and the offense of attempt to commit murder may not be convicted of attempt to commit murder unless he causes or aids the suicide attempt by the use of duress or deception.

OKLAHOMA

§ 813. Aiding suicide

Every person who willfully, in any manner, advises, encourages, abets, or assists another person in taking his own life, is guilty of aiding suicide.

§ 814. Furnishing weapon or drug

Every person who willfully furnishes another person with any deadly weapon or poisonous drug, knowing that such person intends to use such weapon or drug in taking his own life, is guilty of aiding suicide, if such person thereafter employs such instrument or drug in taking his own life.

§ 815. Aid in attempt to commit suicide

Every person who willfully aids another in attempting to take his own life, in any manner which by the preceding sections [footnote omitted] would have amounted to aiding suicide if the person assisted had actually taken his own life, is guilty of aiding an attempt at suicide.

§ 816. Incapacity of person committing or attempting suicide no defense

It is no defense to a prosecution for aiding suicide or aiding an attempt at suicide, that the person who committed or attempted to commit the suicide was not a person deemed capable of committing crime.

§ 817. Punishment for aiding suicide

Every person guilty of aiding suicide is punishable by imprisonment in the penitentiary for not less than seven (7) years.

§ 818. Punishment for aiding an attempt at suicide

Every person guilty of aiding an attempt at suicide is punishable by imprisonment in the penitentiary not exceeding two (2) years, or by a fine not exceeding One Thousand Dollars ($1,000.00), or both.

OREGON

163.125 Manslaughter in the second degree

(1) Criminal homicide constitutes manslaughter in the second degree when:

. . .

(b) A person intentionally causes or aids another person to commit suicide.

PENNSYLVANIA

§ 2505. Causing or aiding suicide

. . .

(b) Aiding or soliciting suicide as an independent offense.--A person who intentionally aids or solicits another to commit suicide is guilty of a felony of the second degree if his conduct causes such suicide or an attempted suicide, and otherwise of a misdemeanor of the second degree.

SOUTH DAKOTA

22-16-37. Aiding and abetting suicide as felony. Any person who intentionally in any manner advises, encourages, abets or assists another in taking his own life is guilty of a Class 6 felony.

TEXAS

§ 22.08. Aiding Suicide

(a) A person commits an offense if, with intent to promote or assist the commission of suicide by another, he aids or attempts to aid the other to commit or attempt to commit suicide.

(b) An offense under this section is a Class C misdemeanor unless the actor's conduct causes suicide or

attempted suicide that results in serious bodily injury, in which event the offense is a felony of the third degree.

WISCONSIN

940.12 Assisting suicide

Whoever with intent that another take his or her own life assists such person to commit suicide is guilty of a Class D felony.

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	DECLARATION OF JOHN P. GEYMAN, M.D.
Defendants.	)	

JOHN P. GEYMAN, M.D. declares:

1. I am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor and received my medical degree from the University of California in 1960.

3. From 1976 through 1990 I served as Professor and Chairman of the Department of Family Medicine at the School of Medicine at the University of Washington. Since stepping down as Chairman of the Department, I have continued to serve as Professor of Family Medicine in the Department of Family Medicine at the School of Medicine at the University of Washington. I held privileges at the University of Washington Medical Center from 1976 to 1993. Since 1993 I have continued as Professor Emeritus of Family Medicine at the University of Washington and have returned to rural practice at the Inter-Island Medical Center, Friday Harbor, Washington.

4. I am a charter fellow of the American Academy of Family Physicians and am certified by the American Board of Family Practice.

5. In addition to my academic appointments, I have practiced family medicine in a number of different practices and places over the course of my career.

6. I am a member of the American Medical Association, the American Academy of Family Physicians, the Society of Teachers of Family Medicine, the Washington State Medical Association, the King County Medical Society, the American Association for Advancement in Science, and the Institute of Medicine.

7. I am recognized in Who's Who in Health Care, Who's Who in America, and the International Who's Who in Medicine.

8. I have published over 70 articles related to the practice of family medicine in medical journals. I have

also authored numerous books, book chapters, and monographs in the field. I am the founding editor of the Journal of Family Practice (1974-1990) and, since 1990, have served as editor of the Journal of the American Board of Family Practice.

9. My complete curriculum vitae is attached hereto.

10. In my 35 years experience as a practicing family physician and medical educator I have had many occasions to witness mentally competent, terminally ill adult patients confront issues relating to their dying process, including the issue of hastening the dying process. Over this period, I have also seen many patients endure unnecessarily prolonged pain and suffering in the dying process under circumstances where patients, for one reason or another, had insufficient participation in deciding upon their terminal care.

11. Physicians caring for patients with terminal illnesses necessarily become directly involved in assisting such patients and their families to understand the prognosis, expected course and options for either therapeutic or palliative care. In the presence of terminal illness, the shared goal of medical care at some point becomes comfort care rather than cure. The physician's task becomes one of alleviating pain and suffering as much as possible.

12. With advancing medical technology, many patients are subject to active and ineffective therapeutic efforts by their physicians, even when an early terminal outcome is not in doubt. As a result, many experience prolonged deaths often involving pain, suffering and loss of dignity. In reaction to this problem, an increasing number of patients want more direct control over the type of care they receive in the last stage of their lives. A subset of dying patients desire to shorten their dying process and thereby

avoid a lingering death and associated pain, suffering and loss of dignity.

13. Terminally ill persons who seek to hasten death by consuming drugs need medical counseling regarding the type of drugs and the amount and manner in which they should be taken, as well as a prescription, which only a licensed medical doctor can provide. Many terminally ill persons will be taking a variety of medications for their condition; for example, patients suffering chronic pain may be taking high doses of morphine or other narcotics and may have developed a high tolerance to narcotics. Knowing what drug, in what amount, will hasten death for a particular patient, in light of the patient's medical condition and medication regimen, is a complex medical task.

14. It is not uncommon, in light of present legal constraints on physician assistance, that patients seeking to hasten their deaths try do so without medical advice. These efforts are often unsuccessful and can cause the patient and family increased anxiety, pain and suffering. Very often, patients who survive a failed suicide attempt find themselves in worse shape than before the attempt.

15. There is often a severe adverse emotional and psychological effect on terminally ill patients who either are unable to broach the subject of their desire to hasten their death with their physician because of the current prohibition or broach the subject but are rebuffed. These patients feel abandoned by their physician when most in need of help.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

Executed at Seattle, Washington, this 10th day of March, 1994.

/s/
JOHN P. GEYMAN, M.D.

CURRICULUM VITAE

John P. Geyman, M.D.

Birthdate:	February 9, 1931
Address:	4909 C Hannah Road Friday Harbor, Washington 98250
	Married 36 years 3 sons (ages 31, 32, and 33)
SSN:	562-50-0853

PRESENT POSITION:

10/01/90-Present	Professor of Family Medicine, Department of Family Medicine, School of Medicine, University of Washington, Seattle, Washington

PREVIOUS POSITIONS:

12/1/76-9/30/90	Professor and Chairman, Department of Family Medicine, School of Medicine, University of Washington, Seattle, Washington
9/1/72-11/76	Professor and Vice Chairman, Department of Family Practice, School of Medicine, University of California - Davis
9/1/72-11/76	Director, University of California - Davis, Family Practice Residency Network Program
1971-72	Chairman, Division of Family Practice, University of Utah College of Medicine, Salt Lake City, Utah

1971-72	Director, University of Utah Family Practice Residency Program, University of Utah Affiliated Hospitals for Family Practice
1969-71	Director, University of California - San Francisco, Community Hospital of Sonoma County Family Practice Program
1969-71	Project Coordinator, University of California - San Francisco, Sonoma County Demonstration Project, Regional Medical Programs (Area I)

EDUCATION:

Undergraduate:

1948-52	Princeton University, A.B. (Geology), Princeton, New Jersey
1955-56	University of California, Premedical, Berkeley, California

Medical School:

1956-60	University of California School of Medicine, M.D., San Francisco, California

Postdoctoral:

1960-61	Los Angeles County General Hospital, Rotating Internship, Los Angeles, California
1961-63	Sonoma County Hospital, General Practice Residency, Santa Rosa, California

CERTIFICATION:

1973	Charter Fellow, American Academy of Family Physicians
Since 1971	Charter Member of American Board of Family Practice (certified in February 1971, recertified in December 1977, September 1983, and October 1990)

LICENSURE:

1977-Present	(Medical)	State of Washington	No. 15618
1977-Present	(Narcotics)	State of Washington	No. AG-5331703
1961-85	(Medical)	State of California	No. A-19658
1961-85	(Narcotics)	State of California	No. 18098

PRACTICE EXPERIENCE:

1963-69	Private Practice, Solo General Practice, Mount Shasta, California
1967-69	Director, Coronary Care Unit, Mount Shasta Community Hospital
1990-Present	Part-Time Group Practice, Inter-Island Medical Center, Friday Harbor, Washington.

HOSPITAL STAFF MEMBERSHIPS:

Present:

1/1/77-Present	University of Washington Medical Center, Seattle, Washington
9/1/72-1976	Sacramento Medical Center, Sacramento, California
1963-69	Mount Shasta Community Hospital, Mount Shasta, California
1969-71	Community Hospital of Sonoma County, Santa Rosa, California

1971-72	University Hospital, University of Utah Medical Center, Salt Lake City, Utah

PROFESSIONAL ASSOCIATIONS:

1960-Present	Gold Headed Cane Society (University of California, School of Medicine, San Francisco)
1963-Present	American Medical Association
1964-Present	American Academy of Family Physicians
1969-Present	Society of Teachers of Family Medicine
1978-Present	Washington State Medical Association
1978-Present	King County Medical Society
1978-1990	Association of Departments of Family Medicine
1983-Present	American Association for Advancement of Science

OFFICES HELD:

1959-60	President, Senior Class, University of California School of Medicine
1967	President, Siskiyou County Medical Society
1968	Chief of Staff, Mount Shasta Community Hospital
1968-69	President, Siskiyou County Comprehensive Health planning Council
1969	Board of Trustees, College of Siskiyou, Weed, California

HONORS:

1960	Gold Headed Cane Award, University of California School of Medicine (San Francisco)
1974	American Men and Women of Science

1977	Who's Who in Health Care
1979	Who's Who in America
1980	Certificate of Excellence, Society of Teachers of Family Medicine
1980	Thomas W. Johnson Award for contributions in family practice education, American Academy of Family Physicians
1985	Member, Institute of Medicine, National Academy of Sciences
1986	International Who's Who in Medicine
1988	Alumnus of the Year, 1988, Community Hospital Alumni Association, Santa Rosa, California
1990	Curtis B. Hames Research Award, North America Primary Care Research Group and Society of Teachers in Family Medicine
1992	Fellow, Royal Society of Medicine, New York and London.

ACADEMIC APPOINTMENTS:

12/1/76-Present	Professor of Family Medicine, University of Washington School of Medicine
9/1/72-11/76	Professor of Family Practice, University of California Davis, School of Medicine
1971-72	Associate Professor of Community and Family Medicine, University of Utah College of Medicine
1969-71	Assistant Clinical Professor of Ambulatory and Community Medicine, University of California, San Francisco

SELECTED COMMITTEES:

University of California - Davis School of Medicine:

1972-76	Admissions Committee
1973-75	Task Force on Planning for Medical School Facilities: Subgroup on Patient Care Needs, Inland Northern California, 1980-85

California Medical Association:

1973-76	Advisory Panel on General and Family Practice

Society of Teachers of Family Medicine:

1971-75	Program Committee
1971-75	Graduate Objectives Committee
1973-78	Education Committee
1975-80	Audio-Visual Review Committee (Chairman)
1979-81	Faculty Development Task Force

University of Washington School of Medicine:

1977-1990	Medical School Executive Committee
1978-1979	Steering Committee of Executive Committee
1978-1984	Appointments and Promotions Committee
1981-1984 and	Academic Affairs Committee
1987-1990	Academic Affairs Committee
1985-1990	Ad Hoc Committee on International Educational Activities of the School of Medicine
1985-1989	Joint Conference Committee
1986-1990	Regional Affairs Committee
1986-Present	Medex Advisory Committee
1987	Chairman, Ad Hoc Committee to Consider Clinical Track

1987-1990	Finance Committee, Associated University Physicians
1987-1988	Awards and Prizes Committee
1988-1992	Admissions Committee
1989-1990	Admissions Review Task Force Committee, Dean's Office

RELATED ACTIVITIES:

1972-78	Consultant for Survey Team for Review of Physician Assistant Programs, American Medical Association
1973-79	Member of Examination Panel - Pictorial Subcommittee, American Board of Family Practice (Chairman, 1975-79)
1973-Present	Regional Consultant for Family Practice Residencies, American Academy of Family Practice
1974-76	Consultant for Family Practice Medical Education, California Health Manpower Policy Commission
1974-Present	Consultant for Family Practice Grant Program, Bureau of Health Resources Development, Department of Health, Education, and Welfare
1975-80	Consultant for Residency Assistance Program, Sponsored by American Academy of Family Physicians, American Board of Family Practice, and the Society of Teachers of Family Medicine
1981-83	Technical Advisory Committee, Financing of Graduate Medical Education Study, Department of Health and Human Services

1981-83	Member, Family Practice Board of Advisors, MULTICARE (National Group Practice Project)
1981-83	Member, Working Group on Fundamental Skills of General Physicians, Education of the Physician Project (AAMC)
1982	Member, Evaluation Committee for Stanford Medical School's Affiliated Family Practice Residency Program at San Jose Hospital
1983	Technical Advisory Committee for the National Study on Medical Care Outcomes, Robert Wood Johnson Foundation
1984	Advisory Panel for Study of Impact of Federal Support of Family Practice Residency Training, Policy Analysis, Inc., and Department of Health and Human Services
1984	Delegation Leader, Family Medicine Delegation to China, Taiwan, and South Korea, People-to-People Citizen Ambassador Program
11/15/85-12/15/85	Visiting Professor, Beer Sheva Medical School, Israel
1986	Delegation Leader, Family Medicine Delegation to Sweden, Soviet Union, and Norway, People-to-People Citizen Ambassador Program
1985-Present	Member, Evaluation Steering Committee for Physician Data Query (PDQ) Projects, National Cancer Institute

1986	Dean's Advisory Committee for Review of Department of Family Medicine, University of California, Irvine
1986-88	Membership Committee, Institute of Medicine
1987-Present	Ad Hoc Committee on Funding for Family Practice, Society of Teachers of Family Medicine
1988	Dean's Advisory Committee for Review of Department of Family Practice and Community Health, University of Minnesota
1988-1989	Study Group for Strategies for Supporting Graduate Medical Education in Primary Care, Institute of Medicine
1988-Present	Chairman, Ad Hoc Committee to Consider Organizational Options for Academic Family Medicine, Society of Teachers of Family Medicine and Association of Departments of Family Medicine.
1989	Invited Participant at Conference on the Future of the Generalist Physician in America, Boston, Massachusetts. Josiah Macy, Jr. Foundation.
1989-1990	Member, Board of Inter-Island Medical Center, Friday Harbor, Washington
1990	External reviewer for Department of Family and Preventive Medicine, University of Utah

1990-Present	Member, Clinical Science Committee of Association of American Medical Colleges for Selection of Distinguished Teacher Awards
1990	Invited as Panel Participant, International Family Practice Panel to select candidates for international academic positions, Faculty of Medicine, United Arab Emirates University, United Arab Emirates
1990-Present	Member, Departments of Family Medicine Review Committee, Division of Medicine, Health Resources & Services Administration, to review grant applications. Rockville, Maryland.
1991	Member, Editorial Advisory Board for Family Physicians Anxiety Education, Program, Science and Medicine, New York
1991	Invited Participant, AAMC Focus Group on Graduate Medical Education for Primary Care, Washington, D.C.
1991	Visiting Professor, University of Oregon Health Sciences Center, Portland, Oregon
1991	Invited Participant, AAMC Focus Group on Graduate Medical Education for Primary Care, Washington, D.C.
1991-1992	Member, Rural Health System Development Project Review Committee, State of Washington, Department of Health.

1992 Member, Education Committee for Statewide Health Personnel Resource Plan, State of Washington Higher Education Coordinating Board.

1992 Visiting Professor, National Taiwan University, Taipei, Taiwan, Republic of China.

1992 Visiting Professor, University of Nevada, Reno, Nevada.

EXTRA-MURAL GRANTS:

Principal Investigator, University of California Davis Family Practice Residency Program in Affiliated Hospitals for Family Practice, funded by W. K. Kellogg Foundation
(7/1/73-6/30/77: $417,164)

Project Investigator, Health Professions Special Project Grant for Preceptorship Training, funded by Department of Health, Education and Welfare, Public Health Service, National Institute of Health
(3/1/74-6/30/76: $543,306)

Principal Investigator, Family Practice Residency Training Program, University of California Davis, Sacramento Medical Center, and Affiliated Hospitals for Family Practice, funded by Department of Health, Education and Welfare, Public Health Service, National Institute of Health
(4/1/74-6/30/76: $302,653)
Supplemental Grants(4/1/74-6/30/75: $55,437) and
(7/1/75-6/30/76: $114,785)

Principal investigator, University of California Davis Family Practice Residency Program Expansion of University-Based Program involving Davis Family Practice Center, Merced Community Medical Center, and Shasta Cascade Family Practice Residency, funded by Health

Manpower Policy Commission, State of California
(7/1/75-6/30/79: $813,261)

Principal Investigator, Family Practice Residency Network Grant involving University of Washington Hospital and six affiliated hospitals with Family Medicine training programs; funded by the W. K. Kellogg Foundation
(12/1/76-8/30/82: $929,821)

Principal Investigator, Family Medicine Residency Network Training Grant involving University of Washington Hospital and six affiliated hospitals for Family Medicine, funded by Department of Health, Education and Welfare, Public Health Service
(7/1/77-6/30/80: $740,000)

Co-Investigator, Faculty Fellowship in Family Medicine, funded by the Robert Wood Johnson Foundation
(1/1/78-6/30/81: $623,832)
Renewal Grant: (7/1/81-6/30/84: $737,498)

Principal Investigator, Family Medicine Residency Training involving University of Washington Hospital, funded by Department of Health and Human Services, Public Health Service
(7/1/80-6/30/85: $713,000)

Principal Investigator, renewal of the Faculty Fellowship in Family Medicine, funded by the Robert Wood Johnson Foundation
(7/1/84-6/30/87: $1,219,103)

Co-Principal Investigator, The Rural Hospital Project to devise model rural hospital service configurations for six rural hospitals in the WAMI region, funded by the W. K. Kellogg Foundation
(12/1/83-11/30/87: $1,268,827)

Principal Investigator, Supplemental Grant for University Hospital Family Medicine Residency Program, funded by

Department of Health and Human Services, Public Health Service
(7/1/85-6/30/85: $54,862)

Principal Investigator, Family Medicine Residency Training Grant involving University of Washington Hospital, funded by Department of Health and Human Services, Public Health Service
(7/1/85-6/30/88: $580,139)

Principal Investigator, Department of Family Medicine Grant, University of Washington, funded by Department of Health and Human Services, Public Health Service
(9/1/86-8/31/89: $427,634)

Principal Investigator, Family Medicine Residency Training Grant involving University of Washington Hospital, funded by Department of Health and Human Services, Public Health Service
(7/1/88-6/30/91: $345,000)

Principal Investigator, Department of Family Medicine Grant, University of Washington, funded by Department of Health and Human Services, Public Health Service
(9/1/89-8/31/92: $534,021)

Principal Investigator, Department of Family Medicine Grant, University of Washington, funded by Lutheran Health Systems, Fargo, North Dakota, and Northwest Area Foundation, St. Paul, Minnesota
(9/1/91-8/31/94: $300,000)

THE HONORABLE BARBARA J. ROTHSTEIN

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	JOINT MOTION FOR ENTRY OF FINAL JUDGMENT
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

The parties jointly move the court, pursuant to Fed. R. Civ. P. 54(b), to determine that there is no just reason for delaying entry of a final judgment as to those claims

addressed in the Court's Order Granting in Part and Denying in Part Plaintiffs' Motion for Summary Judgment and Denying Defendant's Cross-Motion for Summary Judgment, and to direct entry of a final judgment as to those claims. This motion is based on the Stipulation of the Parties Regarding Finality of the Court's Order and Appeal, and the parties Joint Memorandum in Support of Rule 54(b) Entry of Final Judgment, both of which are filed herewith, and is intended to facilitate an expeditious appeal of the Court's order by the defendants.

DATED this 19th day of May, 1994.

CHRISTINE O. GREGOIRE
Attorney General

UNITED STATES DISTRICT COURT
WESTERN DISTRICT OF WASHINGTON
AT SEATTLE

COMPASSION IN DYING, a Washington nonprofit corporation, JANE ROE, JOHN DOE, JAMES POE, HAROLD GLUCKSBERG, M.D., ABIGAIL HALPERIN, M.D., THOMAS A. PRESTON, M.D., and PETER SHALIT, M.D., Ph.D.,	)	NO. C94-119
Plaintiffs,	)	STIPULATION OF THE PARTIES REGARDING FINALITY OF COURT'S ORDER AND APPEAL
vs.	)	
THE STATE OF WASHINGTON and CHRISTINE GREGOIRE, Attorney General of Washington,	)	
Defendants.	)	

The parties stipulate as follows:

1. Defendants intend to pursue an appeal of the Court's order granting partial summary judgment. It is in the best interest of all of the parties, and of the public, that such an appeal be pursued as expeditiously as possible.

2. If the Court enters a final judgment as to those claims addressed in the Order dated May 3, 1994, granting partial summary judgment as to some of plaintiffs' claims, any further action with respect to any remaining claims of the plaintiffs shall be deferred pending final resolution of the defendants' appeal of the Court's order granting partial summary judgment. This does not preclude the possibility that plaintiffs may pursue injunctive relief should events develop that warrant doing so.

3. Any petition by plaintiff for attorneys' fees shall be deferred pending final resolution of the defendants' appeal of the Court's order granting partial summary judgment.

4. This stipulation is for the purpose of facilitating appellate review of the Court's order granting partial summary judgment. By signing this stipulation, the parties shall not be deemed to have waived or in any way limited their respective legal arguments in this case.

DATED this 19th day of May, 1994.

QUESTIONS PRESENTED

1. Is there a constitutionally protected liberty interest under the Due Process Clause of the Fourteenth Amendment in committing suicide, and if so, does that interest include assistance in so doing?

2. If the answer to the foregoing question is in the affirmative, is a State statute that infringes on the protected liberty interest by prohibiting one person from assisting another to commit suicide nonetheless valid under the Due Process Clause because it furthers legitimate State interests?

3. Is there a rational basis for distinguishing between refusing life-sustaining medical treatment and requesting life-ending medical intervention, so that a State whose law allows the former but not the latter does not violate the Equal Protection Clause of the Fourteenth Amendment?

LIST OF PARTIES

The parties to the proceeding below were:

Petitioners: State of Washington and Christine O. Gregoire, Attorney General of Washington, both of whom were aligned as defendants/appellants below.

Respondents: Harold Glucksberg, M.D., Abigail Halperin, M.D., Thomas A. Preston, M.D., and Peter Shalit, M.D., Ph.D., all of whom were aligned as plaintiffs/respondents below. Three individuals identified only by pseudonyms were plaintiffs in the District Court below, but died during the pendency of the proceedings and are no longer parties to the litigation. A nonprofit corporation, Compassion in Dying, was a plaintiff in the District Court; however, its claims were not adjudicated by the District Court order that prompted this appeal and it is not a party to the appeal.

2. The Court Of Appeals Panel Decision 7

3. *En Banc* Review 8

4. Post-Decision Proceedings 9

V. SUMMARY OF ARGUMENT 9

VI. ARGUMENT 10

A. The Clear Line Between Permitting Refusal Of Treatment And Prohibiting Action Intended To Cause Death Is Based On Well-Settled Legal Doctrines. Whether That Line Should Be Disturbed To Allow Physician-Assisted Suicide Is A Complex And Controversial Issue Of Public Policy Which Is Vigorously Debated Throughout The Land. State Legislatures Should Be Allowed To Resolve The Issue Without Having Their Policy Choices Limited 10

B. The Decision Below Is A Radical Departure From Our Nation's Legal Traditions And This Court's Fourteenth Amendment Jurisprudence 16

1. The Ninth Circuit's Broad Characterization Of The Issue Ignored This Court's Restrained Analytical Approach To Substantive Due Process Cases 18

2. The Asserted Liberty Interest In Suicide Or Assisted Suicide Is Neither Deeply Rooted In Our Nation's History And Traditions Nor Implicit In The Concept Of Ordered Liberty 21

3. The Decision Below Departs From This Court's Substantive Due Process Jurisprudence By Creating A Protected Interest That Is Not Rooted In Our Historical Concepts Of Liberty And Is Different In Character And Quality From Other Protected Liberty Interests Recognized By This Court 25

(a) *Cruzan* 28

(b) *Casey* 30

4. The Balancing Test Used By The Ninth Circuit Undervalued Legitimate State Interests That Are Furthered By The Statute At Issue 33

5. This Court Should Reject The Ninth Circuit's "As Applied" Approach To Substantive Due Process Claims And Uphold Washington's Statute That Furthers Legitimate State Interests . . 38

C. Washington Law Does Not Violate The Equal Protection Clause 41

D. There Is No Principled Basis On Which The Asserted Right To Assisted Suicide Can Be Limited To Physician Prescription Of Medication For Mentally Competent, Terminally Ill Patients To Administer To Themselves 44

E. Our Federal System Works Best When Important Questions Of Public Policy Are Resolved Through The State Legislative Process 47

I. OPINIONS BELOW

The decision of the *en banc* panel of the United States Court of Appeals for the Ninth Circuit[1] is reported at 79 F.3d 790 (9th Cir. 1996). The Court's Amended Order[2] denying a request that the full court rehear the case *en banc*, with dissenting opinions, is reported at 85 F.3d 1440 (9th Cir. 1996). The decision of the Ninth Circuit three judge panel[3] is reported at 49 F.3d 586 (9th Cir. 1995). The decision of the United States District Court for the Western District of Washington[4] is reported at 850 F. Supp. 1454 (W.D. Wash. 1994).

II. JURISDICTION

The Court of Appeals' opinion was filed and judgment entered on March 6, 1996.[5] The jurisdiction of this Court is invoked pursuant to 28 U.S.C. § 1254(1). By order of May 14, 1996, the time for filing an application for a writ of certiorari was extended to July 4, 1996.[6] The Petition For a Writ of Certiorari was filed on July 3, 1996, and was granted on October 1, 1996. *Washington v. Glucksberg*, 117 S. Ct. 37 (1996).

III. CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED

U.S. Constitution, Fourteenth Amendment

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Declaratory Judgment Act, 28 U.S.C. § 2201

(a) In a case of actual controversy within its jurisdiction, except with respect to Federal taxes other than actions brought under section 7428 of the Internal Revenue Code of 1986, a proceeding under section 505 or 1146 of title 11, or in any civil action involving an antidumping or countervailing duty proceeding regarding a class or kind of merchandise of a free trade area country (as defined in section 516A(f)(10) of the Tariff Act of 1930), as determined by the administering authority, any court of the United States, upon the filing of an appropriate pleading, may declare the rights and other legal relations of any interested party seeking such declaration, whether or not further relief is or could be sought. Any such declaration shall have the force and effect of a final judgment or decree and shall be reviewable as such.

(b) For limitations on actions brought with respect to drug patents see section 505 or 512 of the Federal Food, Drug, and Cosmetic Act.

Washington Revised Code § 9A.36.060

(1) A person is guilty of promoting a suicide attempt when he knowingly causes or aids another person to attempt suicide.

(2) Promoting a suicide attempt is a class C felony.

Natural Death Act

Pursuant to Sup. Ct. Rule 24.1(f), the pertinent provisions of Wash. Rev. Code Ch. 70.122, the Natural Death Act, are set forth in the appendix to this brief.

IV. STATEMENT OF THE CASE

A. The Parties And Their Interests

Petitioners are the State of Washington and its Attorney General. They invoke the appellate jurisdiction of this Court to preserve and protect the ability of the people of Washington to determine an important question of public policy—whether Washington law should allow one person to knowingly aid another person to commit suicide.

Respondents are physicians who practice in Washington. J.A. at 5-7. They occasionally treat patients who they believe have no hope of survival. *Id.* Some of those patients have in the past requested that Respondents assist them to commit suicide. *Id.* Respondents' personal ethics would allow them to comply with such requests if received from future patients. *Id.*[7] However, they allege that they are deterred from doing so by Wash. Rev. Code

---

[7] Regardless of Respondents' personal sense of ethics, prescribing medication other than for a therapeutic purpose violates state medical licensing standards (*see* Wash. Rev. Code § 18.130.180(6)) and is inconsistent with standards of medical ethics established by the American Medical Association. J.A. at 133-167.

§ 9A.36.060, Washington's statute prohibiting one person from assisting another to commit suicide. *Id.*

Respondents, along with three other individuals and a non-profit corporation, filed suit pursuant to 28 U.S.C. § 2201 and 42 U.S.C. § 1983 seeking a declaratory judgment that Washington's criminal statute prohibiting one person from aiding another person to commit suicide violates the rights of competent, terminally ill individuals under the Fourteenth Amendment of the United States Constitution. Plaintiffs also sought to enjoin enforcement of the statute.[8]

B. The State Statute At Issue

Washington's statute prohibiting one person from assisting another person to commit suicide was initially adopted in 1854 by the first Territorial Legislature. The prohibition has remained in effect throughout the State's history, although the specific language of the statute has varied with different codifications of the State's criminal code.[9]

The 1975 revision of the criminal code retained the prohibition against assisted suicide while at the same time it removed the criminal penalties from the act of attempting

[8] The complaint alleged that the statute violates Respondents' constitutional rights as well. J.A. at 7. These claims were neither argued to the District Court nor resolved by the District Court's order granting partial summary judgment (App. Pet. Cert. at E-28) and accordingly are not before this Court.

[9] Copies of the various legislative enactments, including the statute currently in effect, are found in App. Pet. Cert. at G-1 to G-3.

suicide.[10] The legislative committee whose comprehensive study led to the revision explained:

> "[W]hatever may be said of suicide itself, it seems clear that the introduction into the situation of another person who actively promotes the suicide could well increase the instability or irrationality of the potential suicide, affecting his judgment or emotional outlook. . . . Whatever the thoughts of a potential suicide may be, it is almost inconceivable that the threat of a two year prison sentence if he is unsuccessful in his attempt is going to deter his act. Moreover, it seems clear that such a person is in all probability a troubled, disturbed human being who need[s] psychiatric care or some other counseling service. His condition could only be aggravated by being branded a convicted felon and sent to [prison] for two years. Thus no attempted suicide crime is defined by this [proposed] code."[11]

In 1991, Washington's voters rejected Initiative 119, which, had it passed, would have authorized a form of physician aid in dying.[12] Its enactment also would have presumably created an implied exception to the crime of promoting or aiding a suicide, at least for conduct

[10] *See* 1975 Wash. Laws, 1st Ex. Sess., ch. 249, § 9A.92.010 (214) (repealing former Wash. Rev. Code § 9.80.020, which was originally enacted by 1909 Wash. Laws, ch. 249, § 134).

[11] Legislative Council's Judiciary Committee, *Report on the Revised Washington Criminal Code* 153 (Dec. 3, 1970).

[12] A copy of the initiative is found in App. Pet. Cert. at H-1 to H-10. The initiative was prepared in standard legislative drafting form, reflecting changes in then existing statutory language by underlining language to be added and striking language to be deleted, enclosing the latter in double parentheses.

explicitly authorized by the initiative. The initiative did not expressly amend or repeal the assisted suicide statute at issue here.

Almost all other States also prohibit assisting a suicide, either by statute or by case law.[13] These statutes—generally considered part of the States' homicide laws—have been recognized by this Court as evidencing the States' interest in protecting and preserving human life.[14]

C. The Proceedings Below

1. The District Court Opinion

On cross motions for partial summary judgment[15], the District Court held that "a competent, terminally ill adult has a constitutionally guaranteed right under the Fourteenth Amendment to commit physician-assisted

---

[13] In his dissent from the *en banc* panel decision, Judge Beezer catalogued forty-four States that condemn assisted suicide. *See* App. Pet. Cert. at A-135 to A-136 nn.10-13. The list is extensive, but not exhaustive, because States are continuing to grapple with the issue. Judge Beezer's list does not include, for example, the 1995 Louisiana statute prohibiting "criminal assistance to suicide." *See* La. Rev. Stat. § 14:32.12 (1995 La. Acts, No. 384, § 1). It should also be noted that the Model Penal Code includes a prohibition against aiding suicide. Model Penal Code § 210.5. The Model Penal Code provision and copies of several States' statutes were appended to Petitioners' brief in the District Court and are found in J.A. at 168-86.

[14] *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261, 280 (1990).

[15] Respondents moved for summary judgment. J.A. at 128-29. In response, Petitioners argued that there were no genuine issues of material fact but that they were entitled to judgment as a matter of law, and that the Court should therefore enter summary judgment for them. *See Cool Fuel v. Conett*, 685 F.2d 309, 311 (9th Cir. 1982). The District Court proceeded as though both parties had in fact moved for summary judgment. App. Pet. Cert. at E-2.

suicide." App. Pet. Cert. at E-16. Finding that Washington's statute prohibiting assisted suicide places an "undue burden" on the exercise of that right, the District Court concluded that the statute violates the Due Process Clause of the Fourteenth Amendment. *Id.* at E-24.

The District Court also held that persons who depend on life support systems to remain alive are situated similarly to those who are terminally ill but able to continue living without life support, and that the refusal or withdrawal of life support by the former is "equivalent" to assisted suicide. *Id.* at E-28. The District Court concluded that by allowing withdrawal or withholding of life support, but prohibiting assisted suicide, Washington law violates the Equal Protection Clause as well. *Id.* Based on these conclusions, the District Court declared the statute unconstitutional. *Id.* at E-28 to E-29.

The District Court granted final judgment declaring the statute invalid pursuant to Fed. R. Civ. P. 54(b) and 28 U.S.C. § 2201, addressing only the claims of the patient plaintiffs and those advanced on their behalf by the physician plaintiffs. *Id.* at I-1 to I-3. The District Court did not reach the claims of the nonprofit corporation, nor the claims of the physicians on their own behalf, as they were not argued to the District Court. *Id.* at E-28. The District Court declined to grant injunctive relief. *Id.* at E-29.

2. The Court Of Appeals Panel Decision

Petitioners appealed to the Court of Appeals pursuant to 28 U.S.C. § 1291. A majority of a three judge panel of the Court of Appeals reversed the District Court, finding that the "decision of the district court lacks foundation in recent precedent [and] in the traditions of our nation." *Compassion in Dying* I, App. Pet. Cert. at D-13. Even assuming the existence of a liberty interest, the panel recognized several State interests furthered by the statute and concluded that "Washington's interests . . .

individually and convergently, outweigh any alleged liberty of suicide." *Id.* at D-14.

Rejecting the District Court's equal protection analysis, the panel also held that "plaintiffs have not sustained [their] burden" (*id.* at D-19) of demonstrating that there is no rational basis for Washington's statutory distinction "between actions taking life and actions by which life is not supported." *Id.* at D-18. Senior Judge Wright dissented. *Id.* at D-20 to D-27.

3. *En Banc* Review

Respondents' suggestion for *en banc* review was granted[16] and a limited *en banc* panel was convened pursuant to 28 U.S.C. § 46(c) and Ninth Circuit Rule 35-3. Following oral argument, a majority of the *en banc* panel "clarified" the scope of the District Court opinion and then affirmed. *Id.* at A-19. Rather than declaring the entire statute invalid, the *en banc* panel held "that the 'or aids' provision of Washington statute RCW 9A.36.060, as applied to the prescription of life-ending medication for use by terminally ill, competent adult patients who wish to hasten their deaths, violates the Due Process Clause of the Fourteenth Amendment." *Id.* at A-19 to A-20.

Three judges dissented. Judge Beezer concluded that mentally competent, terminally ill adults have a liberty interest in committing physician-assisted suicide, but that the State's interests "are sufficiently strong to sustain the constitutionality of RCW 9A.36.060 as applied to plaintiffs' asserted liberty interest." *Id.* at A-160. Judges Fernandez and Kleinfeld, in separate opinions, concurred with Judge Beezer, but added that they found no constitutionally

---

[16] *Compassion in Dying v. Washington*, 62 F.3d 299 (9th Cir. 1995).

protected interest in committing suicide. *Id.* at A-160 (Fernandez, J., dissenting), A-161 to A-164 (Kleinfeld, J., dissenting).

4. Post-Decision Proceedings

A *sua sponte* suggestion by an active judge of the Ninth Circuit for rehearing before the full Ninth Circuit Court failed to receive a majority of the votes of the non-recused active judges. *Id.* at C-1 to C-2. Pursuant to orders of this Court, the Ninth Circuit's mandate has been stayed pending "the sending down of the judgment of this Court." *Id.* at K-1. The Petition For Writ Of Certiorari was filed on July 3, 1996, and granted on October 1, 1996. *Washington v. Glucksberg*, 117 S. Ct. 37 (1996).

V. SUMMARY OF ARGUMENT

The clear line between permitting refusal of treatment and prohibiting action intended to cause death is based on well-settled legal doctrines. Whether that line should be disturbed to allow physician-assisted suicide is a complex and controversial issue of public policy which is vigorously debated throughout the land. State legislatures should be allowed to resolve the issue without having their policy choices limited.

The decision below is a radical departure from our nation's legal traditions and this Court's Fourteenth Amendment jurisprudence. Disregarding this Court's restrained analytical approach to substantive due process claims, the Ninth Circuit created a protected interest that is not rooted in our historical concepts of liberty and is different in character and quality from other protected liberty interests recognized by this Court. In addition, the balancing test used by the Ninth Circuit undervalued legitimate State interests that are furthered by the statute at issue.

Moreover, this Court should reject the Ninth Circuit's "as applied" approach to substantive due process claims which focused on hypothetical subsets of the population rather than the needs of society as a whole. If upheld, this approach trumpets a new and intrusive role for the federal judiciary in evaluating the policy judgments of State legislatures and voters.

Washington law does not violate the Equal Protection Clause because those who require mechanical assistance to eat, breathe, and drink are situated differently from those who do not, and the line allowing the former to refuse artificial life support while prohibiting assisted suicide to everyone else is rationally based on these well-settled differences and equally well-settled legal doctrines.

Additionally, there is no principled basis on which the asserted right to assisted suicide can be limited to physician prescription of medication for mentally competent, terminally ill patients to administer to themselves. This Court should decline the invitation to resolve by Constitutional mandate the public policy debate over whether physician-assisted suicide should be allowed.

VI. ARGUMENT

A. The Clear Line Between Permitting Refusal Of Treatment And Prohibiting Action Intended To Cause Death Is Based On Well-Settled Legal Doctrines. Whether That Line Should Be Disturbed To Allow Physician-Assisted Suicide Is A Complex And Controversial Issue Of Public Policy Which Is Vigorously Debated Throughout The Land. State Legislatures Should Be Allowed To Resolve The Issue Without Having Their Policy Choices Limited

This case lies at the intersection of two well-established doctrines in our legal traditions. The first holds

that each of us has the right to withhold consent to medical treatment. *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261, 260-70 (1990). Treatment without informed consent was a battery at common law and remains actionable in most States today, with the inquiry in most cases focusing on whether the patient was adequately informed about the risks and benefits of a particular treatment.[17]

The second doctrine, even more strongly held, is that one who intentionally acts to cause or contribute to another's death is, with rare exceptions, guilty of criminal conduct.

> As this Court has observed:
>
> "As a general matter, the States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan*, 497 U.S. at 280.

The potential for conflict between these two legal traditions arose with the advent of medical machines capable of performing the body's essential functions—breathing, eating, and drinking. While these machines were designed to allow life to be maintained while therapeutic benefits were obtained from other treatments, their use also results in individual situations where life can be mechanically preserved long after death would ordinarily come through the natural progression of the patient's disease or condition. The question then

---

[17] The common law rule has been statutorily abrogated in Washington. Treatment without informed consent is actionable only if "a reasonably prudent patient under similar circumstances would not have consented to the treatment if informed of [appropriate] material fact[s]." Wash. Rev. Code § 7.70.050(1)(c).

presented is whether the physician's obligation to follow the patient's desires to withhold or withdraw treatment would result in the physician being legally responsible for causing or contributing to the patient's death once those desires are implemented.

That issue—once hotly debated—is now resolved. It is well settled, through a series of lower (mostly State) court decisions and State statutes, that a physician who complies with the patient's choice not to institute treatment, or who implements a patient-directed withdrawal of treatment previously implemented, violates no law.[18] This allows the disease process to follow a natural course to death, while at the same time accommodating the two legal traditions. Patient autonomy is respected while conduct intended to cause death independent of natural forces is prohibited.

Throughout our nation's history, these legal doctrines have been central to the development of substantive law in two areas for which the States have been primarily responsible—regulation of societal conduct through development of the criminal law and regulation of health care practice. Together, they have informed the line that, in the end-of-life context, delineates physician conduct which is permissible from that which is not.

The Ninth Circuit decision below conflated these well-established doctrines with a force that enlarges the first, undercuts the second, and limits a State's ability to accommodate the competing interests served by each. As a result, the clear line of demarcation between what a

[18] In the only case involving this issue to come before this Court, the Court, assuming but not deciding, that there is a constitutionally protected liberty interest in refusing life-saving treatment, upheld a state procedural limitation on the exercise of such refusal. *Cruzan*, 497 U.S. at 284.

physician may do and must not do at the patient's request has been abandoned in favor of one that is difficult to ascertain and inherently unstable.

In this case, the Court is asked to confirm the action of the court below by adopting as a constitutional imperative a public policy that allows physicians to prescribe medications intended not for therapeutic purposes, but to cause their patients to die.

It is difficult to overstate the importance of what the Court is asked to do or the complexity of the considerations which surround it. The issue of physician-assisted suicide has been discussed and debated throughout the nation in a variety of media—from television and radio talk shows to scholarly medical[19] and legal[20] journals to the daily newspapers.[21] Voters in Washington and California have

[19] See, for example, the written testimony submitted to the House of Representatives Judiciary Subcommittee on the Constitution by Kathleen M. Foley, M.D., the Chief of Pain Service at Memorial Sloan-Kettering Cancer Center, on April 29, 1996. Dr. Foley attached to her written testimony a reference list identifying more than 150 articles—most from medical journals—touching on the subject. A copy of Dr. Foley's statement and referenced list may be downloaded via the Subcommittee's home page on the internet (http:\\www.house.gov\judiciary\2167.htm).

[20] See, for example, 18 Seattle U. L. Rev. No. 3 (Spring 1995), 72 U. Det. Mercy L. Rev. No. 4 (Summer 1995), and 35 Duq. L. Rev. (Special Issue) (Fall 1996), each devoted to the issue.

[21] See, for example, Paul Wilkes, *The Case Against Doctor-Assisted Suicide, The Next Pro-Lifers*, N.Y. Times Magazine, July 21, 1996, at 22-27, 42, 45, 50-51; Carol J. Castaneda, *Agonizing over the right to die*, USA Today, June 7, 1996, at 4A; *Doctor-assisted suicide decision*, Seattle Post Intelligencer, March 9, 1996, at A10 (editorial agreeing with decision below); and *Court confuses liberty, death*, The Oregonian, March 8, 1996, at C8 (editorial criticizing decision below).

defeated, albeit by close votes, initiatives that would have authorized forms of physician-assisted suicide in their respective States. App. Pet. Cert. at A-49. Voters in Oregon, by an even closer vote, have adopted a statute allowing what this Court is asked to declare a constitutional right—physician prescription of life-ending medications for terminally ill patients—although implementation of the statute has been enjoined as a result of litigation that may find its way to this Court as early as this term. *See Lee v. State of Oregon*, 891 F. Supp. 1429 (D. Or. 1995), *appeal docketed*, No. 95-35854 (9th Cir. argued July 9, 1996).

In recent years, legislation authorizing physician-assisted suicide has been introduced in the legislatures of at least fifteen States. Daniel Callahan & Margot White, *The Legalization of Physician-Assisted Suicide: Creating a Regulatory Potemkin Village*, 30 U. Rich. L. Rev. 1, 18 (1996).

Commissions in two of those states—Michigan and New York—have studied the various ethical, medical, legal, social, philosophical, and psychological issues surrounding the physician-assisted suicide debate. Each produced a thoughtful and provocative report, with the differences between their approaches and results illustrative of the complexity of the issues.[22]

---

[22] The Michigan Commission on Death and Dying, *Final Report* (1994); The New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* (1994). The Michigan Commission produced three separate reports—one recommending a change in Michigan law to allow physician-assisted suicide, one recommending procedures should such a change be made, and one recommending no change. None of these recommendations was endorsed by a majority of the members of the Commission, although the recommendation for a change in the law received more votes than the others. The New York State Task Force Report compiled as thorough an analysis of the various social, medical, psychological, philosophical, and legal issues touching on the assisted suicide debate as can be found anywhere. The Task Force, representing a broad spectrum of divergent view points, unanimously recommended that New York's statutory prohibition against assisting a suicide be retained. New York State Task Force Report at 119-141.

As these reports—indeed the hundreds of articles and books written on the subject—illustrate, the debate over physician-assisted suicide implicates a wide range of interests and points of view, including at least the following:

- Those who, like the patients for whom the Respondents advocate, are mentally competent and terminally ill adults who want to end their lives with physician assistance;
- Those, equally competent and ill, who nonetheless want to remain alive, but fear that allowing assistance to some increases the risk that they themselves may die involuntarily;
- Those who are not mentally competent or terminally ill but who face a risk of being viewed as both and thus placed at increased risk of dying involuntarily;
- Those whose apparent voluntary desire to end their lives may, in reality, be the product of an unrecognized emotional or mental disorder;
- Those who believe that social policy should support life at all costs and in every setting, and those who do not;
- Those who believe that the desires of an individual, even one who may be operating under the effect of a mental disease or disorder, should prevail in all circumstances, and those who do not;

- Those who value self-determination but fear that shifting the line of permissible physician conduct into the realm of assisted suicide will place many vulnerable individuals at risk of an untimely and unwanted death.

This Court should resist the temptation to assert itself as the arbitrator of this complex and challenging issue, and leave the formulation of public policy to the State legislative arena where it has traditionally resided.

B. The Decision Below Is A Radical Departure From Our Nation's Legal Traditions And This Court's Fourteenth Amendment Jurisprudence

The decision below is replete with anecdotal recitations of the toll that terminal illness has inflicted on some individuals as they approach the end of life. *See, e.g.*, App. Pet. Cert. at A-11 to A-13, A-54 n.62, A-57, A-58, A-84 n.98, A-106 to A-108, A-109 n.135. These accounts cannot be read without evoking at least two strong emotional reactions—sympathy for those afflicted, and apprehensiveness that some day a similar fate may befall the reader or a loved one. The proposition advanced by Respondents and apparently subscribed to by the Ninth Circuit—that such suffering would be alleviated by finding a constitutional right to assisted suicide—is unquestionably inviting.

There are, of course, stories that make a different point:

- The story of a New York woman, a multiple sclerosis victim, who committed suicide with the encouragement of her husband. Excerpts from her husband's diary, which came to light after her death, suggested that his encouragement of her suicide was motivated, at least in part, by his own wish to be free of the burden of taking

care of his ailing wife. Rather than face a jury, the husband pled guilty to attempted manslaughter.[23]

- The story of a Seattle man who, though diagnosed with terminal pancreatic cancer, was able with modern pain management techniques to be active until shortly before his death. According to his wife, "[w]e went fly-fishing three weeks before he died . . . . It made all the difference in the world to be able to do things together—continue having fun while living with this knowledge that it's not going to be forever. I look back on those last six months as among the best we had."[24]

- The story of a Virginia woman who was born with cerebral palsy and, among other things, needed several surgeries to connect her malformed esophagus to her stomach. She survived one suicide attempt, and her doctor resisted her thinly-veiled requests that he assist her in another, instead persuading her to undergo yet another surgery. Two weeks after the surgery she was eating on her own, planning a new wardrobe, and contemplating a return to college.[25]

---

[23] Herbert Hendin, *Dying of Resentment*, N.Y. Times, March 21, 1996, at A19.

[24] Cecelia Goodnow, *True reliever*, Seattle Post Intelligencer, July 25, 1996, at D1.

[25] Paul Wilkes, *The Case Against Doctor Assisted Suicide, The Next Pro-Lifers*, N.Y. Times Magazine, July 21, 1996, at 22-23.

But this Court's jurisprudence has not been and should not be determined on the basis of anecdotes, no matter what points they make or how compellingly they make them. This Court must focus on the needs of our society as a whole and its role in responding to those needs, and it must do so in a principled manner that builds upon, but does not distort, its prior jurisprudence. The Ninth Circuit decision departed from this Court's jurisprudence in several important respects.

1. The Ninth Circuit's Broad Characterization Of The Issue Ignored This Court's Restrained Analytical Approach To Substantive Due Process Cases

Respondents' claims are cast under the substantive component of the Due Process Clause, which has been recognized as protecting individual liberty against "certain government actions regardless of the fairness of the procedures used to implement them." *Collins v. Harker Heights*, 503 U.S. 115, 125 (1992) (*citing Daniels v. Williams*, 474 U.S. 327, 331, 106 S. Ct. 662, 88 L. Ed. 2d 662 (1986)). The *Collins* Court observed:

> "As a general matter, the Court has always been reluctant to expand the concept of substantive due process because guideposts for responsible decisionmaking in this unchartered area are scarce and open-ended. The doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field." *Id.*[26]

[26] *See also Bowers v. Hardwick*, 478 U.S. 186, 194-95 (1986):

> "Nor are we inclined to take a more expansive view of our authority to discover new fundamental rights imbedded in the Due Process Clause. The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution. . . . There should be,therefore, great resistance to expand the substantive reach of [the Due Process Clause] particularly if it requires redefining the category of rights deemed to be fundamental."

This caution is reflected in the Court's analytical approach in due process cases. The analysis "must begin with a careful description of the asserted right.." *Reno v. Flores*, 507 U.S. 292, 302 (1993). The degree of specificity with which the asserted right is described is important and may be determinative of the extent to which the claim of constitutional protection is recognized. *See* Laurence H. Tribe, *Levels of Generality in the Definition of Rights*, 57 U. Chi. L. Rev. 1057 (1990).[27]

In deciding Respondents' claims that their terminally ill patients have a constitutionally protected liberty interest in physician-assisted suicide, the Ninth Circuit *en banc* panel cast its net broadly:[28]

> "[W]e first determine whether there is a liberty interest in choosing the time and manner of one's

[27] For example, in *Bowers*, which involved a challenge to a state statute outlawing sodomy, the majority characterized the issue as whether there exists "a fundamental right [for] homosexuals to engage in acts of consensual sodomy" (*Bowers*, 478 U.S. at 192), while the dissent characterized the issue as whether "individuals [have] the right to decide for themselves whether to engage in particular forms of private, consensual sexual activity" (*id.* at 199 (Blackmun, J., dissenting)).

[28] The Ninth Circuit noted, correctly, that "[u]nder the Court's traditional jurisprudence, those classified as fundamental rights cannot be limited except to further a compelling and narrowly tailored state interest," but that individual liberty interests such as are asserted here are subject to lesser protection. App. Pet. Cert. at A-33. *See also Cruzan*, 497 U.S. at 279 n.7.

death . . . in common parlance . . . Is there a right to die?" App. Pet. Cert. at A-21.

Not only is the breadth of the Ninth Circuit's characterization of the asserted liberty interest inconsistent with this Court's careful analytic approach, it is problematic in other respects as well. If there is indeed a constitutionally protected liberty interest in "determining the time and manner of one's death," not only laws banning assisted suicide are suspect. Also at risk are such statutes as, for example, those prohibiting the sale of transplantable human body parts[29] and denying access to ineffective medications[30], as well as the well-established rule that consent of the victim is not a defense to a murder charge.[31]

Moreover, by phrasing the question—and its answer—broadly, the Ninth Circuit disregarded the *Cruzan* Court's "judicious counsel . . . that in deciding 'a question of such magnitude and importance . . . it is the better part of wisdom not to attempt, by any general statement, to cover every possible phrase of the subject.'" *Cruzan*, 497 U.S. at 277-78 (citation omitted) (second ellipsis in original).

---

[29] *See, e.g.*, Wash. Rev. Code § 68.50.610; 42 U.S.C.S. § 274e; *see also* Yale Kamisar, *The Reasons So Many People Support Physician-Assisted Suicide—And Why These Reasons Are Not Convincing*, 12 Issues in L. & Med. 113, 114 (1996).

[30] In *United States v. Rutherford*, 442 U.S. 544 (1979), this Court upheld the statutory authority of the Food and Drug Administration to prohibit the sale or distribution of a drug (laetrile) that had not been shown to be effective, rejecting the suggestion that an exception be made for terminally ill cancer patients. On remand, the Tenth Circuit upheld the constitutionality of the prohibition. *Rutherford*, 616 F.2d 455 (10th Cir. 1980), *cert denied* 449 U.S. 937 (1980).

[31] *See, e.g., Martin v. Commonwealth*, 184 Va. 1009, 1018-19, 37 S.E.2d 43 (1946).

The *Cruzan* Court assumed, but did not decide, that "the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving treatment and nutrition" (*id.* at 279) and upheld a State procedural limitation on the exercise of the assumed right (*id.* at 284).

This Court should follow its prior teachings, and its *Cruzan* example, and focus its analysis on the narrow issue before it in this case—whether there is a liberty interest protected by the Fourteenth Amendment in committing suicide that includes assistance in doing so.

2. The Asserted Liberty Interest In Suicide Or Assisted Suicide Is Neither Deeply Rooted In Our Nation's History And Traditions Nor Implicit In The Concept Of Ordered Liberty

The Court's principal "guideposts for responsible decision making" (*Collins*, 503 U.S. at 125) in determining the existence of a constitutionally protected liberty interest have been our nation's history and legal traditions. The Court has said that the category of "rights qualifying for heightened judicial protection . . . includes those fundamental liberties that are 'implicit in the concept of ordered liberty,' such that 'neither liberty nor justice would exist if they were sacrificed.'" *Bowers*, 478 U.S. at 191-92 (*quoting Palko v. Connecticut*, 302 U.S. 319, 325-26 (1937)). An alternative statement also recognized by the *Bowers* Court was Justice Powell's characterization of constitutionally protected liberties as those that are "deeply rooted in this nation's history and tradition." *Id.* at 192 (*quoting Moore v. East Cleveland*, 431 U.S. 494, 503 (1977) (opinion of Powell, J.)).

While conceding the correctness of the *Bowers* Court formulation[32], the Ninth Circuit downplayed the significance of the historical view of our Nation and its legal traditions.

> "Were history our sole guide, the Virginia anti-miscegenation statute that the Court unanimously overturned in *Loving v. Virginia*, 388 U.S. 1 (1967), . . . would still be in force." App. Pet. Cert. at A-36.

Although the result in *Loving* reflected current societal attitudes about relations among people from diverse ethnic and racial backgrounds, the Court based its due process holding squarely on its recognition that "[t]he freedom to marry has long been recognized as one of the vital personal rights essential to the orderly pursuit of happiness." *Loving v. Virginia*, 388 U.S. 1, 12 (1967).

There is no parallel element of our historical concept of liberty upon which to base the interest in physician-assisted suicide that is asserted in this case.

The limited historical analysis that was conducted by the Ninth Circuit combined a selective reading of the most comprehensive scholarly treatment of legal issues

---

[32] The Ninth Circuit's limited *en banc* panel dismissed the holding of *Bowers* on the basis of a subsequent statement by Justice Powell, who voted with the 5-4 majority, that he had "probably made a mistake." App. Pet. Cert. at A-31 n.16. As noted above, page 19 note 27, one difference between the *Bowers* majority and the dissent was their characterization of the issue there involved. However, both the majority and the dissent looked to our nation's history and traditions to determine whether constitutional protection was warranted, and the court below acknowledged that the *Bowers* Court's formulation of the test for the existence of a protected liberty interest "is not controversial." *Id.* at A-31 n.16.

surrounding suicide and assisted suicide[33] with occasional examples of notorious suicides in mythology and literature. *See* App. Pet. Cert. at A-30 to A-47.

This selective and incomplete analysis glossed over the fact that throughout our legal traditions—from the English common law to colonial times to the present—suicide and attempted suicide have been disfavored and have resulted in adverse legal consequences. *See generally* Thomas J. Marzen et al., *Suicide: A Constitutional Right?* 24 Duq. L. Rev. 1 (1985). For several centuries, the act of attempting suicide was a crime, both in the English common law and in many State statutes. *Id.* at 56-100.

Over time, attitudes toward suicide softened, not because it was considered acceptable, but because of a growing recognition that those who attempted suicide were led to do so because of a mental disease or an emotional disorder, rather than as a noble act of self-determination. Thus, while it is true that "[t]oday, no state has a statute prohibiting suicide or attempted suicide" (App. Pet. Cert. at A-47), virtually every State recognizes a suicide attempt as sufficiently indicative of a mental disorder to justify involuntary commitment for mental health evaluation and treatment.[34]

---

[33] Thomas J. Marzen et al., *Suicide: A Constitutional Right?* 24 Duq. L. Rev. 1 (1985). A thorough explication of the extent to which the Ninth Circuit misread or mischaracterized the historical evidence reviewed in this article may be found in Thomas J. Marzen, et al., *"Suicide: A Constitutional Right"—Reflections Eleven Years Later*, 35 Duq. L. Rev. 261, 262-68 (1996).

[34] See, for example, Wash. Rev. Code §§ 71.05.020(3) and 71.05.240. The New York State Task Force noted that "[s]tudies that examine the psychological background of individuals who kill themselves show that 95 percent have a diagnosable mental disorder at the time of death." New York State Task Force Report at 11.

Other than noting, correctly, that "[a] majority of states . . . still have laws on the books against assisting suicide" (App. Pet. Cert. at A-47), the Ninth Circuit limited *en banc* panel made no attempt to determine if access to assistance in committing suicide was "implicit in the concept of ordered liberty" or "deeply rooted in this nation's history and tradition."

The reason for this lack of inquiry is, of course, that any such attempt would fail. Though the historical record is incomplete, it appears that most colonial governments viewed assisting a suicide as a common law crime (Marzen, at 70-74, *supra* p. 23), and statutes like the Washington statute at issue here remain on the books in most states. *See supra* p. 6 n.13; *see also People v. Kevorkian*, 447 Mich. 436, 495, 527 N.W.2d 714 (1994), *cert. denied*, 115 S. Ct. 1785 (1995) (holding *inter alia* that assisted suicide remains a common law offense in Michigan today).

The possibility that one who assists a would-be suicide is acting other than altruistically no doubt accounts for the fact that most States continue to view assisting a suicide as a crime.

> "[I]n principle it would seem that the interests in the sanctity of life that are represented by the criminal homicide laws are threatened by one who expresses a willingness to participate in taking the life of another, even . . . with the consent, or at the request, of the suicide victim." American Law Institute, *Model Penal Code and Commentaries, Part I*, § 210.5 at 100.

See also supra p. 5 (comments of the drafters of the current version of the Washington statute).

Even if the Ninth Circuit was correct in concluding that suicide has not been universally condemned, the mere absence of universal condemnation does not establish a

right. Neither Respondents nor the Court below have identified any positive source of the asserted right that is "implicit in the concept of liberty."

As the Second Circuit concluded:

> "Nor can it be said that the right to assisted suicide claimed by plaintiffs is deeply rooted in the nation's traditions and history . . . . Indeed the very opposite is true." *Quill v. Vacco*, 80 F.3d 716, 724 (2nd Cir. 1996) (*cert. granted sub nom. Vacco v. Quill*, Case No. 95-1858, to be argued in tandem with the instant case).

But arguing that the opposite is *not* true, which is all the Ninth Circuit opinion does, does not transform suicide into a right deeply rooted in the nation's history and traditions.

3. The Decision Below Departs From This Court's Substantive Due Process Jurisprudence By Creating A Protected Interest That Is Not Rooted In Our Historical Concepts Of Liberty And Is Different In Character And Quality From Other Protected Liberty Interests Recognized By This Court

This Court's substantive due process jurisprudence has recognized protected liberty interests in marriage,[35] procreation,[36] and the decision to bear a child.[37] In

---

[35] *Loving v. Virginia*, 388 U.S. 1 (1961); *Turner v. Safley*, 482 U.S. 78 (1987).

[36] *Eisenstadt v. Baird*, 405 U.S. 438 (1972); *Carey v. Population Services International*, 431 U.S. 678 (1977).

[37] *Roe v. Wade*, 410 U.S. 113 (1973); *Planned Parenthood v. Casey*, 505 U.S. 833 (1992).

according constitutional protection to these activities, the Court considered the nature of the activity, the importance that it plays in the individual's enjoyment of the full range of liberty, and the State interests arguably advanced by the particular governmental restriction involved. The alleged liberty interest in physician-assisted suicide is different in a number of respects than the interests to which constitutional protection has previously been granted.

Each of the Court's earlier cases involved activities that allow the individual a broader participation in life and society, e.g., to enjoy the benefits of marriage to whomever one pleases, regardless of race, or to pursue or avoid the combination of blessings and burdens that parenthood brings.

A decision to terminate one's life, on the other hand, has exactly the opposite effect—once executed, life itself, along with its burdens and benefits, is gone.

The Court has also recognized liberty interests in avoiding unwanted medical treatment[38] and *assumed* that such an interest was implicated even where the treatment consisted of artificial nutrition and hydration necessary to preserve the life of the patient.[39]

Such interests, perhaps more closely analogous to the interest advanced here, are rooted in the individual's freedom from "[t]he State's imposition of medical treatment on an unwilling competent adult [which] necessarily involves some form of restraint and intrusion." *Cruzan*, 497 U.S. at 288 (O'Connor, J., concurring).

Assisted suicide invites, rather than avoids, bodily intrusion. The informed consent doctrine on which the

---

[38] *Washington v. Harper*, 494 U.S. 210 (1990).

[39] *Cruzan*, 497 U.S. at 267.

Harper/Cruzan line of cases is anchored simply does not provide doctrinal support for the proposition that there is a liberty interest in physician-assisted suicide.

Both the District Court and the Ninth Circuit limited *en banc* panel analogized the interest here to a woman's decision to terminate a pregnancy.

> "In examining whether a liberty exists in determining the time and manner of one's death, we begin with the compelling similarities between right-to-die cases and abortion cases." App. Pet. Cert. at A-25.

While there may be similarities between the two issues, the similarities are superficial at best, and there are significant differences as well. The Ninth Circuit's disregard of those differences is another example of its departure from this Court's cautious analytical approach to substantive due process claims.

First, and foremost, from a constitutional point of view, the abortion decision does not implicate the life of a person.

> "The Court in *Roe* carefully considered, and rejected, the . . . argument 'that the fetus is a 'person' within the language and meaning of the Fourteenth Amendment' . . . [T]he Court concluded that that word 'has application only postnatally.'" *Planned Parenthood v. Casey*, 505 U.S. 833, 913 (Stevens, J., concurring in part and dissenting in part).

Secondly, from a practical point of view, any attempt to regulate the abortion decision perforce impacts women more profoundly than men, seriously implicating equal

protection considerations that are absent in respect to assisted suicide.[40]

Finally, what is at stake in the abortion context is the decision whether to have a child, something over which humans can exercise a great deal of personal autonomy. This case involves death, which ultimately humans have little, if any, ability to control. Death is in fact the antithesis of liberty—neither can coexist with the other. Finding a liberty interest in the former context accords with reality; to do so in the latter does not.

The Ninth Circuit *en banc* panel attempted to anchor its decision on two recent cases from this Court: *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990), and *Planned Parenthood v. Casey*, 505 U.S. 833 (1992). In reality, it distorted the holdings of both.

(a) *Cruzan*

In *Cruzan*, this Court considered whether Missouri could require clear, cogent, and convincing evidence of a patient's desire before authorizing termination of artificial life support, including nutrition and hydration.

Recognizing that the common law doctrine of informed consent included a co-terminus right to refuse consent, the Court reviewed a series of cases involving intrusive actions, such as immunization and forced medical treatment, and concluded that "[t]he principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." *Cruzan*, 497 U.S.

---

[40] "[S]ome commentators and judges . . . have suggested that the constitutional theory of sex equality . . . better supports the constitutional protection afforded the abortion decision." Marc Spindelman, *Are The Similarities Between a Woman's Right to Choose an Abortion and the Alleged Right to Assisted Suicide Really Compelling?* 29 U. Mich. J.L. Reform 775, 824 n.186 (1996).

at 278. However, the Court stopped short of holding that this principle extended to "the forced administration of life-sustaining medical treatment, and even of artificially delivered food and water." *Id.* at 279. Rather, the Court stated that "for purposes of this case, [it would] assume that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Id.* That, of course, did not end the inquiry.

> "Whether or not Missouri's clear and convincing evidence requirement comports with the United States Constitution depends in part on what interests the State may properly seek to protect in this situation." *Id.* at 280.

The State interests recognized in *Cruzan* included "the protection and preservation of human life" as reflected in the universally held view that homicide is a crime and that most states "have laws imposing criminal penalties on one who assists another to commit suicide." *Id.*

The *Cruzan* Court noted that this State interest could justify forced nutrition, at least under some circumstances:

> "We do not think a State is required to remain neutral in the face of an informed and voluntary decision by a physically able adult to starve to death." *Id.*

The *Cruzan* Court also recognized that the Missouri rule also served "more particular interests"—preventing abuse or undue influence. *Id.* at 281. And it rejected the notion that these State interests varied from one person to another:

> "[W]e think a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life

to be weighed against the constitutionally protected interests of the individual." *Id.* at 282.

Unlike *Cruzan*, this case is not about governmentally forced medical or nutritional procedures. Individuals who require artificial life-support are by definition excluded from the category of individuals on whose behalf Respondents advocate.

To the contrary, Respondents seek to require the government to permit them to take affirmative steps to help their patients die, not as a result of the natural course that is followed when artificial life support is foregone or withdrawn, but as a direct and intended result of an artificial death-inducing intervention.

Such a holding is beyond the scope of *Cruzan* and not supported by the common law doctrine which formed the basis for the *Cruzan* opinion.

Rather than supporting the decision below, the *Cruzan* opinion confirms that the important State interests present in this case outweigh any asserted liberty interest in assisted suicide.

(b) *Casey*

The Ninth Circuit also attempted to anchor its decision on this Court's holding in *Casey*. App. Pet. Cert. at A-56 to A-58. The *en banc* panel attempted to transform a three-sentence passage into a new formulation of the test for the existence of a protected liberty interest. In so doing, it ignored the context in which *Casey* was decided, its focus on the specific issue of "a woman's right to terminate her pregnancy" (*Casey*, 505 U.S. at 844), and the role that *stare decisis* played in the *Casey* decision.

The primary issue in *Casey* was whether the Court should retreat from its "holding that the Constitution protects a woman's right to terminate her pregnancy in its early stages, *Roe v. Wade*, 410 U.S. 113, 93 S. Ct. 705,

35 L. Ed. 2d 147 (1973)." *Casey*, 505 U.S. at 844. The *Casey* Court declined to do so:

> "After considering the fundamental constitutional questions resolved by *Roe*, principles of institutional integrity, and the rule of *stare decisis*, we are led to conclude this: the essential holding of *Roe v. Wade* should be retained and once again reaffirmed." *Casey*, 505 U.S. 845-46.

Discussing *Roe* and its antecedents, the *Casey* Court noted that the Due Process Clause "affords constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing, and education. . . . [M]atters . . . involving the most intimate and personal choices a person may make in a lifetime." *Id.* at 851.

From the context, it is clear that this language described specific interests accorded constitutional protection in prior cases. There is nothing in content or context to suggest that the *Casey* Court intended this language as a reformulation of the test for determining the existence of a liberty interest.

This is even more clear from Part III of the Court's opinion, explaining the important influence of the doctrine of *stare decisis* in the *Casey* conclusion:

> "Where, in the performance of its judicial duties, the Court decides a case in such a way as to resolve the sort of intensely divisive controversy reflected in *Roe* and those rare comparable cases, its decision has a dimension that the resolution of the normal case does not carry. It is the dimension present whenever the Court's interpretation of the Constitution calls the contending sides of a national controversy to end their national division by accepting a common mandate rooted in the Constitution." *Id.* at 866-67.

In such situations, the *Casey* Court noted:

> "[The Court's] decision[s] require[] an equally rare precedential force . . . [lest] a later decision overruling the first [be seen as] a surrender to political pressure, and an unjustified repudiation of the principle on which the Court staked its authority in the first instance. . . . [T]o overrule under fire in the absence of the most compelling reason to reexamine a watershed decision would subvert the Court's legitimacy beyond any serious question." *Id.* at 867.[41]

In summary, the *Casey* Court reaffirmed the essential holding of *Roe v. Wade* because it was consistent with, albeit an extension of, other substantive due process cases *and* because the Court's institutional integrity required a forceful application of the principles of *stare decisis* to such a "watershed decision" as *Roe*.

That *Casey*'s reaffirmation of *Roe* does not represent an expansion of substantive due process beyond the reproductive rights arena is clear from the *Casey* Court's observation that "*Roe*'s scope is confined by the fact of its concern with postconception potential life, a concern otherwise likely to be implicated only by some forms of contraception protected [by earlier] cases." *Casey*, 505 U.S. at 859.

---

[41] These considerations reinforce the need for the Court to be particularly cautious before attempting to resolve the policy debate over whether and under what circumstances physician-assisted suicide should be allowed. This case presents another "watershed" issue involving an "intensely divisive controversy." The Court should refrain from finding a constitutionally mandated answer to this "national controversy," because it cannot do so with sufficient clarity that its answer will withstand inevitable efforts to overturn it and thwart its implementation.

In short, the Ninth Circuit *en banc* panel's reliance on *Casey* was misplaced.

4. The Balancing Test Used By The Ninth Circuit Undervalued Legitimate State Interests That Are Furthered By The Statute At Issue

The Ninth Circuit, having over-stated the nature of the liberty interest involved and under-stated the extent to which recognition of such an interest would depart from our nation's history and traditions, also departed from this Court's substantive due process jurisprudence in the way in which it evaluated legitimate State interests furthered by the Washington statute.

Consider, for example, the *en banc* panel's treatment of this Court's teaching in *Cruzan*, that "a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life." *Cruzan*, 497 U.S. at 282. While noting this passage, the Ninth Circuit concluded that the "*strength* [of the State's interest] is dependent on relevant circumstances, including the medical condition" of the patient. App. Pet. Cert. at A-65 (emphasis in original). The Ninth Circuit does not explain how a State can, under this construct, assess the strength of its interest without making "judgments about the 'quality' of life that a particular individual may enjoy," precisely what the *Cruzan* Court said a State is not required to do.[42]

---

[42] The *Cruzan* Court was aware of Ms. Cruzan's tragic circumstances. *Cruzan*, 497 U.S. 266-67 n.1. If the Ninth Circuit's "sliding scale" approach were correct, it would be difficult to imagine a case where the State's interest would have been weaker. Yet, this Court in *Cruzan* concluded that the general State interests in preserving life and particularized interests in preventing abuse or undue influence

Similarly, the Ninth Circuit considered, and dismissed, other State interests, performing its own evaluation of the "strength" of those interests in the circumstances of the mentally competent, terminally ill patient who wishes to commit suicide. By focusing its analysis on the strength, rather than the nature, of the implicated State interests, the Court below was able to substitute its judgment for that of the Washington Legislature as to which of several competing interests should be given preference.

For example, in recognizing the State's legitimate interest in "preventing deaths that occur as a result of errors in medical or legal judgment," the Court

> "acknowledge[d] that it is sometimes impossible to predict with certainty the duration of a terminally ill patient's remaining existence, just as it is sometimes impossible to say for certain whether a borderline individual is or is not mentally competent." App. Pet. Cert. at A-83.[43]

At the same time, the Ninth Circuit ignored the inevitability of "situations in which family members will not act to protect a patient." *Cruzan*, 497 U.S. at 281.

These possibilities raise concerns that any attempt to limit assisted suicide to mentally competent, terminally ill adults will fail, with the result that some individuals will be

---

outweighed the individual liberty interest assumed to exist in that case.

[43] This Court has recognized as well "that with diseases such as cancer it is often impossible to identify a patient as terminally ill except in retrospect." *United States v. Rutherford*, 442 U.S. 544, 556 (1979). The Ninth Circuit's failure to articulate a clear definition of when a patient is "terminal" or the standard of "mental competence" to be used in determining eligibility for suicide assistance makes such judgments that much more complicated and error prone.

helped to die even if they do not meet either or both criteria.

Such concerns are, in the Ninth Circuit's view, minimal, because "should an error actually occur it is likely to benefit the individual by permitting [the patient] . . . to end his life peacefully and with dignity." App. Pet. Cert. at A-83. In other words, to the Ninth Circuit limited *en banc* panel, a peaceful death, even erroneously administered, is preferable to an erroneous extension of life.

However, is it not an equally legitimate view that the risk of "wrongful" extension of life is preferable to premature unwanted death? As this Court noted in *Cruzan*,

> "[a]n erroneous decision not to terminate [life support maintains] the status quo; the possibility of subsequent developments . . . at least create the potential that a wrong decision will eventually be corrected or its impact mitigated. An erroneous decision to withdraw life-sustaining treatment, however, is not susceptible of correction." *Cruzan*, 497 U.S. at 283.

The same may be said for assisted suicide.

The Court below also attempted to justify its evaluation of various state interests by comparing Washington's approach to the related—yet different—issue of patient refusal of treatment. Thus, while the State may "assert an unqualified interest in the preservation of human life" (App. Pet. Cert. at A-65 (*citing Cruzan*, 497 U.S. at 282)), Washington's interest in preserving life, according to the Ninth Circuit, is weakened because of the Legislature's adoption of the Natural Death Act, Wash. Rev. Code Ch. 70.122 (App. at 1a-11a), setting forth procedures by which an individual may indicate his or her desire to forego artificial life support.

According to the Court below, this statute reflects "Washington's *recognition* that the state's interest in

preserving life is not always of the same force and that in some cases at least other considerations may outweigh the state's." App. Pet. Cert. at A-68 (emphasis added). However, the statute could just as easily be viewed as a legislative *choice* among competing interests and values in a specific context, a choice that is admittedly different in kind and degree from that reflected in the statute and context at issue here. In any event, the Ninth Circuit did not explain how creation of a statutory right based on common law principles mandated recognition of a constitutionally protected liberty interest inconsistent with the common law.

Certainly, the Washington Legislature did not believe that by enacting the Natural Death Act it was abandoning opposition to assisted suicide:

> "Nothing in [the Natural Death Act] shall be construed to condone, authorize, or approve mercy killing or physician-assisted suicide, or to permit any affirmative or deliberate act or omission to end life other than to permit the natural process of dying." Wash. Rev. Code § 70.122.100.

Similarly, the Court below independently assessed the "strength" of the State's interest in preventing suicides:

> "[W]e see no ethical or constitutionally cognizable difference between a doctor's pulling the plug on a respirator and his prescribing drugs which will permit a terminally ill patient to end his own life. . . . In sum, we find the state's interests in preventing suicide do not make its interests substantially stronger here than in cases involving other forms of death-hastening medical intervention. To the extent that a difference exists, we conclude that it is one of degree and not of kind." App. Pet. Cert. at A-82.

While the Ninth Circuit may see no differences between withdrawing life support and assisted suicide, most other courts have.[44]

Consider the following examples:

The Washington State Supreme Court:

- "We emphasize that we are not endorsing suicide or euthanasia." *In re Grant*, 109 Wash. 2d 545, 563, 747 P.2d 445 (1987).

The New Jersey Supreme Court:

- "We would see, however, a real distinction between the self-infliction of deadly harm [suicide] and a self-determination against artificial life support . . . ." *Matter of Quinlan*, 70 N.J. 10, 43, 355 A.2d 647 (1976).

The Arizona Supreme Court:

- "Asserting the right to refuse medical treatment is not tantamount to committing suicide." *Rasmussen v. Fleming*, 154 Ariz. 207, 218, 741 P.2d 674 (1987).

---

[44] *See, e.g., Rasmussen v. Fleming*, 154 Ariz. 207, 218, 741 P.2d 674 (1987); *Bouvia v. Superior Court*, 179 Cal. App. 3d 1127, 1144, 225 Cal. Rptr. 297 (1986); *Bartling v. Superior Court of Los Angeles (Glendale Adventist Med. Ctr.)*, 163 Cal. App. 3d 186, 196, 209 Cal. Rptr. 220 (1984); *Foody v. Manchester Memorial Hosp.*, 482 A.2d 713, 720 (Conn. Super. Ct. 1984); *Staz v. Perlmutter*, 362 So. 2d 160, 162-63 (Fla. Dist. Ct. App. 1978); *State v. McAfee*, 259 Ga. 579, 385 S.E.2d 651, 652 (1989); *In re Gardner*, 534 A.2d 947, 955-56 (Me. 1987); *Brophy v. New England Sinai Hosp., Inc.*, 398 Mass. 417, 497 N.E.2d 626, 638 (1986); *Matter of Quinlan*, 70 N.J. 10, 355 A.2d 647 (1976); *Matter of Farrell*, 108 N.J. 335, 529 A.2d 404, 411 (1987); *Matter of Storar*, 52 N.Y.2d 363, 438 N.Y.S.2d 266, 273, 420 N.E.2d 64, 71 n.6 (1981); *Leach v. Akron Gen. Med. Ctr.*, 68 Ohio Misc. 1, 426 N.E.2d 809, 815 (1980); *In re Grant*, 109 Wash. 2d 545, 563, 747 P.2d 445 (1987).

The Maine Supreme Court :

- "[A patient's] decision not to receive [medical procedures], far from constituting suicide, is a choice to allow to take its course the natural dying process set in motion by his physiological inability to chew or swallow." *In re Gardner*, 534 A.2d 947, 955-56 (Me. 1987) (citations omitted).

As this Court has noted:

"It is conventional constitutional doctrine that where reasonable people disagree the government can adopt one position or the other." *Casey*, 505 U.S. at 851.

It is manifest that the Ninth Circuit's evaluation of the State interests involved differed from that of Washington's Legislature in adopting Wash. Rev. Code § 9A.36.060, and from that of Washington's voters in rejecting Initiative 119. What is not manifest is why one assessment is correct and the other is not.

5. This Court Should Reject The Ninth Circuit's "As Applied" Approach To Substantive Due Process Claims And Uphold Washington's Statute That Furthers Legitimate State Interests

Respondents alleged that the statute is unconstitutional on its face. J.A. at 7. The District Court agreed. App. Pet. Cert. at E-28 to E-29, I-1 to I-3. In their Ninth Circuit Reply Brief, Respondents recast their challenge to the statute:

> "Appellees have challenged RCW 9A.36.060 both on its face and as applied to them individually." Br. Appellees at 29.

The limited *en banc* panel, finding it "extremely unlikely that the district judge intended to strike down the

entire statute" (App. Pet. Cert. at A-18 n.18), transformed the District Court decision into a different kind of ruling:

> "[I]t appears that [the District Court] declared the statute invalid only insofar as it applies to the prescription of medication to terminally ill competent adults . . . or, to use the district court's precise terminology, only insofar as it applies to 'physician-assisted suicide[.]'" App. Pet. Cert. at A-18.

The limited *en banc* panel then held that "the 'or aids' provision of Washington statute RCW 9A.36.060, as applied to the prescription of life-ending medication for use by terminally ill, competent adult patients who wish to hasten their deaths, violates the Due Process Clause of the Fourteenth Amendment." App. Pet. Cert. at A-19 to A-20.

By characterizing its ruling as an "as applied" holding, the Ninth Circuit disguised the extent to which it was merely substituting its judgment for that of Washington's Legislature and voters about the appropriate scope of this statute.

The core of the Ninth Circuit limited *en banc* panel's ruling, and of Respondents' argument in this case, is that the statute operates imperfectly, that "as applied" to the hypothetical mentally competent, terminally ill person who decides, free of undue influence or coercion, to commit suicide, the statute serves no legitimate State interest and is therefore arbitrary. However, as this Court has observed in *Cruzan*:

> "[T]he Constitution does not require general rules to work faultlessly; no general rule can." *Cruzan*, 497 U.S. at 284.

And in *Romer v. Evans*, 116 S. Ct. 1620 (1996):

> "Even laws enacted for broad and ambitious purposes often can be explained by reference to legitimate public policies which justify the incidental disadvantages they impose on certain persons." *Romer*, 116 S. Ct. at 1628.

Respondents' argument overlooks the differences between the hypothetical group for whom they advocate and the real world, where the *potential* for abuse and undue influence is present in *every* situation.

As the New York State Task Force concluded:

> "For purposes of public debate, one can posit 'ideal' cases in which all the recommended safeguards would be satisfied: patients would be screened for depression and offered treatment, effective pain medication would be available, and all patients would have a supportive, committed family and doctor. Yet the reality of existing medical practice in doctors' offices and hospitals across the state generally cannot match these expectations, however any guidelines or safeguards might be framed. These realities render legislation to legalize assisted suicide and euthanasia vulnerable to error and abuse for all members of society, not only for those who are disadvantaged. The argument for mercy or compassion then is complex. Constructing an ideal or 'good' case is not sufficient for public policy, if it bears little relation to prevalent medical practice." *See* New York State Task Force Report, at 120.

An "as applied" challenge provides the means for one who is impacted by a law to ask the court to balance the individual liberty interests against the interests of society. It is not an invitation to the court to base its judgment on the law only on how it applies to that individual.

In making public policy, a State legislature—which in Washington and many other States includes the people through the initiative process—must consider a wide variety of interests and strike a balance that, in their collective judgment, best serves the needs of all of the State's citizens.

This Court should reject the Ninth Circuit's use of an "as applied" substantive test to second guess the legislative judgment reflected in the statute at issue here.

C. Washington Law Does Not Violate The Equal Protection Clause

Respondents also claim that Washington's ban on assisted suicide violates the equal protection clause of the Fourteenth Amendment. J.A. at 7.[45] This claim is based on Washington's Natural Death Act[46] which permits an individual to "execute a directive directing the withholding or withdrawal of life-sustaining treatment in a terminal condition or permanent unconscious condition." Wash. Rev. Code § 70.122.030(1) (App. at 4a). The thrust of their argument is that individuals who seek physician-assisted suicide and those who seek withdrawal of life-sustaining treatment are similarly situated and that

---

[45] This issue of whether States whose statutes allow refusal or withdrawal of life support while at the same time prohibiting assisted suicide violates the Equal Protection Clause is more squarely presented in New York's appeal of the Second Circuit's decision in *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996), *cert. granted sub nom. Vacco v. Quill*, No. 95-1858, to be argued in tandem with the instant case.

[46] Wash. Rev. Code §§ 70.122.010-.910 (App. at 1a-11a).

there is no rational basis for banning one and permitting the other.[47]

The Equal Protection Clause is "essentially a direction that all persons similarly situated should be treated alike." *Cleburne v. Cleburne Living Center*, 473 U.S. 432, 439 (1985). "The general rule is that legislation is presumed to be valid and will be sustained if the classification drawn by the statute is rationally related to a legitimate state interest." *Id.* at 440.

Respondents have not met the threshold test for equal protection because they have not shown that the two groups are similarly situated. There is a significant difference between terminally ill patients who can breathe, eat, and drink on their own and terminally ill patients who are being kept alive only by artificial means. The patient kept alive by artificial means suffers restraint and bodily intrusion from the unwanted treatment. As Justice O'Connor observed in *Cruzan*:

> "The States' imposition of medical treatment on an unwilling competent adult necessarily involves some form of restraint and intrusion. A seriously ill or dying patient whose wishes are not honored may feel a captive of the machinery required for life-sustaining measures or other medical interventions. Such forced treatment may burden that individual's liberty interests as much as any state coercion." *Cruzan*, 497 U.S. at 288 (O'Connor, J., concurring).

---

[47] The District Court ruled that this constituted an equal protection violation. App. Pet. Cert. at E-25 to E-28. This ruling was reversed by the three judge panel of the Ninth Circuit. App. Pet. Cert. at D-18 to D-19. The *en banc* panel of the Ninth Circuit did not reach this question (App. Pet. Cert. at A-115), although its due process analysis was strongly flavored with equal protection principles. *See* pp. 35-38 *supra*; Pet. at 22-28.

A terminally ill patient who is not receiving unwanted treatment is not subject to this restraint and bodily intrusion. The New York State Task Force Report also recognized this distinction:

> "If a patient is denied medically assisted suicide or euthanasia, he or she is likely to die more slowly of natural causes. When a competent patient is denied the option of refusing treatment, he or she will not only have life prolonged, *but must be physically forced to undergo unwanted treatment*. Whether the treatments are highly invasive such as chemotherapy or a respirator, or are generally regarded as less intrusive such as antibiotics, *the patient's body is physically invaded without consent. Under the common law, this is called battery*." New York State Task Force Report at 146 (emphasis added).

In sum, the two groups are not similarly situated because, while both may be said to be terminally ill, only one is suffering from the restraint and intrusion of unwanted medical treatment.

The significant practical distinction between these two groups is plainly rational. It is based on the common law doctrine of informed consent, which includes the right to refuse medical treatment. In *Cruzan*, this Court reviewed a number of State decisions on this point and concluded that:

> "As these cases demonstrate, the common-law doctrine of informed consent is viewed as generally encompassing the right of a competent individual to refuse medical treatment." *Cruzan*, 497 U.S. at 277.

This also is the case in Washington. The underpinnings of the Natural Death Act include the recognition that a patient may refuse unwanted medical treatment. *In re Colyer*, 99 Wash. 2d 114, 121, 660 P.2d 738 (1983)

("The common law right to be free from bodily invasion is an alternative basis for the right to refuse life sustaining treatment. Historically, an operation without authorization constituted an assault and battery, as well as malpractice." (citation omitted)).

The distinction between the two groups is also rational because it is based on the strongly held doctrine that one who intentionally acts to cause or contribute to another's death is, with rare exceptions, guilty of criminal conduct. As this Court stated in *Cruzan*:

> "As a general matter, the States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan*, 497 U.S. at 280.

As noted above on pages 35 and 36, Washington did not abandon this doctrine when it adopted the Natural Death Act. Wash. Rev. Code § 70.122.100 provides:

> "Nothing in this chapter shall be construed to condone, authorize, or approve mercy killing or physician-assisted suicide, or to permit any affirmative or deliberate act or omission to end life other than to permit the natural process of dying."

In short, the Equal Protection Clause does not provide an alternative basis for upholding the decision below.

D. There Is No Principled Basis On Which The Asserted Right To Assisted Suicide Can Be Limited To Physician Prescription Of Medication For Mentally Competent, Terminally Ill Patients To Administer To Themselves

It may be tempting to believe that the impact of the decision below will be mitigated because, by its terms, it

applies only to "competent, terminally ill adults who wish to hasten their deaths by obtaining medication prescribed by their doctors." App. Pet. Cert. at A-116.[48] If, however, this Court recognizes even a limited constitutional right to physician-assisted suicide, any attempt to confine it to such circumstances is likely to fail.

The Court has previously noted that its "power lies . . . in its legitimacy . . . [which] depends on making legally principled decisions under circumstances in which their principled character is sufficiently plausible to be accepted by the Nation." *Casey*, 505 U.S. at 865-66. In this regard, the Court differs from a legislative body which may, "[c]onsistent with other constitutional norms, . . . draw lines which appear arbitrary without the necessity of offering a justification." *Id.* at 870.

There is no principled basis on which the decision of the Ninth Circuit *en banc* panel can be limited to the prescription of medication for terminally ill patients to administer to themselves. One commentator, who has written widely on the subject, illustrates the problem of trying to limit the newly established right to the terminally ill:

> "If the merciful termination of suffering (or termination of an unendurable existence) is the basis for [the right to assisted suicide], why limit it to those who are terminally ill? . . . [U]nder a variety of circumstances life may be unendurable to a reasonable person, even though he does not face the prospect of immediate and painful death. . . . [I]s it [not] arbitrary to exclude the quadriplegic? The victim of a paralytic stroke? The mangled survivor of a road accident? A person afflicted with severe arthritis? . . . If a competent person comes to the unhappy

---

[48] As noted in the Petition at pages 10-11, the substance of the decision below in fact telescopes a much broader impact.

> conclusion that his existence is unbearable and freely, clearly, and repeatedly requests assisted suicide, why should he be rebuffed because he does not 'qualify' under somebody else's standards?" Yale Kamisar, *Are Laws against Assisted Suicide Unconstitutional?*, Hastings Ctr. Report 32, 36-37 (May-June 1993) (footnotes omitted) (quotation marks omitted).

Similarly, the newly created "right" to assisted suicide cannot be limited on any principled basis to those who are mentally competent. The Ninth Circuit limited *en banc* panel acknowledged as much:

> "Finally, we should make it clear that a decision of a duly appointed surrogate decision maker is for all legal purposes the decision of the patient himself." App. Pet. Cert. at A-101 n.120.

The court below also acknowledged that its decision to allow physician-assisted suicide, which it defined as "the prescribing of medication by a physician for the purpose of enabling a patient to end his life" (*Id.* at A-30), was not the final word on whether other forms of life-ending assistance must also be allowed:

> "We agree that it may be difficult to make a principled distinction between physician-assisted suicide and the provision to terminally ill patients of other forms of life-ending medical assistance, such as the administration of drugs by a physician [i.e., active euthanasia]. We recognize that in some instances, the patient may be unable to self-administer the drugs and that administration by the physician, or a person acting under his direction or control, may be the only

> way the patient may be able to receive them." *Id.* at A-100.[49]

Finally, the Ninth Circuit declined to limit its formulation of the newly created right to assistance by physicians, but also included friends, family members, and other health care workers who may facilitate the process within the scope of its ruling. *Id.* at A-116 n.140.

State legislatures, if left unhampered by a constitutional imperative of the sort contained in the decision below, have a broad range of discretion within which to operate on such a complex and controversial subject as physician-assisted suicide. Absent a principled basis upon which to affirm the decision below, this Court should reverse the Ninth Circuit and confirm the States' discretion to balance competing interests in a way that meets the needs of their respective populations.

E. Our Federal System Works Best When Important Questions Of Public Policy Are Resolved Through The State Legislative Process

The Ninth Circuit rejected the argument that the States are capable of forming their own judgments as to whether a policy allowing physician-assisted suicide would meet the needs of their respective populations:

---

[49] *See also* App. Pet. Cert. at A-30 n.15 ("The issue of the constitutionality of prohibiting physicians from administering life-ending drugs to terminally ill persons [i.e., active euthanasia] is not before us."). Again, Professor Kamisar's comments are illuminating:

> "If the right to control the time and manner of one's death . . . is well-founded, how can it be denied to someone simply because she is unable to perform the final act herself? Although there is a 'mechanical' distinction between assisted suicide and euthanasia, is it not a distinction without a difference?" Kamisar, at 35, *supra* p. 46.

> "[A]llowing each state to decide whether to *prohibit* [assisted suicide] results [in] a patchwork-quilt pattern of prohibitory legislation." App. Pet. Cert. at A-105 n.124 (emphasis in original).[50]

The same could be said, of course, for a wide variety of contexts in which the States' approaches differ, from real property to contracts to tort liability to criminal law. One could construct an argument that a national rule in any of these areas would have benefits. This was not, however, an argument that the founders of our federal system found to be persuasive.

Nor should this Court. There is great benefit to be gained by allowing each State to grapple on its own with complex issues of public policy such as assisted suicide. Each State can benefit from sister States' experiences, avoiding those approaches that have proven problematic and adapting those that are successful to the needs of their local populations.

As Justice Brandeis pointed out:

> "It is one of the happy incidents of the federal system that a single courageous State may, if its citizens choose, serve as a laboratory; and try novel social and economic experiments without risk to the rest of the country." *New State Ice Co. v. Liebmann*, 285 U.S. 262, 311 (1931) (Brandeis, J., dissenting).

Just as this Court "has the power to prevent an experiment [by striking] down the statute which embodies it" (*id.*), a pre-emptory decision by this Court on the issue

---

[50] Of course, there is now no "patchwork" quilt since most States prohibit assisted suicide in all cases, and implementation of the one State statute permitting a limited form of physician-assisted suicide has been enjoined by the federal courts. *See supra* p. 6 n.13; p. 14.

of assisted suicide would freeze the process of experimentation that it presents and forestall the opportunity to learn.

State courts and legislatures are quite capable of resolving these issues *and* protecting individual interests without significant federal judicial assistance. As Justice Holmes observed:

> "[I]t must be remembered that legislatures are ultimate guardians of the liberties and welfare of the people in quite as great a degree as the courts." *Missouri, K.T.R. Co. v. May*, 194 U.S. 267, 270 (1904).

VII. CONCLUSION

For the reasons outlined above, the decision of the limited *en banc* panel of the United States Court of Appeals for the Ninth Circuit should be reversed and this matter remanded to the District Court with directions to enter summary judgment for the Petitioners.

Respectfully submitted this 8th day of November, 1996.

APPENDIX

APPENDIX A

Chapter 70.122 RCW

NATURAL DEATH ACT

RCW 70.122.010 Legislative findings.

The legislature finds that adult persons have the fundamental right to control the decisions relating to the rendering of their own health care, including the decision to have life-sustaining treatment withheld or withdrawn in instances of a terminal condition or permanent unconscious condition.

The legislature further finds that modern medical technology has made possible the artificial prolongation of human life beyond natural limits.

The legislature further finds that, in the interest of protecting individual autonomy, such prolongation of the process of dying for persons with a terminal condition or permanent unconscious condition may cause loss of patient dignity, and unnecessary pain and suffering, while providing nothing medically necessary or beneficial to the patient. The legislature further believes that physicians and nurses should not withhold or unreasonably diminish pain medication for patients in a terminal condition where the primary intent of providing such medication is to alleviate pain and maintain or increase the patient's comfort.

The legislature further finds that there exists considerable uncertainty in the medical and legal professions as to the legality of terminating the use or application of life-sustaining treatment where the patient

having the capacity to make health care decisions has voluntarily evidenced a desire that such treatment be withheld or withdrawn.

In recognition of the dignity and privacy which patients have a right to expect, the legislature hereby declares that the laws of the state of Washington shall recognize the right of an adult person to make a written directive instructing such person's physician to withhold or withdraw life-sustaining treatment in the event of a terminal condition or permanent unconscious condition. The legislature also recognizes that a person's right to control his or her health care may be exercised by an authorized representative who validly holds the person's durable power of attorney for health care.

RCW 70.122.020 Definitions.

Unless the context clearly requires otherwise, the definitions contained in this section shall apply throughout this chapter.

(1) "Adult person" means a person who has attained the age of majority as defined in RCW 26.28.010 and 26.28.015, and who has the capacity to make health care decisions.

(2) "Attending physician" means the physician selected by, or assigned to, the patient who has primary responsibility for the treatment and care of the patient.

(3) "Directive" means a written document voluntarily executed by the declarer generally consistent with the guidelines of RCW 70.122.030.

(4) "Health facility" means a hospital as defined in RCW 70.41.020(2) or a nursing home as defined in RCW 18.51.010, a home health agency or hospice agency as defined in RCW 70.126.010, or a boarding home as defined in RCW 18.20.020.

(5) "Life-sustaining treatment" means any medical or surgical intervention that uses mechanical or other artificial means, including artificially provided nutrition and hydration, to sustain, restore, or replace a vital function, which, when applied to a qualified patient, would serve only to prolong the process of dying. "Life-sustaining treatment" shall not include the administration of medication or the performance of any medical or surgical intervention deemed necessary solely to alleviate pain.

(6) "Permanent unconscious condition" means an incurable and irreversible condition in which the patient is medically assessed within reasonable medical judgment as having no reasonable probability of recovery from an irreversible coma or a persistent vegetative state.

(7) "Physician" means a person licensed under chapters 18.71 or 18.57 RCW.

(8) "Qualified patient" means an adult person who is a patient diagnosed in writing to have a terminal condition by the patient's attending physician, who has personally examined the patient, or a patient who is diagnosed in writing to be in a permanent unconscious condition in accordance with accepted medical standards by two physicians, one of whom is the patient's attending physician, and both of whom have personally examined the patient.

(9) "Terminal condition" means an incurable and irreversible condition caused by injury, disease, or illness, that, within reasonable medical judgment, will cause death within a reasonable period of time in accordance with accepted medical standards, and where the application of life-sustaining treatment serves only to prolong the process of dying.

RCW 70.122.030 Directive to withhold or withdraw life-sustaining treatment.

(1) Any adult person may execute a directive directing the withholding or withdrawal of life-sustaining treatment in a terminal condition or permanent unconscious condition. The directive shall be signed by the declarer in the presence of two witnesses not related to the declarer by blood or marriage and who would not be entitled to any portion of the estate of the declarer upon declarer's decease under any will of the declarer or codicil thereto then existing or, at the time of the directive, by operation of law then existing. In addition, a witness to a directive shall not be the attending physician, an employee of the attending physician or a health facility in which the declarer is a patient, or any person who has a claim against any portion of the estate of the declarer upon declarer's decease at the time of the execution of the directive. The directive, or a copy thereof, shall be made part of the patient's medical records retained by the attending physician, a copy of which shall be forwarded by the custodian of the records to the health facility when the withholding or withdrawal of life-support treatment is contemplated. The directive may be in the following form, but in addition may include other specific directions:

Health Care Directive

Directive made this . . . . day of . . . . . (month, year).

I . . . . . ., having the capacity to make health care decisions, willfully, and voluntarily make known my desire that my dying shall not be artificially prolonged under the circumstances set forth below, and do hereby declare that:

(a) If at any time I should be diagnosed in writing to be in a terminal condition by the attending physician, or in a permanent unconscious condition by two physicians,

and where the application of life-sustaining treatment would serve only to artificially prolong the process of my dying, I direct that such treatment be withheld or withdrawn, and that I be permitted to die naturally. I understand by using this form that a terminal condition means an incurable and irreversible condition caused by injury, disease, or illness, that would within reasonable medical judgment cause death within a reasonable period of time in accordance with accepted medical standards, and where the application of life-sustaining treatment would serve only to prolong the process of dying. I further understand in using this form that a permanent unconscious condition means an incurable and irreversible condition in which I am medically assessed within reasonable medical judgment as having no reasonable probability of recovery from an irreversible coma or a persistent vegetative state.

(b) In the absence of my ability to give directions regarding the use of such life-sustaining treatment, it is my intention that this directive shall be honored by my family and physician(s) as the final expression of my legal right to refuse medical or surgical treatment and I accept the consequences of such refusal. If another person is appointed to make these decisions for me, whether through a durable power of attorney or otherwise, I request that the person be guided by this directive and any other clear expressions of my desires.

(c) If I am diagnosed to be in a terminal condition or in a permanent unconscious condition (check one):

I DO want to have artificially provided nutrition and hydration.

I DO NOT want to have artificially provided nutrition and hydration.

(d) If I have been diagnosed as pregnant and that diagnosis is known to my physician, this directive shall

have no force or effect during the course of my pregnancy.

(e) I understand the full import of this directive and I am emotionally and mentally capable to make the health care decisions contained in this directive.

(f) I understand that before I sign this directive, I can add to or delete from or otherwise change the wording of this directive and that I may add to or delete from this directive at any time and that any changes shall be consistent with Washington state law or federal constitutional law to be legally valid.

(g) It is my wish that every part of this directive be fully implemented. If for any reason any part is held invalid it is my wish that the remainder of my directive be implemented.

Signed.....

City, County, and State of Residence

The declarer has been personally known to me and I believe him or her to be capable of making health care decisions.

Witness.....

Witness.....

(2) Prior to withholding or withdrawing life-sustaining treatment, the diagnosis of a terminal condition by the attending physician or the diagnosis of a permanent unconscious state by two physicians shall be entered in writing and made a permanent part of the patient's medical records.

(3) A directive executed in another political jurisdiction is valid to the extent permitted by Washington state law and federal constitutional law.

RCW 70.122.040 Revocation of directive.

(1) A directive may be revoked at any time by the declarer, without regard to declarer's mental state or competency, by any of the following methods:

(a) By being canceled, defaced, obliterated, burned, torn, or otherwise destroyed by the declarer or by some person in declarer's presence and by declarer's direction.

(b) By a written revocation of the declarer expressing declarer's intent to revoke, signed, and dated by the declarer. Such revocation shall become effective only upon communication to the attending physician by the declarer or by a person acting on behalf of the declarer. The attending physician shall record in the patient's medical record the time and date when said physician received notification of the written revocation.

(c) By a verbal expression by the declarer of declarer's intent to revoke the directive. Such revocation shall become effective only upon communication to the attending physician by the declarer or by a person acting on behalf of the declarer. The attending physician shall record in the patient's medical record the time, date, and place of the revocation and the time, date, and place, if different, of when said physician received notification of the revocation.

(2) There shall be no criminal or civil liability on the part of any person for failure to act upon a revocation made pursuant to this section unless that person has actual or constructive knowledge of the revocation.

(3) If the declarer becomes comatose or is rendered incapable of communicating with the attending physician, the directive shall remain in effect for the duration of the

comatose condition or until such time as the declarer's condition renders declarer able to communicate with the attending physician.

RCW 70.122.051 Liability of health care provider or facility.

Any physician, health care provider acting under the direction of a physician, or health facility and its personnel who participate in good faith in the withholding or withdrawal of life-sustaining treatment from a qualified patient in accordance with the requirements of this chapter, shall be immune from legal liability, including civil, criminal, or professional conduct sanctions, unless otherwise negligent.

RCW 70.122.060 Procedures by physician—Health care facility or personnel may refuse to participate.

(1) Prior to the withholding or withdrawal of life-sustaining treatment from a qualified patient pursuant to the directive, the attending physician shall make a reasonable effort to determine that the directive complies with RCW 70.122.030 and, if the patient is capable of making health care decisions, that the directive and all steps proposed by the attending physician to be undertaken are currently in accord with the desires of the qualified patient.

(2) The attending physician or health facility shall inform a patient or patient's authorized representative of the existence of any policy or practice that would preclude the honoring of the patient's directive at the time the physician or facility becomes aware of the existence of such a directive. If the patient, after being informed of such policy or directive, chooses to retain the physician or facility, the physician or facility with the patient or the patient's representative shall prepare a written plan to be filed with the patient's directive that sets forth the physician's or facilities' intended actions should the

patient's medical status change so that the directive would become operative. The physician or facility under this subsection has no obligation to honor the patient's directive if they have complied with the requirements of this subsection, including compliance with the written plan required under this subsection.

(3) The directive shall be conclusively presumed, unless revoked, to be the directions of the patient regarding the withholding or withdrawal of life-sustaining treatment. No physician, health facility, or health personnel acting in good faith with the directive or in accordance with the written plan in subsection (2) of this section shall be criminally or civilly liable for failing to effectuate the directive of the qualified patient pursuant to this subsection.

(4) No nurse, physician, or other health care practitioner may be required by law or contract in any circumstances to participate in the withholding or withdrawal of life-sustaining treatment if such person objects to so doing. No person may be discriminated against in employment or professional privileges because of the person's participation or refusal to participate in the withholding or withdrawal of life-sustaining treatment.

RCW 70.122.070 Effects of carrying out directive—Insurance.

(1) The withholding or withdrawal of life-sustaining treatment from a qualified patient pursuant to the patient's directive in accordance with the provisions of this chapter shall not, for any purpose, constitute a suicide or a homicide.

(2) The making of a directive pursuant to RCW 70.122.030 shall not restrict, inhibit, or impair in any manner the sale, procurement, or issuance of any policy of life insurance, nor shall it be deemed to modify the terms of an existing policy of life insurance. No policy of life

insurance shall be legally impaired or invalidated in any manner by the withholding or withdrawal of life-sustaining treatment from an insured qualified patient, notwithstanding any term of the policy to the contrary.

(3) No physician, health facility, or other health provider, and no health care service plan, insurer issuing disability insurance, self-insured employee welfare benefit plan, or nonprofit hospital service plan, shall require any person to execute a directive as a condition for being insured for, or receiving, health care services.

RCW 70.122.080 Effects of carrying out directive on cause of death.

The act of withholding or withdrawing life-sustaining treatment, when done pursuant to a directive described in RCW 70.122.030 and which results in the death of the declarer, shall not be construed to be an intervening force or to affect the chain of proximate cause between the conduct of anyone that placed the declarer in a terminal condition or a permanent unconscious condition and the death of the declarer.

RCW 70.122.090 Criminal conduct—Penalties.

Any person who willfully conceals, cancels, defaces, obliterates, or damages the directive of another without such declarer's consent shall be guilty of a gross misdemeanor. Any person who falsifies or forges the directive of another, or willfully conceals or withholds personal knowledge of a revocation as provided in RCW 70.122.040 with the intent to cause a withholding or withdrawal of life-sustaining treatment contrary to the wishes of the declarer, and thereby, because of any such act, directly causes life-sustaining treatment to be withheld or withdrawn and death to thereby be hastened, shall be subject to prosecution for murder in the first degree as defined in RCW 9A.32.030.

RCW 70.122.100 Mercy killing or physician-assisted suicide not authorized.

Nothing in this chapter shall be construed to condone, authorize, or approve mercy killing or physician-assisted suicide, or to permit any affirmative or deliberate act or omission to end life other than to permit the natural process of dying.

RCW 70.122.110 Discharge so that patient may die at home.

If a qualified patient capable of making health care decisions indicates that he or she wishes to die at home, the patient shall be discharged as soon as reasonably possible. The health care provider or facility has an obligation to explain the medical risks of an immediate discharge to the qualified patient. If the provider or facility complies with the obligation to explain the medical risks of an immediate discharge to a qualified patient, there shall be no civil or criminal liability for claims arising from such discharge.

RCW 70.122.120 Directive's validity assumed.

Any person or health facility may assume that a directive complies with this chapter and is valid.

RCW 70.122.900 Short title.

This act shall be known and may be cited as the "Natural Death Act".

RCW 70.122.910 Construction.

This chapter shall not be construed as providing the exclusive means by which individuals may make decisions regarding their health treatment, including but not limited to, the withholding or withdrawal of life-sustaining treatment, nor limiting the means provided by case law more expansive than chapter 98, Laws of 1992.

QUESTIONS PRESENTED

Whether the Fourteenth Amendment's guarantee of liberty protects the decision of a mentally competent, terminally ill adult to bring about impending death in a certain, humane, and dignified manner?

Whether a state denies equal protection when it permits terminally ill patients who are on life support to choose a humane death with medical assistance but prohibits terminally ill patients who are not on life support from exercising the same right by self-administering medication prescribed for that purpose?

OPINIONS BELOW 1

JURISDICTION 1

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED 1

STATEMENT OF THE CASE 1

SUMMARY OF ARGUMENT 7

I. INDIVIDUAL LIBERTY PROTECTED BY THE FOURTEENTH AMENDMENT INCLUDES CONTROL OF ONE'S FINAL DAYS 7

II. DENYING ASSISTANCE IN DYING TO TERMINALLY ILL PATIENTS NOT ON LIFE SUPPORT VIOLATES EQUAL PROTECTION 7

ARGUMENT 8

I. THE CHALLENGED STATUTE INFRINGES THE LIBERTY OF COMPETENT, TERMINALLY ILL ADULTS TO MAKE END-OF-LIFE DECISIONS FREE OF UNDUE GOVERNMENT INTERFERENCE 10

A. A Competent, Terminally Ill Patient's End-of-Life Decision Is Within the Court's Interpretation of Liberty as Including Basic and Intimate Exercises of Personal Autonomy 10

B. The Liberty to Direct the Withdrawal of Medical Treatment to Hasten Death Is No Different Than That in Choosing to Hasten Impending Death With Medications Prescribed For That Purpose 22

C. The Challenged Statute Does Not Serve Legitimate State Interests; State Regulation Would Better Protect Any Such Interests 28

1. The Challenged Statute Is Not Necessary to Protect Against Third-Party Usurpation of the Patient's Control Over the Remaining Days of Life 30

2. Ensuring That Assistance Is Provided Only to Mentally Competent, Uncoerced, Terminally Ill Patients Better Protects the State's Interests Than Does the Current Covert Practice 32

(a) Prohibiting All Competent, Uncoerced, Terminally Ill Patients From Exercising a Right to Protect a Few Incompetent or Coerced Patients From Erroneously Exercising That Right Does Not Serve Any State Interest 32

(b) Terminal Illness Is a Workable Boundary 34

(c) The Random, Covert, and Unregulated Practice Under the Existing Prohibition Poses Greater Risk to the State's Interests 38

3. Federalism Does Not Justify Unlimited Government Power at the Expense of Individual Autonomy 39

II. SECTION 9A.36.060 DENIES EQUAL PROTECTION TO COMPETENT, TERMINALLY ILL ADULTS WHO ARE NOT ON LIFE SUPPORT 42

CONCLUSION 47

JURISDICTION

Respondents concur in petitioners' statement.

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED

Respondents concur in petitioners' statement.

STATEMENT OF THE CASE

The State of Washington has recognized a "fundamental right" of a competent, terminally ill patient to exercise "individual autonomy" to end a painful, dehumanizing, and extended process of dying. Wash. Rev. Code § 70.122.010. To that end, the State has made lawful the withdrawal of medical treatment and hydration and nutrition for the purpose of hastening death at the request of such patients. Wash. Rev. Code § 70.122.051. A preexisting state law, however, makes it a crime to aid another person to attempt suicide. Wash. Rev. Code § 9A.36.060. This law applies to physicians who respond to a mentally competent, terminally ill patient's choice to avoid an extended course of dying by prescribing medications that the patient can choose to take to bring about impending death. This case challenges that application as a denial of liberty and of equal protection.

The record establishes these undisputed facts regarding the plaintiff patients and physicians:

At the time the complaint was filed, the plaintiff who used the pseudonym Jane Roe was dying of breast cancer.[1] She was 69, a retired pediatrician. Her cancer had metastasized widely and was growing rapidly throughout her entire skeleton. She had undergone surgery, chemotherapy, and radiation therapy, but the cancer prevailed. Dr. Roe suffered chronic, intractable pain, which she attempted to alleviate with large and increasing doses of morphine. She still experienced frequent and severe pain. Dr. Roe was confined to bed for the seven months prior to the filing of this action. Movement was intensely painful, and her weakened muscles could not support her. She was anemic, incontinent, and vulnerable to infection.

Dr. Roe was mentally competent. She had been advised and, as a doctor, fully understood that there was no chance of recovery and that, despite excellent medical care, she faced severe and unrelenting suffering. Dr. Roe wished to hasten her impending death by taking drugs of a type and in an amount prescribed by her doctor for that purpose. *Compassion in Dying v. Washington*, 79 F.3d 790, 794-95 (CA9 1996) (en banc); Appendix to Petition for Writ of Certiorari (Pet. App.) A-10 to A-13. (The undisputed declarations of the patients and doctors appear in the Joint Appendix (JA) 22-75 and 187-228.)

Plaintiff John Doe, 44, was dying of AIDS. His doctors had advised him that there was no chance of recovery and that

---

[1] Dr. Roe died a month after the filing of the lawsuit, and the other two patient-plaintiffs died within the following months. *See Compassion in Dying v. Washington*,79 F.3d 790, 794-95 (CA9 1996) (en banc); Appendix to Petition for Writ of Certiorari (Pet. App.) A-10 to A-13.

he faced severe and continuous suffering. Mr. Doe was vulnerable to all manner of infection. He had cytomegalovirus retinitis, which had caused him to lose approximately 70 percent of his vision and was anticipated to soon result in complete blindness. Mr. Doe had been hospitalized for AIDS-related pneumonia on several occasions; suffered from chronic skin infections, sinusitis, and grand mal seizures related to AIDS; and experienced extreme fatigue and a rapidly diminishing ability to care for himself. Mr. Doe had served as the primary caregiver for his long-term companion who died of AIDS at home. Mr. Doe witnessed firsthand the pain, suffering, and loss of bodily function, integrity, and personal dignity that the disease causes at the end of life.

Mr. Doe was mentally competent and understood his diagnosis and prognosis. He wished to hasten his impending death by taking drugs prescribed by his doctor. *Id.*

Plaintiff James Poe, 69, was dying of emphysema. His doctors had advised him that he had no chance of recovery. Every breath was a struggle. He was tethered to an oxygen tube 24 hours a day. He spent hours each day aspirating medications to facilitate breathing. He was terrified by his "constant sensation of suffocation." He regularly took morphine and other medications to calm his "terror." He also suffered from associated heart failure, which resulted in painful swelling of his extremities and loss of mobility. "The only comfortable times are when I am asleep. However, I have difficulty sleeping longer than two to three hours at a time." JA 30.

Mr. Poe was mentally competent and understood his diagnosis and prognosis. He too desired the right to hasten his impending death by taking drugs prescribed by his doctor for that purpose when his suffering became unbearable. 79 F.3d at 794-95; Pet. App. A-10 to A-13.

Respondents Glucksberg, Halperin, Preston, and Shalit are physicians who regularly treat terminally ill patients. Each encounters mentally competent, terminally ill patients who understand their condition, diagnosis, and prognosis and who desire physician assistance in dying to avoid prolonged suffering. Each feels a professional responsibility to honor a competent, voluntary, and personal choice in the face of death to hasten that death and reduce suffering. The physicians present both their own claims and the claims of their patients.[2] *Id.*

In the physicians' professional judgment, the desire of such patients to hasten impending death and avoid continued suffering can be rational. Each physician-plaintiff believes that before prescribing drugs that the patient could choose whether to take to bring about death, the appropriate procedure is to ensure that the patient is competent, is acting voluntarily, and is in the terminal phase of illness. Where this has been done and the patient still seeks a humane and dignified death, these doctors wish to prescribe drugs that will allow the patient to decide whether to live, and suffer, any longer. It was undisputed below that patients who cannot receive this medical assistance cannot hasten their deaths in a certain and humane manner and that some cannot hasten their death in any manner without such assistance. The physicians, however, know that prescribing drugs for this purpose exposes them to criminal prosecution under Wash. Rev. Code § 9A.36.060. *Compassion in Dying v. Washington*, 850 F. Supp. 1454, 1457-58 (W.D. Wash. 1994); Pet. App. E-4 to E-7.

---

[2] The State does not challenge the Ninth Circuit's holding that the physicians, who sued on their own behalf and on behalf of their mentally competent, terminally ill patients, have standing to present the claims of such patients. 79 F.3d at 795-96; Pet. App. A-13 to A-15; *see, e.g., Planned Parenthood of Mo. v. Danforth*, 428 U.S. 52, 62 (1976).

As a result, the physicians have witnessed their patients suffer terrible ordeals. One of Dr. Glucksberg's mentally competent, terminally ill patients, who was in excruciating pain and did not want to end his days in a lingering drug-induced stupor, requested medication he could self-administer to hasten his impending death. Constrained by the criminal statute, Dr. Glucksberg was forced to refuse this request. The patient enlisted one of his family members to help him climb over a bridge railing to jump to his death. JA 35-36.

A competent patient of Dr. Halperin's with advanced terminal breast cancer, who had been fiercely self-sufficient throughout her lifetime, and who rejected living her final days in a dependent and undignified manner, requested medications she could take to hasten her death. Dr. Halperin was forced to reject this request. The patient suffocated herself by securing a plastic bag over her head. JA 50-51.

A mentally competent AIDS patient requested Dr. Shalit to prescribe medications he could self-administer to hasten a more gentle death. The criminal prohibition forced Dr. Shalit to deny the request and to stand by as the patient endured an excruciating and lingering death. Oozing lesions from his cancer prevented him from walking or urinating. His fingers were gangrenous. The patient's loved ones found his condition so horrifying that they could not bear to visit and witness his physical torture. JA 74-75.[3]

---

[3] The experiences of these patients are in no way unique. The Brief Amici Curiae of Surviving Family Membe.s in Support of Respondents details similar experiences. *See also* Timothy E. Quill, *Death and Dignity* (1993); Timothy E. Quill, *A Midwife Through the Dying Process* (1996); Lonny Shavelson, *A Chosen Death* (1995); Betty Rollin, *Last Wish* (1996); Sherwin B. Nuland, *How We Die: Reflections on Life's Final Chapter* (1993).

These patients and physicians were not "hypothetical," *cf.* Brief for the Petitioners at 39,[4] and they filed suit in the United States District Court for the Western District of Washington, challenging the application of Section 9A.36.060 to them. On cross motions for summary judgment, with the State accepting all of plaintiffs' factual allegations, the District Court held that Section 9A.36.060 abridges rights secured by the United States Constitution, specifically liberty and equal protection guaranteed by the Fourteenth Amendment. 850 F. Supp. at 1467; Pet. App. E-28 to E-29. The Ninth Circuit, sitting en banc, affirmed the liberty analysis in an exhaustive opinion joined by eight judges. 79 F.3d at 813-16; Pet. App. A-56 to A-62. The Ninth Circuit did not reach the equal protection claim. *Id.* at 838; Pet. App. A-115. One month later, the Second Circuit invalidated similar application of a New York statute on equal protection grounds. *Quill v. Vacco*, 80 F.3d 716, 727 (CA2), *cert. granted*, No. 95-1858 (1996).

---

[4] Petitioners never suggested below that these patients were less than real and never contested their conditions or the ability of their doctors to accurately assess whether they were in the terminal stage and whether they were competent. The challenged statute operated to prevent patient-plaintiffs Roe, Doe, and Poe — and operates to prevent the mentally competent, terminally ill patients of the physician-plaintiffs — from exercising the option of a humane, hastened death. Having found the statute unconstitutional as applied to these individuals, the court below properly concluded that the constitutional infirmity would exist as well in the case of individuals similarly situated. 79 F.3d at 798 n.9; Pet. App. A-20 to A-21.

SUMMARY OF ARGUMENT

I. INDIVIDUAL LIBERTY PROTECTED BY THE FOURTEENTH AMENDMENT INCLUDES CONTROL OF ONE'S FINAL DAYS

The Court has consistently recognized that the guarantee of liberty in the Fourteenth Amendment extends to life-shaping decisions that individuals make about their bodies and futures. Forcing a patient to suffer through an extended process of dying controls that person's remaining life and denies the patient's choice to cross the threshold of death in a manner consistent with her conscience and values. The State ought not intrude into and dictate this profoundly personal decision, forcing the patient-plaintiffs to endure painful and undignified deaths.

The State enforces an absolute prohibition on patient choice in a context where the State's legitimate concerns would be adequately, indeed better, addressed through regulation. Recognizing a dying patient's liberty to choose how to die in no way suggests that the State lacks a valid interest in protecting against usurpation of the dying patient's wishes by others. To say that the State must respect the individual's autonomy does not imply that the State must stand by while others try to extinguish such autonomy or that the State must allow an incompetent or coerced patient to die. The State may establish reasonable safeguards to assure that the patient is competent and has in fact reached the terminal phase of illness.

II. DENYING ASSISTANCE IN DYING TO TERMINALLY ILL PATIENTS NOT ON LIFE SUPPORT VIOLATES EQUAL PROTECTION

Washington law recognizes the same right at issue in this case, but only for a certain class of mentally competent, terminally ill patients — those whose lives depend upon contin-

ued medical intervention. Physicians who comply with requests by terminally ill patients to withdraw treatment, even where the patient's express intention is thereby to hasten death, are immune from prosecution under the challenged statute. Some terminally ill patients thus are able to choose to hasten impending death with medical assistance. This discrimination between terminally ill patients whose condition involves life-sustaining treatment and those whose condition does not involve such treatment violates the Equal Protection Clause of the Fourteenth Amendment.

ARGUMENT

Wash. Rev. Code § 9A.36.060 was enacted in 1854. It provides in relevant part that a person is guilty of a crime if he or she "knowingly . . . aids another person to attempt suicide."[5] The Washington Supreme Court and the Washington

---

[5] Respondents do not challenge the portion of the statute that prohibits "knowingly caus[ing] another person to attempt suicide," which would include undue influence or assisting in the suicide of a patient who was not mentally competent or who was known to be under a misapprehension as to such material facts as diagnosis and prognosis. *See, e.g., State v. Jamison*, 94 Wash. 2d 663, 619 P.2d 352 (1980) (defendant promoted suicide by abusing cellmate). Some amici urge that the challenged statute does not reach the conduct of a physician in prescribing medications for a competent, dying patient to use to hasten death. *E.g.*, Brief Amici Curiae of Bioethicists in Support of Petitioners at 15 n.6. The State obviously disagrees and has expressed its intent to prosecute, thus deterring physicians from responding to the requests of these patients. It is true that the State has, in the name of federalism, claimed various purposes nowhere mentioned by the Washington Legislature and contrary to the legislative findings in Wash. Rev. Code § 70.122.010 and the Washington court decisions that preceded that statute. It should not be assumed that the State, as opposed to state lawyers, accepts those interests or finds that they outweigh the liberty at stake. For these reasons, Judge Calabresi in *Quill* suggested in his concurrence that a sensible course would be to strike the statute down as

Legislature have created effective exceptions to Section 9A.36.060 for those on life-sustaining treatment. Section 70.122.080 created an exception for withdrawal of life support, and in Section 70.122.010 the Legislature recognized the fundamental rights at issue here. Nonetheless, the State contends that the statute reaches physicians who respond to the requests of their competent, dying patients by prescribing drugs that the patients can use, when and if they so choose, to shape and control their imminent and inevitable death.

Since 1854, the art and science of medicine have advanced dramatically. Lifespans have been extended, and the dying process frequently proceeds less rapidly than once was the case.[6] A series of court decisions and statutes permit competent patients undergoing an intolerable process of dying to direct the termination of life support, and thereby hasten death. Other patients, similarly facing imminent death, have conditions that are not susceptible to such treatments, and thus to the termination of such treatments. They are equally at a terminal stage, but their conditions do not interfere with respiration, nutrition, or hydration. Those patients now ask for protection of their liberty, and for the same rights as other patients are afforded.

---

unconstitutional but allow the legislature to consider whether it in fact desired to prohibit the conduct alleged to be protected. The legislature could seek passage of a suitably explicit measure, which could then be reviewed for constitutional sufficiency. *Quill*, 80 F.3d at 738-43 (Calabresi, J., concurring).

[6] *See* Brief Amici Curiae of Bioethics Professors Supporting Respondents; Howard Brody, *Assisted Death—A Compassionate Response to a Medical Failure*, 327 New Eng. J. Med. 1384, 1385 (1992) (modern medical technology extends lives but leaves patients with an unacceptable way of dying).

I. THE CHALLENGED STATUTE INFRINGES THE LIBERTY OF COMPETENT, TERMINALLY ILL ADULTS TO MAKE END-OF-LIFE DECISIONS FREE OF UNDUE GOVERNMENT INTERFERENCE

A. A Competent, Terminally Ill Patient's End-of-Life Decision Is Within the Court's Interpretation of Liberty as Including Basic and Intimate Exercises of Personal Autonomy

This case calls upon the Court to address once again the limits of government power and the scope of individual autonomy. The Fourteenth Amendment provides that the State may not "deprive any person of life, liberty, or property, without due process of law." The scope of liberty, the "least specific and most comprehensive protection," is not clear from the face of the Constitution. *Rochin v. California*, 342 U.S. 165, 170 (1952). The Court has applied the term to many different situations. *See Poe v. Ullman*, 367 U.S. 497, 543 (1961) (Harlan, J., dissenting) ("[L]iberty is not a series of isolated points pricked out . . . . It is a rational continuum which, broadly speaking, includes a freedom from all substantial arbitrary impositions and purposeless restraints . . . ."). In analyzing "liberty," the Court has heeded the directive of the Ninth Amendment that the rights of the people are not to be disparaged merely because every aspect could not be explicitly captured in constitutional text. *See Planned Parenthood v. Casey*, 505 U.S. 833, 847-48 (1992); *Griswold v. Connecticut*, 381 U.S. 479, 488-92 (1965) (Goldberg, J., concurring) (recognizing Ninth Amendment rule of construction that substance of liberty protected against state action by the Fourteenth Amendment is not exhausted by specific rights enumerated in the first eight amendments).

Just four years ago, in addressing one of the most persistent and difficult issues that it has ever confronted, the Court stated resoundingly:

> It is a promise of the Constitution that there is a realm of personal liberty which the government may not enter.

Casey, 505 U.S. at 847.[7] The Court accepted that there is a core of individuality that the state is bound to respect under the Fourteenth Amendment, and the Court recognized that "[o]ur law affords constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing, and education." *Id.* at 851. In *Casey*, the Court reviewed its liberty jurisprudence and noted:

> It is settled now, as it was when the Court heard arguments in *Roe v. Wade*, [410 U.S. 113 (1973)], that the Constitution places limits on a State's right to interfere with a person's most basic decisions about family and parenthood, *see Carey v. Population Services International*, [431 U.S. 678 (1977)]; *Moore v. East Cleveland*, 431 U.S. 494 . . . (1977); *Eisenstadt v. Baird*, [405 U.S. 438 (1972)]; *Loving v. Virginia*, [388 U.S. 1 (1967)]; *Griswold v. Connecticut*, [381 U.S. 479 (1965)]; *Skinner v. Oklahoma ex rel. Williamson*, 316 U.S. 535 . . . (1942); *Pierce v. Society of Sisters*, [268 U.S. 510 (1925)]; *Meyer v. Nebraska*, [262 U.S. 390 (1923)], as well as bodily integrity. *See, e.g., Washington v. Harper*,

---

[7] The State denies the applicability of *Casey*, seeking to limit to the abortion context the principles *Casey* enunciated and characterizing its holding as compelled by stare decisis. *See, e.g.*, Brief for the Petitioners at 31-32. *Casey*, says the State, is not worthy of stare decisis because it relied only upon stare decisis. To the contrary, *Casey* crafted a reliable, measured course for the future, and the reasoning of *Casey* applies with full force to the present case.

> 494 U.S. 210, 221-222 . . . (1990); *Winston v. Lee*, 470 U.S. 753 . . . (1985); *Rochin v. California*, 342 U.S. 165 . . . (1952).

505 U.S. at 849.

The holdings cited by the Court in *Casey* arise from the fact that our society has historically afforded individuals the right to make personal decisions regarding their own bodies, medical care, and, fundamentally, the future course of their lives. As Justice Powell said for the Court in one of the cases underlying *Casey*, "unless we close our eyes to the basic reasons why certain rights . . . have been accorded shelter under the Fourteenth Amendment's Due Process Clause, we cannot avoid applying the force and rationale of these precedents to the . . . choice involved in this case." *Moore v. East Cleveland*, 431 U.S. 494, 501 (1977). The liberty at issue here is another element of self-sovereignty and is of comparable importance to that involved in *Casey*.

Indeed, the Court's discussion in *Casey* as to why the Constitution protects various personal decisions applies with full force to end-of-life decisions:

> These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life.

505 U.S. at 851. "Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State." *Id.* Finally, *Casey* recognizes that

the State's authority to insist that an individual endure suffering is quite limited. *Id.* at 852.

In the decision below, the Ninth Circuit correctly found that "few decisions are more personal, intimate or important than the decision to end one's life, especially when the reason for doing so is to avoid excessive and protracted pain." 79 F.3d at 813; Pet. App. A-55 to A-56. Few would deny that "no decision is more painful, delicate, personal, important, or final than the decision how and when one's life shall end." *Id.* at 837; Pet. App. A-113. The Ninth Circuit recognized that

> For such patients, wracked by pain and deprived of all pleasure, a state-enforced prohibition on hastening their deaths condemns them to unrelieved misery or torture. Surely, a person's decision whether to endure or avoid such an existence constitutes one of the most, if not the most, "intimate and personal choices a person may make in a life-time," a choice that is "central to personal dignity and autonomy."

Id. at 814; Pet. App. A-57 to A-58 (quoting *Casey*, 505 U.S. at 851). Moreover, as the Ninth Circuit noted and as is discussed at greater length *infra* with respect to equal protection, the State of Washington has recognized a "fundamental right" in making end-of-life decisions, and has determined that the State's interest in preserving life is either not implicated or should ordinarily give way to the wishes of a competent, terminally ill patient. *Id.* at 817; Pet. App. A-65 to A-67.

For many patients suffering through an intolerable process of dying, "being forced to live is in fact to be forced into a particular, all-consuming, totally dependent, and indeed rigidly standardized life . . . . It is a life almost totally occupied." Jed Rubenfeld, *The Right of Privacy*, 102 Harv. L. Rev. 737, 788,

795 (1989). That is certainly true for the patient-plaintiffs. As Dr. Roe stated:

> I have been almost entirely bedridden due to a combination of pain associated with the cancer in my bones and the diminishing strength in my muscles as I use them less and less. I am now unable to walk or use the commode or a bed pan without assistance. My legs are swollen with severe edema and I can scarcely use them. I have developed bed sores as a result of being bed bound. My appetite is poor and I take medications to prevent nausea and vomiting. My vision is often impaired. My left hand is weak. Drowsiness is a frequent problem. I have an indwelling urinary catheter and am sometimes incontinent of bowel.
>
> . . . The pain associated with this cancer is unrelenting. It is a constant, dull pain, interspersed with sharp, severe pain provoked by movement. The site of pain moves as the disease advances. . . . I take a variety of medications to manage pain. There is a tension between taking enough medication to alleviate the pain and retaining an alert mental state. It is not possible to eliminate my pain and for me to retain an alert state.

JA 23-24. Liberty certainly reaches laws that operate to "occupy" lives such as that of Dr. Roe, confining them into a painful and dependent condition.

People treat the manner of their death as of special, symbolic importance and want their deaths to confirm their own values. The moment and circumstances of death can be of profound significance. *See* Brief Amici Curiae of Religious

Organizations and Leaders in Support of Respondents. Control over one's final circumstances, especially because it is the last exercise of autonomy, is an intensely personal decision at a very private time. The fundamental protection from state intrusion into basic personal decisions as to the course of one's life limits the state's power to dictate this most intimate choice: the selection and implementation within the doctor-patient relationship of appropriate treatment at the end of life.

To deny a competent, dying patient the right to choose a humane, dignified death is to condemn the individual to live the final chapter of life in a state-controlled and state-approved manner. This plainly has "life long spiritual, moral and psychological" consequences both for the patient and loved ones who bear witness. *See* Brief for the United States as Amicus Curiae Supporting Petitioners at 14. Forcing a patient to endure a painful and dehumanizing dying process is fraught with cruelty to the patient and anguish to loved ones. *See id.* at 14 (citing *Casey*, 505 U.S. at 853). Accordingly, even the Solicitor General agrees that this is a protected liberty. Brief for the United States as Amicus Curiae Supporting Petitioners at 12-16.

Although the end-of-life decision is not explicitly discussed in the Constitution, the Court in *Casey* reaffirmed that the liberty protected by the Due Process Clause encompasses more than the rights guaranteed by the express provisions of the first eight amendments, and may well include protection of conduct that was illegal at the time the Fourteenth Amendment was ratified. 505 U.S. at 847. *Casey* decisively rejected the notion that illegality at the time the Fourteenth Amendment was ratified precludes recognition of a protected liberty. *Id.* As Justice O'Connor has noted, "due process is not a technical concept with a fixed content unrelated to time, place, and circumstances. . . . The Constitution . . . requires judges to examine even traditionally accepted procedures and, if necessary, to declare them invalid." Sandra D. O'Connor,

Conference on Compelling Government Interests, 55 Alb. L. Rev. 535, 542 (1992). Historical protection is a sufficient but not a necessary condition to recognition of an additional aspect of liberty.

Thus, the Second Circuit's reluctance in *Quill v. Vacco* to recognize the dying patient's liberty was based on the mistaken understanding that *Bowers v. Hardwick*, 478 U.S. 186 (1986), directs lower courts to refrain from recognizing new aspects of liberty, even where this Court's analytical standards have been met. 80 F.3d at 725.[8] This Court has long accepted its duty to apply the concept of liberty to appropriate situations that it had not previously been called upon to address, just as a "prime part of the history of our Constitution . . . is the story of the extension of constitutional rights and protections to people once ignored or excluded." *United States v. Virginia*, 116 S. Ct. 2264, 2287 (U.S. 1996).

The State argues that the cases recognizing various aspects of liberty are distinguishable because they involve activities allowing the individual "a broader participation in life and

---

[8] The Second Circuit's deferral to this Court betrayed no disagreement with respondents that the fundamental personal decision at stake here is within the core of protected individual liberty:

> [W]hat business is it of the state to require the continuation of agony when the result is imminent and inevitable? What concern prompts the state to interfere with a mentally competent patient's "right to define her own concept of existence, of meaning, of the universe, and of the mystery of human life" . . . when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness? The greatly reduced interest of the state in preserving life compels the answer to these questions: "None."

80 F.3d at 730 (quoting *Casey*, 505 U.S. at 851).

society" or, conversely, because they are limited to a right to be free of bodily invasion. Brief for the Petitioners at 26-27. This contention is unpersuasive. Those cases consistently protect decisions arising at key points in one's life, decisions that help define and shape that life. Few of the cases, and certainly not the abortion decisions, involve direct bodily intrusion. The decision how to die is the final life-shaping decision a person can make, and is as important, personal, and private as other decisions the Constitution protects from state domination. The circumstances certainly narrow a dying patient's participation in life and society, but the right at issue here broadens the patient's control over what is left of such participation. Any element of control during those last days is precious. Many of the Court's liberty decisions have not involved a person's desire to enjoy broader participation; in fact, some have involved the individual's right to choose among quite unpleasant alternatives. *E.g.*, *Cruzan v. Director, Mo. Dep't of Health*, 497 U.S. 261 (1990); *Washington v. Harper*, 494 U.S. 210 (1990); *Rochin v. California*, 342 U.S. 165 (1952).

Several of the State's amici devote their briefs to the history of proscriptions against suicide. The Court in *Casey* decisively rejected any general rule that liberty is limited to historically and traditionally protected rights. 505 U.S. at 847-50; *see Rochin*, 342 U.S. at 171 (rights cannot be frozen "at some fixed stage of time or thought"); *Roe*, 410 U.S. at 118 (most states had abortion prohibitions similar to that of Texas). More specifically, in *Cruzan* the Court effectively rejected Justice Scalia's contention that state laws prohibiting suicide precluded the recognition of a right to hasten death by directing the removal of life support. The proper question is whether society, and the Court's constitutional interpretation, has afforded individuals the right to make personal decisions

regarding their bodies, medical care, and life-course without burdensome government intrusion.[9] The answer is plainly yes.

Further, history reflects a growing trend in favor of the terminally ill patient's control of end-of-life decision-making. *See Compassion*, 79 F.3d at 821-22; Pet. App. A-75 to A-77. Indeed, many of the state court decisions dealing with the patient's right to hasten death by deciding to terminate medical care have recognized that right as not self-contained but as one aspect of the common law protection of self-determination and personal autonomy. *E.g.*, *In re Gardner*, 534 A.2d 947, 950 (Me. 1987); *In re Conroy*, 486 A.2d 1209, 1221-23 (N.J. 1985). The Washington Supreme Court held that such principles were fundamental to the common law and to the state (and federal) constitution. *In re Welfare of Colyer*, 99 Wash. 2d 114, 660 P.2d 738, 741-42 (1983); *In re Guardianship of Hamlin*, 102 Wash. 2d 810, 689 P.2d 1372, 1376 (1984); *In re Guardianship of Grant*, 109 Wash. 2d 545, 747 P.2d 445, 449 (1987).

It is true that, for many people in our society, a competent, terminally ill person's liberty to shape death in this manner raises religious implications, just as does abortion.[10] Religious

---

[9] Even if the historical inquiry focuses on the act of suicide or assisted suicide, the Ninth Circuit is correct that the historical record is checkered. 79 F.3d at 806-10; Pet. App. A-39 to A-47; *see* Maria T. CeloCruz, *Aid-in-Dying: Should We Decriminalize Physician-Assisted Suicide and Physician-Committed Euthanasia?*, 18 Am. J.L. & Med. 369, 373-75 (1992).

[10] *See, e.g.*, Brief Amici Curiae of Metropolitan Catholic Physicians Guild in Support of Petitioners at 14-23; Brief Amicus Curiae of Evangelical Lutheran Church in America in Support of Petitioners at 1-3, 22-24; Brief Amici Curiae of Catholic Health Association in Support of Petitioners at 16-18. *See generally* Matthew P. Previn, *Assisted Suicide and Religion, Conflicting Conceptions of the Sanctity of Human Life*, 84 Geo. L.J. 589 (1996).

objections to the exercise of individual liberty, however, are reason to leave such issues to individual conscience, not the state. *See* Brief Amicus Curiae of Religious Organizations and Leaders in Support of Respondents. As recognized by the Court in *Casey*, religious concerns about a liberty

> cannot control our decision. Our obligation is to define the liberty of all, not to mandate our own moral code. The underlying constitutional issue is whether the State can resolve these philosophic questions in such a definitive way that a [person] lacks all choice in the matter
>
> . . . .

505 U.S. at 850; *see Poe v. Ullman*, 367 U.S. at 545 (Harlan, J., dissenting) ("the mere assertion that the action of the State finds justification in the controversial realm of morals cannot justify alone any and every restriction it imposes").

Here, the question is whether the State can resolve the philosophical questions relating to the end of life so definitively that competent, terminally ill adults lack any choice in the matter. The answer, consistent with the Fourteenth Amendment, must be no. To hold otherwise would necessarily mean that the State's religious or philosophical preference outweighs that of the competent, dying patient. By compelling individuals to endure suffering at the end of their lives, the state devalues the nobility of the free will and faith that many would otherwise show in willingly accepting the circumstances of death, no matter how painful and humiliating.

The State attempts to distinguish the decision to seek assistance in dying from the decision to have an abortion on the grounds that "the decision whether to have a child . . . is

something over which humans can exercise a great deal of personal autonomy." Brief for the Petitioners at 28. This is circular and inconsistent. Absent the State's interference, a terminally ill patient could exercise the full measure of autonomy that the circumstances allow over how and when to die, and such autonomy is today legal with respect to the decision to accept, forgo, or withdraw life-sustaining treatment.

Similarly flawed is the Solicitor General's attempt to distinguish the abortion cases on the grounds that the decision to abort implicates a "combination" or "constellation" of interests. Brief for the United States as Amicus Curiae Supporting Petitioners at 15.[11] The United States recognizes that both abortion and the present case implicate a desire to avoid pain and suffering, but argues that the abortion equation involves much more than that. Avoidance of suffering, while undoubtedly significant here, is still but one part of a terminally ill patient's decision to die in a humane and dignified manner. The equation here includes the freedoms to exercise conscience and personal autonomy, to avoid irreversible bodily disintegration, to choose the course of one's life, and to subscribe to a philosophy about the end of life that is different from that of the 19th century Washington legislature that enacted the statute now at issue.

The American Medical Association asserts that pain management can ease one form of suffering, physical pain, and

---

[11] The Solicitor General's argument that abortion precedent is premised on principles of gender equality is inaccurate. While the Court recognized an equality component in liberty, which is also important here, the Court has always found the right of reproductive choice to be protected as a matter of human liberty, and not just as a matter of gender equality. *E.g. Casey*, 505 U.S. at 851, 853; *Carey*, 431 U.S. at 684-86; *Roe*, 410 U.S. at 152-53; *Eisenstadt*, 405 U.S. at 453; *Griswold*, 381 U.S. at 485-86.

reduce many patients' desire for a hastened death. Brief Amicus Curiae of American Medical Association in Support of Petitioners at 10. The State can act to assure that inadequately treated pain does not motivate the choice of a hastened death. Successful pain management, however, would at most mitigate for some patients the need to exercise the liberty in question. Even where pain management is successful, *Casey* and *Cruzan* make clear that liberty is not limited to the avoidance of pain, especially when avoidance is accomplished with medication that reduces control over mind and body, thus imposing on the patient even more incapacity and increasing the suffering from feelings of degradation and helplessness. Moreover, the undisputed factual record of this case is that medical science cannot sufficiently ease the physical pain of the patient-plaintiffs and many others. JA 34-35, 49, 73. *See also* Brief of Coalition of Hospice Professionals as Amicus Curiae for Affirmance of the Judgments Below.

The AMA concedes this and suggests that, where pain cannot be alleviated, the doctor can sedate the patient "to a sleep-like state" until she dies of starvation or dehydration "days or weeks" later. Brief Amicus Curiae of American Medical Association in Support of Petitioners at 6.[12] This "terminal sedation" option — voluntarily submitting to a drug-induced coma while one's body disintegrates and loved ones stand vigil — is monstrous to many patients. Moreover, a patient sedated in this manner might only *appear* to be insensate. Even patients under general anesthesia — a deeper

---

[12] *See* Robert D. Truog et al., *Barbiturates in the Care of the Terminally Ill*, 327 New Eng. J. Med. 1678 (1992); Nathan Chernoy et al., *Sedation in the Management of Refractory Symptoms: Guidelines for Evaluation and Treatment*, 10 J. of Palliative Care 31-38 (1994) (describing practice of terminal sedation).

state of sedation — often feel and hear.[13] Hence, terminal sedation may serve only to make the death less excruciating to observers. Certainly, allowing physicians to administer coma-inducing medications and to monitor patients in that state until dehydration or starvation eventually causes death cannot be reconciled with the AMA's ethical concerns and the action/omission distinction suggested by a number of the State's amici.

The Ninth Circuit is correct that the aspect of liberty invoked here follows naturally from this Court's prior decisions. 79 F.3d at 813-14; Pet. App. A-56 to A-58. Moreover, reposing end-of-life decisions with the dying patient is essential to ensure that the government not be empowered either to deny the option of a hastened death or to compel one. *See* Brief of Respondents in No. 95-1858. If the power to determine whether to continue a pregnancy rested with the state, for example, the state could compel abortion as well as deny it. So, too, if the power to decide how a life should end is vested in the state, the state might determine that, since death is inevitable, no purpose is served by honoring a futile choice to suffer through a few more days of life.

B. The Liberty to Direct the Withdrawal of Medical Treatment to Hasten Death Is No Different Than That in Choosing to Hasten Impending Death With Medications Prescribed For That Purpose

Of all the Court's decisions with respect to personal liberty, perhaps the closest to the present case factually is *Cru-*

---

[13] *See generally* R. Cork et al., *Is There Implicit Memory After Propofol Sedation?*, 76 Brit. J. Anaesthesia 492 (1996); N. Moerman et al., *Awareness and Recall During General Anesthesia*, 79 Anesthesiology 454 (1993).

zan. There the Court acknowledged that competent, dying persons have the right to direct the removal of life-sustaining medical treatment and thus hasten death. 497 U.S. at 278; *see* Brief for the United States as Amicus Curiae Supporting Petitioners at 13-14. The Court recognized that the liberty to make this end-of-life decision is uniquely and "deeply personal." 497 U.S. at 281; *see id.* at 289 (O'Connor, J., concurring). The Court in *Cruzan* addressed the question of the level of evidence Missouri could require as to the wishes of a presently incompetent person that life-sustaining treatment be withdrawn. The Court made it clear that a state's interest in this area is limited to ensuring a voluntary decision — in safeguarding personal autonomy but not in interfering with it. *Id.* at 281.

The dissenting opinions differed as to the limitations that the State could impose to ensure voluntariness, but agreed with the majority as to the personal nature of end-of-life decisions and the limited state interest in such decisions:

> Dying is personal. And it is profound. For many, the thought of an ignoble end, steeped in decay, is abhorrent. A quiet, proud death, bodily integrity intact, is a matter of extreme consequence.

Id. at 310-12 (Brennan, J., with Marshall & Blackmun, JJ., dissenting).

> Choices about death touch the core of liberty. Our duty, and the concomitant freedom, to come to terms with the conditions of our own mortality are undoubtedly "so rooted in the traditions and conscience of our people as to be ranked as fundamental." . . .

> The more precise constitutional significance of death is difficult to describe; not much may be said with confidence about death unless it is said from faith, and that alone is reason enough to protect the freedom to conform choices about death to individual conscience.

Id. at 343 (Stevens, J., dissenting) (quoting *Snyder v. Massachusetts*, 291 U.S. 97, 105 (1934)).

Dr. Roe, Mr. Doe, and Mr. Poe were indisputably competent, and their requests were indisputably voluntary. Respondents do not challenge procedures such as those in *Cruzan* that seek to assure rather than deny free will. The Court's acknowledgment in *Cruzan* of the profoundly personal and protected nature of the decision to die through refusal of medical treatment squarely supports recognizing that aspect of liberty claimed here. *See Compassion*, 79 F.3d at 824; Pet. App. A-82. The Solicitor General agrees. *See* Brief for the United States as Amicus Curiae Supporting Petitioners at 13-14.

The patient's decision in *Cruzan* had not been made contemporaneously with the circumstances that triggered the potential effectuation of the decision, and it had not been memorialized in any manner, giving rise to significant questions regarding the patient's true wishes with regard to maintenance of life support. Whatever had been the case at one time, there was no way to determine if it was still Nancy Cruzan's wish to die. Because of her comatose condition, she would not have known if her wishes had been ignored. In contrast, the patient-plaintiffs here were available to have their competence and voluntariness tested, were capable of retracting their decisions, and had made their decisions clear. Nonetheless, the State required Dr. Roe, Mr. Doe, and Mr. Poe to continue to suffer excruciating pain, anxiety, and loss of

dignity and to know that those who cared for them were compelled to reject their requests for help or face prosecution.

From the patient's perspective, the decision to direct the withdrawal of a feeding tube or a respirator, or to submit to terminal sedation, is no different than the decision to choose to hasten death by consuming drugs prescribed for this purpose. In each situation, patients request such assistance for the same reason: they want to exercise what control they can over when and how they die. In each situation, plaintiffs make the decisions based upon their own values, in consultation with their own doctor and, if they wish, their own families.

Similarly, from the doctor's perspective, honoring the patient's decision to direct the withdrawal of treatment or to submit to terminal sedation is assisting in a patient's wish to die. The recognized right to direct the withdrawal of treatment requires medical assistance in, for example, removing a feeding tube or ventilator and in administering medications to ease pain, the sensation of suffocation, and anxiety while that is done. Such assistance requires far more physician action than the assistance sought in this case, as acknowledged by the Solicitor General. Brief for the United States as Amicus Curiae Supporting Petitioners in No. 95-1858 at 12. The provision of terminal sedation requires affirmative and continuing medical assistance in initiating the coma through the administration of medication and maintaining it until starvation or dehydration causes death.[14] Paul Rousseau, *Terminal*

---

[14] Some of the State's amici assert that the kind of physician assistance sought by the patient-plaintiffs would be unethical. Such beliefs did not deter the Court from recognizing a constitutionally protected right in *Roe v. Wade*. And they did not halt recognition of the right to direct the withdrawal of life support. *Colyer*, 660 P.2d at 744 ("It is not necessary to deny a right of self-determination to a patient in order to recognize the interests of doctors, hospitals, and medical personnel in attendance on

Sedation in the Care of Dying Patients, 156 Archives of Internal Med. 1785 (1996).

Thus, the constitutional principle behind recognizing the patient's liberty to direct the withdrawal of artificial life support applies at least as strongly to the choice to hasten impending death by consuming lethal medication. The District Court and the Ninth Circuit in this case, as well as the Second Circuit in *Quill*, found that no relevant distinction could be drawn between the decision to direct the withdrawal of life-sustaining medical treatment and the decision of a mentally competent, terminally ill adult to consume medications prescribed for the purpose of hastening death. *Compassion*, 79 F.3d at 821-24; Pet. App. A-75 to A-82; 850 F. Supp. at 1467; Pet. App. E-27 to E-28; *Quill*, 80 F.3d at 727. From the patient's or the doctor's perspective, it is exactly the same choice, and the record here establishes that medical assistance in hastening death is necessary to permit implementation of that choice for persons not on life support. JA 35, 49, 55-56, 73, 190.

---

the patient."). Moreover, where studies have been conducted, a majority of physicians already view physician assistance in the case of mentally competent, terminally ill patients as ethical. *See, e.g.*, Jonathan S. Cohen et al., *Attitudes Toward Assisted Suicide and Euthanasia Among Physicians in Washington State*, 331 New Eng. J. Med. 89 (1994); Melinda A. Lee, *Legalizing Assisted Suicide — Views of Physicians in Oregon*, 334 New Eng. J. Med. 310 (1996). Legalizing the practice, bringing it into the open, and imposing protection for the patient can only increase the integrity of the practice and of the profession. *See, e.g.*, Franklin G. Miller et al., *Regulating Physician-Assisted Death*, 331 New Eng. J. Med. 119, 120 (1994); Brief Amici Curiae of Bioethics Professors Supporting Respondents; Brief Amicus Curiae of American College of Legal Medicine. Physicians who do not wish to honor a patient's request can refer the patient to another doctor. *See Smith v. Cote*, 513 A.2d 341, 355 (N.H. 1986) (Souter, J., concurring); Wash. Rev. Code § 70.122.060(4).

The alternatives to physician assistance involve violent means — almost unimaginable for a competent person and leaving a horrible last impression on family members — or an uncertain and often botched attempt with poison or drugs not prescribed for this purpose.[15] Dr. Glucksberg's patient was forced to jump from a bridge; Dr. Halperin's to suffocate herself. The undisputed record shows that terminally ill persons who seek to hasten death need medical counseling regarding the type of drugs and the amount and manner in which they should be taken, as well as a prescription, which only a doctor can provide.[16] *See* JA 190. Attempts to hasten death without such advice frequently fail, often leaving the patient in worse shape than before, or succeed only after terrible pain and suffering.[17] *Id.*

---

[15] The violent death by self-inflicted gunshot of Nobel Physics Laureate Percy Bridgman, in the final stages of cancer, exemplifies the brutality of this option. Professor Bridgman's last message: "It is not decent for Society to make a man do this to himself. Probably, this is the last day I will be able to do it myself." Sherwin B. Nuland, *How We Die: Reflections on Life's Final Chapter* 152-53 (1993); *see* Brief Amici Curiae of Surviving Family Members in Support of Respondents.

[16] Patients often choose not to use such a prescription. *See* Anthony L. Back et al., *Physician-Assisted Suicide and Euthanasia in Washington State*, 275 JAMA 919, 922 (1996). Knowing that they control how much suffering they must endure reduces the patients' anxiety and helps avoid premature violent deaths such as that of Professor Bridgman.

[17] *See* Russel D. Ogden, *Euthanasia, Assisted Suicide & AIDS* (1994); JA 190 (emotional and psychological effect of inability to obtain assistance can be devastating to terminal patients who feel abandoned by their physicians when most in need of their help); Brief Amici Curiae of Surviving Family Members in Support of Respondents; Clyde H. Farnsworth, *Bungled AIDS Suicides Often Increase the Suffering*, N.Y. Times, June 14, 1994, at B9.

C. The Challenged Statute Does Not Serve Legitimate State Interests; State Regulation Would Better Protect Any Such Interests

The liberty here is as substantial and fundamental as that recognized in *Casey*, *Cruzan*, and Wash. Rev. Code § 70.122.010. As discussed in the Brief of Respondents in No. 95-1858, however, the Court need not categorize this aspect of liberty, or determine which system of categorization, if any, is appropriate. The prohibition must fail under the venerable strict scrutiny standard, the undue burden model employed in *Casey*, or the rational relationship test. The statute simply does not serve the interests asserted by the State of Washington. *See* Brief Amici Curiae of Law Professors in Support of Respondents.

The three interests identified by the State are: (1) protecting terminally ill patients against being extinguished by third parties against their will because their lives are viewed as having little quality; (2) protecting patients against physician errors in judgment as to mental competence and terminal illness; and (3) protecting the State's right to choose whether or not to legalize this practice. Brief for the Petitioners at 33-36, 47-49. As discussed in detail below, none of these interests is sufficient to justify the total prohibition of individual liberty in these circumstances, and none is served by this statute.

The challenged statute absolutely forbids physician assistance, even where, as here, the patient's voluntariness of choice, mental competence, and terminal state are undisputed. The statute is not an effort to discourage, to inform, or to regulate. *See Akron v. Akron Ctr. for Reprod. Health*, 462 U.S. 416, 446-47 (1983) (state may require provision of accurate medical information to abortion patient); *Maher v. Roe*, 432 U.S. 464, 474 (1977) (state may express preference against abortion); *Roe*, 410 U.S. at 150 (state may regulate to

ensure safety of abortion). Wash. Rev. Code § 9A.36.060 is a flat prohibition, and it does not serve the supposed ends argued by the State. "[L]iberty may not be interfered with, under the guise of protecting the public interest, by legislative action which is arbitrary or without reasonable relation to some purpose within the competency of the state to effect." *Meyer v. Nebraska*, 262 U.S. 390, 399-400 (1923).[18]

Indeed, when one compares the statute to the asserted state purposes, it is clear that there is so little "fit" that either the statute is irrational or it serves some other, unstated and undefended purpose. *See Romer v. Evans*, 134 L. Ed. 2d 855, 865-66, 868 (1996). The statute is grossly overinclusive; it interferes with the liberty of even those who are clearly competent and uncoerced. It is equally underinclusive; it does not prohibit the same decision, with the same fatal consequences, for those on life support or those who would submit to a medically induced coma and starvation.[19] The statute allows

---

[18] Some amici refer to adverse implications for survivors. The Washington Supreme Court has held that this interest does not exist unless family members object to the patient's action. *Colyer*, 660 P.2d at 743. Moreover, the act of a mentally competent, terminally ill adult to hasten impending death is nothing like the typical suicide, as shown by the State's legalization of assisted death through withdrawal of life support. Indeed, it is undisputed on the record that by recognizing the choice to hasten death with drugs prescribed for that purpose, death will be nonviolent and humane, easing a tortured dying process. The inevitable mourning can proceed with the comfort of knowing a loved one's wishes regarding this most personal and profound matter were respected and that the patient suffered less. *See* JA 74-75; *Compassion*, 79 F.3d at 827; Pet. App. A-90; Brief Amici Curiae of Surviving Family Members in Support of Respondents.

[19] The State has done little to protect against abuse in the context of withdrawal of life support. *E.g.*, Wash. Rev. Code § 70.122.020(8) and .030(2) (no second opinion required as to terminal condition). Reason-

withdrawal of life support even though patients on life support, due to its extended cost, are more likely to be pressured to hasten death. The statute does not serve the mentally ill or weak-willed as effectively as would tailored regulation. The current prohibition leaves those individuals vulnerable to the unrestrained "back alley" practitioner, rather than careful, open, peer-reviewed opinions by doctors currently unwilling to risk a crime prosecution. The legitimate purposes that the State advances in support of the law can be accomplished through regulation that would not unduly burden liberty, and the State must legislate within that framework.

This case involves state interests of less weight than those at stake in *Casey*. In upholding the right of women to choose, the Court in *Casey* recognized that abortion is an "act fraught with consequences for others" and raises numerous potentially conflicting interests, particularly that of the separate, silent life of the fetus. 505 U.S. at 871. It is the state interest in fetal life that makes the abortion cases so difficult. This case directly involves no life apart from that of the individual making the personal choice.

1. The Challenged Statute Is Not Necessary to Protect Against Third-Party Usurpation of the Patient's Control Over the Remaining Days of Life

The State of Washington has no interest in mandating that the lives of the terminally ill be extended as long as possible. Indeed, the State disavows any such interest in recognizing a terminally ill patient's right to direct withdrawal of life support. Wash. Rev. Code § 70.122.051. Thus, as the Ninth Circuit noted, the State has accepted the notion that its interest in preserving life should ordinarily give way, in the case of a competent, terminally ill adult, to the wishes of the patient. 79 F.3d at 817; Pet. App. A-65. The existing exception to the challenged statute acknowledges that denial of assistance in dying extinguishes the only liberty a terminally ill person has left. *Id.* at 820; Pet. App. A-72; *see Quill*, 80 F.3d at 729. For a patient at death's door, the choice is not between continuing life and bringing on death but between a painful and degrading death or a humane and dignified one.

---

able regulation of both categories of patients would better honor both the Constitution and the asserted state interests.

As was noted in a case accepted by the Washington Supreme Court with respect to the interests of the State in the lives of the terminally ill: "[T]he individual's right to privacy grows as . . . the prognosis dims." *In re Quinlan*, 355 A.2d 647, 664 (N.J.), *cert. denied*, 429 U.S. 922 (1976), *discussed in Colyer*, 660 P.2d at 743.

Recognition of a dying patient's liberty to choose how to die would in no way suggest that physicians may kill those patients who do not request assistance in dying. The State has a strong interest in protecting against usurpation of the dying patient's wishes by others. To say that the State must respect the individual's autonomy does not imply that the State must stand by should others try to override that autonomy and extinguish that life. The legalization of a patient's right to direct withdrawal of life support did not increase the risk of such patients to involuntary euthanasia or other forms of murder, much less legalize such conduct. The State retains an undiminished interest in ensuring that the lives of such patients, however short, are protected against extinction against their will by third parties. The value of life is cheapened not by allowing a humane death but by denying a competent human being the right of choice.

2. Ensuring That Assistance Is Provided Only to Mentally Competent, Uncoerced, Terminally Ill Patients Better Protects the State's Interests Than Does the Current Covert Practice

(a) Prohibiting All Competent, Uncoerced, Terminally Ill Patients From Exercising a Right to Protect a Few Incompetent or Coerced Patients From Erroneously Exercising That Right Does Not Serve Any State Interest

The State's interest in preventing suicide by those with mental illness or susceptible to "undue influence" is premised on assuring free choice. As with refusal of life-sustaining treatment, an interest in free choice is not furthered by denying choice to those who are mentally competent and exercising free will.[20] "If the state's interest in preventing suicide is really an interest in preventing irrational suicides, coerced suicides, or suicides by the young, then the state has little interest, if any, in preventing informed, competent, terminally ill individuals who are free from undue influence from committing suicide." Mark Strasser, *Assisted Suicide and the Competent Terminally Ill*, 74 Or. L. Rev. 539, 558 (1995); *see Superintendent of Belchertown State Sch. v. Saikewicz*, 370 N.E.2d 417, 426 n.11 (Mass. 1977) (state's interest in the

---

[20] Various of the State's amici contend that no dying patient desiring to hasten death could be free of mental illness. This factual contention contradicts the undisputed record of this case. JA 22-31. Even the New York State Task Force ("Report"), relied upon heavily by petitioners and amici, refutes this "myth." Report at 16. The Task Force reports that depression is the exception in the terminally ill and can be diagnosed. *Id.* at 13, 26; *see* Brief Amici Curiae of Mental Health Professionals in Support of Respondents.

prevention of irrational self-destruction is not at issue in competent, rational decision to refuse medical treatment when death is impending) (cited with approval on this point by the Washington Supreme Court in *Colyer*, 660 P.2d at 743).

The patient-plaintiffs did not suffer from mental illness and were acting of their own free will. JA 25, 28, 31. It is uncontroverted that the patients whose claims are asserted through the physician-plaintiffs are mentally competent, and that physicians can determine who is competent. JA 35, 49, 55, 73; *Compassion*, 850 F. Supp. at 1458; Pet. App. E-8. The present case is limited to those who seek a humane, hastened death not because they are troubled, disturbed, misled, confused, unduly influenced, or in need of psychiatric care, but rather because they are dying and suffering unbearably in the process. The Ninth Circuit recognized that the liberty extends only to such patients. 79 F.3d at 793, 834, 837; Pet. App. A-9 to A-10, A-106, A-113 to A-114. This Court drew the same dividing line in *Cruzan*. 497 U.S. at 279. The State remains free to protect those not facing death and to enact procedures to protect those who are terminally ill to ensure that their end-of-life decision is informed and voluntary. The State certainly remains free to prosecute those who "knowingly cause . . . another person to attempt suicide."

The State of Washington has previously convinced this Court that doctors can determine if someone is suffering from a mental disorder and that review by two doctors is adequate to assure accuracy. *Washington v. Harper*, 494 U.S. at 222, 232 (1990). In that case, the Court also agreed with the State that it would not assume that doctors would abuse their power. *Id.* at 222 & n.8. Moreover, the right claimed in the present case is access to life-ending medication that the patient may self-administer if the patient so chooses, providing an additional assurance of volition.

The State and some of its amici contend that it would not be permissible to limit the right at issue to the mentally competent. This Court accepted that boundary without question in *Cruzan*, 497 U.S. at 277-79, 287 n.2. The right at issue is by definition a very personal one that involves a conscious decision by the individual. A right of self-determination would never justify, and is in fact antithetical to, involuntary euthanasia. The State's interest in protecting incompetent individuals is undisputed and of great weight. The state protects the incompetent in matters ranging from contracts to criminal trials; there has been no "slippery slope" from allowing competent citizens to exercise those rights to allowing incompetent citizens to do so. *E.g.*, *Faretta v. California*, 422 U.S. 806, 833-35 (1975) ("the inestimable worth of free choice" belongs to competent citizens exercising "informed free will").

Finally, some of the State's amici urge that shortcomings in the health care system are so coercive as to justify a prohibition on choice. This supposed state interest has never been espoused by the State and would justify the governmental prohibition of any patient choice that might be influenced by limited finances and care options. Free will under our Constitution is not limited only to easy decisions in uncomplicated circumstances. The solution to this concern is to fix the risks in the health care system, not to trample individual liberty. *See, e.g.*, Newborns' and Mothers' Health Protection Act of 1996, Pub. L. No. 104-204 (prohibiting premature discharge from hospital after childbirth).

(b) Terminal Illness Is a Workable Boundary

The State suggests, and some of the State's amici contend, that it is difficult in some cases to determine when a patient has reached the terminal phase. Of course, no one knew for sure that Nancy Cruzan would not have regained consciousness. *See* 497 U.S. at 266-67 ("virtually no chance"). In fact, since 1979 Washington has used the terminal dividing line for this purpose with respect to life support and does not even require a second opinion, Wash. Rev. Code § 70.122.020(8)-(9), and most other states and the federal government define and use "terminal" for a variety of state functions, including authority to direct the withdrawal of life support.[21] This Court need not define terminal as an initial matter; that can be left to the states. The important point is that terminal can be defined. Whatever might have been the case in 1854, the record of this case shows that, for many patients, physicians now can determine terminal stage with assurance.[22] The State did not dispute the record below that the physician-plaintiffs and other doctors can determine when many illnesses have progressed to this stage.[23]

---

[21] *E.g.*, Cal. Health & Safety Code § 7186(j); 42 U.S.C. 1395x(dd)(3)(A).

[22] The medical profession also utilizes the terminal diagnosis as a clinical bright line in provision of terminal sedation. *See* Paul Rousseau, *Terminal Sedation in the Care of Dying Patients*, 156 Archives of Internal Med. 1785, 1785 (1996) ("prior to initiation of sedation, clinicians must ascertain the need for sedating therapy, including the presence of a terminal disease with impending death").

[23] There is no right for those patients who are not terminally ill and not imminently facing death. The State has a real interest in preserving the lives of those who can still contribute to society and have the potential to enjoy life again. As explained in the Brief of Respondents in No. 95-1858, the right of patients to direct the withdrawal of life support with the intent to bring about their own deaths is limited to the terminally ill or those in a permanent vegetative state. In Washington, both statutory and common law are so limited. Other states have created exceptions for patients who refuse treatment for religious reasons. If, as some of the State's amici argue, there are states that, regardless of religious considerations, allow refusal of temporary life support for conscious patients who are not terminally ill, but simply wish to die, that

The claimed state interest can support an absolute prohibition as to all patients only if the rights of those where accurate diagnosis is possible must be sacrificed to avoid any risk of physician error.[24] As discussed in the Brief of Respondents in No. 95-1858, this sort of sacrifice has never been permitted under our Constitution. As with all human endeavors, diagnosis of terminal illness is not infallible, but that does not justify a total prohibition on the right to choose a humane, hastened death. As the Court noted in *Casey*, in dealing with the question of fetal viability:

> [T]here is no line other than viability which is more workable. To be sure, as we have said, there may be some medical developments that affect the precise point of viability, . . . but this is an imprecision within tolerable limits given that the medical community and all those who must apply its discoveries will continue to explore the matter.

505 U.S. at 870.

---

is not a right guaranteed by the Constitution and is instead one created, wisely or unwisely, by such states. Protecting the constitutional right at stake here will not alter the wisdom of those states. Contrary to the assertions of the State's amici, there has been no slide down the slippery slope in the Netherlands, where the practice of assistance in dying, though still illegal, is conducted more openly. *See Special Reports from the Netherlands*, 335 New Eng. J. Med. 1676, 1699, 1706 (1996); *Quill*, 80 F.3d at 730-31; *Compassion*, 79 F.3d at 830 n.114; Brief Amici Curiae of Bioethics Professors Supporting Respondents.

[24] If error occurs, it is generally in the direction of excessive optimism regarding remaining life expectancy. *See, e.g.*, Lorna E. Forster & Joanne Lynn, *Predicting Life-Span for Applicants to Inpatient Hospice*, 148 Archives of Internal Med. 2540 (1988); David B. Reuben et al., *Clinical Symptoms and Length of Survival in Patients With Terminal Cancer*, 148 Archives of Internal Med. 1586 (1988).

The line drawn by the Ninth Circuit is reasoned and workable and serves the rule that "[l]iberty must not be extinguished for want of a line that is clear." *Id.* at 869. "Constitutional rights do not always have easily ascertainable boundaries." *Thornburgh v. American College of Obstetricians & Gynecologists*, 476 U.S. 747, 771 (1986). Certainly the doctor should inform the patient of the risks of misdiagnosis, but that does not justify prohibiting informed patient choice.

The primary concern of the State's amici appears to be that the possibility of an erroneous diagnosis means that no line separates the terminally ill from others, so that the "slippery slope" toward assisted suicide on demand will be unavoidable. To the contrary, erroneous placement of a person on the wrong side of a bright line does not mean that the line does not exist, nor does it constitute an endorsement of suicide on demand by the healthy. If such an error were to occur, it would be because a mentally competent person, based upon medical advice (after whatever reasonable safeguards regarding such advice the State wished to impose), made the voluntary choice to end suffering. An error of this sort would not open the door to euthanasia.

If rights could be denied for fear that they might be exercised unwisely or upon inaccurate information, they would not be rights at all. Numerous rights can be exercised upon inaccurate information: marrying, voting, having an abortion, and even refusing medical treatment. "[I]t is far better to permit some individuals to make incorrect decisions than to deny all individuals the right to make decisions that have a profound effect upon their destiny." *Id.* at 781-82 (Stevens, J., concurring).

Finally, some of the State's amici contend that the Ninth Circuit has stripped elderly, chronically ill, or disabled persons of the State's protection. Nothing in the Ninth Circuit's deci-

sion supports this. All such persons are fully entitled to protection against coercion and other abuse, and all are, if competent, as entitled to a humane death as anyone else when they reach the final stages of dying. *See* Brief Amici Curiae of GMHC, LAMBDA, and Prominent Americans with Disabilities in Support of Respondents.

(c) The Random, Covert, and Unregulated Practice Under the Existing Prohibition Poses Greater Risk to the State's Interests

Entirely absent from the State's brief is any mention of the well-established fact that, notwithstanding the criminal prohibition, physicians frequently provide assistance in dying to patients.[25] This reflects the demand of such patients for their liberty, and the respect of many doctors for its exercise. This assistance currently is provided in a covert manner without oversight. No safeguards ensure that the patient's decision is informed and voluntary. No other professionals are involved to ensure that the patient is indeed in the terminal phase of illness, is mentally competent, and has had the benefit of

---

[25] *See, e.g.*, Anthony L. Back et al., *Physician-Assisted Suicide and Euthanasia in Washington State*, 275 JAMA 919 (1996) (in year preceding study, 12 percent of physicians had been asked to provide assistance in hastening death, and 24 percent of patients making such requests received assistance); Franklin G. Miller et al., *Regulating Physician-Assisted Death*, 331 New Eng. J. Med. 119, 120 (1994) ("relatively widespread secret practice of physician-assisted death in the United States, which is completely unregulated"); Richard A. Knox, *1 in 5 Doctors Say They Assisted a Patient's Death, Survey Finds*, Boston Globe, Feb. 28, 1992, at 5; Sidney H. Wanzer et al., *The Physician's Responsibility Toward Hopelessly Ill Patients, A Second Look*, 320 New Eng. J. Med. 844 (1989); Sherwin B. Nuland, *How We Die: Reflections on Life's Final Chapter* 153 (1993) ("a muted practice that has existed since Aesculapius was in swaddling clothes").

palliative care. Only affluent and educated consumers of medical services are likely to have access to a willing, competent physician, in much the same way as those with financial and educational means could obtain abortions prior to *Roe*.[26] Patients without access to a willing, competent provider must abandon their rights or seek a "back alley" provider who may be a careless, unqualified charlatan.[27] The State cannot reconcile this situation with its asserted interest.

3. Federalism Does Not Justify Unlimited Government Power at the Expense of Individual Autonomy

The State's argument before the Court is almost entirely premised upon federalism — contending that state governments, rather than competent, dying citizens, are empowered under the Constitution to decide how such citizens should die.

---

[26] Because clandestine assistance is available to the powerful, the notion that the political process can be expected to protect all citizens in this context, Brief for the United States as Amicus Curiae Supporting Petitioners at 11-12, is as factually flawed as it is legally irrelevant. Moreover, our culture is one of denial where mortality is concerned. Death is generally taboo. Kathy Charmaz, *The Social Reality of Death* 67, 83-87 (1980); William E. Phipps, *Death: Confronting the Reality* 55-56 (1987); Philippe Aries, *The Hour of Our Death* 569-571 (1981); Louise Harmon, *Fragments on the Deathwatch*, 77 Minn. L. Rev. 1, 105-18 (1992). Citizens do not deal with mortality until directly confronted with imminent death. *See* Ernest Becker, *The Denial of Death* (1973). The constituency that would bring about political change is composed of ailing, dying persons who cannot direct their waning energy to political action.

[27] *See* Mark Strasser, *Assisted Suicide and the Competent Terminally Ill*, 74 Or. L. Rev. 539, 604 (1995) ("it may be that individuals like Kevorkian are able to break laws precisely because of society's failure to offer legal procedures by which people can achieve a painless, dignified death") (footnote omitted).

This argument is contradicted by the Fourteenth Amendment's explicit restructuring of federalism, by the Ninth Amendment's rule for interpreting the Fourteenth Amendment, and by the Court's decisions interpreting both.

The State argues primarily that the decision is "a complex and controversial issue" that should be left to state legislatures.[28] *E.g.*, Brief for the Petitioners at 9. The State contends not so much that exercise of this right would compromise its substantive interests, but that recognizing the citizen's right to choose would deny the State's right to choose.

Constitutional liberty belongs to individuals, not states, however, and the question of whether liberty must give way to supposed state objectives cannot be left totally to the states. "[T]his Court too has its responsibility." *Rochin v. California*, 342 U.S. at 168-69. Thus, the State's citation to *Casey* for the proposition that "it is conventional constitutional doctrine that where reasonable people can disagree the government can adopt one position or the other," Brief for the Petitioners at 38, does not advance its position. The very next sentence in *Casey* recognizes that "[t]hat theorem, however, assumes a state of affairs in which the choice does not intrude upon a protected liberty." 505 U.S. at 851; *see* Brief Amici Curiae of State Legislators in Support of Respondents.

---

[28] The State's invocation of Justice Brandeis's laboratory of social policy experimentation is misplaced. *See* Brief for the Petitioners at 48. The ruling below invites "dialogue with legislators" and leaves appropriate room for the political process to operate. Ruth B. Ginsburg, *Speaking in a Judicial Voice*, 67 N.Y.U. L. Rev. 1185, 1204-05 (1992). Striking down the flat prohibition of the exercise of liberty of mentally competent, terminally ill patients leaves the states free to regulate exercise of that liberty.

Moreover, the State must assert more than an abstract religious or philosophical disagreement; the statute must serve a legitimate public purpose. It would directly contradict the most basic, anti-authoritarian premise of the constitutional guarantee of liberty to permit specific exercises of rights to be subordinated to the controversial, moral dictates of a majority or powerful minority. Indeed, it has long been recognized that, where the democratic process impinges on constitutional rights, "the judiciary then has a duty to intervene in the democratic process." *Schweiker v. Wilson*, 450 U.S. 221, 230 (1981). The Constitution protects citizens against moral and political domination by the state, especially with regard to freedoms of conscience and control over one's destiny. *See Wooley v. Maynard*, 430 U.S. 705 (1977); *West Virginia Bd. of Educ. v. Barnette*, 319 U.S. 624, 636-37, 642 (1943).

In any event, affirmance of the decision below works no improper judicial encroachment into the state legislative domain. The Court in *Casey* permitted states to enact rules governing previability abortion so long as these do not impose an undue burden on the woman's ability to make her decision. 505 U.S. at 872-79. The Court in *Cruzan* expressed great deference to a state's procedural effort to assure competence and voluntariness. 497 U.S. at 280-82. Thus, the Ninth Circuit properly recognized that the State can adequately regulate to protect its legitimate interests here as well.[29] 79 F.3d at 816, 833, 837; Pet. App. A-63, A-104, A-112.

---

[29] It is not "improper legislating" for a court to note that simple regulatory protections (waiting period, information on alternatives, second opinion) would safeguard any legitimate interests. Model regulations incorporating these and other safeguards have been proposed. *See, e.g.*, Franklin G. Miller et al., *Regulating Physician-Assisted Death*, 331 New Eng. J. Med. 119 (1994); Brief Amici Curiae of State Legislators in Support of Respondents (describing various legislative proposals). Many of the interests raised by the State's amici have not been asserted by the

II. SECTION 9A.36.060 DENIES EQUAL PROTECTION TO COMPETENT, TERMINALLY ILL ADULTS WHO ARE NOT ON LIFE SUPPORT

The Ninth Circuit did not reach the question whether Section 9A.36.060 denies equal protection, 79 F.3d at 838; Pet. App. A-115, although it could discern no "ethical or constitutionally cognizable" basis upon which to distinguish between physician assistance by prescribing life-ending medication and the act of withdrawing life support. *Id.* at 821-24; Pet. App. A-75 to A-82. The question was fully briefed and argued below and offers an alternative basis upon which this Court can and should affirm the judgment. *Washington v. Confederated Bands & Tribes of Yakima Indian Nation*, 439 U.S. 463, 476 n.20 (1979). Equal protection did form the basis of the Second Circuit's judgment in *Quill*. 80 F.3d at 727. To avoid duplication of the full briefing submitted in No. 95-1858, the discussion here focuses on the specifics of Washington statutory and case law.

Even before *Cruzan*, the Washington Supreme Court recognized the right of a competent, terminally ill adult to hasten death by directing that life-sustaining medical treatment be suspended. *In re Welfare of Colyer*, 99 Wash. 2d 114, 660 P.2d 738 (1983); *In re Guardianship of Hamlin*, 102 Wash. 2d 810, 689 P.2d 1372 (1984); *In re Guardianship of Grant*, 109 Wash. 2d 545, 747 P.2d 445 (1987). The Washington court effectively excluded from the facial coverage of Section 9A.36.060 those who assist in such decisions.

The Washington Natural Death Act, though limited to withdrawal of life-sustaining treatment, explicitly recognizes the same "fundamental right" in "individual autonomy" as

---

State itself and could be voiced and, subject to undue burden analysis, properly addressed in the legislative process.

that at stake here. Wash. Rev. Code § 70.122.010. "The legislature . . . finds that . . . such prolongation of the process of dying for persons with a terminal condition . . . may cause loss of patient dignity, and unnecessary pain and suffering . . . ." *Id.* "The legislature finds that adult persons have the fundamental right to control the decisions relating to the rendering of their own health care . . . ." *Id.* The State recognized "the dignity and privacy which patients have a right to expect." *Id.*

These interests and rights apply equally to all mentally competent, terminally ill adults. The statute specifically allows those terminally ill adults who are on life-sustaining treatment to direct their doctors to withdraw such treatment, Section 70.122.030, and it protects such doctors from civil and criminal liability without specifically mentioning Section 9A.36.060. Wash. Rev. Code § 70.122.051. The statute also provides that it "shall not be construed as providing the exclusive means by which individuals may make decisions regarding their health treatment, . . . nor limiting the means provided by case law more expansive than [the statute]." Wash. Rev. Code § 70.122.910.

The State does not dispute that Washington law recognizes a fundamental liberty interest or that it then distinguishes between those competent, terminally ill adults whose condition requires life-sustaining treatment and those whose condition does not. The first group has the right to direct the course of treatment with the specific purpose and result of hastening death. The second group does not, and must suffer the very same pain and suffering and loss of dignity and privacy from which the statute and common law protect the first group.

Under the current arbitrary and irrational scheme imposed by the State of Washington, patients on life support may choose death, even if they are not suffering, and despite any

risk of error of misdiagnosis of condition or competency. Terminally ill patients not on life support are prohibited from surrendering the few days or weeks they have left, even if they must endure them in extreme and unrelenting pain and suffering. The State has never provided any justification for this discrimination — not on the face of the statute, not in the legislative history, and not even as a matter of litigative hindsight.

The State's argument, that the common law right to be free from bodily invasion applies only to the first group, is refuted by the State's admission that the common law was only one of the "underpinnings" for protecting the first group's liberty. Brief for the Petitioners at 43-44. The State does not deny that the other underpinnings, liberty and self-determination, were more important, as is apparent from the express legislative findings in Wash. Rev. Code § 70.122.010. Furthermore, the case upon which the State relies as to the common law in Washington, *Colyer*, not only recognized the liberty of "an adult who is incurably and terminally ill" under both the federal and state constitutions, but held that such a right "*encompasses* the right to refuse treatment that serves only to prolong the dying process, given the absence of countervailing state interests." 660 P.2d at 742 (emphasis supplied). Only later in its opinion did the court turn to the "common law right to be free from bodily invasion [as] an alternative basis." *Id.* at 743. Thus, the right in Washington is not limited to the refusal of treatment, and the purpose is not just in avoiding battery. The purpose, as here, is avoiding futile, painful, and degrading prolongation of the dying process.

The State's other argument in support of this arbitrary distinction is purely circular. The State says that "one who intentionally acts to cause or contribute to another's death, is with rare exceptions, guilty of criminal conduct." Brief for the Petitioners at 44. Honoring the liberty and the wish to die of a competent, terminally ill patient by withdrawing life support is

one of those rare exceptions. As the Washington Supreme Court held in *Colyer*, the challenged statute does not apply to "the exercise of a constitutional right." 660 P.2d at 751. The question is how honoring in a slightly different fashion the same liberty and same wish of another competent, terminally ill patient is any different. The State has no answer.

The State cites to various state court decisions holding that directing the withdrawal of life support is not suicide and that assisting the patient in removing life support is not assisted suicide. Brief for the Petitioners at 37. Proving that Washington and other states make a distinction does not prove that the distinction is justified. That these courts felt a compulsion to create an exception to their assisted suicide statutes for physician withdrawal of life-sustaining technology confirms traditional respect for patient autonomy, especially at the end of life, but it hardly means that the legislatures that enacted the statutes subscribed to any purposes that would distinguish between dying patients. The act of a dying, suffering patient choosing to shorten the period of suffering before death by consuming life-ending medication is no more suicide in the traditional or typical sense than is withdrawal of life support. In both, the only question is the manner, not the fact, of taking action to hasten death when death is impending. Continuation of life is not a choice for these patients.

Some of the State's amici contend that the discriminatory treatment is justified by the difference between an act and an omission. Withdrawal of life support, they say, is somehow not an act, though it requires activity. Terminal sedation does not cause death, they believe, though it requires the administration of medication to induce and maintain sedation until death inevitably occurs. The State certainly would not adopt this distinction, and apply it in this way, if, for example, a hired killer removed a respirator or induced a coma and cut off nutrition and hydration. Is the State itself immune if its jailers "omit" to feed prisoners, and they die? In fact, the

writing of a prescription is less active than the removal of a gastrostomy tube. *Quill*, 80 F.3d at 729. If this distinction were the critical factor, the right to direct withdrawal of life support would not be limited to terminally ill patients. The action/inaction distinction, rejected by Justice Scalia in *Cruzan*, 497 U.S. at 296-97, exists only in the minds of those who wish to *preserve the appearance* that they are not participating in hastening death. *Compassion*, 79 F.3d at 821-22; Pet. App. A-75 to A-78. This basis cannot support such discrimination.

Nor is a distinction found in the fact that a patient on life support might feel a "captive" of that type of care. *See* Brief for the Petitioners at 42 (citing *Cruzan*, 497 U.S. at 288). As discussed in the Brief of Respondents in No. 95-1858, a dying, suffering patient, whose life and dying process have been extended by modern medical technology, but who is not presently on life support, similarly becomes a captive of her disintegrating body and the medical care that brought her to that juncture. *See* Brief Amici Curiae of Bioethics Professors Supporting Respondents. This patient has the identical motivation and objective as the patient whose condition happens to encompass life-sustaining technology: the desire to hasten impending death in a humane and dignified manner.

Thus, as properly recognized by the District Court in this case, which did reach the equal protection claim, the decision to request termination of life-sustaining treatment to hasten death is different in no material respect for a terminally ill patient from requesting life-ending drugs. *Compassion*, 850 F. Supp. at 1461, 1466-67; Pet. App. E-15, E-25 to E-28. The same conclusion was reached by the Second Circuit in *Quill*. 80 F.3d at 729.

Having recognized a liberty — indeed, a "fundamental" liberty — in determining whether to endure a prolonged dying process, the State may not deny it to one group of patients,

particularly where regulation can achieve any legitimate state interests, interests that apply equally to both groups. The Court should affirm the judgment below because the statute impermissibly burdens liberty and denies equal protection.

CONCLUSION

The Court has long recognized that the constitutional right of liberty stands as a barrier against laws that deny individuals the right to make the most fundamental choices affecting their values, their bodies, and the course of their lives. The Constitution protects the liberty of a dying citizen to choose how to die in accordance with her own intensely personal convictions. The private values that inform this decision are too central to personality, too much at the core of liberty, to allow the State to decide how everyone must act or what everyone must believe.

The Ninth Circuit correctly applied the Court's precedent in finding that the Fourteenth Amendment protects the liberty of competent, terminally ill citizens to determine their moment of death and to do so in a manner that comports with values formed over their lifetime, while at the same time recognizing the legislative role in crafting safeguards to protect legitimate state interests. Respondents urge the Court to remain true to principled application of precedent and once again define the freedom guaranteed by the Constitution's own promise, the promise of liberty, and affirm the judgment below.

The Court should also, or alternatively, affirm on the ground that the challenged law violates the Equal Protection Clause. Having recognized a liberty to choose to die in a dignified manner with limited pain and suffering, the State may not preclude some individuals from exercising that liberty.

I. WASHINGTON'S ASSISTED SUICIDE STATUTE DOES NOT VIOLATE DUE PROCESS

This case involves a challenge to Wash. Rev. Code 9A.36.060, a statute adopted in 1975 as a recodification of pre-existing statutes dating back to the first Territorial Legislature. Br. Pet'rs at 4-6; App. Pet. Cert. at G-1 to G-3.

The precise legal issues in this case are whether there is a constitutionally protected liberty interest under the Due Process Clause in committing suicide that includes assistance in so doing; and, if so, whether the statute is nonetheless constitutional because it advances legitimate state interests.[1]

The Due Process Clause of the Fourteenth Amendment protects, *inter alia*, "life, liberty, or property" against state deprivation. This case involves two of those components—life and liberty. The outcome of the case will determine whether a State must value the liberty claims of a few when those claims conflict with a State's goal of protecting the lives of *all* its people.

A. Respondents Disregard The Court's Well-Established Analytical Approach To Substantive Due Process

The issue arises under "the substantive component of the [Due Process] Clause that protects individual liberty

---

[1] Respondents proffer the Equal Protection Clause as an alternative theory to support the decision below. Br. Resp'ts at 42-47. Petitioners have previously demonstrated that Washington law does not violate the Equal Protection Clause. Pet. Writ Cert. at 22-26; Br. Pet'rs at 41-44. *See also Vacco* Br. Pet'rs at 9-19; *Vacco* Br. Amici Curiae States Supp. Pet'rs; *Vacco* United States Amicus Curiae Supp. Pet'rs. Accordingly, Petitioners focus this brief on the Due Process arguments advanced by Respondents and their amici.

against 'certain government actions regardless of the fairness of the procedures used to implement them.'" *Collins v. Harker Heights*, 503 U.S. 115, 125 (1992) (quoting *Daniels v. Williams*, 474 U.S. 327, 331 (1986)).

This Court has developed certain enduring principles as "guideposts for responsible decisionmaking" in the "unchartered area" (*id.*) of substantive due process analysis.

The "analysis must begin with a careful description of the asserted right, for 'the doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field.'" *Reno v. Flores*, 507 U.S. 292, 302 (1993) (quoting *Collins*, 503 U.S. at 125).

The Court then determines whether the asserted liberty claim is "implicit in the concept of ordered liberty" (*Palko v. Connecticut*, 302 U.S. 319, 325 (1937)) or "deeply rooted in this Nation's history and tradition" (*Moore v. East Cleveland*, 431 U.S. 494, 503 (1977) (opinion of Powell, J.)). Reliance on the Nation's history and tradition provides an objective framework within which to make the ultimately subjective determination as to whether a particular activity is, or is not, a component of the liberty protected by the Due Process Clause.

The Court's careful and consistent application of these principles serves "to assure itself and the public that announcing rights not readily identifiable in the Constitution's text involves much more than the imposition of the Justices' own choice of values on the States and the Federal Government." *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986). Expressed another way, "[a]ppropriate limits on substantive due process come not from drawing arbitrary lines but rather from careful 'respect for the teachings of history and solid recognition of the basic values that underlie our society.'" *Moore*, 431 U.S. at 503 (quoting *Griswold*

v. Connecticut, 381 U.S. 479, 501 (1965) (Harlan, J., concurring)).

Respondents' approach to the threshold question—whether there is a constitutionally protected liberty interest at all—ignores the Court's established analytical approach. Rather, they assert:

> "The proper question is whether society, and the Court's constitutional interpretation, has afforded individuals the right to make personal decisions regarding their bodies, medical care, and life-course without burdensome government intrusion." Br. Resp'ts at 17-18.[2]

Respondents pose the wrong question. The question is not whether some activities involving personal decisions affecting bodily integrity *have* been accorded constitutional protection. Rather, the issue in this case is whether the decision to commit suicide, and having assistance in carrying out that decision, *is to be* protected by the Constitution. The answer to this question is plainly no.

Neither Respondents nor their New York counterparts make any effort to demonstrate that the asserted right to assisted suicide is "deeply rooted in our Nation's history and tradition" (*Moore*, 431 U.S. at 503) or "implicit in the concept of ordered liberty," (*Palko*, 302 U.S. at 325) having presumably concluded, for good reason, that any such enterprise would fail.[3] "Nor can it be said that the

---

[2] Respondents do not attempt to defend the Ninth Circuit's broadly phrased recognition of a liberty interest in "determining the time and manner of one's death." App. Pet. Cert. at A-27.

[3] Respondents rely on the ineffective effort of the Ninth Circuit to find historical support for the notion of a right to commit suicide, asserting that "the historical record is checkered." Br. Resp'ts at

right to assisted suicide claimed by [Respondents] is deeply rooted in the nation's traditions and history. Indeed, the very opposite is true." *Quill v. Vacco*, 80 F.3d 716, 724 (2d Cir. 1996), *cert. granted sub nom, Vacco v. Quill*, Case No. 19-1858. *See* Br. Pet'rs at 21-25. *See generally* Br. Amicus Curiae State Legis. Supp. Pet'rs.[4]

Respondents' liberty interest argument rests on their expansive view of the Court's decision in *Planned Parenthood v. Casey*, 505 U.S. 833 (1992). *Casey* followed two decades of multiple, contentious challenges to the Court's decision in *Roe v. Wade*, 410 U.S. 113 (1973), which held that previously recognized constitutional protections accorded to procreation included the right of a woman to obtain an abortion. The *Casey* Court declined to overrule *Roe*, concluding instead that "the essential holding of *Roe v. Wade* should be retained and once again reaffirmed." *Casey*, 505 U.S. at 846.

---

18 n.9. Their New York counterparts completely ignore the history and tradition prong of this Court's jurisprudential approach. See generally *Vacco* Br. Resp'ts. The ACLU repeats—but does not improve upon—the Ninth Circuit's historical analysis. *See* Br. Amici Curiae Supp. Resp'ts of ACLU at 4-7.

[4] The Court's reliance on the history and tradition of our country does not reflect an "historically frozen concept of constitutionally protected liberty." Br. Nat'l Women's Health Network Amici Curiae Supp. Resp'ts at 10 n.11. Rather, it provides the means whereby the Court can assure that its jurisprudence

> "represent[s] the balance which our Nation, built upon postulates of respect for the liberty of the individual, has struck between that liberty and the demands of organized society. . . . having regard to what history teaches are the traditions from which it developed as well as the traditions from which it broke." Poe v. Ullman, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting).

The *Casey* Court's one hundred ten page explanation of its decision included a paragraph in which the Court summarized its prior decisions affording constitutional protection to "marriage, procreation, contraception, family relationships, child rearing, and education." *Casey*, 505 U.S. at 851. The last three sentences of that paragraph describe common elements of the particular activities addressed in those previous cases:

> "These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State." *Id.*

In effect, Respondents argue that these last three sentences from *Casey* stand for the proposition that *all* "intimate and personal choices a person may make in a lifetime" (*id.*) are constitutionally protected. According to Respondents' logic, a decision to end one's life is "intimate and personal"—therefore, such a decision is, like the abortion decision at issue in *Casey*, constitutionally protected.

Respondents misread *Casey*. The language from *Casey* on which Respondents rely is *descriptive*, not *prescriptive*. It *describes* certain specific actions to which constitutional protection had previously been accorded. It does not purport to *prescribe* that any activity falling within the grammatical construct of the passage necessarily

qualifies for enhanced protection under the "liberty" component of the Due Process Clause.[5]

Respondents' view of the *Casey* decision is that the passage quoted above represents a new formulation of the test for identifying liberty interests entitled to heightened protection under the Due Process Clause. Under Respondents' view, *Casey* represents a wholesale departure from the Court's prior due process jurisprudence. The traditional test—whether a particular claim to liberty is "deeply rooted in this Nation's history and tradition" (*Moore*, 431 U.S. at 503) or "implicit in the concept of ordered liberty" (*Palko*, 302 U.S. at 325)—no longer applies. Rather, according to Respondents, liberty interests after *Casey* are defined as those matters "involving the most intimate and personal choices a person may make in a lifetime [including] choices central to personal dignity and autonomy." *Casey*, 503 U.S. at 851.

Under Respondents' view, not only did the *Casey* opinion jettison the Court's test for determining the existence of a constitutionally protected liberty interest, it also cast doubt on the continued viability of several of the Court's prior decisions. *See, for example, Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 (1973) (rejecting a claim of constitutional protection to conduct on the basis that it involved only consenting adults). The Court in *Slaton* catalogued other cases where the Court had upheld statutes

---

[5] Respondents' analysis under *Casey* is based on a flawed syllogism, along the following lines: Apples, oranges, and grapefruit are fruits. They are round in shape and edible. A cabbage is also round in shape and edible; therefore, a cabbage must be a fruit as well. A choice to commit suicide, though "intimate and personal," is of a fundamentally different nature than the choice to marry, to have a child (or not), to live with one's grandchildren, or to send them to a private school. *See* Br. Pet'rs at 25-28.

regulating conduct arguably included within the scope of the language from *Casey* quoted above, and noted that "[t]he state statute books are replete with constitutionally unchallenged laws against prostitution, *suicide*, voluntary self-mutilation, brutalizing 'bare fist' prize fights, and duels." *Id.* at 68-69 n.15 (emphasis added).[6]

Indeed, even the *Roe* Court's rejection of the proposition "that one has an unlimited right to do with one's body as one pleases" (*Roe*, 410 U.S. at 154) is subject to revisitation if, indeed, Respondents' expansive view of the *Casey* decision is correct.

Respondents' view of *Casey* is *not* correct. *Casey* was grounded in the principles of the Court's prior jurisprudence—relied on in *Roe*—which recognized that decisions about procreation are "implicit in the concept of ordered liberty" (*Palko*, 302 U.S. at 325) and thus protected under the Due Process Clause.[7] The *Casey* decision was bolstered by principles of *stare decisis*, the application of which serve to strengthen "the Court's capacity to exercise the judicial power and to function as the Supreme Court of a Nation dedicated to the rule of law." *Casey*, 505 U.S. at 865, *and see generally* 864-69; *see also* Br. Pet'rs at 31-33.

By arguing that this Court should abandon the use of the Nation's history and tradition and the concept of ordered liberty as the primary "guideposts for responsible

---

[6] At the time this opinion was written, no State criminalized attempted suicide; therefore, the reference to "suicide" must have been to assisted suicide statutes such as that at issue here.

[7] *Roe* also concluded that prior to laws adopted in the latter half of the 19th century, largely to protect women's health, women generally had access to an abortion, especially early in pregnancy. *Roe*, 410 U.S. at 140-41. Thus, its decision protecting a woman's access to an abortion was not contrary to the Nation's history and tradition.

decisionmaking" (*Collins*, 503 U.S. at 125) in the due process arena, Respondents acknowledge that the decision below can only be affirmed if in fact the *Casey* decision represents a wholesale rejection of the Court's prior analytical approach rather than a principled reaffirmation of "the essential holding of *Roe v. Wade*" (*Casey*, 505 U.S. at 846). *See* Br. Resp'ts at 11-22; *Vacco* Br. Resp'ts at 19-28; *see also* Br. Amici State Leg. Supp. Resp'ts at 4-6.

Indeed, Respondents' New York counterparts assert that failure to affirm the decision below on the basis of *Casey* "would render this Court's decision in *Casey* itself vulnerable to repudiation as unprincipled and *ad hoc*, an illegitimate interference with the power of the State." *Vacco* Br. Resp'ts at 24 n.10. This is exactly wrong. The *Casey* decision, though controversial, was grounded in this Court's traditional jurisprudential approach and demonstrated that the *Roe* decision was the outgrowth of the constitutional protection to decisions about contraception and procreation. To suggest, as the New York Respondents do, that *Casey*'s credibility rises or falls with the instant case does a disservice to the authors of the *Casey* opinion by suggesting its constitutional analysis cannot stand on its own.

B. Respondents' Liberty Interest Argument Is Unprincipled And Illogical

Three other aspects of Respondents' liberty interest argument merit mention.

First, Respondents and their New York counterparts claim that the interest they seek to enshrine as a constitutional right is limited: "The *present* case is limited to those who seek a humane, hastened death . . . because they are dying *and* suffering unbearably in the process." Br. Resp'ts at 33 (emphasis added). *See also Vacco* Br. Resp'ts at 21 ("the only right asserted by the patient-plaintiffs and claimed before this Court is the right of the

competent, terminally ill patient to choose whether to endure a death marked by intolerable agony, degradation, and suffering").[8]

Yet the doctrinal support they offer for this asserted right does not supply the limits they claim.[9] For example, Respondents argue that "[t]he decision how to die is the final life-shaping decision a person can make." Br. Resp'ts at 17. Does not this statement apply with equal force to *anyone* who commits suicide, not just the terminally ill? As the panel opinion below noted:

> "The depressed twenty-one year old, the romantically-devastated twenty-eight year old, the alcoholic forty-year old who choose suicide are also

---

[8] It is doubtful, of course, that the "right," if it exists, can be so limited as Respondents suggest. *See* Br. Pet'rs at 44-47; Br. Am. Geriatrics Soc'y Amicus Curiae [Supp. Pet'rs] at 15-27.

[9] In the same vein, the Solicitor General suggests the existence of a liberty interest with no doctrinal limitation to the terminally ill. Relying on cases involving the procedural protections of the Due Process Clause, he asserts that the substantive component protects a liberty interest in "avoiding severe pain or suffering." Br. United States Amicus Curiae Supp. Pet'rs at 14. This assertion misses the mark in two ways. A requirement of procedural protection under the Due Process Clause does not equate to the special protection accorded certain fundamental liberty interests under the substantive component of the Clause. Moreover, "[t]he question presented . . . is not whether a person has a constitutional right . . . not to suffer. Rather, the question . . . is whether the constitution encompasses a right to commit suicide and, if so, whether it includes a right to assistance." *People v. Kevorkian*, 447 Mich. 436, 476 n.47, 527 N.W.2d 714, 730 n.47 (1994), *cert. denied*, 115 S. Ct. 1785 (1995). Petitioners agree with the ultimate conclusion advanced by the United States that the Washington statute does not violate the Due Process Clause. However, the constitutional analysis utilized in arriving at a particular conclusion is often as important as the conclusion itself.

expressing their views of the existence, meaning, the universe, and life; they are also asserting their personal liberty. If at the heart of the liberty protected by the Fourteenth Amendment is the uncurtailable ability to believe and to act on one's deepest beliefs about life, the right to suicide and the right to assistance in suicide are the prerogative of at least every sane adult." App. Pet. Cert. at D-12; *see also* Br. Am. Suicide Found. Amicus Curiae [Supp. Pet'rs] at 5-12.[10]

Respondents' argument for a right that belongs to some but not all—"[t]here is no right for those patients who are not terminally ill and not imminently facing death" (Br. Resp'ts at 35 n.23)—belies any claim that the asserted right to assisted suicide is "implicit in the concept of ordered liberty." *Palko*, 302 U.S. at 325.

Second, although Respondents and their amici argue for a right to assisted suicide for mentally competent, terminally ill patients, their amici, like the court below, at the same time recognize that "State laws or regulations governing physician-assisted suicide are *both necessary and desirable* to ensure against errors and abuse, and to protect legitimate state interests." App. Pet. Cert. A-102 (emphasis added). *See, e.g.*, Br. Amici ACLU (urging "support [for] the use of legislative safeguards"); *Vacco* Br. Resp'ts at 3 ("Close regulation is required for many of the reasons put forward by petitioners and their *amici*."); Br. Amici Curiae of Coun. for Secular Humanism Supp. Resp'ts at 14 ("[N]o

[10] Similarly, Respondents' Equal Protection arguments are not doctrinally limited to the terminally ill. The right to refuse medical treatment belongs to everyone. Respondents' arguments that assisted suicide is no different than refusing medical treatment are no more persuasive in the due process context than they are in the equal protection concept.

responsible proponent of legalized assisted suicide maintains that the practice should not be subject to *stringent* regulation." (emphasis added)).[11]

The apparent consensus among the proponents of the asserted right, that it must be carefully controlled to limit its exercise by the public at large, is strong evidence that it has no nexus to the concept of "liberty" as that term is understood in common parlance or as reflected in this Court's Due Process Clause jurisprudence.

What other liberty interest granted constitutional protection by this Court has carried with it a recommendation by its advocates that the exercise of the claimed liberty must be (1) limited to only a few people and (2) closely regulated to avoid its abuse? The answer, of course, is none. One can only imagine the hue and outcry that would arise—and rightfully so—should the suggestion be advanced that the nature of other constitutionally protected liberty interests—marriage, procreation, family relationships, pre-viability abortions—*requires* that they be carefully regulated, lest the right be abused. *See also* Br. Am. Med. Ass'n Amici Curiae Supp. Pet'rs at 25-26; Br. Bioethics Professors Amicus Curiae Supp. Pet'rs at 23-26.

Finally, it is just not true, as Respondents and their New York counterparts claim, that affirming the decision below is "essential to ensure that the government not be empowered either to deny the option of a hastened death or to compel one." Br. Resp'ts at 22; *see also Vacco* Br.

[11] Of course, these concerns are well-justified. *See* Br. Dist. Atty. Milwaukee Cy. Amicus Curiae Supp. Pet'rs (arguing that creating a constitutionally mandated exemption from States' homicide laws for physician-assisted suicide "will cause grave practical difficulties in the enforcement of our homicide laws" (at 2) and cateloguing (at 12-16, and in the appendix) examples of "intrafamily and other homicides" (at 12) where the decision below is problematic to law enforcement).

Resp'ts at 29-30. This argument is based on the *Casey* Court's recognition that failure to recognize a *liberty* interest in the abortion context could lead to a situation where "the State might as readily restrict a woman's right to choose to carry a pregnancy to term as to terminate it." *Casey*, 505 U.S. at 859.

Unlike the abortion context, in which the liberty protection is a "two-way street" (*Vacco* Br. Resp'ts at 30), any purported action by a State to "compel" an early death for those for whom Respondents advocate would run afoul of the State's duty, also under the Fourteenth Amendment, to protect *life*.[12]

The *Roe* opinion made clear that the decision to abort a nonviable fetus does not implicate the life of a person: "[A]n abortion is not 'the termination of life entitled to Fourteenth Amendment protection.'" *Casey*, 505 U.S. at 913 (Stevens, J., concurring in part and dissenting in part) (quoting *Roe*, 410 U.S. at 159). Had the contrary been true, the *Roe* Court noted, "the [argument for a right to abortion] collapses, for the fetus' right to life is then guaranteed specifically by the [Fourteenth] Amendment." *Roe*, 410 U.S. at 156-57.

It is inarguable that assisted suicide *does* involve the taking of *life* entitled to Fourteenth Amendment protection. Declining to recognize a liberty interest in assisted suicide would not leave the terminally ill—or anyone else—exposed to a risk of State-compelled death.[13]

---

[12] *See* Br. Amicus Curiae States Supp. Pet'rs at 10-13 (arguing that recognizing a "liberty" interest to take a life is contrary to the language and design of the Due Process Clause).

[13] On the other hand, recognizing a liberty interest in assisted suicide may indeed create a "one-way street" in the wrong direction by implying that some lives are entitled to lesser protection than others. *See* Br. Nat'l Spinal Cord Injury Ass'n Amicus Curiae Supp. [Pet'rs] at 1-3, 17-36; Br. Amici Curiae Nat'l Legal Ctr. for Medically Dependent & Disabled Supp. Pet'rs at 12-24.

C. Washington's Statute Furthers Important State Interests

Even if the Court finds the existence of a constitutionally protected liberty interest, that does not end the inquiry. *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261, 279 (1990). Rather, the Court must then decide whether the statute nonetheless prevails over whatever liberty interest may be involved, because it furthers legitimate State interests. *Id.*

The Court has identified two tests by which statutes not implicating abortion rights are measured.[14] At a threshold level, the statute must rationally advance legitimate State interests. *Reno*, 507 U.S. at 301-03. If a statute burdens a fundamental liberty interest, it must be "narrowly tailored to serve a compelling state interest." *Id.* at 302.[15]

The Respondents and their amici acknowledge the existence of important State interests:

- "The State has a *strong* interest in protecting against usurpation of the dying patient's wishes by others. . . . The State retains an *undiminished*

---

[14] Statutes regulating abortion rights are judged by the undue burden standard announced in *Casey*: "An undue burden exists, and therefore a provision of law is invalid, if its purpose or effect is to place a substantial obstacle in the path of a woman seeking an abortion before the fetus attains viability." *Casey*, 505 U.S. at 878. This test has not been applied outside of the abortion context.

[15] Not even Respondents contend that the subjective "sliding scale" balancing test performed by the Ninth Circuit below was correct.

interest in ensuring that the lives of such patients, however short, are protected against extinction against their will by third parties." Br. Resp'ts at 31 (emphasis added).

- "The State's interest in protecting incompetent individuals is . . . of *great weight.*" *Id.* at 34 (emphasis added).
- "Undoubtedly the protection of people who might seek to end life mistakenly or under pressure is a *compelling* interest." *Vacco* Br. Resp'ts at 37 (emphasis added).

The Court has previously acknowledged the important role that statutes such as that at issue here serve in furthering the States' interest in protecting the lives of its citizens:

> "As a general matter, the States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan*, 497 U.S. at 280.

Respondents assert that the statute at issue does not meet either applicable test, arguing that it is both "overinclusive" and "underinclusive," and that, in their judgment, a regulatory approach in which physician-assisted suicide is allowed to some but not to all would "better protect" these State interests. *See generally* Br. Resp'ts at 28-39. Yet neither Respondents nor their *amici* deny that *any* attempt to legalize assisted suicide would inevitably lead

to at least some persons dying either prematurely or involuntarily, or both.[16]

The reality of human mortality is that there is a continuum of circumstances under which we perish. *See* Br. Am. Geriatrics Soc'y at 4-11. Respondents describe tragic individual stories that are close to the line that now separates "*letting* the patient die [from] *making* the patient die." S. Carter, *The Culture of Disbelief* 236 (1993) (emphasis in original). Respondents appear to hope that these terrible stories will evoke an emotional reaction that will lead this Court to mandate moving that line.

But Respondents do not offer a workable stopping point along the continuum where a new line can be established—in effect, their argument provides the "slippery slope." If refusing medical care equals assisted suicide for the terminally ill, why not for the chronically ill or the just plain unhappy, who have the same right to refuse treatment? If assisted suicide is equivalent to health care, can allowing a guardian to consent to one and not the other pass the equal protection test Respondents suggest? While there may indeed be individual circumstances that are not well-served by the current line, a State legislature could reasonably—and rationally—conclude that "there is no line other than [that

---

[16] *See, e.g.*, Br. Resp'ts at 36 ("diagnosis of terminal illness is not infallible"); Br. Amici ACLU at 20 (asserting that safeguards would reduce the "likelihood of misdiagnosis to a very small order of probability," an error rate that it presumably believes is acceptable); Br. Amicus Curiae Julien M. Whitaker, M.D., Supp. Resp'ts at 22 ("There can be no doubt that from time to time certain individuals possessed of malicious intent (whether family members, friends, or physicians) will exert an untoward influence on the terminally ill, urging them to make a decision for or against physician-assisted suicide that may not be the one the patient would make if fully possessed of independent reason.").

drawn by current law] that works better." *Casey*, 505 U.S. at 870.

In short, Respondents contend that the State is required to adopt a policy that sacrifices the lives of at least some of its citizens in order to accommodate the interests of those for whom they advocate. A military commander preparing for battle must accept the inevitability of casualties and develop battle plans designed to keep them to an "acceptable" level. State legislatures, when crafting public policy, should not be constitutionally required to engage in the same calculus.

The compelling nature of the State's interest in protecting the lives of its citizens, combined with the profound impact on at least some of those citizens should Respondents' arguments prevail, demonstrate that the Washington statute passes constitutional muster regardless of which test the Court applies.

D. Respondents Oversimplify The Complexity Of The Task Before The Court

Respondents assert that "[t]he present case is limited to those who seek a humane, hastened death . . . because they are dying and suffering unbearably in the process." Br. Resp'ts at 33. While the "present case" may be limited as Respondents suggest,[17] there is no doubt that recognition of a liberty interest in physician-assisted suicide sufficient to invalidate the Washington statute will generate several more rounds of litigation challenging whatever limits or procedures a State may craft. It is not difficult to imagine

[17] The Ninth Circuit did not see the case as necessarily limited to the mentally competent (App. Pet. Cert. at A-101 n.120), to assisted suicide (as opposed to voluntary euthanasia) (*id.* at A-100), or, for that matter, to physicians (*id.* at A-116 n.140).

this Court being asked to rule on the constitutionality of at least the following:

- whether a particular State's definition of "terminal illness" is too restrictive;
- whether a State's requirement for two, or three, "or an entire committee of physicians" (Br. Amici ACLU at 20 n.30) to verify the patient's condition is too onerous;
- whether a State's standard of determining mental competence unduly limits access to assisted suicide;
- a State's requirement that mental competence be evaluated by a psychiatrist or psychologist;[18]
- a State's requirement for a waiting period between an initial request for physician-assisted suicide and the provision of assistance;[19]
- a State's procedural requirement for consultation with family members;[20]

[18] The Brief Of The Washington State Psychological Association, et al., Amici Curiae In Support Of Respondents, at page 24 note 9, notes such a limitation under the recently approved Oregon Measure 16 and argues that "other mental health professionals, including social workers and professional counselors [with appropriate training] would also be capable of performing such evaluations."

[19] *Cf. Casey*, 505 U.S. at 885-87 (upholding a Pennsylvania twenty-four hour waiting period for obtaining an abortion); *see* Or. Rev. Stat. § 127.840 (requiring two oral requests at least fifteen days apart for life-ending medication before it can be provided); *see also* Br. Amici Curiae Gary Lee, M.D., Supp. Pet'rs at 17 (criticizing the fifteen-day period of the Oregon statute as too narrow).

[20] The guidelines developed by Compassion in Dying, a plaintiff below, specify that "[a]ssistance with suicide will not be provided if there is expressed disapproval by members of the immediate

- a State's requirement that the medication be self-administered;[21]
- whether the limitations suggested by the Respondents—terminal illness, mental competence, even adulthood—are themselves constitutionally defensible.

Respondents suggest that States are able to answer these questions "as an initial matter" (Br. Resp'ts at 35) and "subject to undue burden analysis" (Br. Resp'ts at 42 n.29). That may be true, but it is also inarguable that the final answer to these and other myriad issues raised by the decision below will have to come from this Court, should the statute at issue be struck down as Respondents and their amici argue it should be.

II. THE WASHINGTON STATUTE REFLECTS THE IMPORTANT VALUE OUR SOCIETY PLACES ON PROTECTING AND PRESERVING LIFE

This case, and the issues surrounding it, present no easy answers. In the final analysis, the fulcrum of decision on the issue of physician-assisted suicide is a value judgment between respecting the autonomy of some versus protecting the lives of all. The historic, and current, judgment

---

family." J.A. at 13-14. The court below noted that "a similar requirement by the state would raise constitutional concerns." App. Pet. Cert. at A-90 n.100.

[21] *See Vacco* Br. Resp'ts at 40 n.20 ("any competent individual, however disabled, who is able . . . to *communicate* a voluntary decision to receive life-ending medication could certainly be enabled, through modern technology, to *self-administer* it" (emphasis in original)). *But see* Br. Amici Curiae Gay Men's Health Clinic Supp. Resp'ts at 19 n.9 (acknowledging that some patients would require "the assistance of [their] physician[s] in administering the drug").

reflected in the statute at issue here values the lives of those whom the statute protects over the autonomy of those whose suicides the statute prevents.

Whether that value judgment has changed or should change is a topic of discussion and debate throughout the land. *See* Br. Pet'rs at 9-16. Unless foreshortened by a pre-emptive decision from this Court, this debate will no doubt continue.

As the New York Task Force concluded, a decision in favor of allowing physician-assisted suicide, even in limited form, will do more than change the law. It will change our society.

> "The prohibition against assisted suicide and euthanasia carries intense symbolic and practical significance. While suicide is no longer prohibited or penalized, the ban against assisted suicide and euthanasia shores up the notion of limits in human relationships. It reflects the gravity with which we view the decision to take one's own life or the life of another, and our reluctance to encourage or promote these decisions.
>
> "If assisted suicide and euthanasia are legalized, it will reflect changed attitudes about the practices. Just as significant, it will prompt further change. Social attitudes will evolve in part because our laws convey acceptance and sanction. More far reaching will be the shift in attitude as assisted suicide or direct killing become more frequent and more widely practiced. If the practices become a standard part of the arsenal of medical treatments, it would profoundly affect our response to those cases that are sanctioned and to those that are not. The momentous nature of the actions, and the sense of caution or gravity with which they are pursued,

would naturally lessen for both health care professionals and for the public. By legalizing the practices, we will blunt our moral sensibilities and perceptions." New York State Task Force Report at 131-32.

Such a change in our national attitude about issues of life and death—if there is to be one at all—should manifest itself in the first instance through changes in the laws of the States; it should not be forced upon the Nation through judicial fiat.

III. CONCLUSION

The decision of the United States Circuit Court of Appeals for the Ninth Circuit should be reversed, and the matter remanded with direction to grant summary judgment to the Petitioners.

Respectfully submitted this 27th day of December, 1996.

QUESTION PRESENTED

Whether a state statute that makes it unlawful to aid a person to attempt suicide violates the Due Process Clause insofar as it prohibits a physician from prescribing lethal doses of medication for use by competent, terminally ill persons who request the medication for the purpose of ending their lives.

WASHINGTON, ET AL., PETITIONERS

v.

HAROLD GLUCKSBERG, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE NINTH CIRCUIT

BRIEF FOR THE UNITED STATES AS AMICUS CURIAE SUPPORTING PETITIONERS

INTEREST OF THE UNITED STATES

This case raises the question whether a State may prohibit a physician from prescribing lethal dosages of medication for competent, terminally ill adults who request such medication for the purpose of ending their lives. In holding that the State does not have a sufficient interest to justify such a prohibition, the court of appeals relied on the fact that the State permits terminally ill adults to refuse life-sustaining treatment. Pet. App. A82.

The United States owns and operates numerous health care facilities which permit patients to refuse life-sustaining treatment, but do not permit physicians to assist patients in committing suicide by providing lethal dosages of medication. The Department of Veterans Affairs (VA),

which operates 173 medical centers, 126 nursing homes, and 55 in-patient hospices, has a policy manual that generally permits the withholding and withdrawal of life-sustaining medical treatment in response to a patient's request. In contrast, the manual forbids "the active hastening of the moment of death." Department of Veterans Affairs, Manual M-2, ¶ 31.08(c) (Nov. 1991). Similarly, the VA's hospice program guide states that "[t]he hospice philosophy does not condone nor participate in any action intended to hasten * * * the patient's death." Department of Veteran Affairs, Veterans Health Admin., Program Guide 1140.10: Hospice Program ¶ 1.02(b) (Sept. 1996). The military services, which operate 124 medical centers, the Indian Health Service, which operates 43 hospitals, and the National Institutes of Health, which operate a clinical center, follow a similar practice which is not embodied in writing.

In addition, Pub. L. No. 101-508, § 4206(a)(2), 104 Stat. 1388-115, requires all health care providers receiving Medicaid or Medicare, first, to inform all competent adults about state laws concerning the right of patients to refuse life-sustaining treatment and, second, to record any advance directives the patient might have. 42 U.S.C. 1395cc(f). No federal law, however, either authorizes or accommodates physician assisted suicide. The United States therefore has a substantial interest in the resolution of the question presented in this case.

STATEMENT

1. Under Washington law, a person is guilty of a criminal offense "when he knowingly causes or aids another person to attempt suicide." Wash. Rev. Code § 9A.36.060(1) (1994). A violation of that prohibition constitutes a felony punishable by imprisonment for as long as five years and a fine of up to $10,000. *Id.* §§ 9A.36.060(2), 9A.20.020(1)(c).

Four physicians who treat terminally ill patients, three terminally ill persons (all of whom have since died), and an organization that provides assistance to terminally ill persons filed suit in the United States District Court for the Western District of Washington against the State of Washington and its Attorney General challenging the State's prohibition against assisted suicide. Pet. App. A10. In their complaint, plaintiffs alleged that "[t]he Fourteenth Amendment protects the rights of terminally ill adults with no chance of recovery to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs and thereby avoid pain and suffering." *Id.* at A17 n.7. Plaintiffs sought a declaration that the prohibition against assisted suicide violates the Due Process Clause to the extent that it interferes with the exercise of that asserted right. *Id.* at A17-A18. Plaintiffs also sought a declaration that the Washington statute violates the Equal Protection Clause insofar as it draws a distinction between terminally ill patients who seek lethal doses of medication and terminally ill patients who refuse life-sustaining treatment. *Id.* at A18.

At the time of the filing of the complaint, each of the patient plaintiffs was mentally competent and terminally ill, each was experiencing severe pain or suffering, and each had made a voluntary decision to hasten his or her death by seeking lethal doses of medication. Pet. App. E3-E4. Jane Roe, a doctor, was suffering from cancer that had metastasized throughout her body; she was bedridden; she experienced constant pain which became especially sharp and severe when she moved; medication could not fully alleviate her pain; and she suffered from swollen legs, bed sores, poor appetite, nausea, vomiting, impaired vision,

incontinence of bowel, and general weakness. *Id.* at E3. John Doe, an artist, was dying of AIDS; he had already suffered twice from pneumonia; he had severe skin and sinus infections; he suffered from grand mal seizures and extreme fatigue; and he was destined to lose all of his vision. *Id.* at E3-E4. James Poe, a retired sales representative, suffered from emphysema; his condition caused him a constant sensation of suffocating; he was connected to an oxygen tank at all times; he regularly took morphine to calm the panic reaction associated with his feeling of suffocation; and he suffered from severe leg pain. *Id.* at E4. Based on their professional judgments, the four physician plaintiffs all believe that they should prescribe life-ending medication for competent, terminally ill patients who request such medication for the purpose of hastening their deaths. *Id.* at E7. They have been deterred from doing so, however, by the statutory prohibition against assisted suicide. *Ibid.*

On cross-motions for summary judgment, the district court ruled in plaintiffs' favor. Pet. App. E1-E29. The court held that the prohibition against assisted suicide unduly burdens the Fourteenth Amendment right of competent, terminally ill persons to hasten their deaths. *Id.* at E28-E29. The court also held that the prohibition violates the Equal Protection Clause insofar as it distinguishes between terminally ill patients who seek to end their lives through lethal doses of medication and terminally ill patients who seek to end their lives by refusing life-sustaining treatment. *Id.* at E29.

2. a. A divided court of appeals panel reversed. Pet. App. D1-D27. Judge Noonan, joined by Judge O'Scannlain, concluded that the prohibition against assisted suicide does not violate either the Due Process Clause or the Equal Protection Clause. *Id.* at D11-D20. The majority concluded that there is no liberty interest in obtaining

assistance for suicide, that the prohibition against assisted suicide is justified by several legitimate state interests, including the State's interest in preserving life, and that the distinction between assisted suicide and the refusal of life-sustaining treatment is not irrational. *Ibid.* Judge Wright dissented. *Id.* at D20-D27.

b. On rehearing en banc, the court of appeals affirmed the district court's judgment. Pet. App. A1-A164. By an 8-3 vote, the court of appeals held that the prohibition against assisted suicide violates the Due Process Clause of the Fourteenth Amendment "as applied to the prescription of life-ending medication for use by terminally ill, competent adult patients who wish to hasten their deaths." *Id.* at A19-A20.

The court began its analysis by holding that there is a constitutionally protected "liberty interest in choosing the time and manner of one's death." Pet. App. A21. The court drew that conclusion primarily from this Court's decision in *Planned Parenthood* v. *Casey*, 505 U.S. 833 (1992). The court of appeals specifically relied on the statement in *Casey* that "matters[] involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment." *Id.* at 851. The court of appeals reasoned that "[l]ike the decision of whether or not to have an abortion, the decision how and when to die is one of 'the most intimate and personal choices a person may make in a lifetime,' a choice 'central to personal dignity and autonomy.'" Pet. App. A57. The court therefore concluded that "[a] competent terminally ill adult, having lived nearly the full measure of his life, has a strong liberty interest in choosing a dignified and humane death rather than being reduced at the end of his existence to a childlike state of helplessness, diapered, sedated, incontinent." *Ibid.*

The court of appeals also viewed *Cruzan* v. *Director, Missouri Department of Health*, 497 U.S. 261 (1990), as persuasive authority for its conclusion that there is a liberty interest in determining the timing of one's death. Pet. App. A62. "[B]y recognizing a liberty interest that includes the refusal of artificial provision of life-sustaining food and water," the court of appeals concluded, *Cruzan* "necessarily recognizes a liberty interest in hastening one's own death." *Ibid.*

Having found a protected liberty interest, the court proceeded to "a balancing test under which * * * the individual's liberty interests [are weighed] against the relevant state interests." Pet. App. A22. After assessing the interests asserted by the State, the court concluded that they do not justify a blanket prohibition against prescribing life-ending medication for use by competent, terminally ill patients. *Id.* at A63-A114.

The court concluded that, although preserving life "is one of the [S]tate's important functions," that interest "is dramatically diminished if the person [the State] seeks to protect is terminally ill * * * and has expressed a wish that he be permitted to die." Pet. App. A72. The court acknowledged that the State has "a clear interest in preventing anyone, no matter what age, from taking his own life in a fit of desperation, depression, or loneliness or as a result of any other problem, physical or psychological, which can be significantly ameliorated." *Id.* at A73. The court concluded, however, that the State's interest in preventing such occurrences is diminished in the case of terminally ill patients who wish to die, because "the decision to commit suicide [by such persons] is not senseless, and death does not come too early." *Id.* at A74. Finally, while the court acknowledged that the State has an "important" interest in preventing decisions to end life that result from "undue * * * influence[]" by family

members and physicians, *id.* at A84, the court concluded the State should address that "real" concern through procedural safeguards, rather than through a complete ban on assisted suicide, *id.* at A86-A89, A102-A103. The court concluded that "[b]y adopting appropriate, reasonable, and properly drawn safeguards Washington could ensure that people who choose to have their doctors prescribe lethal doses of medication are truly competent and meet all the requisite standards." *Id.* at A103.

Judge Beezer filed a dissenting opinion. Pet. App. A118-A160. He concluded that mentally competent, terminally ill adults have "an autonomy-based, nonfundamental liberty interest in committing physician-assisted suicide," *id.* at A139, and that the relevant inquiry is therefore whether the State's prohibition against assisted suicide "rationally advances some legitimate governmental purpose," *id.* at A155. Judge Beezer concluded that the Washington statute satisfies that standard because it "rationally advances four legitimate governmental purposes: preserving life, protecting the interests of innocent third parties, preventing suicide and maintaining the ethical integrity of the medical profession." *Id.* at A119. Judges Fernandez and Kleinfeld joined Judge Beezer's opinion, and each also wrote a separate opinion. *Id.* at A160-A164. Judge Fernandez expressed the view that "no one has an even nonfundamental *constitutional right*" to commit suicide. *Id.* at A160. Judge Kleinfeld saw no need "to decide whether suicide is a constitutionally protected right" because Washington "has a rational basis for preventing assisted suicide." *Id.* at A162.

c. The full Ninth Circuit was polled, but declined to rehear the case. Pet. App. C1-C2. Three judges dissented from the order rejecting the request for rehearing en banc by the full court. *Id.* at C2-C26.

SUMMARY OF ARGUMENT

The State's prohibition against assisted suicide does not violate the Due Process Clause.

A. A competent, terminally ill adult has a constitutionally cognizable liberty interest in avoiding the kind of suffering experienced by the plaintiffs in this case. That liberty interest encompasses an interest in avoiding not only severe physical pain, but also the despair and distress that comes from physical deterioration and the inability to control basic bodily or mental functions in the terminal stage of an illness.

This Court's cases make clear that, when the State itself inflicts severe pain or suffering on someone, a liberty interest is implicated. *Ingraham* v. *Wright*, 430 U.S. 651, 674 (1977); see also *Hudson* v. *McMillian*, 503 U.S. 1, 9-10 (1992). A similar liberty interest is implicated when severe pain or suffering is caused by an illness, but the State compels a person to remain in that condition by prohibiting access to medication that would relieve that pain or suffering. See *Planned Parenthood* v. *Casey*, 505 U.S. 833, 852 (1992).

Although *Cruzan* v. *Director, Missouri Department of Health*, 497 U.S. 261 (1990), involves a liberty interest of greater magnitude, it supports the conclusion that a liberty interest is at stake in this case. *Cruzan* holds that the core liberty interest in avoiding medical treatment through bodily invasions is implicated even when the treatment is life-sustaining and its withdrawal would likely lead to a person's death. 497 U.S. at 279. By a parity of reasoning, the liberty interest at issue here is still implicated at the point at which avoiding severe pain or suffering and ending life coalesce.

While there is a liberty interest at stake in this case, the court of appeals erred when it equated the right to

choose an abortion with that interest. The right to choose an abortion implicates a constellation of liberty and equality rights of fundamental importance that are not implicated here.

B. Overriding state interests justify the State's decision to ban physicians from prescribing lethal medication. The State has an interest of the highest order in prohibiting its physicians from assisting in the purposeful taking of another person's life. The view that there should be an exception to the State's general policy of protecting life for cases in which a competent, terminally ill adult voluntarily requests life-ending medication strikes a responsive chord in many people. At this point in history, however, a State could responsibly conclude that creating such an exception would endanger persons who are not competent to seek lethal medication, persons whose decision to seek lethal medication is not truly voluntary, or those persons who are not in fact terminally ill. The difficulty that physicians have in determining whether requests for assisted suicide come from patients with treatable pain or depression, the vulnerability of terminally ill patients to subtle influences from physicians, family members, and others, and the continuing possibility that someone can be misdiagnosed as terminally ill all support a State's decision to ban all assisted suicides.

The State's interest is not lessened by the fact that the State permits competent, terminally ill adults to refuse life-saving medical treatment. There is an important and common-sense distinction between withdrawing artificial supports so that a disease will progress to its inevitable end, and providing chemicals to be used to kill someone. The imposition of life-saving medical treatment, which often involves highly invasive equipment and procedures, is also a more serious interference with personal liberty. In addition, the risks involved in honoring a person's re-

quest to refuse treatment are far less extensive than the dangers involved in permitting physicians to prescribe lethal medication. Thus, while there is a constitutional right to refuse treatment that the State cannot override, there is no corresponding constitutional right to obtain access to lethal medication.

The difficulty that the State would have drawing any line that is more reasonable than the current line reinforces that conclusion. Once a State decides to create an exception to its prohibition against assisted suicide, there is no obvious stopping point.

State legislatures undoubtedly have the authority to create the kind of exception to assisted suicide fashioned by the court of appeals. But there is no constitutional basis for imposing that exception on all the States. Because terminal illness potentially affects all Americans—all races, both genders, and every income group—there is every reason to believe that state legislatures will address the urgent issues involved in this case in a fair and impartial way.

ARGUMENT

THE STATE'S PROHIBITION AGAINST ASSISTED SUICIDE DOES NOT VIOLATE THE DUE PROCESS CLAUSE

This case requires the Court to determine the scope of the protection afforded by the Due Process Clause, which provides that no State may "deprive any person of life, liberty, or property, without due process of law." U.S. Const. Amend. XIV. The Due Process Clause has a substantive as well as a procedural component: it not only imposes procedural safeguards against the arbitrary deprivation of life, liberty, or property, but also "bar[s] certain government actions regardless of the fairness of

the procedures used to implement them." *Daniels* v. *Williams*, 474 U.S. 327, 331 (1986).

The Due Process Clause incorporates most of the rights protected by the Bill of Rights, *Duncan* v. *Louisiana*, 391 U.S. 145, 147-148 (1968), as well as certain common law rights that were protected at the time the Fourteenth Amendment was adopted. See *Cruzan* v. *Director, Missouri Department of Health*, 497 U.S. 261, 269-279 (1990). But "[n]either the Bill of Rights nor the specific practices of States at the time of the adoption of the Fourteenth Amendment marks the outer limits of the substantive sphere of liberty which the Fourteenth Amendment protects." *Planned Parenthood* v. *Casey*, 505 U.S. 833, 848 (1992). See *Roe* v. *Wade*, 410 U.S. 113, 152-153 (1973); *Loving* v. *Virginia*, 388 U.S. 1, 12 (1967); *Griswold* v. *Connecticut*, 381 U.S. 479, 481-482 (1965); *Pierce* v. *Society of Sisters*, 268 U.S. 510, 534-535 (1925); *Meyer* v. *Nebraska*, 262 U.S. 390, 399-403 (1923). This Court has recently stated that the task of defining the sphere of autonomy and personal dignity encompassed within the meaning of "liberty" ultimately requires a reliance on "reasoned judgment." *Casey*, 505 U.S. at 849.

The recognition of an interest as one encompassed within the meaning of the term "liberty" is a crucial first step in deciding whether a state policy violates substantive due process. The acknowledgement that a particular interest qualifies as a liberty interest for purposes of the Due Process Clause, however, does not invariably lead to the conclusion that the State is powerless to interfere with that interest. The question whether a statutory restriction on "liberty" violates the Constitution must be determined by assessing whether the State has an adequate justification for overriding the liberty interest at issue. The strength of the justification that is required depends upon the nature and character of the liberty

interest. *Cruzan*, 497 U.S. at 279 (liberty interest in refusing medical treatment must be balanced against the relevant state interests); *Williamson* v. *Lee Optical of Ok., Inc.*, 348 U.S. 483, 491 (1955) (state restriction affecting a person's ability to engage in a business must merely be rationally related to a legitimate government purpose); *Reno* v. *Flores*, 507 U.S. 292, 301-302 (1993) (infringement on certain fundamental liberty interests must be narrowly tailored to serve a compelling interest).

A. A Competent, Terminally Ill Adult Has A Liberty Interest In Obtaining Relief From Severe Pain Or Suffering

1. " 'Substantive due process' analysis must begin with a careful description of the asserted right." *Flores*, 507 U.S. at 302. The complaint in this case alleged that "[t]he Fourteenth Amendment protects the rights of terminally ill adults with no chance of recovery to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs and thereby avoid pain and suffering." Pet. App. A17 n.7. We do not agree that this Court's decisions support the conclusion that there is a broad liberty interest in deciding the timing and manner of one's death. The term "liberty" in the Due Process Clause, however, is broad enough to encompass an interest on the part of terminally ill, mentally competent adults in obtaining relief from the kind of suffering experienced by the plaintiffs in this case, which includes not only severe physical pain, but also the despair and distress that comes from physical deterioration and the inability to control basic bodily and mental functions.

2. This Court's cases leave no doubt that when the State itself inflicts severe pain or suffering on someone, a liberty interest is implicated. *Ingraham* v. *Wright*, 430

U.S. 651, 674 (1977); see also *Hudson* v. *McMillian*, 503 U.S. 1, 9-10 (1992). A liberty interest is also implicated when severe pain or suffering is caused by an illness, but the State compels a person to remain in that condition by prohibiting access to medication that would alleviate that condition. For example, in the absence of a subordinating government interest, a State could not prevent a person in extreme pain from obtaining from a qualified physician a medication demonstrated to be safe and effective in alleviating pain. Similarly, the State could not deny to persons suffering from severe and chronic depression access to safe and effective drugs that would relieve that debilitating condition. When the effect of a state prohibition is to prevent a person from ameliorating severe suffering, the State interferes with a liberty interest protected by the Due Process Clause. See *Casey*, 505 U.S. at 852 (among many other things, a prohibition on abortion interferes with a woman's liberty interest in avoiding potential physical and mental suffering associated with unwanted pregnancy and government-compelled childbirth).

3. *Cruzan* supports the conclusion that a liberty interest is at stake in this case. In *Cruzan*, the Court addressed the question whether the term "liberty" includes an interest in refusing medical treatment, even when the treatment is life-sustaining and its withdrawal would likely lead to a person's death. The Court noted that its prior decisions had established that a competent person has a liberty interest in refusing medical treatment, and it concluded that "the logic of th[ose] cases * * * would embrace a liberty interest" in refusing "the forced administration of life-sustaining medical treatment, and even of artificially delivered food and water essential to life." 497 U.S. at 279. The Court added that "[t]he choice between

life and death is a deeply personal decision of obvious and overwhelming finality." *Id.* at 281.

Although this case does not involve a liberty interest of the magnitude of that at stake in *Cruzan*—avoiding invasions of bodily integrity—it nonetheless implicates a significant liberty interest: avoiding severe pain or suffering. The lesson of *Cruzan* is that once such a liberty interest is acknowledged to exist, it persists even at the point at which avoiding severe pain and suffering coalesces with ending life. That "dramatic consequence[]" is taken into account in deciding whether the State's interest outweighs the interference with liberty. 497 U.S. at 279.

4. We disagree with the court of appeals' equation of the right to choose an abortion with the liberty interest at stake in this case. Pet. App. A56-A57. The fundamental right to choose an abortion rests on a combination of constitutionally protected interests, of which avoiding the pain and suffering associated with being forced to continue an unwanted pregnancy is but one part. A prohibition on abortion interferes with personal autonomy in an extremely consequential way: by forcing a woman to continue an unwanted pregnancy, the State requires a woman to undertake the birth of, and responsibility for, another person in a way that has no counterpart in our laws. The decision whether to have a child has life-long spiritual, moral, psychological, and legal consequences for both the woman and any child she may bear. The bearing of an unwanted child is fraught with the potential for "cruelty to the child" and "anguish to the parent." *Casey*, 505 U.S. at 853.

The right to choose an abortion, moreover, stands at the intersection of constitutional liberty and constitutional equality. "Requiring women to bear unwanted children threatens to lock them into a traditional and subordinate role, embodies assumptions about their inability to make

autonomous moral choices, and burdens women as a group with obligations that have no counterpart in the burdens that the State demands from men." Seth F. Kreimer, *Does Pro-Choice Mean Pro-Kevorkian? An Essay On Roe, Casey, And The Right To Die*, 44 Am. U.L. Rev. 803, 849 (1995) (Kreimer). There is therefore a profound equal protection dimension to the right to choose an abortion that is wholly absent here. See *Casey*, 505 U.S. at 852 (stating that a woman's "suffering is too intimate and personal for the State to insist, without more, upon its own vision of the woman's role, however dominant that vision has been in the course of our history and our culture"); *id.* at 856 ("The ability of women to participate equally in the economic and social life of the Nation has been facilitated by their ability to control their reproductive lives."). The right to choose an abortion thus implicates the liberty of a woman "in a sense unique to the human condition and so unique to the law." *Id.* at 852.

Because the right to choose an abortion implicates a constellation of liberty and equality rights of fundamental constitutional importance, the court of appeals erred in equating the right at issue in this case with that right. There is nonetheless, for the reasons we have discussed, a liberty interest at stake in this case: a State may not, without adequate justification, prevent a person from obtaining relief from severe suffering.

5. The conclusion that a liberty interest is at stake in this case cannot be avoided by the assertion that terminally ill patients can receive relief from their pain without taking lethal doses of medication. There are some few patients whose pain cannot be alleviated.[1] There is,

---

[1] While most terminally ill persons can obtain relief from extreme pain through palliative treatment, studies show that an "irreducible core of patients are trapped in physical agony (if they are awake)."

moreover, suffering beyond physical pain for some in the terminal stages of illness. A patient in the terminal phase of a disease may suffer from several serious conditions that may not be fully treatable, including the constant sensation of suffocation, the inability to sleep, the loss of appetite, and nausea. New York State Task Force Report on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* 40-41 (1994) (*Task Force Report*); Pet. App. E3-E4. Most important, perhaps, the inability to exercise control over bodily or mental functions can itself be a source of great despair. A constitutionally protected liberty interest is at stake for all these persons.

B. Overriding State Interests Justify The State's Decision To Ban Physicians From Prescribing Lethal Medication

As previously discussed, the question of whether an individual's constitutional rights have been violated must be determined by assessing whether the interests asserted by the State in support of a restriction on liberty override the individual's interest in liberty. In some contexts, a State may justify an interference with liberty by offering no more than a rational and legitimate justification. *Williamson*, 348 U.S. at 491. In other circumstances, the State must show that any restriction is narrowly tailored to further a compelling interest. *Flores*,

---

Kreimer, 44 Am. U.L. Rev. at 831 & n.93 (pain can be effectively controlled in up to 90% of all cancer patients); The New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* 40 & n.18 (1994) (pain can be effectively controlled in 90%-95% of all cases; in the remaining cases, the reduction of pain would require sedation into a sleep-like state, an option that is considered only in the last days or weeks of a person's life).

507 U.S. at 301-302. And in still other contexts, an intermediate standard is applied in which the individual's "liberty interests" are "balance[d] * * * against the relevant state interests." *Cruzan*, 497 U.S. at 279; *Youngberg* v. *Romeo*, 457 U.S. 307, 321 (1982). For reasons discussed, pp. 24-25, *infra*, there are important differences between the liberty interest in refusing medical treatment recognized in *Cruzan* and the interest in avoiding severe pain or suffering at issue here. Nonetheless, the interest in avoiding the suffering or pain of terminal illness may be sufficiently analogous to the interest in refusing medical treatment to justify the application of the same legal standard for determining whether the State's interests are overriding. Measured by that standard, the state interests supporting the ban on assisted suicide are sufficient to justify the limitation on liberty embodied in that prohibition.

1. The State of Washington does much to accommodate the liberty interest of a competent, terminally ill adult in obtaining relief from severe pain or suffering. The State permits terminally ill, competent adults to refuse unwanted medical treatment when it is offered and to order the withdrawal of such treatment if it has already begun. Wash. Rev. Code §§ 70.122.010-70.122.030 (1994). Equally important, the ethical standards of the medical community have long permitted physicians to prescribe medication in sufficient doses to relieve pain, even when the necessary dose will hasten death. AMA Council on Ethical and Judicial Affairs, *Code of Medical Ethics: Current Opinions* § 2.20 (1989). So long as the physician's intent is to relieve pain, and not to cause death, such treatment does not violate the ethical standards of the medical community. *Ibid.* The question presented in this case is whether the State is constitutionally required to take the additional step of permitting physicians to prescribe lethal medica-

tion for competent, terminally ill adults, when the acknowledged purpose of the prescription is to end the patient's life.

2. As a general matter, the State unquestionably has an interest of the highest order in prohibiting its physicians from assisting in the purposeful taking of another life. "[T]he States—indeed all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan*, 497 U.S. at 280. In addition, the Due Process Clause itself "protects an interest in life" as well as an interest in obtaining relief from pain and suffering. *Id.* at 281. The question is whether the Constitution requires a State to make an exception to its general policy of protecting life in the class of cases in which a competent, terminally ill adult voluntarily requests life-ending medication in order to obtain relief from severe pain or suffering. The case for such an exception strikes a responsive chord in many people.

Responsible and fair-minded legislators, however, must not only concern themselves with the effect that a prohibition against assisted suicide will have on the class of persons identified by the court of appeals. They must also concern themselves with the effects that creating an exception to that prohibition would have on others. One difficult question for lawmakers, including those who believe that the prescription of life-ending medication is defensible in some circumstances, is whether an exception can be created for persons like the plaintiffs in this case without endangering the lives of many other persons who do not satisfy the criteria specified by the court of appeals. The State must attempt to decide, in the face of much uncertainty, whether the creation of an exception to its

prohibition against providing lethal medication for the competent, terminally ill adults who voluntarily request the assistance will lead to the deaths of many persons who are not competent, who are not terminally ill, and who do not make truly voluntary requests for assistance. At this point in our history, there is little doubt that a legislature may responsibly decide that making lethal medication available for some "would create widespread and unjustified risks for many others." *Task Force Report* at 135. A State therefore may conclude that it has an overriding interest in maintaining a prohibition against all assisted suicides.[2]

a. One special source of concern is that terminally ill persons who contemplate suicide often suffer from undiagnosed depression and inadequately treated pain. *Task Force Report* at 126-128. In most cases, once appropriate treatment is provided, the desire for suicide abates. As explained in the *Task Force Report*, "[g]iven access to appropriate relief from pain and other debilitating symptoms, many of those who consider suicide during the course of a terminal illness abandon their desire for a quicker death in favor of a longer life made more tolerable with effective treatment." *Id.* at 120-121.

It is perhaps possible to posit a world in which physicians who treat terminally ill patients could readily distinguish between requests for suicide that stem from treatable depression and pain and requests that are based

---

[2] This Court therefore need not decide, in the abstract, whether the State has an overriding interest in protecting the life of a competent, terminally ill adult who makes a voluntary decision to seek lethal medication in order to alleviate severe pain or suffering that is not treatable. That question would have to be decided only if it were clear that creating an exception from the prohibition against assisted suicide for such persons would not lead to the deaths of other persons whom the State has an unquestionable interest in protecting.

on severe pain and suffering that is not treatable. But "the reality of existing medical practice in doctors' offices and hospitals * * * cannot match th[ose] expectations." *Task Force Report* at 120. The truth is that physicians often fail to detect treatable depression in terminally ill patients and that they undermedicate persons in pain. *Id.* at 127-128. Any exception to the ban on assisted suicide therefore runs a very significant risk that persons with treatable depression and pain will be allowed to commit suicide. A State has an overriding interest in avoiding that risk and in protecting persons who would want to remain alive if provided with the appropriate treatment. That interest is directly implicated here, and the State could responsibly conclude that the appropriate way to serve that interest is by continuing to prohibit all assisted suicides.

b. Another area of concern is that terminally ill patients are often extremely vulnerable and susceptible to influence by physicians, family members, and others on whom they depend for support. A terminally ill person may have a strong desire to remain alive. But if that person perceives that those around him disapprove of that choice, it may be difficult to remain steadfast in that choice. The problem is even greater if the patient begins without a strong resolve to cling to life. The point is not that physicians or family members will attempt to coerce persons into committing suicide, although there may be some cases of that. The real dangers are much more subtle and extremely difficult to monitor and address.

For example, physicians may offer lethal medications based on their own judgments concerning the quality of the person's life and their own belief that any rational person in that condition would want assistance in committing suicide. *Task Force Report* at 124-125. Physicians may readily accept a person's request for suicide,

rather than offering emotional support for a decision to remain alive because of their "own frustration in situations when medicine can provide care but not cure." *Id.* at 123. Pressures to cut costs can also affect judgment. When the choice is between suicide and an expensive and prolonged course of treatment, physicians may feel pressured to suggest the former. *Ibid.* "Particularly with the emergence of cost controls and managed care in the United States, the danger of tempting health care providers to persuade chronic patients to minimize costs by ending it all painlessly is no fantasy." Kreimer, 44 Am. U.L. Rev. at 841.

Many terminally ill patients are under the care of physicians with whom they have personal relationships, and many of those physicians have the time, energy, and sensitivity to help patients who request assisted suicide in making a truly voluntary decision about their treatment options. Such physicians know that terminally ill patients often voice a desire to commit suicide as a way of seeking confirmation that there is still value to their lives. *Task Force Report* at 128. And when physicians affirm that the patient's life continues to be valued and devote the necessary time to bring that point home, patients often respond with a renewed sense of purpose. *Id.* at 129. In the real world, however, patients do not always receive advice from sensitive and caring physicians. That advice also comes from doctors who are "harried," who are "uncomfortable talking about dying," who are "unable to distinguish their views from the values and needs of their patients," or who are dealing with patients "with whom they have had little contact and for whom they hold no hope of recovery." *Id.* at 130.

The involvement of family members in decisions about a terminally ill relative presents a very different set of concerns. Providing care and support to a terminally ill fam-

ily member can exact an enormous financial and emotional toll. *Task Force Report* at 124. Undertandably, some family members, at some point, may hope that a lingering illness that has left a loved one in a debilitated state will come to a quick end. "Close family members may have a strong feeling—a feeling not at all ignoble or unworthy, but not entirely disinterested, either—that they do not wish to witness the continuation of the life of a loved one which they regard as hopeless, meaningless, and even degrading." *Cruzan*, 497 U.S. at 286. Even those determined to keep such thoughts to themselves can have difficulty hiding their true feelings from the ones they love. Those who are terminally ill may come to feel that their only real choice is to comply with the unstated wishes of their family members by seeking a lethal prescription. *Task Force Report* at 124.

c. Another difficulty with permitting doctors to prescribe lethal drugs for terminally ill patients is that illnesses can be misdiagnosed as terminal. In fact, "[a] surprising number of people have had the experience of being misinformed that they had a terminal illness." Richard A. Posner, *Aging and Old Age* 245 (1995) (Posner). If the State were to create an exception to its ban on assisted suicide for terminally ill adults, such a misdiagnosis could have tragic consequences. That is particularly true in cases in which lethal medication has been sought by persons only because they were mistakenly informed that they were suffering from a terminal disease. The State has an overwhelmingly strong interest in preventing such tragedies from occurring.

d. The court of appeals acknowledged the State's important interest in protecting the lives of those who do not really wish to die, but who request lethal drugs from their doctors because of real or perceived pressure from others to choose death. Pet. App. A84. The court concluded, however, that the State should address that concern through procedural safeguards. *Id.* at A102-A103. A State is not constitutionally precluded from attempting to deal with the issue of voluntariness through procedural safeguards. But a State could also fairly decide that, in light of the special vulnerability of terminally ill patients and the many subtle ways in which physicians and family members can influence them, a scheme of procedural safeguards would not be effective in ensuring that choices about death are truly voluntary. To prevent the very real danger that persons who want to live will feel unduly pressured to choose death, the State may decline to give its imprimatur to physician assisted suicides through lethal medications.

In gauging the strength of a State's interest in enacting a categorical ban on assisted suicide in order to protect the lives of persons outside the class of persons described by the court of appeals, it is useful to examine the experience of the Netherlands. In that country, doctors are not subject to legal sanctions for assisting suicide where the patient's request is persistent and voluntarily made, where the patient's condition is beyond recovery or amelioration, and where the doctor has consulted with a colleague to ensure that the relevant criteria have been satisfied. Burial and Cremation Act, Stb. § 10 App. (1994); see also Carlos F. Gomez, *Regulating Death: Euthanasia and the Case of the Netherlands* 25-44 (1991). All physician assisted deaths must also be reported. Burial and Cremation Act, Stb. § 10 (1994).

A recent study shows that those procedural safeguards have not worked. In 1990, more than one-half of assisted deaths were not even reported. Yale Kamisar, *Against Assisted Suicide—Even A Very Limited Form*, 72 U. Det. L. Rev. 735, 752 (1995) (Kamisar). More troubling, there were 1000 cases in which physicians had taken the

patient's life without having received an explicit request. *Ibid.*

There are dangers in relying too heavily on the experience of another country in predicting what would happen if physician assisted suicide were permitted in this country. But the Netherlands experience is the only test thus far of whether procedural safeguards can adequately protect the State's interest in protecting the lives of those who fall outside the class of persons described by the court of appeals.

3. As we demonstrate more fully in our amicus brief in *Vacco* v. *Quill*, No. 95-1858, the strength of the State's interest in this case is not diminished by the fact that the State permits competent, terminally ill adults to refuse life-saving treatment. There are important distinctions between the two. First, there is a very significant distinction between removing artificial supports—and thereby allowing the underlying disease to progress to its inevitable end—and providing chemicals to kill someone. In one case, the cause of death can reasonably be viewed as the underlying disease; in the other, the cause of death can only be viewed as the lethal medication. That important, common-sense distinction is reflected in the laws of at least 40 states that permit the withdrawal of life-sustaining treatment, but prohibit the prescription of lethal drugs. Compare Pet. App. A68 & n.77 (listing States that permit the withdrawal of life-sustaining treatment) with *id.* at A135-A136 & nn.10-12 (listing States that prohibit assisted suicide). The distinction may not be completely satisfying in all of its applications, but it is entirely logical in the vast majority of cases.

The imposition of life-saving treatment also involves a significantly more serious interference with personal liberty than a prohibition against lethal prescriptions. To force upon an unwilling patient artificial, invasive means

of life-support is not only to transgress the "sacred * * * right of every individual to the possession and control of his own persons," *Cruzan*, 497 U.S. at 269 (quoting *Union Pac. Ry.* v. *Botsford*, 141 U.S. 250, 251 (1891), but to force upon the patient a condition of total physical dependence in which his bodily existence may be literally taken over by machines.

As in the case of physician-provided lethal medications, there are risks that extending a right to refuse life-sustaining treatment to competent, terminally ill persons who voluntarily request it may endanger the lives of persons outside that class. But the risks are significantly less serious in both kind and degree. The prescription of life-ending drugs leaves no opportunity to correct a misdiagnosis of terminal illness. In contrast, when life-sustaining treatment is withdrawn, certain death does not follow if the diagnosis of terminal illness is mistaken. More important, the class of persons at risk of making a decision that is not competent or truly voluntary when a State recognizes a right to refuse treatment is self-limiting: the risk extends only to those who would die without treatment—many of whom are in hospitals or nursing homes. While that is not an insignificant number of people, permitting assisted suicide would extend that risk to a much larger group of persons in circumstances that may be much more difficult to monitor.

Thus, there are constitutionally significant differences between refusing medical treatment and obtaining lethal medication. Accordingly, while competent, terminally ill adults have a constitutional right to refuse life-saving medical treatment that the State may not override, see *Casey*, 505 U.S. at 857, we believe that such persons have no corresponding constitutional right to obtain lethal medication. In the latter context, in our view, a State may decide that its interests are overriding.

4. Once a legislature abandons a categorical prohibition against physician assisted suicide, there is no obvious stopping point. Indeed, "[m]ost proposals to legalize assisted suicide have rejected terminal illness as the dividing line because it would not respond to many circumstances that can cause the same degree o[f] pain and suffering." *Task Force Report* at 132. Once the exception is expanded to anyone who suffers from severe pain and suffering, however, it may become difficult to contain effectively. *Ibid.*

Moreover, once a categorical prohibition against prescribing lethal medication to assist suicide is lifted, it may be difficult to justify a categorical prohibition against permitting physicians to administer lethal medication themselves (usually referred to as active euthanasia). When a person experiencing severe pain or suffering requests life-ending medication, but is physically unable to take the medication himself, active euthanasia is the only possible way to satisfy his request. Timothy Quill, a leading advocate of physician assisted suicide and a respondent in the New York case presently before the Court (No. 95-1858), initially opposed active euthanasia on the ground that it created unacceptable risks of abuse not present when the final act is solely the patient's. Kamisar, 72 U. Det. L. Rev. at 747-748. Two years later, however, Dr. Quill changed his mind, arguing that a prohibition against physician administered life-ending medication unfairly discriminates against patients with unrelievable suffering who resolve to end their lives but are physically unable to do so. *Id.* at 748. The court of appeals in this case similarly noted that any distinction between a physician prescribing lethal medication and a physician administering such medication would be difficult to maintain. Pet. App. A100-A101.

The extraordinary difficulty in drawing fully defensible lines in this area is significant. The line between withdrawing life-saving treatment and providing lethal medication may not be fully satisfactory in all of its applications. But it is at least as reasonable as any other line that could be drawn. In such circumstances, there is no basis for a court to invalidate the line drawn by the State.

5. When a State seeks to reconcile the liberty interests of some people with the risk of death to others, it must be given some latitude in drawing the appropriate line. See *Youngberg*, 457 U.S. at 320, 322-323. That is particularly true in this context, where there is every reason to believe that the state legislatures will address the competing interests in an impartial and unbiased way. Posner at 260-261.[3] Terminal illness does not single out any discrete or insular minority; it potentially affects all Americans—all races, both genders, and every income group. All legislators must face the possibility that they will one day suffer from a terminal illness; there are no immunities from that fate. There is, in sum, no constitutional basis for preempting the continuing legislative reexamination of the urgent issues involved in this case.

---

[3] States have begun to consider anew the issue of physician assisted suicide, and there is no indication that the political processes are malfunctioning. Voters in the State of Oregon approved a ballot initiative permitting physician assisted suicide in November 1994. Pet. App. A49. Initiatives in California and Washington were rejected, but they were supported by 46% of the voters. *Ibid.* And "[p]roposals to permit physician-assisted suicide have also been introduced in Iowa, Maine, Michigan, and New Hampshire." *Id.* at A49 n.52.

CONCLUSION

The judgment of the court of appeals should be reversed.

Respectfully submitted.

INTEREST OF THE *AMICI* STATES..... 1

SUMMARY OF ARGUMENT 3

ARGUMENT..... 6

I. THERE IS NO LIBERTY INTEREST UNDER THE DUE PROCESS CLAUSE OF THE FOURTEENTH AMENDMENT TO COMMIT SUICIDE OR ASSISTED SUICIDE..... 6

A. The Ninth Circuit's Constitutional Analysis Was Fundamentally Flawed At The Threshold By Its Failure To Carefully Identify The Specific Conduct At Issue..... 7

B. The Ninth Circuit's Discovery Of New Liberty Interests In Suicide And Assisted Suicide Is Not Supported By The Plain Language Or *Design* Of The Due Process Clause..... 10

C. Opposition to Suicide and Assisted Suicide Is Deeply Rooted In This Nation's History And Tradition 12

D. Suicide And Assisted Suicide Are Not Implicit In The Concept Of Ordered Liberty Such That Neither Liberty Nor Justice Would Exist If They Were Sacrificed 16

E. The New Liberty Interests In Suicide And Assisted Suicide Discovered By The Ninth Circuit Cannot Be Limited To Terminally-Ill, Mentally Competent Adults..... 24

TABLE OF CONTENTS – Continued

Page

II. RELEVANT STATE INTERESTS CLEARLY OUTWEIGH ASSERTED INTERESTS IN SUICIDE AND ASSISTED SUICIDE 26

III. THE DECISION BELOW SHOULD BE REVERSED IN ORDER TO REAFFIRM THE ESSENTIAL ROLE OF THE STATES IN OUR FEDERAL SYSTEM OF GOVERNMENT AND THE POWER OF THE PEOPLE TO DIRECTLY GOVERN THEIR OWN AFFAIRS 29

CONCLUSION 30

INTEREST OF THE *AMICI* STATES

Over a century ago, this Court, describing the dual sovereignty of the States and Federal Government, declared that:

> The preservation of the States, and the maintenance of their governments, are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States.[1]

Respect for state sovereignty and the power of the people to directly govern their own affairs, unless excluded by the Constitution or valid Act of Congress, is the embodiment of our federalism.[2] It is this understanding of federalism which ensured ratification of the Constitution and which safeguards the essential role of the States in our federal system. There have been few cases in which this understanding of federalism has been disregarded as completely as in the case below.

In the history of our Nation, no court of final jurisdiction has ever declared the existence of a constitutional right or interest to commit suicide or assisted suicide.[3] However, in a radical departure from our Nation's history and tradition, and contrary to the laws of an overwhelming majority of States, the Ninth Circuit has announced its discovery of new rights to commit suicide and assisted suicide imbedded in the Due

---

[1] *Texas v. White*, 7 Wall. 700, 725 (1869), *quoting Lane County v. Oregon*, 7 Wall. 71, 76 (1869).

[2] "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." U.S. Const. amend. X.

[3] The Second Circuit has rejected the claim that there is a liberty interest in assisted suicide under the Due Process Clause of the Fourteenth Amendment. *Quill v. Vacco*, 80 F.3d 716, 723-725 (2d Cir. 1996) (hereinafter "*Quill*"), *cert. granted*, ___ U.S. ___ (1996 WL 282544) (1996). The Second Circuit did, however, invalidate New York's prohibition of assisted suicide on equal protection grounds. *Quill*, 80 F.3d at 725-731.

Process Clause of the Fourteenth Amendment.[4] The Ninth Circuit's holding strikes at the very heart of this Court's federalism jurisprudence and, upon review, falls far short of overcoming that "great resistance" to expansion of the substantive content of the Due Process Clause. *Bowers v. Hardwick*, 478 U.S. 186, 195 (1986). It also "calls for some judgment about the limits of the [Judiciary's] role in carrying out its constitutional mandate." *Bowers*, 478 U.S. at 190.

At stake in this case are, first and foremost, the lives of the people, both those who wish to die and those who wish to live no matter what their circumstances. Also at stake is the sovereign power of the States to protect and preserve those lives without a federal requirement that the State "make judgments about the 'quality' of life that a particular individual may enjoy, . . . " *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 282 (1990). The Court's decision in this case will directly affect the people of all the States of the Union. It will also determine whether "the States *as States* have [any] legitimate interests which the National Government is bound to respect even though its laws are supreme." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 581 (1985) (O'Connor, J., dissenting) (italics original, citation omitted, insert added).

---

[4] *Compassion in Dying v. State of Washington*, 79 F.3d 790, 793-794 (9th Cir. 1996) (*en banc*) (hereinafter "*Compassion in Dying II*"), *cert. granted*, ___ U.S. ___ (1996 WL 411596) (1996). A limited eleven-judge *en banc* panel vacated the previous decision of the three-judge panel, reported at *Compassion in Dying v. State of Washington*, 49 F.3d 586 (9th Cir. 1995) (hereinafter "*Compassion in Dying I*"), which had voted 2-1 to reverse the district court decision, reported at 850 F.Supp. 1454 (W.D. Wash. 1994). Thereafter, an active judge *sua sponte* requested that the full court *en banc* rehear the case; however, that request failed to receive a majority of the votes of the non-recused active judges and was rejected. Dissenting opinions from the order rejecting the request for rehearing were filed by Circuit Judges O'Scannlain and Trott. *Compassion in Dying v. State of Washington*, 85 F.3d 1440 (9th Cir. 1996).

SUMMARY OF ARGUMENT

Americans today often speak in terms of their "right" to engage in particular conduct. However, "words [such] as 'right' are a constant solicitation to fallacy." *Jackman v. Rosenbaum Co.*, 260 U.S. 22, 31 (1922). In this case, respondents claim that patients have a "right to die." "The mere novelty of such a claim is reason enough to doubt that substantive due process sustains it; . . . " *Reno v. Flores*, 507 U.S. 292, 303 (1993). Indeed, the framers of the Fourteenth Amendment would be profoundly amazed if they were told that the liberty they sought to preserve for the newly freed slaves encompassed a liberty to kill oneself and, further, a liberty to receive the assistance of another to do so.[5] As discussed below, in order to sustain respondents' novel claim, the Ninth Circuit had to create a new standard for substantive due process adjudication and, in the process, committed a series of fundamental errors.

The threshold error was the Ninth Circuit's failure to carefully identify the specific conduct at issue, *i.e.*, suicide and assisted suicide. That failure, coupled with the broad approach utilized by the Ninth Circuit, opened the door to consideration of a host of activities which are wholly dissimilar from suicide and assisted suicide and which plainly involve different considerations.

The Ninth Circuit's discovery of new liberty interests in suicide and assisted suicide is unsupported by the plain language of the Due Process Clause, antithetical to its design, and unsupported by any previous decision of this Court. Indeed, this Court has never before recognized a "liberty" interest to extinguish the life of a "person" as that word is used in the Fourteenth Amendment. It is this critical difference between abortion and assisted suicide which exposes the fundamental error of seeking to create new liberty interests in

---

[5] *McLaughlin v. Florida*, 379 U.S. 184, 191-192 (1964) ("the historical fact [is] that the central purpose of the Fourteenth Amendment was to eliminate racial discrimination emanating from official sources in the States. [insert added]").

suicide and assisted suicide by analogizing to the unique abortion rights jurisprudence.

There can be no doubt that opposition to suicide and assisted suicide is deeply rooted in our Nation's history and tradition. Furthermore, the Ninth Circuit failed to even consider whether suicide and assisted suicide are "implicit in the concept of ordered liberty," such that "neither liberty nor justice would exist if they were sacrificed." *Palko v. Connecticut*, 302 U.S. 319, 325-326 (1937) (citation omitted). Instead, the Ninth Circuit fashioned a new standard for substantive due process adjudication premised on three sentences taken from *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), and the limited holding of the Court in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990). That new standard, which is based on a concept of autonomous self-determinism, ignores both our Nation's history and tradition with respect to suicide and assisted suicide and, at the same time, "the demands of organized society." *Poe v. Ullman*, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting).

Finally, the Ninth Circuit purported to limit its newly discovered interests in suicide and assisted suicide to just terminally ill, mentally competent adults. However, if, as the Ninth Circuit found, personal autonomy and the right to refuse unwanted medical treatment are the roots for these new liberty interests, such a limitation is plainly insupportable. In short, the decision below does not simply push the States down the so-called "slippery slope" – it hurls them over the precipice into a bottomless pit of constitutional litigation where they will spend decades litigating the parameters of these newly discovered liberty interests in suicide and assisted suicide.

With the ever-increasing power of medical science to prolong life, even in the face of what would otherwise be terminal illness, the States have had to strike a balance between the rights of the individual and "the demands of organized society." *Poe*, 367 U.S. at 542 (Harlan, J., dissenting). That balance is grounded in the States' recognition of their responsibility to protect both individual liberty and, at the same time, the lives of the people, both those who wish to die and those who wish to live no matter what their circumstances.

In striking that balance, the States have drawn a line between an individual's right to refuse unwanted medical treatment and intentionally killing oneself, with or without assistance. That balance, now a national consensus, is represented by statutes in a majority of States which recognize an individual's right to refuse unwanted medical treatment and, at the same time, reject any affirmative act to end life.[6] Whether that balance

---

[6] Today, forty-seven state legislatures make the fundamental distinction between refusal of unwanted life-sustaining medical treatment and the act of suicide in their natural death/living will statutes: Ala. Code § 22-8A-10 (1990); Alaska Stat. § 18.12.080(f) (Michie 1994); Ariz. Rev. Stat. Ann. § 36-3210 (West Supp. 1995); Ark. Code Ann. § 20-17-210(g) (Michie 1991); Cal. should be abandoned and the line redrawn to permit an individual to commit suicide without state interference, and then redrawn yet again to permit assisted suicide, is a matter appropriately left for the people to decide, through their duly elected representatives or by initiative ballot.[7] The principles of federalism embodied in our Constitution require no less.

ARGUMENT

I. THERE IS NO LIBERTY INTEREST UNDER THE DUE PROCESS CLAUSE OF THE FOURTEENTH AMENDMENT TO COMMIT SUICIDE OR ASSISTED SUICIDE

The issue presented in this case is whether there is a liberty interest under the Due Process Clause of the Fourteenth Amendment to commit suicide and, if so, whether it includes an interest to receive the assistance of another to do so. The novelty of respondents' claim serves to highlight the importance of the cautionary note, expressed by the Court in *Bowers v. Hardwick*, which governs all substantive due process adjudication:

> Nor are we inclined to take a more expansive view of our authority to discover new fundamental rights imbedded in the Due Process Clause. The

Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr.2d 59, 64 (1992). *See also Cruzan v. Harmon*, 760 S.W.2d 408, 426 (Mo. banc 1988) ("Broad policy questions bearing on life and death issues are more properly addressed by representative assemblies."), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990).

> Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution. That this is so was painfully demonstrated by the face-off between the Executive and the Court in the 1930's, which resulted in the repudiation of much of the substantive gloss that the Court had placed on the Due Process Clauses of the Fifth and Fourteenth Amendments. There should be, therefore, great resistance to expand the substantive reach of those Clauses, particularly if it requires redefining the category of rights deemed to be fundamental. Otherwise, the Judiciary necessarily takes to itself further authority to govern the country without express constitutional authority.

Bowers v. Hardwick, 478 U.S. 186, 194-195 (1986).

The Court recently reaffirmed that "great resistance" in *Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992), declaring that "[a]s a general matter, the Court has always been reluctant to expand the concept of substantive due process because guideposts for responsible decisionmaking in this unchartered area are scarce and open-ended. [citation omitted]" Mindful of that "great resistance", it is of critical importance that lower courts carefully adhere to the principles established by this Court when construing the substantive content of the Due Process Clause. Unfortunately, as discussed below, the Ninth Circuit failed in this regard.

A. The Ninth Circuit's Constitutional Analysis Was Fundamentally Flawed At The Threshold By Its Failure To Carefully Identify The Specific Conduct At Issue

In the perilous waters of substantive due process adjudication, a carefully focused approach helps to eliminate the irrelevant, illuminate the pertinent, and insure that the discovery of new rights is "much more than the imposition of the Justices' own choice of values on the States and Federal Government, . . . " *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986). Indeed, the Court has made clear that " '[s]ubstantive

due process' analysis must begin with a careful description of the asserted right, for '[t]he doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field.' " *Reno v. Flores*, 507 U.S. 292, 302 (1993) (citations omitted). Thus, in *Bowers*, the Court carefully focused on the specific conduct at issue when it framed the question presented as "whether the Federal Constitution confers a fundamental right upon homosexuals to engage in sodomy and hence invalidates the laws of the many States that still make such conduct illegal and have done so for a very long time." *Bowers*, 478 U.S. at 190. The focus of the Court's inquiry was not whether one has a right to engage in sexual conduct of one's choice but, rather, whether the specific conduct at issue – homosexual sodomy – was entitled to constitutional protection. Likewise, in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), the Court carefully focused on whether Nancy Cruzan had "a right under the United States Constitution which would require the hospital to withdraw life-sustaining treatment from her under [her] circumstances." *Cruzan*, 497 U.S. at 269 (insert added). This carefully focused approach allowed the Court to first identify the specific conduct at issue, *i.e.*, the withdrawal of unwanted life-sustaining medical treatment, and then the relevant historical traditions, *i.e.*, the doctrine of informed consent (which encompasses the notion of bodily integrity), protecting or denying protection to that specific conduct.

Rather than carefully focusing on suicide and assisted suicide, the Ninth Circuit broadly framed the question presented as "whether there is a liberty interest in determining the time and manner of one's death." *Compassion in Dying II*, 79 F.3d at 800. By doing so, it opened the door to consideration of a host of activities which are wholly dissimilar from suicide and assisted suicide and which plainly involve different considerations. Indeed, even the Ninth Circuit acknowledged that "[t]he liberty interest we examine encompasses a whole range of acts that are generally not considered to constitute 'suicide.' " *Compassion in Dying II*, 79 F.3d at 802.

In sharp contrast to the Ninth Circuit's broad approach, other courts which have considered this identical question

have utilized a carefully focused approach consistent with the precedents of this Court.[8] The Ninth Circuit's rationale for broadly framing the question presented was its belief that "it is the end and not the means that defines the liberty interest." *Compassion in Dying II*, 79 F.3d at 801. If true, the issues framed by this Court in *Bowers*, *Cruzan*, and *Reno v. Flores* were far too narrow. Rather, under the Ninth Circuit's new "end-result" standard for defining liberty interests, the issue in *Bowers* should have been whether there is a liberty interest to engage in sexual conduct of one's choice and, in *Cruzan*, whether there is a liberty interest to determine the time and manner of one's death. In fact, under the Ninth Circuit's new "end-result" standard, the issues in *Compassion in Dying II* and *Cruzan* should have been *identical*. In *Reno v. Flores*, respondents, a class of alien juveniles arrested by the Immigration and Naturalization Service on suspicion of being deportable and seeking a right to be routinely released into the custody of other "responsible adults," claimed a right to " 'freedom from physical restraint.' " *Reno v. Flores*, 507 U.S. 292, 299 (1993). Under the Ninth Circuit's new "end-result" standard, since "freedom from physical restraint" is the end sought to be achieved, that would be the proper description of the liberty interest at issue. However, that description was soundly rejected by this Court because it did not accurately identify the specific right or interest at issue. *Reno*, 507 U.S. at 302. Likewise, the question in the instant case is not "whether there is a liberty interest in determining the time and manner of one's death, . . . " *Compassion in Dying II*, 79 F.3d at 800. Rather, it is whether there is a liberty interest to commit suicide and, if so, whether it

---

[8] *See, e.g., Quill*, 80 F.3d at 723 (Second Circuit carefully focusing on plaintiffs' argument "for a right to assisted suicide as a fundamental liberty under the substantive component of the Due Process Clause of the Fourteenth Amendment.") and *People v. Kevorkian*, 447 Mich. 436, 464, 527 N.W.2d 714, 724 (1994) (Michigan Supreme Court carefully focusing its inquiry on "whether the clause encompasses a fundamental right to commit suicide and, if so, whether it includes a right to assistance."), *cert. denied*, 115 S.Ct. 1795 (1995).

includes an interest to receive the assistance of another to do so.[9]

B. The Ninth Circuit's Discovery Of New Liberty Interests In Suicide And Assisted Suicide Is Not Supported By The Plain Language Or *Design* Of The Due Process Clause

The Due Process Clause of the Fourteenth Amendment provides that no State shall "deprive any person of life, liberty, or property, without due process of law; . . . " U.S. Const. amend. XIV, § 1. Nowhere in the plain language of the Clause is an interest in committing suicide or assisted suicide expressly granted. Nor does the *design* of the Clause support any such contention.[10] The design of the Clause establishes life as the first interest to be accorded substantive and procedural protection, liberty the second, and property the third. The reason for this design is manifest: without life, liberty cannot exist and property cannot be acquired. Any finding of a "liberty" interest to extinguish the life of a "person," as that word is used in the Fourteenth Amendment, inverts the order and is directly contradicted by, and plainly inconsistent with, the design of the Clause itself.[11]

This Court has never before recognized a "liberty" interest to extinguish the life of a "person" as it understands that

---

[9] *Cf. People v. Kevorkian*, 447 Mich. 436, 476 n.47, 527 N.W.2d 714, 730 n.47 (1994) ("The question presented in this case thus is not whether a person has a constitutional right of self-determinism, or a right to define personal existence, or a right to make intimate and personal choices, or a right not to suffer. Rather, the question that we must decide is whether the constitution encompasses a right to commit suicide and, if so, whether it includes a right to assistance."), *cert. denied*, 115 S.Ct. 1795 (1995).

[10] "The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language *or design* of the Constitution." *Bowers v. Hardwick*, 478 U.S. 186, 194 (1986) (emphasis added).

[11] *Cf.* Thomas J. Marzen, *"Out, Out Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Constitutional Law Quarterly, No. 3, 799, 807 (1994).

word to be used in the Fourteenth Amendment.[12] "[A] fundamental premise of our constitutional law governing reproductive autonomy" is the Court's holding in *Roe* that "an abortion is not 'the termination of life entitled to Fourteenth Amendment protection.' " *Planned Parenthood v. Casey*, 505 U.S. 833, 913-914 (1992) (Stevens, J., concurring in part and dissenting in part), *citing Roe v. Wade*, 410 U.S. 113, 159 (1973). Indeed, in discussing its earlier decision in *United States v. Vuitch*, 402 U.S. 62 (1971), the Court made clear in *Roe* that it "would *not* have indulged in statutory interpretation favorable to abortion in specified circumstances *if the necessary consequence was the termination of life entitled to Fourteenth Amendment protection.*" *Roe*, 410 U.S. at 159 (emphasis added).

---

[12] *See* Charles Warren, *The New "Liberty" Under The Fourteenth Amendment*, 39 Harv. L. Rev. 431, 439-445 (1926) (discussing decisions between 1789 and 1926 in which the term "liberty" has been construed by the Court). *See also Meyer v. Nebraska*, 262 U.S. 390 (1923) ("right to choose and pursue a given legitimate vocation"); *Pierce v. Society of Sisters*, 268 U.S. 510 (1925) (upbringing and education of children); *Skinner v. Oklahoma*, 316 U.S. 535 (1942) (procreation); *Prince v. Massachusetts*, 321 U.S. 158 (1944) (family relationships); *Griswold v. Connecticut*, 381 U.S. 479 (1965) (use of contraceptives by married couples); *Loving v. Virginia*, 388 U.S. 1 (1967) (marriage); *Eisenstadt v. Baird*, 405 U.S. 438 (1972) (use of contraceptives by unmarried couples); and *Roe v. Wade*, 410 U.S. 113 (1973) (decision of a woman to seek an abortion before fetus attains viability). In *Cruzan*, the Court did not explicitly recognize a liberty interest to terminate the life of a person entitled to Fourteenth Amendment protection; rather, it *assumed* a liberty interest, based on the doctrine of informed consent and notion of bodily integrity, to refuse unwanted life-sustaining medical treatment, regardless of the consequences of that refusal. *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 279 (1990). Moreover, since the patient's death is caused by his/her underlying terminal illness when unwanted life-sustaining medical treatment is refused or withdrawn, and not by any affirmative act intended to extinguish life, the assumed liberty interest recognized in *Cruzan* can in no way be considered the equivalent of a liberty interest to terminate the life of a person entitled to Fourteenth Amendment protection.

That is precisely the "necessary consequence" which this Court is confronted with in the instant case: "the termination of life entitled to Fourteenth Amendment protection." *Id.* Unsupported by the plain language of the Clause, antithetical to its design, and unsupported by any previous decision of this Court, there must necessarily be a strong presumption against the contention that a liberty interest to extinguish the life of a person entitled to Fourteenth Amendment protection can nevertheless be implied in the substantive content of the Clause itself.[13]

C. Opposition to Suicide and Assisted Suicide Is Deeply Rooted In This Nation's History And Tradition

This Court has established the principles to be used by the Judiciary when identifying "rights that have little or no textual support in the constitutional language." *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986) (further citation omitted).

> In *Palko v. Connecticut*, 302 U.S. 319, 325, 326 (1937), it was said that this category includes those fundamental liberties that are "implicit in the concept of ordered liberty," such that "neither liberty nor justice would exist if [they] were sacrificed." A different description of fundamental liberties appeared in *Moore v. East Cleveland*, 431 U.S. 494, 503 (1977) (opinion by Powell, J.), where they are characterized as those liberties that are "deeply rooted in this Nation's history and tradition."

Bowers, 478 U.S. at 191-192 (citations omitted).

In approaching an historical analysis to determine whether a particular practice has been accepted by our people,

---

[13] The States stand as the primary guardians of individual interests in life and liberty. Herein, the States are seeking to protect both individual interests, and their own institutional interests, in life. It is well-settled that individual interests are not afforded any less protection simply because the government, rather than the individual, is defending them. *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 282 n.10 (1990).

it is important to remember that it is *this* Nation's history and tradition which is dispositive. *Cf. Bowers*, 478 U.S. at 191-194. An analysis, such as that utilized by the Ninth Circuit in *Compassion in Dying II*, which centers primarily on "ancient attitudes" having little, if any, relevance to America's historical and traditional treatment of suicide and assisted suicide cannot establish that such practices have been accepted by this Nation.[14]

Opposition to suicide is deeply rooted in *this* Nation's history and tradition. "At common law suicide was a felony, punished by forfeiture of property to the king and ignominious burial. Essentially, suicide was considered a form of murder." *In re Joseph G.*, 34 Cal.3d 429, 433, 194 Cal.Rptr. 163, 165 (1983) (citations omitted). While no State has a statute imposing criminal penalties for a successful suicide,

> abolition of such "punishments" as ignominious burial for suicide and then the decriminalization of both suicide and attempted suicide did not come about because suicide was deemed a "human right" or even because it was no longer considered reprehensible. These changes occurred, rather, because punishment was seen as unfair to innocent relatives of the suicide and because those who committed or

---

[14] "[T]he primary and most reliable indication of [a national] consensus . . . [is] the pattern of enacted laws." *Stanford v. Kentucky*, 492 U.S. 361, 373 (1989). All but disregarding the statutes of the overwhelming majority of States which seek to prevent suicide and prohibit assisted suicide, and relying instead on public opinion polls and surveys, the Ninth Circuit found "growing popular support for permitting doctors to provide assistance to terminally ill patients who wish to hasten their deaths. [footnote omitted]" *Compassion in Dying II*, 79 F.3d at 810. Such polls and surveys simply have no place in substantive due process adjudication. Rather, "[a] revised national consensus so broad, so clear, and so enduring as to justify a permanent prohibition upon all units of democratic government must appear in the operative acts (laws and the application of laws) that the people have approved." *Stanford v. Kentucky*, 492 U.S. 361, 377 (1989) (Scalia, J.).

attempted to commit the act were thought to be prompted by mental illness.[15]

In the United States, suicide continues " 'to be considered an expression of mental illness.' "[16] Indeed, the New York State Task Force on Life and the Law found that "[s]tudies that examine the psychological background of individuals who kill themselves show that 95 percent have a diagnosable mental disorder at the time of death."[17] "[A]ll states provide for the involuntary commitment of persons who may harm themselves as the result of mental illness, and a number of states allow the use of nondeadly force to thwart suicide attempts." *People v. Kevorkian*, 447 Mich. 436, 479, 527 N.W.2d 714, 732 (1994) (footnotes omitted), *cert. denied*, 115 S.Ct. 1795 (1995). Simply stated, as Justice Scalia pointed out in his concurring opinion in *Cruzan*, " 'there is no significant support for the claim that a right to suicide is so rooted in our tradition that it may be deemed 'fundamental' or 'implicit in the concept of ordered liberty.' "[18]

Logically, if there is no liberty interest to commit suicide, there can be no liberty interest in receiving the assistance of another to do so. *People v. Kevorkian*, 447 Mich. 436, 468 n.35, 527 N.W.2d 714, 726 n.35 (1994), *cert. denied*, 115 S.Ct. 1795 (1995). However, an independent analysis of

[16] *In re Joseph G.*, 34 Cal.3d 429, 433, 194 Cal.Rptr. 163, 165 (1983) (citation omitted). *See also Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1624, 4 Cal.Rptr.2d 59, 64 (1992).

[17] New York State Task Force Report, *When Death is Sought – Assisted Suicide and Euthanasia in the Medical Context* (hereinafter "*When Death is Sought*") (May 1994) at 11.

[18] *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 295 (1990) (Scalia, J., concurring) (citation omitted). *See also* Thomas J. Marzen, *et al.*, *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 100 (1985) (reaching identical conclusion); and *When Death is Sought*, at 54-63 and 67-75.

the issue provides even more evidence that no such derivative interest exists. At common law, a person who assisted another to commit suicide was guilty of murder. *In re Joseph G.*, 34 Cal.3d 429, 434, 194 Cal.Rptr. 163, 165 (1983). "At the time the Fourteenth Amendment was ratified, at least twenty-one of the thirty-seven existing states (including eighteen of the thirty ratifying states) proscribed assisted suicide either by statute or as a common-law offense." *People v. Kevorkian*, 447 Mich. 436, 478, 527 N.W.2d 714, 731 (1994) (citation omitted), *cert. denied*, 115 S.Ct. 1795 (1995).

Today, while a few states continue to classify assisted suicide as murder or manslaughter, "the predominant statutory scheme . . . is to create a sui generis crime of aiding and abetting suicide." *In re Joseph G.*, 34 Cal.3d 429, 434, 194 Cal.Rptr. 163, 165 (1983). The overwhelming majority of States, Puerto Rico and the Virgin Islands, impose criminal penalties on one who assists another to commit suicide.[19]

---

[19] The following States, plus Puerto Rico and the Virgin Islands, expressly prohibit assisted suicide by statute: Alaska Stat., § 11.41.120(a)(2) (Michie 1989); Ariz. Rev. Stat. Ann., § 13-1103(A)(3) (West Supp. 1995); Ark. Stat. Ann., § 5-10-104(a)(2) (Michie 1993); Cal. Pen. Code, § 401 (West 1988); Colo. Rev. Stat., § 18-3-104(1)(b) (Supp. 1995); Conn. Gen. Stat. Ann., § 53a-56(a)(2) (West 1994); Del. Code Ann., tit. 11, § 645 (1995); Fla. Stat. Ann., § 782.08 (West 1992); Ga. Code Ann. § 16-5-5(b) (1996); Ill. Comp. Stat. Ann., ch. 720, 5/12-31(a)(2) (Smith-Hurd Supp. 1996); Ind. Stat. Ann., § 35-42-1-2.5(b) (West Supp. 1996); Iowa Code, §§ 707A.1, 707A.2 and 707A.3, as amended by Acts of the 76th General Assembly, 1996 Session; Kan. Stat. Ann., § 21-3406 (1995); Ky. Rev. Stat. Ann., § 216.302 (Michie 1995); La. Rev. Stat. Ann., § 14:32.12 (West Supp. 1996); Me. Rev. Stat. Ann., tit. 17-A, § 204 (West 1983); Minn. Stat. Ann., § 609.215 (West 1987 and Supp. 1996); Miss. Code Ann., § 97-3-49 (1994); Mo. Ann. Stat., § 565.023(1)(2) (West Supp. 1996); Mont. Code Ann., § 45-5-105 (1995); Neb. Rev. Stat. Ann., § 28-307 (Michie 1995); N.H. Rev. Stat. Ann., § 630:4 (1996); N.J. Stat. Ann., § 2C:11-6 (West 1995); N.M. Stat. Ann., § 30-2-4 (Michie 1994); N.Y. Penal Law, §§ 120.30, 125.15(3) (McKinney 1987); N.D. Cent. Code, § 12.1-16-04 (Supp. 1995); Okla. Stat. Ann., tit. 21, §§ 813, 814, 815 (West 1983); Pa. Cons. Stat. Ann., tit. 18, § 2505(b) (West 1983); P.R. Laws Ann., tit. 33, § 4009; R.I. Pub. Act 96-133, *to be codified as* R.I. Gen. Stat., tit.

Against this background, the claim that assisted suicide is so "deeply rooted in this Nation's history and tradition" that it is entitled to constitutional protection is entirely devoid of merit.[20]

D. Suicide And Assisted Suicide Are Not Implicit In The Concept Of Ordered Liberty Such That Neither Liberty Nor Justice Would Exist If They Were Sacrificed

"Ordered liberty" is not absolute liberty.[21] Rather, it is the liberty of an individual to pursue her lawful goals, without

---

11, ch. 60; S.D. Codified Laws Ann., § 22-16-37 (Michie 1988); Tenn. Code Ann., § 39-13-216 (Supp. 1995); Tex. Penal Code Ann., § 22.08 (West 1994); V.I. Code Ann., tit. 14, § 2141; Wash. Rev. Code Ann., § 9A.36.060 (West 1988); and Wis. Stat. Ann., § 940.12 (West 1996). *See also* Or. Rev. Stat. § 163.125(1)(b) (1993) (prohibiting assisted suicide generally), *but see* Or. Rev. Stat. § 127.800 *et seq.* (1996) (permitting physician-assisted suicide in certain circumstances). The following states impose criminal penalties by case law for assisting a suicide: *Commonwealth v. Mink*, 123 Mass. 422, 428-429 (1877); *People v. Kevorkian*, 447 Mich. 436, 493-497, 527 N.W.2d 714, 738-739 (1994), *cert. denied*, 115 S.Ct. 1795 (1995); *Blackburn v. State*, 23 Ohio St. 146, 163 (1872); *State v. Jones*, 86 S.C. 17, 22, 47, 67 S.E. 160, 162, 165 (1910); and *State v. Willis*, 255 N.C. 473, 477, 121 S.E.2d 854, 856-857 (1961).

[20] *Cf. Bowers v. Hardwick*, 478 U.S. 186, 192-194 (1986). *See also Jackman v. Rosenbaum Co.*, 260 U.S. 22, 31 (1922) ("The Fourteenth Amendment, itself a historical product, did not destroy history for the States and substitute mechanical compartments of law all exactly alike. If a thing has been practised for two hundred years by common consent, it will need a strong case for the Fourteenth Amendment to affect it, . . . ").

[21] Almost a century ago, the Court reaffirmed this understanding of liberty when it stated that:

> [T]he liberty secured by the Constitution of the United States to every person within its jurisdiction does not import an absolute right in each person to be, at all times and in all circumstances, wholly freed from restraint. There are manifold restraints to which every person is necessarily subject for the common good. On any other basis organized society could not exist with safety to its members. Society based on the rule that each one is a law unto himself would soon be confronted with disorder and anarchy. Real liberty for all could not exist under the operation of a principle which recognizes the right of each individual person to use his own, whether in respect of his person or his property, regardless of the injury that may be done to others. This court has more than once recognized it as a fundamental principle that "persons and property are subjected to all kinds of restraints and burdens in order to secure the general comfort, health, and prosperity of the state; of the perfect right of the legislature to do which no question ever was, or upon acknowledged general principles ever can be, made, so far as natural persons are concerned."

Jacobson v. Massachusetts, 197 U.S. 11, 26 (1905) (citations omitted).

unreasonable state interference, in light of "the demands of organized society." *Poe v. Ullman*, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting). "Ordered liberty" is not founded, as the Ninth Circuit's opinion was, on a concept of autonomous self-determinism. Rather, it is founded on a firm understanding of the "traditions and conscience of our people . . . " *Palko v. Connecticut*, 302 U.S. 319, 325 (1937) (citations omitted). As the second Justice Harlan observed in *Griswold v. Connecticut*, 381 U.S. 479, 501 (1965) (Harlan, J., concurring in judgment):

> Judicial restraint . . . will be achieved in this area, as in other constitutional areas, only by continual insistence upon respect for the teachings of history, solid recognition of the basic values that underlie our society, and wise appreciation of the great roles that the doctrines of federalism and separation of powers have played in establishing and preserving American freedoms. (citation omitted)[22]

With these principles in mind, this Court must now determine whether suicide and assisted suicide are "implicit in the

---

[22] *See also Ex parte Grossman*, 267 U.S. 87, 108-109 (1925) ("The language of the constitution cannot be interpreted safely except by reference to the common law and to British institutions as they were when the instrument was framed and adopted.").

concept of ordered liberty," such that "neither liberty nor justice would exist if they were sacrificed." *Palko v. Connecticut*, 302 U.S. 319, 325-26 (1937) (citation omitted). In *Compassion in Dying II*, the Ninth Circuit failed to even apply this standard and, instead, simply declared:

> That [this] language . . . has never been applied literally. It would be difficult, if not impossible, for any fundamental right or liberty interest to meet such a standard. One could hardly argue for example that neither liberty nor justice would survive if contraceptives were banned, as they were for most of our history. Nor indubitably, would even the most vigorous proponent of abortion rights argue that neither liberty nor justice existed in this nation prior to *Roe*.

Compassion in Dying II, 79 F.3d at 813 n.64 (insert added).

Application of the *Palko* standard is neither difficult nor impossible and, contrary to the Ninth Circuit's view, this Court has concluded that certain fundamental rights and interests plainly meet that standard. Examples of this can be found in *Palko* itself where, discussing "the privileges and immunities that have been . . . brought within the Fourteenth Amendment by a process of absorption," the Court cited "freedom of thought, and speech," and noted that this freedom "is the matrix, the indispensable condition, of nearly every other form of freedom."[23] *Palko*, 302 U.S. 326-327. "[C]ondemnation only after trial", and a defendant's right to counsel in a state-court capital case were other examples of fundamental liberty interests cited by the Court in *Palko*. *Id.* at 327 (citations omitted). As in *Palko*, the question herein (which the Ninth Circuit never reached) is simply this:

---

[23] Twelve years earlier, in *Gitlow v. New York*, 268 U.S. 652, 666 (1925), the Court stated that: "For present purposes, we may and do assume that freedom of speech and of the press – which are protected by the First Amendment from abridgment by Congress – are among the fundamental personal rights and 'liberties' protected by the due process clause of the Fourteenth Amendment from impairment by the States."

> Is [Washington's absolute prohibition of assisted suicide] so . . . shocking that our policy will not endure it? Does it violate those "fundamental principles of liberty and justice which lie at the base of all our civil and political institutions"?

Id. at 328 (citation omitted, insert added).

Indeed, can it truly be said that "[j]ustice . . . would . . . perish" (*Id.*, at 326) if the States continue to prevent their citizens from committing suicide and, at the same time, continue to prohibit one person from assisting another to commit suicide? Plainly, the answer to all of these questions is "no." Of "the basic values that underlie our society," (*Griswold*, 381 U.S. at 501 (Harlan, J., concurring in judgment)), certainly the most important is our fundamental respect for human life. State policies which further that most basic societal value can hardly be said to imperil either justice or liberty.

Rather than applying the *Palko* standard consistent with the precedents of this Court, the Ninth Circuit relied on *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), and *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), to support its discovery of new liberty interests to commit suicide and assisted suicide. That reliance was entirely misplaced.

In *Casey*, the Court was not called upon to decide whether some newly asserted liberty interest to choose an abortion was entitled to constitutional protection. Rather, the primary question presented in *Casey* was whether the fundamental holding of *Roe v. Wade*, 410 U.S. 113 (1973), should be overruled. *Casey*, 505 U.S. at 844-846. Thus, the Court had no reason to discuss, and did not discuss, the well-established principles for construing the substantive content of the Due Process Clause. The Ninth Circuit's extensive reliance on *Casey*, and its apparent belief that *Casey* has modified, *sub silentio*, long-standing principles for construing the substantive content of the Due Process Clause, was particularly surprising since, in the same opinion, the Ninth Circuit rejected similar arguments regarding the effect of the Court's decision in *Reno v. Flores* as to whether all liberty interests

other than fundamental rights would be subjected to rational-basis review or balancing.[24]

In declaring the existence of new liberty interests to commit suicide and assisted suicide, the Ninth Circuit found the following three sentences from *Casey* to be almost controlling on the issue before it:

> These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.[25]

Contrary to the Ninth Circuit's reasoning, these three sentences taken from *Casey* – broad generalities on the nature

---

[24] In attempting to distinguish *Reno v. Flores*, the Ninth Circuit stated that:

> The Court did not, as the dissent implies, purport to establish a new classification system under which all liberty interests other than fundamental rights would be subject to rational basis review. Nor did *Flores* purport to overrule, or even hint at any desire to modify, the Court's ninety-year-old practice of using a balancing test in liberty interest cases that raise important issues of the type before us. In fact, *Flores* did not mention *Cruzan*, *Youngberg*, *Mills*, *Jacobson*, or any other balancing case.

Compassion in Dying II, 79 F.3d at 804 (footnote omitted). These same arguments are equally applicable to the Ninth Circuit's apparent belief that *Casey* has overruled or modified, *sub silentio*, long-standing principles for construing the substantive content of the Due Process Clause.

[25] *Compassion in Dying II*, 79 F.3d at 813, *quoting Casey*, 505 U.S. at 851. *See also Id.* (Ninth Circuit agreeing with district court that *Casey* is "highly instructive and almost prescriptive for determining what liberty interest may inhere in a terminally ill person's choice to commit suicide. [citation and internal quotes omitted]").

of the liberty protected by the Fourteenth Amendment – did not establish a new standard for construing the substantive content of the Due Process Clause. If the Court in *Casey* had intended to eliminate the long-standing principles which govern substantive due process adjudication, plainly it would have said so. Furthermore, when taken out of context, "the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life" has almost limitless application. Likewise, many activities which plainly are not entitled to constitutional protection can nevertheless be characterized as "intimate", "personal" or involving "choices central to personal dignity and autonomy." When taken out of context and fashioned into a new standard for substantive due process adjudication, these three sentences are entirely inconsistent with accepted understandings of "ordered liberty." Such a new standard would virtually eliminate the "guideposts for responsible decisionmaking in this unchartered area [which] are [already] scarce and open-ended." *Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992) (inserts added).

The Ninth Circuit's reliance on *Casey* was also predicated on the mistaken notion that simply because a decision may involve "choices central to personal dignity and autonomy," one is free to do whatever one wants with one's body. This is not the "ordered liberty" discussed by the Court in *Palko* and the cases which followed it. Rather, this is precisely the sort of "unlimited right to do with one's body as one pleases" which this Court has consistently and soundly rejected. *See Roe v. Wade*, 410 U.S. 113, 154 (1973), and cases cited therein; *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986); and *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 (1973), *citing*, *inter alia*, constitutionally unchallenged laws against suicide.

The Ninth Circuit's reliance on *Casey* also ignores the fundamental differences between abortion, suicide and assisted suicide. This Court has held that abortion does not extinguish the life of a "person" in the context of the

Fourteenth Amendment.[26] Certainly, it cannot be denied that suicide does. Under *Roe*, abortion concerns the choice of a woman, the decision-maker, to live her life without the dangers and unwanted conditions associated with pregnancy.[27] Suicide, on the other hand, is about death, *i.e.*, the death of the decision-maker. Finally, the States' treatment of abortion and assisted suicide has been markedly different. In *Roe*, the Court observed that "[i]n the past several years, . . . a trend toward liberalization of abortion statutes ha[d] resulted in adoption, by about one-third of the States, of less stringent laws, . . . " *Roe v. Wade*, 410 U.S. 113, 139-140 (1973). No such trend exists with respect to assisted suicide. *See* ns.6 and 19, *supra*.

In summary, as Justice O'Connor observed in *Casey*, "[a]bortion is a unique act" and "the liberty interest of the woman is at stake in a sense unique to the human condition and so unique to the law." *Casey*, 505 U.S. at 852. It is a fundamental error to seek to discover new constitutional rights to commit suicide and assisted suicide by analogizing to the unique abortion rights jurisprudence. There is simply no indication in *Casey*, or the precedent from which it evolved, of an intention to expand the liberty interests previously identified by this Court in the manner utilized by the Ninth Circuit.

Nor does this Court's decision in *Cruzan* support the Ninth Circuit's discovery of new liberty interests to commit suicide and assisted suicide. In *Cruzan*, this Court stated

---

[26] *Roe v. Wade*, 410 U.S. 113, 158-159 (1973). While, under *Roe*, an unborn fetus is not yet a "person" as that word is used in the Fourteenth Amendment, its proximity to that status after viability so strengthens the State's interest in preserving and protecting fetal life that nontherapeutic abortions can be absolutely prohibited at that stage of a woman's pregnancy. *See Roe*, 410 U.S. at 164-165 and *Casey*, 505 U.S. at 846, 860, 869, 870, and 879.

[27] *Roe v. Wade*, 410 U.S. 113, 153 (1973) (listing factors a woman and her physician would necessarily consider when considering an abortion).

that "[t]he principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." *Cruzan*, 497 U.S. at 278. Later in the opinion, the Court stated that "*for purposes of this case*, we *assume* that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Cruzan*, 497 U.S. at 279 (emphasis added). Careful examination of this portion of the *Cruzan* opinion reveals two critical points. First, the Court *assumed*, but did not expressly hold, that there is a constitutionally protected interest to refuse life-sustaining medical treatment. Second, this assumption was expressly limited to the *Cruzan* case. Notwithstanding this clear language, the Ninth Circuit read *Cruzan* as "necessarily recogniz[ing] a liberty interest in hastening one's own death." *Compassion in Dying II*, 79 F.3d at 816 (footnote omitted, insert added). Such a reading of *Cruzan* assumes far too much.[28] It is error to attempt to construe *Cruzan's* limited assumption of an interest to refuse medical treatment as acceptance by this Court of a far broader interest to commit suicide and, broader still, assisted suicide. Indeed, the error of such an attempt is plainly evidenced by the majority's recognition in *Cruzan* that, even in the face of a right to refuse medical treatment, the States may properly assert important interests in the protection and preservation of human life, and in the prevention of both suicide and assisted suicide. *Cruzan*, 497 U.S. at 280-282. In summary, suicide and assisted suicide are so significantly different from the refusal of unwanted medical treatment, and its legal underpinnings, that an interest

---

[28] The Ninth Circuit's broad reading of *Cruzan* is also inconsistent with this Court's clear admonition in *Cruzan* itself that "in deciding a question of such magnitude and importance . . . it is the [better] part of wisdom not to attempt, by any general statement, to cover every possible phase of the subject." *Cruzan*, 497 U.S. at 277-278 (citation and internal quotes omitted, insert and omission original).

in committing suicide or assisted suicide simply cannot be inferred from *Cruzan*.[29]

E. The New Liberty Interests In Suicide And Assisted Suicide Discovered By The Ninth Circuit Cannot Be Limited To Terminally-Ill, Mentally Competent Adults

If personal autonomy and the right to refuse unwanted medical treatment are the roots for these newly discovered liberty interests to commit suicide and assisted suicide, any purported limitation of these new interests to just terminally ill, mentally competent adults is plainly insupportable.

In this regard, Professor Yale Kamisar has observed:

> If personal autonomy and the termination of suffering are the key factors fueling the right to assisted suicide, why exclude those with non-terminal illnesses or disabilities who might have to endure greater "unbearable suffering" for much longer periods of time than those who are likely to die in the near future? Why does not a person who must continue to live what she considers an unendurable existence for ten or twenty more years have an equal – or even greater – claim on the liberty interest in assisted suicide than those with terminal conditions?

Yale Kamisar, *Physician-Assisted Suicide: The Last Bridge to Active Voluntary Euthanasia*, in Euthanasia Examined, 225, 234 (John Keown, ed. 1995) (Cambridge University Press) (footnote omitted).

While the Ninth Circuit, at least in the case below, purported to limit suicide and assisted suicide to just the terminally ill,

---

[29] Unlike suicide, "[t]he right to refuse medical treatment meets the 'ordered liberty' and the 'historical underpinnings' tests because it is rooted in the common-law doctrine of informed consent, which embodies the notion of bodily integrity." *People v. Kevorkian*, 447 Mich. 436, 480 n.59, 527 N.W.2d 714, 732 n.59 (1994), *cert. denied*, 115 S.Ct. 1795 (1995).

> Why stop there? If a competent person comes to the unhappy conclusion that his existence is unbearable and freely, clearly, and repeatedly requests assisted suicide, why should he be rebuffed because he does not "qualify" under somebody else's standards? Isn't *this* an arbitrary limitation of self-determinism and personal autonomy?

Yale Kamisar, *Are Laws against Assisted Suicide Unconstitutional?*, 23 Hastings Center Report, No. 3, 32, 37 (1993) (emphasis original).

Indeed, as the Michigan Supreme Court recently observed:

> [B]ecause all persons possess a basic right to personal autonomy, regardless of their physical or mental condition, there would be no principled basis for restricting a right to commit suicide to the terminally ill. The inevitability of death adds nothing to the constitutional analysis.

People v. Kevorkian, 447 Mich. 436, 470 n.41, 527 N.W.2d 714, 727-728 n.41 (1994), *cert. denied*, 115 S.Ct. 1795 (1995).

Nor do the right-to-refuse treatment cases provide any support for such a limitation. First, there is wide disagreement among the States as to the definition of "terminal illness."[30] Second, the right-to-refuse medical treatment has not been limited to just the terminally ill.[31] Finally, even if these newly discovered liberty interests in suicide and assisted suicide are initially limited to just the

---

[30] *See* Alan Meisel, *The Right to Die*, Vol 2, § 11.9, 96-101 (2d ed. 1995). *See also* Thomas J. Marzen, *"Out, Out Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Constitutional Law Quarterly, No. 3, 799, 814-819 (1994); Yale Kamisar, *Physician-Assisted Suicide: The Last Bridge to Active Voluntary Euthanasia*, in Euthanasia Examined, 225, 234 (John Keown, ed. 1995) (Cambridge University Press).

[31] *See Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 277 (1990) ("As these cases demonstrate, the common-law doctrine of informed consent is viewed as generally encompassing the right of a competent individual to refuse medical treatment.").

terminally ill, it is far from clear whether the Ninth Circuit intends that limitation to endure for long. In this regard, the Ninth Circuit stated that:

> Our conclusion is strongly influenced by, but not limited to, the plight of mentally competent, terminally ill adults. We are influenced as well by the plight of others, such as those whose existence is reduced to a vegetative state or a permanent and irreversible state of unconsciousness.

Compassion in Dying II, 79 F.3d at 816 (citation omitted).

If the decision below is affirmed, the next question to be decided by the courts will be whether those who are neither terminally ill nor mentally competent can likewise exercise these new liberty interests to commit suicide and assisted suicide. The question of whether the States may prohibit active voluntary euthanasia, as opposed to suicide and assisted suicide, will likewise be on the horizon.[32] Thus, the decision below does not simply push the States down the so-called "slippery slope" – it hurls them over the precipice into a bottomless pit of constitutional litigation where they will spend decades litigating the parameters of these newly discovered liberty interests in suicide and assisted suicide.

II. RELEVANT STATE INTERESTS CLEARLY OUTWEIGH ASSERTED INTERESTS IN SUICIDE AND ASSISTED SUICIDE

Only if this Court finds protected liberty interests in suicide and assisted suicide, does it then become necessary to

---

[32] *Compassion in Dying II*, 79 F.3d at 831-832 ("We recognize that in some instances, the patient may be unable to self-administer the drugs and that administration by the physician, or a person acting under his direction or control, may be the only way the patient may be able to receive them. [footnote omitted] The question whether that type of physician conduct may be constitutionally prohibited must be answered directly in future cases, and not in this one. We would be less than candid, however, if we did not acknowledge that for present purposes we view the critical line in right-to-die cases as the one between the voluntary and involuntary termination of an individual's life.").

balance those interests against countervailing state interests.[33] In the event of such a finding, the wide range of circumstances within which these newly discovered interests could be exercised implicate several important state interests, including, but not limited to: (1) the protection and preservation of human life;[34] (2) the prevention of suicide;[35] (3) preventing the fraud, errors and abuse which would accompany acceptance of suicide and assisted suicide;[36] (4) maintaining the ethical integrity of the medical profession;[37] (5) protecting the poor and minorities from

---

[33] *Cruzan*, 497 U.S. at 261. *Cf. Quill*, 80 F.3d 716, 723-725 (rejecting Fourteenth Amendment assisted suicide liberty interest claim and thus no balancing required); *People v. Kevorkian*, 447 Mich. 436, 463-481, 527 N.W.2d 714, 724-733 (1994) (reaching same conclusion and thus no balancing required), *cert. denied*, 115 S.Ct. 1795 (1995).

[34] *Cruzan*, 497 U.S. at 280.

[35] "Suicide is the eighth leading cause of death in the United States." *When Death is Sought*, at 9 (footnote omitted). "Studies that examine the psychological background of individuals who kill themselves show that 95 percent have a diagnosable mental disorder at the time of death." *Id.*, at 11. Furthermore, "[l]ike other suicidal individuals, patients who desire suicide or an early death during a terminal illness are usually suffering from a treatable mental illness, most commonly depression." *Id.*, at 13 (footnote omitted).

[36] *Cruzan*, 497 U.S. at 281 ("[E]ven where family members are present, [t]here will, of course, be some unfortunate situations in which family members will not act to protect a patient. A State is entitled to guard against potential abuses in such situations. [citation omitted, internal quotes omitted]"). *See also Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr. 59, 64 (1992) ("The state's interest must prevail over the individual because of the difficulty, if not the impossibility, of evaluating the motives of the assister or determining the presence of undue influence."), and *Donaldson*, 2 Cal.App.4th at 1624 ("Third parties, even family members, do not always act to protect the person whose life will end.").

[37] *Cf. Middlesex Ethics Committee v. Garden State Bar Association*, 457 U.S. 423, 434 (1982) (important state interest in "maintaining and assuring the professional conduct of professional attorneys it licenses").

exploitation;[38] (6) protecting handicapped persons from societal indifference;[39] and (7) protecting innocent third parties.[40]

While the Ninth Circuit acknowledged, at least to some extent, some of these interests, its application of the balancing test was fundamentally flawed by the improper insertion of quality-of-life considerations which it used to discount the strength of various important state interests.[41] Such quality-of-life considerations are directly contrary to this Court's holding in *Cruzan* that "a State may properly decline to make

---

See also Donaldson v. Lungren, 2 Cal.App.4th 1614, 1620, 4 Cal.Rptr.2d 59, 62 (1992) (recognizing state interest in maintaining the ethical integrity of the medical profession). In reaffirming its long-standing opposition to physician-assisted suicide, the American Medical Association has declared that physician-assisted suicide "threatens the very core of the medical profession's ethical integrity" and is "fundamentally inconsistent with the physician's professional role." American Medical Association, Council on Ethical and Judicial Affairs, *Code of Medical Ethics Reports*, Vol. V, No. 2 (July 1994), Report 59, *Physician-Assisted Suicide*, 269 and 274, respectively.

[39] *Quill*, 80 F.3d at 730, *citing Compassion in Dying I*, 49 F.3d 586, 592-593 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996).

[40] *Application of President & Directors of Georgetown College, Inc.*, 118 U.S.App.D.C. 80, 331 F.2d 1000, 1008 (1964), *cert. denied*, 377 U.S. 978 (1964). *See also Bartling v. Superior Court*, 163 Cal.App.3d 186, 195 n.6, 209 Cal.Rptr. 220, 225 n.6 (1984).

[41] *Compassion in Dying II*, 79 F.3d at 817 (strength of the state's important interest in the preservation of human life "is dependent on relevant circumstances, including the medical condition and the wishes of the person whose life is at stake."); *Id.*, at 820 (state interest in preventing suicide, "like the state's interest in preserving life, is substantially diminished in the case of terminally ill, competent adults who wish to die. [footnote omitted]"); *Id.*, at 825 (state's interest in preventing involvement of third persons at a minimum "when the assistance is provided by or under the supervision or direction of a doctor and the recipient is a terminally ill patient."); and *Id.*, at 827 (state's interest in protecting innocent third parties "is of almost negligible weight when the patient is terminally ill and his death is imminent and inevitable.").

judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life to be weighed against the constitutionally protected interests of the individual." *Cruzan*, 497 U.S. at 282.

Moreover, the dangers inherent in using such quality-of-life considerations are well-recognized. "Were quality of life at issue, persons with all manner of handicaps might find the state seeking to terminate their lives." *Cruzan v. Harmon*, 760 S.W.2d 408, 422 (Mo. banc 1988), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990). An analysis such as that utilized by the Ninth Circuit also disregards the irrefutable principle that all lives, from beginning to end and irrespective of physical or mental condition, are under the full protection of the law. *See Blackburn v. State*, 23 Ohio St. 146, 163 (1872). When properly weighed, without the insertion of improper quality-of-life considerations, the States' interests, individually and collectively, clearly outweigh any individual interests in committing suicide and assisted suicide.

III. THE DECISION BELOW SHOULD BE REVERSED IN ORDER TO REAFFIRM THE ESSENTIAL ROLE OF THE STATES IN OUR FEDERAL SYSTEM OF GOVERNMENT AND THE POWER OF THE PEOPLE TO DIRECTLY GOVERN THEIR OWN AFFAIRS

As the States grapple with the difficult questions presented by the ever-increasing ability of medical technology to prolong life, the corresponding need to allow the States to serve as laboratories for change becomes paramount. Indeed, as this Court has recognized, "[t]he science of government . . . is the science of experiment, . . . " *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985) (citation and internal quotes omitted). A decision affirming the Ninth Circuit's opinion in *Compassion in Dying II* will effectively extinguish the power of the States to continue to serve as laboratories for change on an issue that arguably will affect more lives than any issue the States will face in the foreseeable future. *See*

New State Ice Co. v. Liebmann, 285 U.S. 262, 311 (1932) (Brandeis, J., dissenting). It will also "invite[] an unelected federal judiciary to make decisions about which state policies it favors and which ones it dislikes." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985). At the same time, it will "relegate the States to precisely the trivial role that opponents of the Constitution feared they would occupy."[42] *Garcia*, 469 U.S. at 575 (Powell, J., dissenting) (footnote omitted).

> That a question is important does not mean that it is constitutional. The Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions would be decided by the judiciary.

Compassion in Dying II, 79 F.3d 790, 858 (9th Cir. 1996) (Kleinfeld, C.J., dissenting).

CONCLUSION

For all the foregoing reasons, the judgment of the United States Court of Appeals for the Ninth Circuit in No. 96-110 should be reversed.

Respectfully submitted,

DANIEL E. LUNGREN

**On Writ of Certiorari to the
United States Court of Appeals
for the Ninth Circuit**

BRIEF *AMICI CURIAE* OF THE UNITED STATES CATHOLIC CONFERENCE; NEW YORK CATHOLIC CONFERENCE; WASHINGTON STATE CATHOLIC CONFERENCE; OREGON CATHOLIC CONFERENCE; CALIFORNIA CATHOLIC CONFERENCE; MICHIGAN CATHOLIC CONFERENCE; CHRISTIAN LIFE COMMISSION OF THE SOUTHERN BAPTIST CONVENTION; NATIONAL ASSOCIATION OF EVANGELICALS; THE LUTHERAN CHURCH-MISSOURI SYNOD; WISCONSIN EVANGELICAL LUTHERAN SYNOD-LUTHERANS FOR LIFE; THE EVANGELICAL COVENANT CHURCH; AND THE AMERICAN MUSLIM COUNCIL IN SUPPORT OF PETITIONERS STATE OF WASHINGTON, ET AL.

INTEREST OF *AMICI*

This Court has agreed to review a decision that draws a startling and unprecedented conclusion—that the Due Process Clause confers a right to obtain from one's physician the means of committing suicide. This remarkable and erroneous conclusion obliterates a most basic tenet of American law—that the State may prohibit conduct that facilitates the killing of another person. For this reason, representatives of diverse religious communities unite here across denominational lines as *amici curiae* to demonstrate to this Court why the lower court was wrong. Our Constitution does not create a right to have one's life taken, much less a right to dispense lethal drugs to facilitate the killing of others. Individual statements of interest follow.

The United States Catholic Conference is a nonprofit corporation organized under the laws of the District of Columbia. Its members are the active Roman Catholic Bishops in the United States. The Catholic Bishops of New York, Washington, Oregon, California, and Michigan are, in addition, members of the State Catholic Conferences of those respective states. The Conferences are vehicles through which the Bishops speak cooperatively and collegially on matters affecting the Catholic Church and its people. Roman Catholicism is the largest religious denomination in the United States, with over 60 million members in this country. The Conferences advocate and promote the pastoral teaching of the Church on diverse issues, including the protection of human rights and the sanctity and dignity of human life. Each Conference has been active in supporting state laws that protect persons from assisted suicide.

The Christian Life Commission is the moral concerns and public policy agency for the Southern Baptist Convention, the nation's largest Protestant denomination, with over 15.2 million members in over 38,000 autonomous

local churches. The Commission is charged with addressing public policies affecting the sanctity of human life.

The National Association of Evangelicals ("NAE") is a nonprofit association of evangelical Christian denominations, churches, organizations, institutions and individuals. It includes some 42,500 churches from 75 denominations, and 300 parachurch ministries. NAE has joined in this and many other *amicus* briefs in the defense of human rights, including the right to life.

The Lutheran Church-Missouri Synod is the second-largest Lutheran denomination in the United States. It has about 6,000 member congregations and about 2.6 million individual members. In 1995, as a result of their deeply held religious beliefs on the sanctity of life, the congregations of the Synod passed a resolution expressing the Synod's objection "to medical personnel having any part in actively inducing death, even at the patient's request." The Synod resolved "to speak against any attempt to legalize physician-assisted suicide."

The Wisconsin Evangelical Lutheran Synod-Lutherans for Life is a para-synod organization in fellowship with the 400,000-member Wisconsin Evangelical Lutheran Synod ("WELS") and the 10,000-member Evangelical Lutheran Synod. WELS-Lutherans for Life is a specialized ministry seeking to make known God's will on life and to provide assistance to others on life issues. God's will concerning euthanasia and suicide is clear, recognizing that God acknowledges the absolute value of human life despite its varying or diminished quality. WELS-Lutherans for Life stands by the conviction that it is contrary to the will of God to take one's own life or to assist in doing so.

The Evangelical Covenant Church ("ECC") is a Protestant denomination with 92,000 members in 600 churches throughout the United States It operates a university, two hospitals, twelve continuing care and retirement com-

munities, and twelve nursing homes as a Christian ministry. ECC has adopted an ethical guideline on death and euthanasia. The guideline affirms the ECC's commitment to provide "the best palliative measures we can to relieve the pain, discomfort and suffering of our patients. . . . We do not act in any way intentionally to cause, assist, or accelerate the death of patients."

The American Muslim Council ("AMC") is a nationally recognized organization representing the interests of the American Muslim community. AMC is a committed advocate of human rights. It participates in interfaith and multiethnic dialogue with the hope of promoting an environment in which tolerance and justice will thrive. AMC's opposition to assisted suicide is rooted in Islamic belief, which strongly affirms the sanctity of human life.

Through their counsel, the parties have consented to the appearance of these *amici*.

SUMMARY OF ARGUMENT

Americans are a people who esteem personal freedom. But personal freedom is lived and experienced in a human community. To live together in a community requires accommodation, compromise, and even limitations on one's choices in order to protect the common good. We are not a nation in which each person is a law unto himself or herself, but a nation of ordered liberty.

In preserving those freedoms essential to ordered liberty, this Court has insisted that the judiciary give special attention to the constitutional text, to history and tradition, and to the specificity of a claim in evaluating whether a personal demand also finds expression in the Due Process Clause. The claims advanced in the court below fail these basic tests.

In this case, the Ninth Circuit read the Due Process Clause to hold that persons who are terminally ill have

a liberty interest in having someone else provide the means of taking their own lives. While the courts have often struggled with the scope and meaning of the word "liberty," it is plain that life is necessary to the exercise of any other right or liberty. A demand for assistance in killing oneself has never received protection under the constitutional guarantee of liberty. Indeed, the text of the Due Process Clause would be emptied of meaning were it read as protecting a right to be *deprived* of life and liberty.

Moreover, the court below disregarded a basic tenet of the common law, that one person may not facilitate the killing of another person. The Washington statute at issue here is such a law. It is quite distinct from the law regulating the acceptance or rejection of medical treatment. One is not required to accept every conceivable medical treatment that might preserve life. This case, however, is not about letting people die by terminating treatment, but deliberately and intentionally making people die through affirmative means. Our history and traditions have never permitted the latter.

Absent action by this Court, the decision below would set in motion profound and ominous changes in how our society will care for persons who are old, poor, disabled, and vulnerable. Lifting prohibitions against assisted suicide will have a disproportionate and adverse impact upon the poor, the elderly, minorities, women, and those without access to medical care. These are precisely the people whom our Constitution should protect. This Court is being asked by respondents to alter the fundamental nature of our relationships at the end of our lives, and to do so with no reliable guide as to the consequences. The radical departure from our legal traditions sought below could adversely affect the life and death of every American. This Court should reverse.

ARGUMENT

An ardent champion of personal freedom, Justice William O. Douglas, understood that living together in a community requires accommodation, compromise, and limitations on one's choices in order to protect the common good. In his concurring opinion in *Roe v. Wade*, 410 U.S. 113 (1973), he wrote that liberty included "autonomous control over the development of one's intellect, interests, tastes and personality." *Id.* at 211. Yet such freedom of thought and belief, which Justice Douglas said was "absolute, permitting of no exceptions," is internal to the person. Personal choices exhibited in *conduct* are subject to restraint for the sake of the common good and civic peace and order. Some conduct, which might at first glance appear exclusively personal, is subject even to outright prohibition for these reasons. *Jacobson v. Massachusetts*, 197 U.S. 11 (1905). We are a nation not of unbridled and autonomous liberties, but of ordered liberty.

While accommodation and compromise are first and foremost the task of our democratic and legislative process, this Court has a role in preserving those personal freedoms that are essential to ordered liberty. Yet the Court's reliance upon principles or values that cannot fairly be read into the Constitution "usurp the people's authority, for such decisions represent choices that the people have never made and that they cannot disavow through corrective legislation." *Thornburgh v. American College of Obstetricians and Gynecologists*, 476 U.S. 747, 787 (1986) (White, J., dissenting). The need for restraint is particularly essential in interpreting a concept as potentially open-ended as "liberty":

> The Judiciary, including this Court, is the most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or even the design of the Constitution. Realizing that the present construction of the Due Process Clause represents a major judicial gloss on its terms, as well as on the anticipation of the Framers . . ., the Court should be extremely reluctant to breathe still further substantive content into the Due Process Clause so as to strike down legislation adopted by a State or city to promote its welfare.

Moore v. East Cleveland, 431 U.S. 494, 544 (1977) (White, J., dissenting).

The claimed right in the case at bar is a demand for the affirmative assistance of another to end one's life. Although this demand has been called by various names, what respondents have asked this Court to create is a "right" to assistance in committing suicide. In holding that there is such a right implicit in the Due Process Clause, the lower court disregarded this Court's decisions on substantive due process and acted in derogation of the common good.

I. THE CONSTITUTION DOES NOT CREATE OR PROTECT A RIGHT TO ASSISTED SUICIDE.

A. Assisted Suicide Does Not Satisfy Any of the Criteria This Court Has Established For Identifying Interests Subject to the Protection of Substantive Due Process.

1. *This Court Has Insisted Upon a Rigorous Test for Substantive Due Process Claims.*

Three methodological principles for identifying interests entitled to substantive due process protection have emerged from this Court's decisions, ensuring judicial restraint and preventing this Court's substantive due process jurisprudence from becoming simply a product of "the predilections of those who happen at the time to be Members of [the] Court." *Moore v. East Cleveland*, 431 U.S. at 502. First, no interest can be protected under the substantive component of the Due Process Clause if recognition of that interest conflicts with the text of the Con-

stitution. If it were otherwise, the Due Process Clause would simply be a judicial vehicle for amending the Constitution, in contravention of the exclusive mechanism that the constitutional text itself establishes for amendment.

Second, this Court has identified those interests entitled to substantive due process protection by reference to an objective standard, to wit, those interests which are "deeply rooted in this Nation's history and tradition," *id.* at 503, or which are so "fundamental" as to lie at the very "base of our civil and political institutions" such that "ordered liberty" could scarcely be imagined were they eliminated. *Palko v. Connecticut*, 302 U.S. 319, 325, 328 (1937); *see also Snyder v. Massachusetts*, 291 U.S. 97, 105 (1934) (due process protects those liberties "so rooted in the traditions and conscience of our people as to be ranked as fundamental"); *Griswold v. Connecticut*, 381 U.S. 479, 501 (1965) (the Court has "continual[ly] insist[ed] upon respect for the teachings of history [and] solid recognition of the basic values that underlie our society") (Harlan, J., concurring in judgment). Thus, history plays more than a merely "useful role," *Compassion in Dying v. Washington*, 79 F.3d 790, 805 (9th Cir. 1996), in deciding questions of substantive due process. Opinion polls (*id.* at 810) and "changing values" (*id.* at 802-3) may influence legislators, but judges are bound by a more enduring standard in matters of constitutional law.[1]

[1] The Ninth Circuit's assessment of public opinion was not only misplaced but wrong. Since 1994, at least seventeen states have rejected legislative proposals to legalize assisted suicide. Alaska, HB 371 (died in House State Affairs Committee, 1996); Arizona, S.B. 1007 (negative vote in Senate Health Committee, Jan. 1996); California, A. 1080 (withdrawn by sponsor in 1995) and A. 1310 (died without a hearing, Jan. 1996); Colorado, H.B. 1308 (tabled by House Committee on Health, Environment, Welfare and Institutions, Feb. 1995) and H.B. 1185 (defeated 7-to-4 in the same committee, Feb. 1996); Connecticut, S.B. 361 (died in committee, April 1995); Maine, L.D. 748 (rejected by House Judiciary Committee 10-to-3 and by full House 105-to-35, June 1996); Maryland, H.B. 933 (rejected by House Environmental Affairs Committee 15-to-4 in 1995) and H.B. 474 (rejected by same committee 16-to-5 in 1996); Massachusetts, H.B. 3173 (died in House Judiciary Committee, May 1995); Michigan, H.B. 4134 (died in committee, 1995); Mississippi, H.B. 1023 (died in House Judiciary Committee, 1996); Nebraska, L.B. 1259 (died in Judiciary Committee, 1996); New Hampshire, H.B. 339 (rejected by House of Representatives 256-to-90, Jan. 1996); New Mexico, S.B. 446 (tabled 6-to-1 by Senate Judiciary Committee, Feb. 1995); New York, S. 1683, S. 5024-A, A. 6333 (died without a hearing in 1995); Vermont, H.B. 335 (died in House Committee on Health and Welfare, 1995); Washington, S.B. 5596 (died in committee, March 1995); Wisconsin, S.B. 90 and A.B. 174 (died in committee).

The voters of Washington have specifically rejected an effort to weaken their State's law against assisted suicide by referendum, as has the State of California. Dennis L. Breo, *MD-Aided Suicide Voted Down; Both Sides Say Debate to Continue*, 266 JAMA 2895 (Nov. 27, 1991). In 1996, Iowa and Rhode Island joined the majority of states that impose criminal penalties on assisted suicide. Iowa S.F. 2066, to be codified at Iowa Code § 707A.2 (Supp. 1996); R.I. Pub. Act 96-133, to be codified at R.I. Gen. Stat. tit. 11, ch. 60.

Opinion polls indicate a divided and ambivalent electorate on this question, *see Legislating Assisted Suicide*, The Washington Post, Apr. 4, 1996, at A18, with opposition to assisted suicide being strongest among the frail, elderly, and terminally ill—precisely those most directly affected by the issue. Harold G. Koenig, *Attitudes of Elderly Patients and Their Families Toward Physician-Assisted Suicide*, 156 Arch. Intern. Med. 2240 (Oct. 28, 1996); Ezekiel J. Emanuel, *et al., Euthanasia and Physician-Assisted Suicide: Attitudes and Experiences of Oncology Patients, Oncologists, and the Public*, 347 The Lancet 1805 (June 29, 1996).

That history is the linchpin for deciding what is protected under substantive due process is evident from this Court's decisions. Early in this century, relying upon our nation's historic recognition of the right and duty of parents to direct the upbringing of their children, this Court struck down laws that forbade parents to have their children taught a foreign language, *Meyer v. Nebraska*, 262 U.S. 390 (1923), or to send their children to private schools. *Pierce v. Society of Sisters*, 268 U.S.

510 (1925). In *Griswold v. Connecticut*, this Court relied upon the historic sanctity of the marital relationship to overturn the conviction of a physician for giving a married couple information and advice about contraceptives. 381 U.S. at 486. This Court said that the Connecticut law "operat[ed] directly on an intimate relation of husband and wife," having a "maximum destructive impact" upon that relationship. *Id.* at 482, 485.[2] Justice Goldberg, in concurring, left no doubt that in his view it was the marital or family relationship that the Connecticut law threatened. That law, he wrote, "disrupt[ed] the traditional relation of the family—a relation as old and as fundamental as our entire civilization. . . ." *Id.* at 495-96 (Goldberg, J., concurring).[3]

History was also identified as the operative principle when the Court defined abortion to be a constitutional right. Half of the majority opinion in *Roe v. Wade* is devoted to historical attitudes toward abortion. Based on this review, a majority of the Court concluded that statutes banning abortion were "of relatively recent vintage," deriving from "statutory changes effected, for the most part, in the latter half of the 19th century." 410 U.S. at 129, 140-41. While the Court's historical account in

[2] This Court's concern with the text of the Constitution is also apparent in *Griswold*. The Court relied upon "the zone of privacy created by several constitutional guarantees." 381 U.S. at 485. Among the various guarantees identified by the Court were the fourteenth amendment freedom to educate one's children, *id.* at 482, the first amendment right of association, *id.* at 483, and the third and fourth amendment right to be free of governmental intrusion into the home. *Id.* at 484.

[3] Reliance upon history and tradition has been equally dispositive in identifying rights triggering heightened judical scrutiny under the Equal Protection Clause. In *Loving v. Virginia*, 388 U.S. 1 (1967), for example, in striking down on equal protection and due process grounds a Virginia law that forbade interracial marriages, the Court observed that "[t]he freedom to marry has long been recognized as one of the vital personal rights essential to the orderly pursuit of happiness by free men." 388 U.S. at 12.

Roe is seriously flawed,[4] this Court's extended historical discussion in *Roe* nonetheless underscores its continued reliance upon our Nation's history and traditions to identify interests entitled to substantive due process protection.

Nothing in *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), repudiates the historical standard to which *Roe* and earlier cases adhered over the course of nearly a century. Indeed, *Casey* reaffirmed that in its substantive due process decisions this Court looks to "what history teaches are the traditions from which [the Nation] developed as well as the traditions from which it broke." *Casey*, 505 U.S. at 850, *quoting Poe v. Ullman*, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting from dismissal on jurisdictional grounds).[5] Legislators can look where they will, but it is our history and traditions that this Court for a century has embraced as the objective criterion that will prevent its substantive due process jurisprudence from lapsing into an expression of the justices' own "personal and private notions." *Griswold v. Connecticut*, 381 U.S. at 493 (Goldberg, J., concurring).[6]

[4] D. Horan & B. Balch, *Roe v. Wade: No Justification in History, Law or Logic*, J. Connery, *The Ancients and the Medievals on Abortion: The Consensus the Court Ignored*, and M. Arbagi, *Roe and the Hippocratic Oath*, in Abortion and the Constitution (eds. D. Horan, E. Grant & P. Cunningham) (Georgetown University Press 1987). As this Court is aware, Christian groups appearing here as amici believe that *Roe* was wrongly decided.

[5] This is not to dispute that constitutional adjudication requires "reasoned judgment." *Casey*, 505 U.S. at 849. Reason, however, does not operate without criteria to guide it. Otherwise, judges would indeed be "free to roam where unguided speculation might take them." *Id.* at 850, *quoting Poe v. Ullman*, 367 U.S. 497, 542 (Harlan, J., dissenting).

[6] The plurality opinion in *Casey* does concern itself with the protection of certain choices it called "intimate" and "personal." 505 U.S. at 851. We do not view this language as setting forth a new test for due process purposes or even signaling a willingness to depart from settled constitutional law. Rather this language is

A third guiding principle of the Court's substantive due process jurisprudence is its recognition that interests for which heightened constitutional protection is sought must be identified with specificity and with an eye toward the factual context in which that interest is asserted. *Reno v. Flores*, 507 U.S. 292, 302 (1993) (substantive due process claims must begin with a "careful description of the asserted right"); *Collins v. City of Harker Heights*, 503 U.S. 115, 126 (1992). Whether a state can constitutionally forbid or authorize certain conduct cannot be answered by describing the conduct in its most abstract or generic terms. States, for example, may not forbid individuals of different races to marry, *Loving v. Virginia*, 388 U.S. 1 (1967), but they can prohibit polygamous unions, *Reynolds v. United States*, 98 U.S. 145 (1878), or marriages between members of the same immediate family or persons of the same gender. 52 Am.Jur.2d *Marriage* §§ 62-63 (2d ed. 1970) (marriages between closely related persons are universally proscribed). Likewise, a state may not prevent parents from sending their children to private schools, *Pierce v. Society of Sisters*, *supra*, or from providing them instruction in a foreign language, *Meyer v. Nebraska*, *supra*, but can require that they attend school and receive instruction in English.[7]

---

descriptive, not prescriptive. *See, e.g., Olmstead v. United States*, 277 U.S. 438, 478 (1928) (Brandeis, J., dissenting) (discussing the "right to be let alone").

[7] *Meyer*, 262 U.S. at 402 (dicta) ("The power of the state to compel attendance at some school and to make reasonable regulations for all schools, including a requirement that they shall give instructions in English, is not questioned"); *Pierce v. Society of Sisters*, 268 U.S. at 534 (dicta) ("No question is raised concerning the power of the state reasonably to regulate all schools, to inspect, supervise and examine them, their teachers and pupils; to require that all children of proper age attend some school, that teachers shall be of good moral character and patriotic disposition, that certain studies plainly essential to good citizenship must be taught,

Thus, whether interracial, polygamous, or incestuous unions may constitutionally be prohibited cannot be answered merely by framing the conduct at issue as an exercise of the "right to marry," just as the constitutionality of a law touching education cannot be determined merely by invoking a generic parental right to control the upbringing of one's child. Individual justices have disagreed about the precise level of specificity with which a particular interest must be characterized,[8] but the impossibility of reconciling the Court's various due process decisions based on mere recitation of such abstract rights as the "right to marry" or "right to control the upbringing of one's child" demonstrates that considerable specificity in articulating the precise interest at issue is necessary.

2. *Assisted Suicide Fails This Court's Due Process Test.*

Application of these three criteria—consistency with constitutional text, grounding in history, and factual specificity in the description of the underlying interest—to the conduct at issue here at once demonstrates that, contrary to the Ninth Circuit's decision, *Compassion in Dying*, 79 F.3d at 793, 802, "terminally ill, competent adults" have no due process "right to die." First, it is impossible to reconcile recognition of a "right to die" with the actual text of the Constitution. On the contrary, the Due Process Clause protects "life." U.S. Const.,

---

and that nothing be taught which is manifestly inimical to the public welfare").

[8] *Compare Michael H. v. Gerald D.*, 491 U.S. 110, 118-30 (1989) (Scalia, J.) (considering a father's interest in asserting parental rights over a child whose mother was at all times married to another man), *with id.*, 491 U.S. at 132 (O'Connor, J., concurring in part) (stating that "[o]n occasion the Court has characterized relevant traditions protecting asserted rights at levels of generality that might not be 'the most specific level' available"), *and with id.*, 491 U.S. at 136 (Brennan, J., dissenting) (stating that fathers have a constitutionally protected interest in their relationship with their children).

amend. 14. Accordingly, there can be no constitutional guarantee to choose to be *dead*. Indeed, life is more fundamental than any other right, for it is the "right to have rights." *Furman v. Georgia*, 408 U.S. 238, 290 (1972) (Brennan, J., concurring). Even outside a constitutional context, American courts generally have rejected *any* claim that there is a legal interest in not being alive.[9]

The Due Process Clause also guarantees "liberty." But choosing to be dead does not enhance one's liberty. Instead it brings all human freedom to an end. It is difficult to see how one can speak coherently of a freedom to give up all one's freedom. Self-destruction is clearly a far more radical renunciation of freedom than, for example, selling oneself to another person, for it is irreversible and eliminates the potential for exercising all other liberties. In short, the Due Process Clause, which is framed as a guarantee against the *deprivation* of life and liberty, would be turned on its head were it construed as requiring the state to permit individuals to assist others in *abandoning* their life and liberty.

Our Constitution has never been understood as requiring states to permit individuals to relinquish their liberty

---

[9] *See, e.g., Lininger v. Eisenbaum*, 764 P.2d 1202, 1212 (Colo. 1988) ("life, however impaired and regardless of any attendant expenses, cannot rationally be said to be a detriment . . . when measured against the alternative of . . . not having existed at all"); *Azzolino v. Dingfelder*, 315 N.C. 103, 111, 337 S.E.2d 528, 533 (1985) ("[W]e are unwilling to say that life, even life with severe defects, may ever amount to a legal injury"), *cert. denied*, 479 U.S. 835 (1986); *Elliott v. Brown*, 361 So.2d 546, 548 (Ala. 1978) ("[T]here is no legal right not to be born. . . . Upon what legal foundation is the court to determine that it is better not to have been born than to be born with deformities? . . . We decline to pronounce judgment in the imponderable area of non-existence"); *Becker v. Schwartz*, 46 N.Y.2d 401, 411, 386 N.E.2d 807, 812 (N.Y. 1978) (rejecting a claim of wrongful life "in view of the very nearly uniform high value which the law and mankind has placed on human life").

even when that is what they claim to want. American law, for example, does not recognize under any circumstances a transaction to sell oneself into permanent servitude. *Memphis v. Greene*, 451 U.S. 100, 120 (1981). A host of far less serious interests, and even statutory interests like the right to be paid a minimum wage, may not be waived. *Brooklyn Savings Bank v. O'Neil*, 324 U.S. 697, 706-07 (1945). Similarly, the law will not enforce an unconscionable bargain or a contract that violates public policy, even if the parties freely agreed to it. *E.g., Stamford Bd. of Educ. v. Stamford Educ. Ass'n*, 697 F.2d 70, 73 (2d Cir. 1982). If the law can prevent waiver of these lesser interests, it would be inexplicable if the state were constitutionally required to stand idle while an individual, alone or with assistance, renounced the one interest upon which all these others depend. It is life itself, as well as liberty, that the founding fathers declared to be "inalienable."

Recognition of a "right to die" on the part of terminally ill, competent adults also creates serious questions of consistency with other constitutional provisions. One court, for example, has concluded that the failure to protect a class of citizens from self-inflicted deadly harm violates the Equal Protection Clause, *Lee v. Oregon*, 891 F. Supp. 1429 (D. Or. 1995) (permanent injunction), *appeal pending*, No. 95-35804 (9th Cir.); *but see Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996), *cert. granted*, No. 95-1858 (U.S.). It may violate federal statutes, such as the Americans with Disabilities Act, which protects the disabled. *Lee v. Oregon*, 869 F. Supp. 1491, 1499 (D. Or. 1994) (preliminary injunction).

The equal protection concerns implicated here are obvious. Singling out the terminally ill as a class of persons who "deserve" to have their suicidal impulses implemented—even as the law continues to forbid assistance in suicide for everyone else—presupposes that, in some objective sense, their lives in particular are no longer

worth living. This at bottom would reflect a judgment by the state that some people are better off dead than alive. A civilized society, and certainly a society that guarantees equal justice under the law, makes no such judgment with respect to any person. A judicial declaration that some citizens have a "right to die" would also be in direct conflict with the decision by almost every State legislature in the Union to preserve a uniform prohibition against assisted suicide, raising profound questions of federalism and separation of powers. Some have even suggested that the federal judiciary's sudden discovery of a "right to die" raises questions about the continued capacity of Americans to debate and devise democratic solutions to the important modern questions facing them. *Compassion in Dying v. Washington*, 85 F.3d 1440, 1446-51 (9th Cir. 1996) (Trott, J., dissenting from the denial of rehearing *en banc* by the full court).

This Court, however, need not resolve these complex questions to decide this case because assisted suicide, even were it not in actual *conflict* with the text of the Constitution, clearly does not satisfy the historical criterion that this Court, over the course of nearly a century, has established as the pre-eminent test for identifying substantive interests whose protection is *mandated* under the Due Process Clause. After reviewing societal attitudes about suicide in the last two millennia, what is probably the most exhaustive modern historical-legal analysis of suicide in this country concludes:

> [T]here is no significant support for the claim that a right to suicide is so rooted in our tradition that it may be deemed "fundamental" or "implicit in the concept of ordered liberty." Indeed, the weight of authority in the United States, from colonial days through at least the 1970s has demonstrated that the predominant attitude of society and the law has been one of opposition to suicide. It follows that courts should not hold suicide or its assistance to be a protected right under the United States Constitution.

Thomas Marzen, *et al., Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 4 (Fall 1985). Relying in part on the Marzen study, Justice Scalia has observed that there is no historical support for a right to assisted suicide:

> At common law in England, a suicide . . . was criminally liable. Although the States abolished the penalties imposed by the common law (*i.e.*, forfeiture and ignominious burial), they did so to spare the innocent family and not to legitimize the act. Case law at the time of the adoption of the Fourteenth Amendment generally held that assisting suicide was a criminal offense. The System of Penal Law presented to the House of Representatives by Representative Livingston in 1828 would have criminalized assisted suicide. The Field Penal Code, adopted by the Dakota Territory in 1877, proscribed attempted suicide and assisted suicide. And most States that did not explicitly prohibit assisted suicide in 1868 recognized, when the issue arose in the 50 years following the Fourteenth Amendment's ratification, that assisted and (in some cases) attempted suicide were unlawful. Thus, there is no significant support for the claim that a right to suicide is so rooted in our tradition that it may be deemed "fundamental" or "implicit in the concept of ordered liberty."

Cruzan v. Director, Missouri Dep't of Health, 497 U.S. 261, 294-95 (1990) (Scalia, J., concurring) (citations and internal punctuation omitted). Except for the Ninth Circuit, lower courts are in agreement with this view. *Quill v. Vacco*, 80 F.3d 716, 724 (2d Cir. 1996), *citing* Mark E. Chopko & Michael F. Moses, *Assisted Suicide: Still a Wonderful Life?*, 70 Notre Dame L. Rev. 519, 561 (1995); *see also People v. Kevorkian*, 527 N.W.2d 714, 733 (Mich. 1994) (stating that it "would be an impermissibly radical departure from existing tradition and from the principles that underlie that tradition to declare that there is . . . a fundamental right [to assistance in com-

mitting suicide] protected by the Due Process Clause"), *cert. denied*, 115 S.Ct. 1795 (1995); *Compassion in Dying v. Washington*, 49 F.3d 586, 591 (9th Cir. 1995) (panel) (no constitutional right to aid in killing oneself has been recognized in "the two hundred and five years of our existence"), *rev'd*, 79 F.3d 790 (9th Cir. 1996) (*en banc*). The Ninth Circuit's historical account is flawed both in method and in its findings. The fact that mankind's view of suicide is "checkered," *Compassion in Dying*, 79 F.3d at 806, or that suicide met with mixed attitudes in ancient times, *id.* at 806-07, does not show that it is "deeply rooted in *this* Nation's history and traditions." *Moore v. East Cleveland*, 431 U.S. at 504 (emphasis added).[10] The Ninth Circuit's assessment of the Christian tradition on suicide is certainly mistaken.[11]

---

[10] Parents in ancient Greece could slaughter or abandon their children if weak or deformed, *see* Will Durant, The Life of Greece 50 (1939), but this is no proof that the practice is deeply rooted in American history and traditions. This Court has never hesitated to reject ancient attitudes, especially when based on ideas that are inconsistent with those ideas upon which our American institutions rest. *E.g., Meyer v. Nebraska*, 262 U.S. 390, 401-02 (1923) (ancient Greek notions concerning child rearing were based on ideas about the relation between the individual and the state which are "wholly different from those upon which our institutions rest," and no legislature could impose similar restrictions on our people "without doing violence to both letter and spirit of the Constitution").

[11] "The Church's tradition has always rejected [suicide] as a gravely evil choice." Pope John Paul II, Encyclical Letter *Evangelium Vitae*, ¶ 66 (March 25, 1995). The single clear instance of "assisted suicide" in the Old Testament, involving the death of Saul, is treated as a capital crime (2 Samuel 1:6-16). The Christian tradition views Judas's suicide not as an act of repentance (*cf.* 79 F.3d at 808 n.25), but as an act of despair. Justin, Cyprian, Tertullian, Clement of Alexandria, Lactantius, Augustine, and other early Christian thinkers all rejected suicide. Darrel W. Amundsen, Medicine, Society, and Faith in the Ancient and Medieval Worlds 89-102 (Johns Hopkins Univ. 1996). Suicide was seen as murder of oneself, and sometimes as worse than murder; according to John Chrysostom, "if it is base to destroy others, much more is it [base] to destroy one's self." *Id.* at 98. Christian leaders praised martyrs

With respect to the Ninth Circuit's treatment of suicide in more modern times, the lessening and eventual removal of criminal penalties for persons who unsuccessfully attempted suicide does not suggest approval of the practice. "Although the States abolished the penalties . . . of forfeiture and ignominious burial, they did so to spare the innocent family and not to legitimize the act." *Cruzan*, 497 U.S. at 294-95 (Scalia, J., concurring) (internal punctuation altered). That stakes are no longer driven through the bodies of persons who commit suicide, *see Compassion in Dying*, 79 F.3d at 809, is no modern-day endorsement of suicide. Our current understanding of assisted suicide is informed by undisputed evidence that virtually all who commit suicide (95% in almost every study) have "a major psychiatric illness at the time of death." New York State Task Force on Life and the Law, When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context 123 (May 1994); P. Marzuk, *et al., Increase in Suicide by Asphyxiation in New York City After the Publication of Final Exit*, 329 New Eng. J. Med. 1508, 1510 (Nov. 11, 1993) ("95 percent of all persons who commit suicide have a serious mental illness").[12] It is for such reasons, and not because of societal

---

who adhered to their faith even under threat of death, but criticized those who rushed to a martyr's death too readily. The point of martyrdom was to remain faithful, not to intend one's death. The Ninth Circuit was wholly mistaken in suggesting that St. Augustine's chief concern about suicide was the toll it was taking on faithful Christians (79 F.3d at 808), since Augustine strongly condemned suicides by heretics whose teaching and activities he vigorously opposed. Amundsen at 109-111. Equally mistaken is the Ninth Circuit's claim (79 F.3d at 808) that St. Thomas More favored euthanasia because it is mentioned in his fictional work on the imaginary *pagan* society of Utopia. *See* Thomas More, Utopia 102 (Penguin Books 1965). More's Utopia also allowed divorce (*id.* at 104), but the real-life Thomas More was beheaded for refusing to accept King Henry VIII's divorce.

[12] In fact, terminally ill patients expressing suicidal thoughts usually abandon the wish to commit suicide after their depression has been treated or they have received other appropriate medical

approval, that suicide itself is not now punished under the criminal law.

The criminal proscription of assisted suicide, of course, is a longstanding tradition that continues to the present day. The consistency of that proscription has an immediate bearing on the inquiry regarding its constitutional status. Whatever else can be said of substantive due process, this much is true: it surely cannot protect conduct *expressly* prohibited throughout our nation's history. *Michael H. v. Gerald D.*, 491 U.S. 110, 122 n.2 (1989); *see also Bowers v. Hardwick*, 478 U.S. 186, 194 (1986) (longstanding proscriptions against homosexual sodomy render any claim to substantive due process protection "at best, facetious"). Protection of a particular interest "need not take the form of an explicit constitutional provision or statutory guarantee" to warrant protection under the Due Process Clause, "but it must at least exclude . . . a societal tradition of enacting laws *denying* the interest." *Michael H. v. Gerald D.*, 492 U.S. at 122 n.2 (original emphasis).

The Ninth Circuit facilely asserts that sometimes history is not a guarantor of fairness, as illustrated by our nation's tragic history of racial discrimination. But now-obsolete and rejected laws condoning racial discrimination are easily distinguishable. Formerly a disgraceful part of our nation's laws and traditions, racial discrimination was specifically targeted in the thirteenth and fourteenth amendments. Clearly the fact that some laws which furthered racial discrimination were once on the books does not prevent one from finding such laws unconstitutional now. *Loving v. Virginia, supra.* The practices of slavery and racial discrimination are precisely examples of those "traditions from which [our nation] broke," *Planned Parenthood v. Casey*, 505 U.S. at 850, for it was precisely

---

treatment. New York State Task Force on Life and the Law, When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context, x, 120-21.

for that purpose that the fourteenth amendment was enacted. In *Loving*, the Court further grounded its decision in history when it observed that the freedom to marry "has long been recognized as one of the vital personal rights essential to the orderly pursuit of happiness by free men." *Loving*, 388 U.S. at 12.

Finally, the "right to die" or to "control the time and manner of one's death," *Compassion in Dying*, 79 F.3d at 802, lacks the requisite specificity used in describing substantive due process interests. First, the Ninth Circuit used these very same terms to describe radically different types of conduct, *i.e.*, refusing medical treatment and obtaining a deadly poison, even though these have been treated quite differently under the law.[18] Moreover, a "right to control the time and manner of one's death" expresses *no* limitation in terms of conduct or the actor. Such a claimed right would seem to encompass, for instance, a right to die by gunfire in full view of paying spectators, or by any other means one chose. Nor does the claimed right express any limitation with respect to who may "assist." *See Compassion in Dying v. Washington*, 79 F.3d at 838 n.140 (noting that family members and others may also be involved in facilitating an assisted suicide). For these reasons, one must reject the claimed "right to die" or to "control the time and manner of one's death." Stripped of euphemism, what is at stake here is a claimed "right" to enlist the aid of others in committing suicide. There is no such right.

B. *Planned Parenthood v. Casey* Does Not Alter the Due Process Methodology or Establish A Right To Assisted Suicide.

In *Planned Parenthood v. Casey*, a plurality opinion for this Court characterized abortion as an "intimate and per-

---

[18] These amici discuss the difference between assisting suicide and rejecting medical treatment in their brief *amici curiae* in *Vacco v. Quill*, No. 95-1858.

sonal" choice, one "central to personal dignity and autonomy." *Planned Parenthood v. Casey*, 505 U.S. at 851. "At the heart of liberty," the plurality wrote, "is the right to define one's own concept of existence. . . ." *Id.* The court below believed assisted suicide to be constitutionally protected because it too is "intimate," "personal," and part of the "right to define one's own concept of existence."

The claim leads to absurd results. If a decision need only be "personal" and "intimate" to qualify for constitutional protection, then the number of interests entitled to constitutional protection and beyond the scope of state regulation will be large indeed. A decision to use hallucinogenic drugs for recreation, engage in a consensual duel, sell one's body into prostitution, or any number of other equally personal and intimate activities currently subject to state prohibition would be constitutionally protected. Furthermore, if the fact that a choice is "intimate and personal" is enough to guarantee its protection under the fourteenth amendment, then the asserted right to commit suicide could not plausibly be confined to the terminally ill. A decision to commit suicide because of a failing business or family tragedy would seem just as "intimate" and "personal" as a decision to commit suicide based on other reasons or no reason. *Compassion in Dying v. Washington*, 49 F.3d at 591 (if terminally ill persons have a right to commit suicide, "every man and woman in the United States must enjoy" the right—"a *reductio ad absurdum*"), *rev'd*, 79 F.3d 790 (9th Cir. 1996). The same could be said of attempts to defend such a right in terms of the "suffering" of the terminally ill. Other kinds of human suffering are as "personal" and some are more long-lasting. In recognition of this fact, the only nation in the world to experiment for a number of years with legally permitted euthanasia has quickly moved from cases of terminal illness to those involving chronic conditions

and even purely mental suffering.[14] The "personal" nature of suicide proves nothing because it proves too much.

Indeed, there is an especially strong reason to believe in this litigious society that such a claimed right to assisted suicide would not stop with the terminally ill.[15] As Justice Cardozo observed, any principle tends "to expand itself to the limit of its logic." Benjamin N. Cardozo, Nature of the Judicial Process 51 (Yale University Press 1949). Once *any* right to assisted suicide is conceded for any class of persons, it will be impossible to confine the right to that class. Indeed, if such a right were recognized, it could be argued in the criminal law context that killing those who cannot be proven to have objected to the act constitutes no crime at all. This would represent a 180-degree change in the direction of the criminal law to date. *Blackburn v. State*, 23 Ohio St. 146, 163 (1873) ("The lives of all are equally under the protection of the law, and under that protection to their last moment"); *Martin v. Commonwealth*, 184 Va. 1009, 1018, 37 S.E.2d 43, 47 (Va. 1946) (right to life is inalienable; consent of victim is no defense). Since all medical conditions can be placed on a continuum, any distinction based on the health status of the victim would be subject to challenge as arbitrary. Other classes of sick or suffering people would demand a right to assisted suicide on equal

[14] House Judiciary Subcommittee on the Constitution, 104th Cong., 2d Sess., *Physician-Assisted Suicide and Euthanasia in the Netherlands* 6-12, 15-16 (September 1996) (Report of Chairman Charles T. Canady).

[15] Defining the term "terminally ill" itself has proven to be problematic. "[S]eventeen years of experience with State Living Will statutes that have used 'terminal condition' as a prerequisite to patient directives have demonstrated that 'terminal' lacks any truly objective, operational definition. The terminal requirement is an . . . unworkable requirement." American Bar Association Commission on Legal Problems of the Elderly, Memorandum of January 17, 1992, *reprinted in* 8 Issues in Law & Medicine 117 (Summer 1992).

protection grounds. There is no principled basis for distinguishing among the "depressed twenty-one year old, the romantically-devastated twenty-eight year old, the alcoholic forty-year old. . . ." *Compassion in Dying v. Washington*, 49 F.3d at 591, *rev'd* 79 F.3d 791 (9th Cir. 1996).

Casey is in any event readily distinguishable from cases involving an asserted right to suicide or assisted suicide. The *stare decisis* considerations which led a plurality of this Court in *Casey* to reaffirm the "central holding" of *Roe* are entirely absent—and indeed, tilt in the opposite direction—when one turns to assisted suicide. Assisted suicide not only has no precedent to support it, but is universally proscribed.

Furthermore, this Court has always permitted abortion regulation it deemed necessary to protect a woman's life and health. *E.g., Roe v. Wade*, 410 U.S. at 164. It has even conceded that bans on abortion were more legally defensible in ages when it was "an inherently hazardous procedure" for the woman. *Id.* at 149-50. By contrast, support of a right to suicide is plainly incompatible with protection of health because it destroys the subject's very life. Suicide is always "an inherently hazardous procedure." Finally, except in the abortion context this Court has never ruled that states are constitutionally required to permit the destruction of innocent human life. The Court permitted the destruction of unborn children only because, in its view, they were not persons. *Roe*, 410 U.S. at 158 ("the word 'person,' as used in the Fourteenth Amendment, does not include the unborn"). No party in this case contests the fact that the terminally ill are "persons" and so are entitled to the Constitution's protection.

II. THIS CASE RAISES FUNDAMENTAL QUESTIONS ABOUT THE ROLE AND RULE OF LAW IN THIS SOCIETY.

Ours is a Nation founded not simply upon boundless or unprincipled liberty, but on *ordered* liberty. *Palko v. Connecticut*, 302 U.S. at 325. It follows that one does not have an absolute right to do with one's own body, or anyone else's, as he or she pleases. *Roe v. Wade*, 410 U.S. at 154. The "statute books are replete with constitutionally unchallenged laws against prostitution, suicide, voluntary self-mutilation, brutalizing 'bare fist' prize fights, and duels, although these crimes may only directly involve 'consenting adults.'" *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 n.15 (1973). The choice of a spouse is perhaps the most intimate of choices, but that choice too is qualified by concerns for the common good that are expressed in limitations based on affinity, consanguinity, and gender. In each of these instances, the claims of an individual are balanced against, and sometimes subordinated to, the common good.

For many reasons, the common good counsels strongly against physician-assisted suicide. Public policy is not made at the extremes or for the extremes. Medical evidence shows clearly that most of those who express desires to end their lives have a treatable depression or other psychopathology.[16] Some, though not the majority, of persons who request suicide are in pain.[17] Once these conditions are treated, however, the demand to end life ceases.[18] If we embrace a "right to die" as designed by the

[16] *See* discussion, *supra*, at 19.

[17] *See* P.J. van der Maas, *et al.*, Euthanasia and Other Medical Decisions Concerning the End of Life 44 (Elsevier Science Publishing 1992).

[18] "Adequate pain relief, control of symptoms, and treatment of psychological distress clearly alter patients' requests to terminate life." Kathleen M. Foley, *The Relationship of Pain and Symptom Management to Patient Requests for Physician-Assisted Suicide*, 6 J. of Pain and Symptom Management 289, 296 (1991).

court below, those who would die prematurely by exercising that "right" are those most in need of care and comfort, those most vulnerable to disparities in economic and health care resources.[10]

A New York State Task Force that studied this issue predicted that the poor, the elderly, minorities, and those without access to medical care are more likely to be encouraged to request "aid" in dying (or have it requested "for" them by surrogates) than any other class if assisted suicide is legalized. New York State Task Force on Life and the Law, When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context, xii (May 1994). Others have noted the disproportionate impact that legalization of assisted suicide would have on women. American Association of Suicidology, *Report of the Committee on Physician-Assisted Suicide and Euthanasia*, 26 Suicide & Life-Threatening Behavior 9 (1996 Supp.). It was for this reason, among others, that the diverse members of the New York State Task Force on Life and the Law unanimously rejected the view that the State's prohibition against assisted suicide should be altered in any way:

> No matter how carefully any guidelines are framed, assisted suicide and euthanasia will be practiced through the prism of social inequality and bias that characterizes the delivery of services in all segments of our society, including health care. The practices will pose the greatest risks to those who are poor, elderly, members of a minority group, or without access to good medical care.

---

[10] Individuals treated at centers serving predominantly minority patients have been found to be three times more likely than others to receive inadequate pain treatment, with women and the elderly also more likely to receive poor treatment. C.S. Cleeland, *et al.*, *Pain and its Treatment in Outpatients with Metastatic Cancer*, 330 New Eng. J. Medicine 592-6 (1994). "Pain is . . . more likely to be undertreated if the patient is minority, female, elderly, or a child." State of California, Summit on Effective Pain Management: Removing Impediments to Appropriate Prescribing 3 (Summit Report 1994).

New York State Task Force on Life and the Law, *supra* at xiii. We need to consider—and this Court needs to confront—the larger consequences for education, economic reform, the eradication of poverty, discrimination, and other ills of society if we foster the attitude that, in the face of seemingly intractable difficulties, it is an individual's right not only to surrender but to enlist others to provide the means to end his or her life. The prohibition against intentional killing "is the cornerstone of law and of social relationships." House of Lords, 1 Report of the Select Committee on Medical Ethics 48 (Jan. 31, 1994). It is surely constitutional.

This case asks plainly how constitutional law and constitutional principle can and should develop over the foreseeable future. It asks whether the rule of law, which traditionally has prevented people from enlisting others to carry out self-destructive impulses, may crumble in the face of a newly-minted claim of unbridled autonomy. It asks whether traditional and valued distinctions in the law and in medical practice must give way to these new claims of autonomy—claims which are self-contradictory, for they destroy the very person whose freedom they claim to maximize. At bottom, this case asks whether the kind of society we are to become will reflect our deepest values or none at all. No person or class of persons should be labeled by our legal system as having a life not worth living. Our society is made richer through the lives and well-being of all.

CONCLUSION

For the foregoing reasons, the judgment of the Ninth Circuit should be reversed.

Respectfully submitted,

Of Counsel:

INTEREST OF *AMICI CURIAE*: Damage to the liberty and property rights of nurses 1

SUMMARY OF ARGUMENT 3

ARGUMENT: The Courts of Appeal granted an entitlement to assisted suicide which inculpates nurses, thereby denying liberty and property rights of nurses to practice a profession undamaged by assistance in suicide 3

1. Legal assisted suicide would inculpate all nurses in assisted suicide, denying nurses the liberty and property interests in their profession 4

a. Legal assisted suicide would inculpate nurse practitioners as prescribers of drugs used in suicide 6

b. Nurses other than nurse practitioners would be affected by legal assisted suicide 8

(1) The practice of every nurse would be changed by legal assisted suicide (which seeks to solve a nonexistent problem) 8

(2) Hospice and home health nursing practice would be changed under legal assisted suicide 11

(3) Hospital and long term care nursing practice would be changed under legal assisted suicide 13

c. Anticipation of legal assisted suicide in one state has caused its nurses to accept involvement 15

INTEREST OF *AMICI CURIAE*:

The decisions of the Courts of Appeal damage the liberty and property rights of nurses.

Letters of the parties consenting to file this brief *amici curiae* have been filed with the Court. Descriptions of each group filing this *amici* brief are set forth in the Appendix.

By striking state laws criminalizing assisted suicide, the decisions of the Courts of Appeal, if affirmed, would make assisted suicide legal. The *amici curiae* will be uniquely and directly affected by the Court's decision in this case. To demonstrate their unique interest, *amici* will present evidence that nurses would be 1) involved, and 2) detrimentally affected, if assisted suicide were made legal.

The decisions of the Courts of Appeal on review grant an entitlement not only to "physician-assisted suicide" but also (a fact unknown to many) to "nurse-assisted suicide." The practitioner most likely to be with the patient as he dies, is his nurse. A large difference exists between the professions of nursing and other professionals in illness care, regarding the care of terminal patients. The patients who are the subject of assisted suicide almost always require nursing care, not always medical care. At the very time when medicine may have little to offer the patient, the nurse can give comfort, concern, and care. The interest of nurses in what happens to their dying patients is unique, even among other professionals.

The nurses' interest differs from other professionals in another way: nurses are almost always employees. They will not have the luxury that other professions might have, abstractly and coolly to deliberate on whether to assist a patient in suicide. Nurses rarely can choose their patients; they are assigned to them. Because of their societal and employment status, nurses would be vulnerable to pressures to assist in suicide against their professional or ethical judgment. They are often in the unenviable position of being responsible for executing decisions in which they have no voice. The nursing coat of arms in some instances might well read: "Responsibility without Authority."

The effect of inculpating nurses in the self-killing of their patients will not be addressed by any other *amici* or Party. The effect is this: If assisted suicide is made legal, nurses will be asked to assist suicide. All nurses care for patients who die, and some of their patients might die by prescription. That nursing care would be nurse assistance in suicide, because the definition of "assist" cannot be narrowly limited only to providing medication. Those nurses and thus the whole profession would be inculpated in nurse-assisted suicide. Further, Nurse Practitioners (NPs) in several states now legally prescribe the medications that would be used to cause death in patients.

The Nurses' concern for their *patients* who would be harmed, will be addressed by other *amici*. Nurses add that the harm done to the profession of nurses, the largest group of practitioners who care for patients, would affect not only current patients but all who would need nursing care in the future.

All nurses would be involved intimately in the death of their patients who might self-kill. The decision of one of the Courts of Appeal contemplates this, together with an assumption that at some future time euthanasia may be delegated:

> "We recognize that in some instances, the patient may be unable to self-administer the drugs [for suicide] and that administration by the physician, **or a person acting under his direction or control** may be the only way the patient may be able to receive them." [Emphasis and material in brackets added]. *Compassion in Dying* v. *State of Washington*, 79 F.3d 790 at 831 (9th Cir.1996).

The inevitable inculpation of nurses in legal assisted suicide would erode the personal and professional ethics of nurses, expose them to criminal and civil sanctions, and destroy the confidence of the public in the profession. Thus the nurses' rights to liberty and property in the practice of their profession would be violated.

SUMMARY OF ARGUMENT

The decisions of the Courts of Appeal grant the entitlement to suicide with assistance and approval and thereby deny liberty and property rights of nurses in their profession, damaged irrevocably by nurse assistance in the deliberate deaths of patients. Nurses would be 1) inculpated, and 2) harmed, by legal assisted suicide:

1. Under legal assisted suicide, nurse practitioners and all other nurses would be inculpated in nurse-assisted suicide. One association of nurses already has advised its members that nurses would be involved in assisting suicide if it were legal.
2. Legal assisted suicide would harm irrevocably the ethical and legal basis of the nursing profession; current ethical standards of nurses would be eroded; and the public's perception of the profession would deteriorate, all causing damage to the liberty and property rights of nurses in practicing their profession.

ARGUMENT

To commit suicide with assistance and approval is not a right but an entitlement. Making assisted suicide legal does not merely allow the ability to do an act by one person, but confers the power to involve another person in the act.

Nurses leave to other *amici* the elaboration of the certain fact that the vast majority of people who seek suicide are psychologically impaired. Even terminal patients in pain do not seek death (and *amici* assert this pain can be relieved, under current standards of care). E.J. Emanuel, *et al, Euthanasia and physician-assisted suicide: attitudes and experiences of oncology patients, oncologists, and the public*, 347 Lancet 1805 (1996).

Terminally ill patients who seek to die are almost invariably depressed and ambivalent about dying, and those patients can be helped with medication. If encouraged, such ambivalent patients will choose to live. For the rare patient who is terminal, competent, non-depressed and seeking suicide with help (and even that patient is likely ambivalent about dying):

Before these Courts of Appeal decisions, prescriptions have been written with knowledge that their purpose was suicide. Though that information has been acknowledged, no prescribers have ever been convicted of assisting suicide. T.H. Stone & W.J. Winslade, *Physician-assisted suicide and euthanasia in the United States*, 16 J. Leg. Med. at 492 (1995).

The aim of making assisted suicide legal, then can be seen. It is not merely to allow a prescription for the few competent, terminal, non-depressed patients who would commit suicide with such drugs. Instead, it provides a prescription *with approval of its purpose*. This prescription would be visible evidence of approval of the act from the doctor or nurse practitioner. Legal assisted suicide confers the entitlement to suicide with approval, by inculpating the professions. The intent is to give to the act the imprimatur and approval of the law, and of the professional.

The tacit tolerance of assisted suicide already creates the perception that some special cases exist that warrant assisted suicide. This tolerance would become explicit if legal. The nurse would be forced to act either in compliance with her conscience (to safeguard her patient, profession, and opinion of herself), or to act in compliance with what would then be the law. She would have to be silent or even assist suicide.

1. Legal assisted suicide would inculpate all nurses in assisted suicide, denying nurses the liberty and property interests in their profession.

The relationship of nurses to their patients has been called a social contract with the public. That is, the public/patient knows in general what a nurse is, and what she is expected to do. People who are currently in the profession entered that work with the knowledge of, and expectation of, what their work would be. They have a property interest in their occupation; and they have a liberty interest in being able to practice the profession as it exists without arbitrary government interference. Both interests have been found to rise to the level of fundamental rights, deserving Constitutional protection.

> " . . . [T]he right to work for a living in the common occupations of the community is of the very essence of the personal freedom and opportunity that it was the purpose of the Amendment to secure."

Truax v. *Raich*, 239 U.S. at 41 (1915); and

> "[T]he right to hold specific private employment **and to follow a chosen profession** free from unreasonable governmental interference comes within the 'liberty' and 'property' concepts of the Fifth Amendment."

Greene v. *McElroy*, 360 U.S. at 492 (1959) [Emphasis and material in brackets added].

The liberty and property interests asserted here are not merely in a specific job, though specific employment also may be endangered for the nurse who will not participate. The nurse who will not participate in assisting suicide cannot merely go to another nursing job that is unaffected by legal assisted suicide. Any and all nurses would find their profession damaged by the inculpation of nurses in assisted suicide. All jobs, all nurses, would be tainted.

The practice of nursing does evolve and change; but the underlying values expressed in the ethics of nursing, and enforced in the minimum of the law, have not changed in thousands of years. The *amici* assert that it has not ever been the legitimate work of their profession to assist patients to kill themselves. Legal assisted suicide would make those acts part of the work of nurses.

Courts have always considered the effect of their decisions on all the people involved in a case. Under these decisions, the nurses are immediately and intimately and detrimentally involved. In particular, the impact of their decisions on the integrity of the professions has been of major concern to courts. *Superintendent of Belchertown* v. *Saikewicz*, 370 N.E.2d at 426 (Mass.1977), *Satz* v. *Perlmutter*, 362 So.2d at 163 (Fla.1980).

Other courts have expressed concern for nurses asked to assist in causing death in their patients (in the case quoted below, by denying nursing care).

> I find it difficult to understand how we can order nursing professionals with an abiding respect for their patients to cease to furnish the most basic of human needs to a patient in their care. [Such an order] may impinge on the privacy rights of those nursing professionals.

In re Jobes, 529 A.2d at 464 (N.J. 1987) (O'Hern, J., dissenting). [Material in brackets added].

Another court worried about the ethics of nurses asked to assist in deliberately dehydrating to death a comatose patient:

> . . . for almost all concerned the adoption of the proposed course will be a merciful relief, [but] this will not be so for the nursing staff, who will be called on to act in a way which must be contrary to all their instincts, training and conditions. They will encounter the ethical problems, not in a court or in a lecture room, but face to face.

Lord Mistill, House of Lords. *Airedale NHS Trust (Respondents)* v. *Bland* (Acting by his guardian *ad litem*) (Appellant) London: House of Lords, 1993 [Material in brackets added].

a. Legal assisted suicide would inculpate nurse practitioners as prescribers of drugs used in suicide.

If assisted suicide were legal, nurse practitioners in many states would be affected in exactly the same way as physicians. They would be seen as practitioners who could prescribe death instead of promoting life. In some states nurse practitioners potentially can prescribe all the drugs that patients seeking to suicide most likely would be prescribed to kill them. Drugs that might be prescribed are used at present for pain, sleep, anxiety, or depression, all of which categories some nurse practitioners legally can prescribe now. See, for example, Or. Rev. Stat. 678.385.

Patients who could legally obtain drugs for the purpose of suicide from physicians could get a prescription for the same or similar drug from a nurse practitioner. This is so, even if the NP technically could not prescribe for the *purpose* of suicide. If prescriptions from the physician for the purpose

of assisted suicide were legal, patients would be encouraged (and perhaps even more likely) to ask for the same drugs from their nurse practitioner. Patients who formerly might not have sought a prescription for suicide might be encouraged to do so if it were legal. The legality of the prescription would remove the stigma from suicide or at least spread it onto the prescriber.

Nurse practitioners in the future likely would be included as "prescribers" if assisting suicide were legal. The equal protection clause of the Fourteenth Amendment to the Constitution would prohibit the exclusion of Nurse Practitioners from prescribing drugs for self-killing. The limitation of such prescriptions to physicians would discriminate without rational basis, since nurse practitioners too could prescribe the drugs most likely to be used to kill the patient.

To assert that the prescription of killing drugs could be limited to physicians because they are better qualified to judge the mental status of the patient, has no factual basis. Comparison of the curricula of their respective educational programs would demonstrate that nurse practitioners (especially those working in mental health) are even more likely than doctors to have been educated in psychosocial components of care. Thus nurse practitioners are at least as able as physicians to assess patients for their competency in making a request to die. Nurse practitioners would be inculpated in legal nurse-assisted suicide as prescribers. Their exclusion will not meet the rational basis standard of Amendment Fourteen of the Constitution.

Nurse practitioners unwilling to assist the patient in suicide likely would be required to transfer medical records to the next practitioner chosen to assist suicide, just as physicians would be. This participation would be required, regardless of the religious or moral or professional objections of the nurse to inculpation in the self-killing. The nurse's objection that suicide was inappropriate for this patient, based on her assessment of the patient, would be no bar to enforcing such

transfer of records. An example of such requirement to transfer patient records in a law with "safeguards" as recommended by the decisions of the Courts of Appeal, is Oregon Ballot Measure 16, Section 4.01(4).

b. Nurses other than nurse practitioners would be affected by legal assisted suicide.

(1) The practice of every nurse would be changed by legal assisted suicide (which seeks to solve a nonexistent problem).

Legal assisted suicide would affect all nursing practice; most nurses care for terminal patients on a daily basis. Some of those patients (those who are depressed and ambivalent) might seek suicide with assistance. Participating in assisted suicide would become part of the practice of nursing. The consequences of legal assisted suicide noted below support that conclusion, and it is admitted by the position of the Oregon Nurses Association (ONA) discussed more fully below. Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995).

If assisted suicide were legal, according to the ONA paper discussed below, even the nurse who is morally opposed to assisted suicide would be required to inform the patient of his right to referral to a physician (or nurse practitioner) who would prescribe a lethal dose. For some nurses, supplying this information would be assisting the patient's suicide. They would assist, as surely as did German nurses under National Socialism assist euthanasia. Those German nurses identified some children as retarded, knowing the result of the diagnosis would be death.

From the research done on attitudes and behavior of patients who are terminally ill, it is evident that the Courts of Appeal have written law to solve a problem that does not exist. Data cited above (Emanuel) show that patients who seek suicide are depressed and at least ambivalent about their wish to die. Practitioners are notoriously bad at diagnosing

and treating depression[1] (a reason to educate practitioners, not a reason to assist depressed patients to suicide). The data also show that competent terminal patients, even those (unnecessarily) in pain, are very unlikely to seek suicide.

According to research studies, a large majority of patients want heroic efforts made if they die. They may overestimate the success rate of heroic efforts, but patients who are very seriously ill, even those that might be classed as "terminal," want to live. R.S. Phillips *et al, Choices of seriously ill patients about cardiopulmonary resuscitation: correlates and outcomes*, 100 Am. J. Med. 128 (1996).

At present, the nurse's duty toward a depressed patient dying in pain is to alleviate the pain and treat the depression, both remediable conditions. If assisted suicide were made legal, the nurse's practice would be changed, perhaps to assist the patient to suicide in order to relieve depression and pain. Effective (non-lethal) treatment is available right now for depression and pain. *Amici* know it is not necessary to end the patient, to end his pain.

The Courts of Appeal have confused withdrawing treatment that patients do not want, with suicide, assisted suicide, and euthanasia. Researchers too have confused refusing treatment with suicide, resulting in studies that seem to indicate that intensive care nurses already assist suicide or euthanize patients. D.A. Asch, *The role of critical care nurses in euthanasia and assisted suicide*, 334 N. Eng. J. Med. 1374 (1996). In reality, only treatment that the patient rejects is removed. Often the treatment rejected would not have prolonged the patient's life in any event. The public (including jurists and researchers) overestimate also the success rate of medicine and nursing in prolonging life with heroic efforts.

---

[1] Purported safeguards in legislation such as those in Oregon's Measure 16, ask the practitioner to refer the patient who may be depressed for counseling. But many practitioners cannot recognize the diagnosis in the first place, so they cannot refer. New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* (May 1994) p. 127.

Though it may be blurry to the Courts of Appeal, the line is very clear and bright between withdrawing treatment which would not prolong life, and actively causing death. Nurses are adamant that care that is not useful, and is not wanted, be ended. The nurse is very often the patient's greatest advocate in such situations. She will take whatever measures are needed to see that the patient's wishes are honored. These measures may include conversations (even confrontations) with doctors, ethics committees and employers. But for the nurse, it is a thousand leagues distance from honoring her patient's wish to stop treatment – to being her patient's agent of death.

Under legal assisted suicide a nurse would encounter a family pressuring the terminal patient to die (subtly or not, and done for the patient's benefit or not). Currently, this behavior might rise to the level of neglect or abuse of an elderly or dependent patient, and the nurse's obligation is to report it. Under legal assisted suicide, the nurse's practice would be changed (perhaps to refer the patient and family to a practitioner who would prescribe a lethal dose).

Under legal assisted suicide, federal law might require nurses to inform the patient who is even possibly "terminal," of his right under state law to assisted suicide. The Patient Self-Determination Act 42 U.S.C. Sec.1395cc(a)(1) *et seq.* requires recipients of Medicare funds (hospitals, skilled nursing facilities, home health agencies, and hospice programs) to provide information to each patient concerning

> "an individual's rights under State law . . . to make decisions concerning such medical care, including the right to accept or refuse medical or surgical treatment and the right to formulate advance directives."

Even government employers may require practitioners to give information preferred by the employer's policy. *Rust* v. *Sullivan*, 500 U.S. 173 (1991). Private employers surely would be able to dictate information to be given. For employers of nurses such as managed care companies or their contractors (virtually all employers of nurses are included in the latter category), the patient's suicide or euthanasia might

be a very cost effective procedure. If the procedures were legal, nurses would be under pressure to assist suicide and euthanize. Nurses might be expected to suggest such "alternatives" to expensive care.

Nurses could be directed by their employers to tell patients that help in killing themselves is available, or be at risk of losing their jobs. Some nurses from strong religious and ethnic tradition, and other nurses who also place primary value on the life of the patient, would be especially at risk. If legal, such nurses who work on oncology and AIDS units, in long term care, hospice, and home health would find their job opportunities limited if they declined to participate in assisted suicide.

Nurses could be forced to choose between job and conscience in a time of shrinking job opportunities in nursing. Most nurses work as "at will" employees, vulnerable to covert and overt pressures to conform to employer goals. Nurses are career professionals, whose jobs usually provide the main source of income in their families. Many could not afford the luxury of maintaining their ethical standards at the cost of losing their livelihood.

(2) Hospice and home health nursing practice would be changed under legal assisted suicide.

Under legal assisted suicide, some hospice or home health nurse would visit her patient to find he had obtained a massive overdose of drugs. (If legal, it would be considered not an overdose but a "correct" dose to kill himself.) Before legal assisted suicide, the nurse would have assumed her duty was to help the patient live. After legal assisted suicide, the nurse's duty could conceivably be to counsel how best to take the drugs to assure death.

Under legal assisted suicide, some nurse who made a visit to check on her patient would find the patient had already ingested the prescribed overdose. (If legal, the dose would be called the "correct" dose – to kill the patient.) Currently, the nurse's duty is to call 911 and resuscitate.

Under legal assisted suicide, the nurse's duty might be to remain passively with the patient/family until the death. The ONA paper [cited below] suggests that if no other nurse were available, legal assisted suicide would create a duty to stay passively with the patient until death, regardless of the nurse's strong intent *not* to assist suicide.

The nurse whose patient would die by legal prescription would be inculpated in the death, because such a death is not so swift or sure or painless as might be assumed.[2] The patient may not die immediately or even within several hours or days. In addition to taking the prescription, proponents of suicide advise placing a plastic bag over the patient's head to assure asphyxiation if the patient awakens. This course of events is said to be not uncommon.

The ONA paper below suggests that even the nurse who did not wish to assist the patient in suicide, still would have to assume the patient's "end of life care" if assisted suicide were legal. If she were unable to transfer the suiciding patient to another nurse, she would have no choice but to participate.

Under legal assisted suicide, the nurse's duty might be changed horribly, perhaps extending to placing the plastic bag over the patient's head if the patient were unable to do so.

---

[2] Prescribers for legal assisted suicide would not be competent to prescribe for a totally new purpose – to kill. To illustrate the problem: Excellent pain control measures are available, but many physicians and nurse practitioners are still unable to prescribe appropriate pain control for terminal patients. (This is not an excuse to kill the patient to relieve the pain, but a reason for more education of prescribers about the near 100% effective relief available.) Considering that current failing, it would be long before prescribers were good at killing. There is no scientific basis for this practice and doctors and nurse practitioners have had no experience in doing it. A new era of research would result if assisted suicide were legal. Such investigation of how to kill people yielded the Guillotine in the 18th Century, and the gas chamber in the 20th. It might well be asked what rough science slouches toward the 21st Century to be unearthed.

Eyewitnesses assert that it is sometimes necessary to hold the suiciding person's hands as he smothers, to keep him from forcefully removing the bag. The nurse's duty could extend to doing that.

If assisted suicide were legal, a hospice or home health nurse would find a suiciding patient alone and with no plastic bag. Currently the nurse's duty is to call 911 and resuscitate. Under legal assisted suicide the nurse's duty might be changed, to placing a plastic bag herself as noted above. Or her duty might be seen as passive, to leave the patient in a comatose state, visiting later to see if the patient died in the interim. It is highly impractical to say that the nurse would be obligated to stay with such a patient. Patients in a coma may take 11-14 days to die of dehydration (known from the experience of deliberately dehydrating to death, non-dying patients). Ruth Phillips, *The legacy of Nancy Cruzan*, 6(2) Living World 16 (1992).

A failed attempt could result in a very damaged patient, which would encourage or even mandate the nurse to ascertain that her patient does not fail. Nursing practice eventually might extend to directly killing the patient who failed in the suicide attempt. Legal assisted suicide does not prohibit active euthanasia; initially, it merely does not "authorize" it. For example see Oregon Ballot Measure 16, Section 3.14.

(3) Hospital and long term care nursing practice would be changed under legal assisted suicide.

Under legal assisted suicide, some patients prescribed a lethal dose would choose to take the drug in the hospital or long term care facility. One proposed "safeguard" legislation recognizes that possibility on its face.

> "If the patient [who wishes to suicide] is an inpatient at a health care facility, one of the witnesses [to the request for suicide] shall be an individual designated by the facility."

Oregon Ballot Measure 16, Section 6, "FORM OF THE REQUEST." [Material in brackets added.] The nurse designated by the facility would be faced with assisting suicide at least to the extent of witnessing the patient's request, regardless of her moral, ethical and professional objections.

If the nurse on duty in a hospital or other inpatient facility knows of the patient's plan to suicide beforehand, her duty might change from trying to save the patient's life – to assisting with his death. Currently the nurse continues nursing care for the patient who is dying; turning the patient, suctioning secretions, administering medications, etc., to help the patient *live* comfortably. Under legal assisted suicide, the nurse's practice would change. The duty logically might be to do whatever would cause the patient to die sooner.

Under legal assisted suicide, the "worse" the nurse by present standards (that is, the faster and better at killing), the better for the patient. The "better" the nurse by present standards (that is, the more life-saving, caring), the worse for her patient under legal assisted suicide. The *amici* assert: This situation stands nursing practice on its head.

These vignettes look macabre, but they are not worst-case scenarios; they are the likely situations that nurses would encounter if the Courts of Appeal are affirmed. Immediately, intimately and inextricably, nurses would be inculpated in assisted suicide.

Nursing "care" would be redefined to include the killing of the patient, and assistance as the patient self-kills. Nursing theory would be developed to teach students how to "care" (or, in every accurate usage of the word, how *not* to "care") for patients committing suicide. Continuing education would be needed for current nurses, on how to assist patients being killed by self-administration of drugs. If assisted killing were extended to people unable to self-administer the drugs (as would be likely), nurses would be taught to kill patients directly.

Nursing education and curricula would be changed to incorporate the "new" ethic and law and nursing practice: Some patients would be given good care. Some patients' "good care" would include giving them prescriptions to kill

themselves. And some patients' "care" would include killing them.

c. Anticipation of legal assisted suicide in one state has caused its nurses to accept involvement.

The threat of legal assisted suicide in one state already has prompted a paper in which the nurses association accepts that nurses will be involved in their patients' suicide. In anticipation that legal assisted suicide would be implemented, and to prepare their members for that reality, the Oregon Nurses Association (ONA) adopted a position statement to guide nurses in the care of terminal patients under legal assisted suicide. Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995).

The ONA document asserts that the nurse's role under legal assisted suicide would be "to share information about health choices **that are legal**." [Emphasis added] Oregon Nurses Association, p. 3. This statement is evidence that nurses will be involved if assisted suicide is legal. Nurses would be expected to teach patients about the option of killing themselves. Mere legality (not any higher ethical standard) would be the defining parameter of the nurse's behavior.

Theoretically, under the Oregon "safeguard" legislation which proposed to make assisted suicide legal, the nurse could refuse to care for a patient who chooses to kill himself. But the ONA paper admits that if she couldn't transfer the patient, "the nurse has the responsibility to provide for ongoing end of life care." Oregon Nurses Association, p. 3. Transfer might be impossible if the nurse discovered the suicide attempt after the patient had taken the poison. Requesting and securing a replacement nurse from her agency (if even granted) could take longer than the patient had to live. Nurses could not opt out of legal assisted suicide, no matter what the language of any "safeguard" legislation adopted by a state legislature.

Nurses are competent to make professional judgments about the mental and physical status of their patients that would affect the appropriateness of a request for suicide.

Further, they are competent to make moral judgments for themselves, about the appropriateness of suicide for any person at any time. Regardless, under legal assisted suicide, the ONA paper asserts that the nurse would be involved and would be muzzled:

> "You may not subject your patients or their families to unwarranted, **judgmental** comments or actions because of the patient's choice [to kill himself]."

Oregon Nurses Association, p. 4. [Emphasis and material in brackets added].

The nurse would be involved, her professional judgment would be thwarted and her freedom of speech compromised under legal assisted suicide.

The ONA position paper is evidence that legal assisted suicide would inculpate nurses fully in assisted suicide, and to the detriment of the practice of the profession.

2. Legal assisted suicide would harm the ethics and law of nursing; the threat already has done harm.

a. Legal assisted suicide would erode the ethics and law of nursing.

The inculpation of nurses in assisting patients to kill themselves causes the degeneration of the ethics and law of nursing, which are based on six values (elaborated below): Doing No Harm, Doing Good, Being Free, Being Fair, Being True, and Life. The position of the American Nurses Association (ANA) states the ethical foundation of nursing practice:

> "The goals of nursing are the promotion, maintenance, and restoration of health, the prevention of illness, and the alleviation of suffering. The social contract between nursing and society to meet these goals is based upon a code of ethics that is grounded in the basic ethical principles of respect for persons, the noninfliction of harm, and fidelity to recipients of nursing care. These principles command that nurses protect or preserve life, avoid doing harm, and create a relationship of trust and loyalty with recipients of nursing actions."

American Nurses Association, *Position Statement on Capital Punishment* (1988).

The ethical standards of conduct (a higher ideal) are used by lawmakers in making lower, legal minimum mandates. Nursing law is the minimum enforcement of nursing ethic. It is the arbitrarily drawn line that separates desired behavior (ethics) from mandated behavior (law). The law exists to guide people who have no higher ethic. People who will not do right voluntarily, can be made to do at least a minimum of "not wrong" with law.

Those people, and others who have no moral compass, will take the law as the highest, not the lowest, standard of behavior. For them, the law becomes the ethic. "It's legal, therefore it must be ethical" is the reasoning. If the nurse who assists suicide were acting legally, some then would assume that she was acting ethically, too.

As noted below regarding nurse participation in executions, the nursing profession nationally has not succumbed to that lowest level of behavior. The national nursing associations, such as the American Nurses Association (ANA) and the National Association of Prolife Nurses, set and promote professional standards of ethics. Those standards cannot be varied according to popularity poll, nor may they descend to whatever acts the popular will has made temporarily legal. As an analogy to assisted suicide: Nursing leaders have suggested that nurses who participate in executions – even if the act is legal – are so far below the ethical standard required of nurses, that their licenses should be revoked.

Assisting a patient to kill herself, merely because it is legal, should not change the standards of nursing practice and ethics; but it would. The legal standard of nursing would be so low that merely to meet it would violate nursing ethics. The standard of nursing ethics and nursing practice would inevitably be ratcheted down to a lower level commensurate with the law.

Some nurses would do whatever is legal. That is why it is not sufficient to say that nurses can protect the ethics of the nursing profession simply by voluntarily refusing to participate in legal assisted suicide. Unlike the isolated participation

in legal executions by a few nurses, *all* nurses are intimately involved in the lives and deaths of dying patients. Under legal assisted suicide, nurses would be inextricably inculpated in their patients' suicides. The erosion of the law would corrupt the ethic correspondingly. Law would lead instead of follow the ethic, and would irreparably harm the profession of nursing.

The ethics and the resulting law of nurses are based on the following six values held by nurses (and all the illness care professions): Doing No Harm, Doing Good, Being Free, Being Fair, Being True, and Life. J.K. Hall, *Nursing Ethics and Law* (1996). Discussion of each value follows with its resulting ethic and law and the changes that legal assisted suicide would cause. As the law deteriorates, so do the ethics.

DOING NO HARM

Legal assisted suicide would damage the nursing ethic and law based on the value, *Doing No Harm* (Non-maleficence). That value is enforced by criminal law, civil intentional tort law and licensure law. Currently, nurses can be prosecuted under their licensure law which in most states allows license revocation for conduct which can be characterized as gross incompetence or gross negligence. See, for example, Or. Rev. Stat. 678.111(b). Presently, assisting deliberately caused death in a patient could be characterized at least as gross incompetence or as gross negligence, if not intentional harm. If assisting suicide were legal, the nursing licensure law would have been dramatically changed.

Assisting deliberately caused death now would surely be "conduct derogatory to the standards of nursing," also grounds for licensure discipline in most states. See for example, Or. Rev. Stat. 678.111(f). Again, legalizing assisted suicide would change the licensure law. As noted above, the standards of nursing have been national parameters, not community or state standards subject to the vagaries of what lawmakers set. But the law will lead those who have no ethical guide, and if assisted suicide is legal, nurses who

assist will seem to meet the minimum standard of nursing practice.

Presently, the nurse whose terminal patient is being pressured to commit suicide may be obligated to report that as neglect or abuse of an elderly or dependent patient. See for example Or. Rev. Stat. 410.610 *et seq*. (elderly) and Or. Rev. Stat. 441.630 *et seq*. (nursing home). If assisted suicide were legal, such encouragement might be considered the right thing for family or nurse to do.

Under legal assisted suicide the enforcement of these laws preventing harm to the patient would change. "Safeguard" legislation (such as that passed in Oregon) would have to provide that nurses would not be subject to criminal or civil liability or professional disciplinary action for assisting suicide. Such law would erode the authority of the board that regulates nursing, and any other agencies that enforce the law that prohibits and punishes harm to patients. Allowing nurses to assist in suicide would erode the minimum ethic enforced by the law, and correspondingly lower the standards expected of nurses generally.

DOING GOOD

The nursing ethic based on the value *Doing Good* (Beneficence) is enforced in malpractice law. Currently, when nurses fail to do good (as a reasonable prudent nurse would do), even unintentionally, they are subject to liability. Currently, nurses are not relieved of their own liability for their actions by physician orders and actions or patient wishes; nurses are morally and legally liable for their own malpractice. See generally, *Nurse Liability for Own Malpractice*, 51 ALR 2d 970.

Legal assisted suicide would change the nursing malpractice law. The standard of care of the "reasonable prudent nurse" would be changed from obligation to *save* the patient's life, to obligation to help *end* it in some situations. As noted above, under legal assisted suicide, the nurse would be obligated to inform the patient about the availability of assisted

suicide. Regardless of her personal moral convictions or professional assessment that the patient can be helped short of suicide, the patient or survivors might bring an action for subsequent pain and suffering based on a negligence theory if she did not so inform.

On the other hand, nurses who did refer or assist the patient who sought assisted suicide, might also be liable. The theory of liability could be failure to assess adequately for depression or decisional capacity, or failure to challenge the prescriber's assessment and prescription if they were faulty.

The family member or the estate who learns about the nurse's involvement in the attempt might have a cause of action for malpractice or wrongful death. The family might notify the licensure board of the nurse's action, alleging failure of nursing care. (Though as noted above, the licensure board might be powerless to enforce standards after legal assisted suicide.)

BEING FREE

Legal assisted suicide would damage the nursing ethic based on the value *Being Free* (Autonomy), enforced by consent law. The nurses leave to other *amici* to elaborate on the obvious fact: The patient's autonomy must *not* be honored and he must be protected from himself, if he is not competent to make decisions. That is the situation if the patient is depressed or suffering from mental illness, which almost all suicidal patients are.

The right of the patient to refuse treatment is stronger than the grant of an entitlement (as in legal assisted suicide), but even that power of refusal is not absolute. The right is conditioned on the impact on other people; for example, the power to refuse a transfusion may be conditioned on the patient's responsibility for another person.

Nurses have some rights to their own autonomy. The patient's demand for treatment which transgresses the professional's ethics cannot be honored. For example, the patient's demand to remove a healthy body part (because the person wanted to qualify as disabled) must be declined by the ethical

physician. Even an *un*ethical doctor would face legal sanctions for performing such a procedure. Government cannot arbitrarily inculpate the professions in such entitlement, to the detriment of their fundamental liberty and property rights to practice their profession with autonomy.

A rough analogy to the damage to nurses' autonomy under legal assisted suicide: Imagine a law granting the entitlement to assisted suicide with the help of a police officer to accomplish the killing. The damage is obvious to the ethic of police officers, whose professional responsibility is to protect innocent life. As noted above, the reason to have a professional assist is to put her imprimatur on the act.

Another analogy of damage, to another profession that might serve as provider of assisted suicide (and whose ethics much of the public already consider to be below reproach) is the legal profession. A recent article describes the perception that lawyers will do whatever their clients order, without reservations based on personal integrity or professional ethics. The authors suggest, perhaps not tongue-in-cheek, that the legal profession might be the ideal suicide assistants. R.M. Sade & M.F. Marshall, *Legistrothanatry: A new specialty for assisting in death,* 39(4) Perspectives in Biology and Medicine 547 (1996).

The American Nurses Association addresses the fine line separating the patient's autonomy from the moral mandates and integrity of his nurse:

> "Though there is a profound commitment both by the profession and the individual nurse to the patient's right to self-determination, limits to this commitment do exist. In order to preserve the moral mandates of the profession and the integrity of the individual nurse, nurses are not obligated to comply with all patient and family requests. The nurse should acknowledge to the patient and family the inability to follow a specific request and the rationale for it."

American Nurses Association, *Position Statement on Assisted Suicide* (1994) p.4.

BEING FAIR

Legal assisted suicide would damage the nursing ethic based on the value *Being Fair* (Justice), enforced by laws requiring equal treatment under the law. Other *amici* will discuss the laws that enforce fairness toward patients in this country. They include the due process and equal protection clauses of the Fifth and Fourteenth Amendments to the Constitution, the Americans with Disabilities Act, and the prohibition against discrimination toward some groups who are more likely to experience pressure to die if assisted suicide were legal.

Amici assert, as detailed above, that the fundamental fairness due nurses under the Fifth Amendment would be violated under legal assisted suicide.

BEING TRUE

Legal assisted suicide would damage the nursing ethic based on the value *Being True* (Loyalty), enforced at a minimum in law by contract law, confidentiality, informed consent, and by law requiring nurses to be advocates for patients. Nursing law mandates that nurses must be advocates for the patient, even if their action is counter to the physician or employer's order.

The changes in nursing practice that legal assisted suicide would force (elaborated above in descriptions of nurse involvement under 1.b.) are severe dislocations of the nurse's ethical and legal duties of loyalty to the patient. Under legal assisted suicide, the nurse's duty to advocate for the patient might become the duty to advocate death for the patient.

LIFE

Legal assisted suicide would damage the nursing ethic based on the value *Life*, enforced by all law that outlaws killing. Though mentioned last, this is the first value of nurses, or the one that underlies all others. The *sine qua non* of nursing ethic is promoting the life of the patient in all aspects, including the comfort of the patient and her value as

an individual. This is so, even and especially as the patient is dying. Promoting and protecting the dying patient's life cannot be subverted to mean assisting her deliberately to kill herself.

At present, the life of the individual is protected by the law, overridden only in extreme circumstances. For example, killing is justified only under narrow conditions such as self-defense, executions, or war.

Under the decisions of the Courts of Appeal, some lives would *not* be protected by law. People who are diagnosed "terminal" would not be protected from assisted suicide. But people who were not dying, *would* be protected from assisted suicide. The assumption underlying that situation: People who are not dying are more valuable than the dying.

Nurses do not discriminate in their care, between patients whose lives are less valued and more valued. This stratification of lives into levels of protection – some more valued, some less valued – is not a new concept. The framers wrote the U.S. Constitution, and courts subsequently have interpreted that Constitution, precisely to *prohibit* laws that classify lives in that way. Yet one of the decisions on review, responding to the state's contention that its principal interest is in preserving the life of all its citizens, answers:

> "[W]hat interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes."

Quill v. *Vacco*, 80 F.3d at 729 (2d Cir.1996).

b. The national standard of ethics for nurses is that nurses do not assist patients to kill themselves, but threat of legal assisted suicide in one state has caused erosion of that standard.

To state the obvious: The consensus of nursing ethics is that nurses do not assist patients to kill themselves.

The maintenance of the ethical integrity of the professions involved is one of the primary interests Courts weigh in

such cases as these. *Superintendent of Belchertown* v. *Saikewicz*, 370 N.E.2d at 426 (Mass.1977), *Satz* v. *Perlmutter*, 362 So.2d at 163 (Fla.1980). The court in *Superintendent of Belchertown* took care to find that its decision was in accord with the "prevailing ethical practice" of the profession. The prevailing ethical practice of the nursing profession is *not* to assist patients to deliberate death, evidenced by the following statements of ethics of American nurses.

The American Nurses Association maintains that nurses may not ethically assist suicide (as they would be asked to do under legal assisted suicide):

> "Nurses, individually and collectively, have an obligation to provide comprehensive and compassionate end-of-life care which includes the promotion of comfort and the relief of pain, and at times, foregoing life-sustaining treatments. The American Nurses Association (ANA) believes that the nurse should not participate in assisted suicide. Such an act is in violation of the Code for Nurses With Interpretive Statements (Code for Nurses) and the ethical traditions of the profession."

American Nurses Association, *Position Statement on Assisted Suicide* (1994) p.1.

The national Oncology Nurses Society endorsed the ANA position in 1995. Oncological Nurses Society, *Endorsement of ANA Position Statement on Active Euthanasia and Assisted Suicide* (1995). The American Association of Critical Care Nurses has endorsed as well.

The National Association of Prolife Nurses and its affiliates oppose assisted suicide in the strongest terms, believing it tantamount to euthanasia:

> "The public must be assured that we will not participate in euthanasia or refer people to individuals and organizations supporting euthanasia, and that we consider euthanasia to be medical murder."

Nancy Guilfoy Valko, *National Nurses Group Supports Resistance to Euthanasia*. National Association of Prolife Nurses (1994).

Though addressed to the prohibition against nurses' participation in executions, the following encompasses the ethical standard of the ANA for causing death in patients:

> "Regardless of the personal opinion of the nurse on the moral appropriateness of capital punishment, either generally or specifically, it is a breach of the ethical tradition of nursing, and its Code for Nurses, to participate in taking human life, even through a legally authorized civil or military execution."

American Nurses Association, *Position Statement on Capital Punishment* (1988).

The *amici* would add that it is a breach of the ethical tradition of nursing to participate in taking human life, even through a legally authorized nurse assisted suicide as would be possible under legal assisted suicide.

Further nurse ethical standards:

> "The nurse acts to safeguard the client and the public when health care and safety are affected by incompetent, unethical, or illegal practice of any person."

American Nurses Association, *Code for Nurses* (1986).

The nurse mandate to safeguard the patient from "any person" must include physicians or other nurses who prescribe or administer drugs to cause death.

And yet another ethical standard that nurses must not aid death:

> "Nurses . . . must take all reasonable means to protect and preserve human life when there is hope of recovery or reasonable hope of benefit from life-prolonging treatment. The nurse does not deliberately act to terminate the life of any person."

American Nurses Association, *Code for Nurses with Interpretive Statements* (1986).

As noted above under 1.c., the anticipation of legal assisted suicide in Oregon has resulted in a position statement by the Oregon Nurses Association. That paper admits that nurses would have to participate or assist in their patient's suicide in several ways –

> informing patients of "choices that are legal" (as noted above, to some nurses this would be tantamount to encouraging suicide),
> "providing for ongoing end of life care" for suiciding patients if the patient couldn't be transferred (very likely if the nurse learned of the suicide attempt after the prescription were ingested), and the nurse could make no "judgmental comments or actions because of the patient's choice [to kill himself]," muzzling the nurse's ethical or professional assessment of the patient's choice.

Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995) p. 4 [Material in brackets added]. As can be seen, the threat of legal assisted suicide in Oregon resulted in a position paper from the ONA which copes with that potential reality, by lowering ethical standards to the minimum ethic: Whatever might be made legal is ethical.

In addition to the assault on their professional ethics, many nurses would have personal ethical problems in assisting suicide – though as outlined above and noted under the ONA paper, they would have little choice under legal assisted suicide. Considering the shrinking job market faced currently, nurses would be under great pressure to comply with the employer who requires them to participate with patient suicide.

Some nurses already have been disciplined with job suspension for six weeks for reporting (or for not reporting fast enough – the employer's version) an active euthanasia performed on a child by the physician. *Death at U.C. Med Center,* San Francisco Chronicle, 3 April 1995, A20; *UCSF suspends nurses who delayed reporting incident*, NURSEweek, First April 1995, 3, 20. Under legal assisted suicide, the pressure would increase on the nurse to look away from patient abuse or to lose her job.

Under legal assisted suicide nurses who are religious would face a compromise to the very fundamentals of their morality – encompassed in any version of "Thou shalt not kill." Exodus Chapter 20, Verse 13. Nurses who are not formally religious are no less spiritual, and no less harmed by such an egregious violation of their personal ethic.

Other *amici* will inform the Court of the fact that all medical associations in the world (save Holland's) oppose assisted suicide. They will describe the experience in Holland in which even the tacit legal approval of euthanasia and assisted suicide – far short of the outright legal assisted suicide as proposed by the Courts of Appeal – has become a large problem, for the society, the professions, and most of all the patients of that country.

3. Legal assisted suicide would inculpate nurses in assisting suicide, damaging the profession in the eyes of the public.

a. Under legal assisted suicide, some nurses *would* assist in patient killing.

No illusions may be indulged; under legal assisted suicide, some nurses would be ready, willing and able to assist suicide. Some would kill patients directly if assisted suicide were extended to the disabled who are unable to self-administer the drugs.

The experience of nurses in the 1930's under Germany's National Socialism is instructive. Though some would wish it not so, 1990's American nurses too would be vulnerable to pressures if killing were made legal. Under National Socialism, some nurses and their associations collaborated when Hitler's euthanasia program was legal.

Some German nurses deliberately administered barbiturates to mentally retarded children that they had selected; the children slept for long periods, developed pneumonia as a result, and died a "natural" death. The death certificates read "Pneumonia," but in the consensus of world opinion, ten and now fifty years after, those nurses caused the deaths of those children. *Testimony of Dr. Valentin Falthauser, 22-23 April 1948; and Nurse Mina Worle, 7 May 1948 (Kaufbeuren asylum)*, Heyde Trial, pp. 143-47, in Robert Jay Lifton, *The Nazi Doctors* (1986) p.55.

The nurse associations of Germany collaborated in changing the ethics of the profession to conform to the legal mandates of the National Socialist government. Hilde Steppe,

Nursing in Nazi Germany 14(6) West. J. Nurs. Res. 744 (1992). Some nurses were not, would not be, immune to pressures to eliminate the problem patient instead of eliminating the patient's problem.

b. If legal, future killing would be delegated to nurses.

In addition to the immediate consequences of legal assisted suicide to the profession, the *amici* have reason to worry about their even worse role in the future. Under legal assisted suicide *amici* believe assisted suicide would be extended to actual administration of "suicide" to the disabled and incompetent. Allowing only competent able patients to kill themselves with prescribed drugs inevitably would be held to discriminate against the disabled who can't self-administer the drugs, and against the incompetent who can't request the killing drugs. At that point, prescribing suicide or even direct euthanasia would fall to the nurses as does other dirty work.

In support of that prediction: Technical procedures always are delegated eventually. When blood pressure measurements were first available, only doctors were allowed to perform them. At present, the *amici* are confident that few members of the Court have ever had their blood pressure measured personally by a doctor. When first developed, the technology of intravenous medication was limited to doctors (as late as the 1970s it was not taught in nursing curricula), as was administration of chemotherapy, and virtually all intensive care technology, including interpretation of electrocardiograms.

Today, in various states, nurses can perform all those procedures; in addition, nurse practitioners may set broken bones, suture wounds, and prescribe almost all drugs that physicians can. Under legal assisted suicide, it would be a short matter of time before this last worst "technique" of assisting suicide would be delegated to the nurse.

c. Allowing nurses legally to assist suicide would result in deterioration of the public's trust in their profession.

The public's perception of nurses would change under legal assisted suicide as nurses came to be seen as people who assist with killing. The public would lose confidence in nurses, and would be suspicious of the nurse's intent when she nursed patients labeled "terminal." The social contract that nurses have with the public would be breached. The ANA believes that trust to be essential:

> "Nursing has a social contract with society that is based on trust and therefore patients must be able to trust that nurses will not actively take human life. The profession's covenant is to respect and protect human life (Nursing: A Social Policy Statement). Nurse participation in assisted suicide is incongruent with the accepted norms and fundamental attributes of the profession."

Position Statement on Assisted Suicide, p.4.

Assisting in deliberate killing of patients, either by prescribing self-administered medications (nurse practitioners), or by tacitly approving of the patient's decision to die by participating in their care as they suicide – would violate the nurses' social contract with their patients and result in the public's loss of trust in the profession.

If nurses could assist suicide legally, the public's perception of nurses would change. Nurses who could assist in suicide would be seen not as trusted advocates but as people who carry out orders regardless of their effect. They would not be seen as professionals with autonomy and independent judgment, but as lackeys who do the patient's or doctor's bidding no matter how heinous the morality of the order.

Patients would not trust nurses who were handmaidens to physicians prescribing death, and who were unquestioning, "nonjudgmental" servants to any patient with a prescription. At present, the wish to die to the nurse is a cry to help the patient to find reason to live. Under legal assisted suicide, it

would be a mandate to nurse the patient to deliberate death. The public's opinion of nurses could not help but decay.

The nurse's liberty to practice nursing as she knew it and chose it and learned it would be curtailed. Her property interest in working at her profession would deteriorate. Hers then would be a profession with an ethic of promoting or assisting patients to deliberate death, instead of to life.

CONCLUSION

Legal assisted suicide creates an entitlement to assistance with, and approval of, suicide. It inevitably will inculpate nurses in the killing of their patients. It would destroy the public's confidence in the profession of nursing, damaging the nurses' liberty and property rights to practice that profession. It purports to help patients who either do not wish to die (terminal patients, even those in pain) or who are treatable and would be treated if society valued their lives (terminal patients who are depressed and ambivalent). That unwanted, unneeded entitlement is granted to the awful detriment to the fundamental rights of nurses who wish to practice their profession uncorrupted.

Based upon the above, the decisions of the Courts of Appeal should be reversed and the cases remanded for disposition in accordance.

Respectfully submitted,

JACQULYN KAY HALL

APPENDIX

Statements of Interest

This brief *amici curiae* is submitted to the Court by people who will be uniquely and directly affected by the Court's decision in this case. *Amici Curiae* are:

The National Association of Prolife Nurses, nurses who promote and protect the lives of patients at all stages of life, was formed in 1973 with state affiliates and members in all states. Their activities on behalf of patients, and on behalf of nurses who protect patient lives, include legal representation, education, and organization. The members have supported an *amicus* brief to the Ninth Circuit in the case challenging the legalization of assisted suicide in Oregon still pending there.

The National Association of Directors of Nursing Administration in Long Term Care, the managers of facilities where some patients are cared for who would be subject to assisted suicide if legal, was formed in 1986, and has 30 state affiliates with 4000 members from all states. Their code of ethics mandates they support and promote quality of care for those individuals receiving long term care, and concern for those delivering long term care.

The Philippine Nurses Association of America, nurses of Philippine ethnicity who live and work in the U.S., was formed in 1979, and has 25 state affiliates with over 2000 individual members. Their endorsement of the Code of Ethics of the International Council of Nurses mandates they protect, promote and restore health when possible, prevent illness when possible, and alleviate suffering; thus

they believe the legalization of nurse assisted suicide and euthanasia will change the very essence of nursing practice.

The Scholl Institute of Bioethics, a group of professionals in medicine, law, psychology and religon, was established in 1986 because of concern for the increasing difficulty of bioethical decisions that both individuals and the medical profession are facing in relationship to today's modern advances in medicine and the growing euthanasia movement.

California Nurses for Ethical Standards, a non-profit educational and professional organization of nurses who promote in all respects ethical standards of health care, was established ten years ago in the state of California. The members believe that euthanasia and assisted suicide violate all nursing ethics codes.

INTEREST OF AMICUS CURIAE [1]

The American Geriatrics Society (AGS) is comprised of professional health care providers focused upon serving the health care needs of elderly persons. Founded in 1942, the AGS has 6,000 dues-paying members. The AGS sponsors conferences and seminars, articulates policy and practice guidelines, publishes a preeminent professional journal (*The Journal of the American Geriatrics Society*), and encourages improved health care services for elderly persons and research on the illnesses from which they suffer. As practitioners specializing in the care of the elderly, AGS members are particularly dedicated to improving how people live at the end of life and consequently have abiding concerns with the issues raised by initiatives to legalize physician-assisted suicide (PAS).

The AGS and its members have worked diligently to assure that even elderly persons with severe dependency and limited personal and family resources can count on reliable and effective diagnosis, treatment, prevention, rehabilitation and supportive care. The AGS has encouraged care providers, the elderly, and their families to adopt an optimistic and energetic approach to treatment of illness. However, geriatricians (including physicians, nurse practitioners, and other health-care professionals) also realize that all elderly persons die, and that serving people well in their old age requires incorporating that fact into judging various strategies for care. Just as we must strive to make available all potentially beneficial treatment, we must also strive to avoid interventions that are more harmful than beneficial.

Legalization of PAS would create a moral dilemma for geriatricians. Most elderly persons experience serious and

---

[1] Each party has given its consent, in writing, to the filing of this brief amicus curiae. Their consent letters have been filed with the Clerk of the Court. Counsel gratefully acknowledges the valuable contributions made to this brief by Joanne Lynn, M.D., and Felicia Cohn, Ph.D. Dr. Lynn, a recognized authority on the care of the dying, is a board member of the AGS and chair of its Ethics Committee. Dr. Cohn is associated with Dr. Lynn in the Center to Improve the Care of the Dying.

progressive illness for extended periods before death and need significant social, financial and medical supports.[2] These resources too often are not available, are of inadequate quality, are not covered by insurance, and are not provided by public entitlement programs.[3] By collaborating in causing early deaths, when continuing to live has been made so difficult, geriatricians would become complicit in a social policy which effectively conserves community resources by eliminating those who need services. By refusing to assist with suicides because a patient's relative poverty and disadvantaged social situation is seen as coercive, geriatricians would condemn their patients, and themselves, to live through the patients' undesired difficulties for the time remaining.

This conundrum has prevented defining a defensible role for geriatricians in any legalized practice of PAS. These concerns have driven the members of the AGS to address this issue at a time when few professional organizations have done so. The AGS position statements on PAS and euthanasia are attached.[4] The AGS opposes legalization of PAS at this time. Elderly and frail persons would be put at risk, yet their interests and concerns have not been adequately addressed in the public discussion of these issues.

[4] *See* Appendix and AGS Ethics Committee, *The Care of Dying Patients*, 43 J. Am. Geriatrics Soc'y 577-578 (1995); AGS Ethics Committee, *Physician-Assisted Suicide and Voluntary Active Euthanasia*, 43 J. Am. Geriatrics Soc'y 579-580 (1995). *See also* Greg A. Sachs, M.D., et al., *Good Care of Dying Patients: The Alternative to Physician-Assisted Suicide and Euthanasia*, 43 J. Am. Geriatrics Soc'y. 553-562 (1995).

The AGS urges this Court to note that improving life at its end has only recently become the subject of research and innovation. The potential consequences of accepting or tolerating PAS are unknown. The AGS believes that continued debate on these issues is essential if there is to be wise policy. The AGS takes no position on the merits of PAS for the patients in the cases before the Court. Instead, the AGS urges this Court not to recognize a constitutional right to the practice of PAS. At this time, the Court should exercise restraint in deciding a matter that would be more appropriately left to the states and the people. The AGS adopts the legal argument advanced in the *amicus* brief of the Project on Death in America of the Open Society Institute, which contends that the matter is not yet ripe for constitutional adjudication. The AGS limits this *amicus* brief to a presentation of a medical perspective on the uncertainties that require study and resolution before PAS could be implemented as the policy of any jurisdiction, or recognized as a constitutional right.

SUMMARY OF ARGUMENT

The courts for the Second and Ninth Circuits relied on three serious misperceptions in overturning state laws prohibiting PAS.[5] First, the courts were misinformed as to how people live while dying in the United States. Contrary to the courts' apparent assumptions, the plaintiff-patients in *Quill* and *Compassion in Dying* do not represent the usual situation of persons facing the end of life; severe pain and other symptoms can be relieved for persons near death; and health care generally and at the end of life is undergoing major changes.

Second, the lower courts mistakenly concluded that there is no significant difference between PAS and foregoing life-sustaining treatment. From a medical standpoint, however, clinical, definitional, and procedural considerations reveal important distinctions. These differences add

---

[5] *Compassion in Dying v. State of Washington*, 79 F.3d 790 (9th Cir. 1996); *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996).

to the legal, ethical, and historical distinctions identified by this court in *Cruzan*.[6]

Third, the courts below mistakenly condition their holdings upon the erroneous assumption that six restrictive criteria or safeguards can be easily identified and implemented: that the patients be (a) terminally ill, (b) competent, (c) suffering, (d) acting voluntarily and (e) seeking assistance in obtaining a means of suicide (f) which will be available only from a physician. In fact, as the discussion that follows makes clear, the medical profession has no adequate definitions for some of these criteria and lacks experience with all of them, making it unreasonable to believe that legislatures or courts could easily design procedures to ensure that each criterion could be met and could be sustained.

In view of the misperceptions upon which the decisions below were based, and the dearth of experience and knowledge that would be necessary to implement the exercise of a right to PAS, the AGS respectfully submits that a decision by this Court to constitutionalize PAS would be, at best, seriously premature.

ARGUMENT

I. THE COURTS WERE MISLED BY MISPERCEPTIONS ABOUT END-OF-LIFE EXPERIENCES.

A. The Patient-Plaintiffs Are Not Representative of Dying Persons Generally.

The named patients in the cases before the Court are dying in ways that do not characterize how people generally die in the United States. The identified patients all have a single, well-defined disease: three suffer from AIDS, two from cancer, and one from emphysema. Their situations thus fail to reflect the multiple diseases and uncertain prognoses that are much more common in advanced old age. Patient-plaintiffs' ages average 56 years. Not

[6] *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990).

one of the named plaintiffs is as old as the median age of death in the United States, 77 years.[7] None is characterized as poor, without family, or living in nursing homes. All have physicians, and none mention problems of access due to inadequate health insurance. This sample thus falls far short of representing the array of problems and concerns which should inform a determination of the constitutionality, or even the wisdom, of allowing PAS. The relative simplicity of the medical and social situations of these patients appears to have misled the lower courts into believing that PAS is the only or best response to those patients' problems.

Much has changed about how people come to the end of their lives in the United States. No more than a century ago, dying afflicted every decade of adult life, nearly evenly.[8] The most common causes of death were infections and accidents, which generally allowed little time between onset and death. Even cancer and heart disease were discovered late and the lack of effective treatment meant that death often occurred shortly after diagnosis.

Average life spans have also increased. Now, median life expectancy is 79 for women and 72 for men. Among those who survive to age 65, median age at death is 84 for women and 80 for men.[9] The usual causes of death now include cancer, heart disease, other organ system failures, and dementia, all of which are illnesses that ordinarily cause progressive disability over more than a year.[10] Typically, persons dying in their eighties and older succumb to a combination of loss of reserve capacity in aging

organs, deficiencies in daily functioning, and diseases with specific etiology.[11]

Modern society must learn how to assure that dependent and disabled persons can live well, despite living for a long time with eventually fatal illnesses. Prognosis is ordinarily uncertain. Poverty and isolation are common. Nearly one in five dies in a nursing home.[12] Depression and other psychiatric problems are common and largely unrecognized.[13] Characterizing the issue as simply acquiescing in the patient's request to end his suffering, as the courts below did, is much more difficult when one imagines a slowly failing elderly widow who is blind, nearly deaf, disabled, and in a Medicaid nursing home, than when the claimant is a younger patient with a predictably fatal illness.

B. Dying Is Mischaracterized as Unavoidably Dreadful.

Contrary to the apparent assumptions of the courts below, fatal illness does not have to mean severe pain and suffering. The Ninth Circuit's opinion repeatedly describes dying as "painful, protracted, and agonizing." [14] The Ninth Circuit then contrasts this fate with death by assisted suicide which lets a patient: "end his life peacefully and with dignity." [15]

However, most people die quietly, most often in their sleep.[16] Hospice and palliative care programs have demonstrated that no dying person must live with overwhelming pain or other severe physical symptoms. Severe and persistent pain affects about half of cancer patients [17] and one quarter of dying persons generally.[18] Sophisticated palliative care relieves pain for most of these patients without confusion or substantial sedation. Intractable pain that can be relieved only by inducing sedation affilicts less than 3%, mostly very near the end of life.[19] Aggressive palliative care and sedation near death are already permissible. So is the removal of artificial nutrition and hydration [20] that were mentioned as sustaining two of the plaintiff-patients.

However, the standard of care lags behind what is possible to achieve, due both to barriers meant to limit the availability of narcotics and to delay in the adoption of

better practices by the health care professions.[21] Public policy should more vigorously encourage reliable relief of symptoms, but PAS is never the only option to relieve uncomfortable symptoms in a person near death.

How society arranges services to support care of those at the end of life has profound effects upon how that life can be lived. Life just before death can be especially precious and important. When supported and comfortable, dying persons ordinarily accomplish important tasks, such as saying farewells, disposing of property, completing life projects, and enjoying their remaining days. The courts below do not seem to have taken account of this possibility. *See, e.g., Quill,* 80 F.3d at 729.

Many persons consider suicide or wish for early death while they are angry or suffering. Since persons feeling worthless often test others to see whether these views are shared, encountering agreement actually functions to affirm the denigration of value. To offer PAS at this time does not merely offer an option but also affirms feelings of worthlessness or devaluation.[22] Since, when comfortable and comforted, most patients feel that this was an unexpectedly important time,[23] encouraging supportive care

and discouraging suicide seems well within the purview of wise public policy.

C. The Lower Courts Misperceived Current Shortcomings in Care at the End of Life as Persistent and Unchanging.

Discussions about PAS are clouded by the paucity of reliable information regarding death in the United States.[24] Nevertheless, this is clearly a time of great ferment. Research in palliative care has developed considerably in the past twenty years.[25] About 61% of Americans die in hospitals and 17% in nursing homes, with the proportion of deaths in nursing homes increasing and those in hospitals decreasing.[26] In 1970, the standard of practice was to attempt resuscitation for virtually every person who died.[27] Now, foregoing life-sustaining treatment is commonplace,[28] especially for those with poor prognoses for survival. Resuscitation is now attempted for only about 10% of seriously ill persons who die in hospitals.[29] In the past, treatments were often continued for patients with poor prognoses and small chances of recovery.[30]

[24] Indeed, the only description of sequential seriously ill patients dying in hospitals in the United States was done in 1904. W. Osler, *Science and Immortality* (The Riverside Press 1904). *See also supra* note 8.

[25] Derek Doyle, et al., eds., *Oxford Textbook of Palliative Medicine,* 4 (Oxford University Press 1993). One recent study of certain seriously ill persons in hospitals has been influential, but it addressed only a small subset of the dying, *supra* note 18.

[29] *Supra* note 18.

[30] E.g., *Cruzan,* 497 U.S. 261.

It is important to consider the major changes that are now reshaping health care generally. The rise of managed or capitated arrangements for service delivery and financing and the shift toward competing on costs rather than quality are rearranging relationships and roles. The impact on end-of-life care is not yet clear, but it is likely to include more reluctance to provide expensive care or to encourage patients and families to seek prolonged survival.[31]

The lower courts accepted a descriptive claim that PAS already exists as a clandestine but widely acknowledged practice.[32] AGS leadership is not familiar with situations in which this is true, and it seems unlikely. Three-quarters of all deaths happen in institutions where a regularized practice would require the collusion of a large number of persons, which seems implausible. Little reliable evidence characterizes the rate and nature of actual instances of PAS.[33] Courts should not rely upon presumptions and unsubstantiated reports in such a matter.

The constitutionality of PAS should not be resolved by reference to atypical situations and reliance upon misperceptions, as happened in these cases. Consideration of the role of PAS must be part of a broader examination of how this society should care for people with fatal illness and is therefore an endeavor more properly undertaken

by state legislatures and professional and lay organizations than by the federal judiciary.

II. THE COURTS BELOW MISTAKENLY CONCLUDED THAT PHYSICIAN ASSISTED SUICIDE IS NO DIFFERENT FROM FOREGOING LIFE-SUSTAINING TREATMENT.

The lower courts erred in finding no justification for distinguishing PAS from foregoing (withdrawing and withholding) life-sustaining treatment (FLST). However, significant medical, legal, and societal distinctions exist between the two practices and fatally undermine the conclusion that they are entitled to the same legal status. The AGS defines PAS as "[w]hen a physician provides either equipment or medication, or informs the patient of the most efficacious use of already available means, for the sole purpose of assisting the patient to end his or her own life." FLST is defined as "[w]hen medical intervention is either not given or the on-going use of the intervention is discontinued, allowing natural progression of the underlying disease state."[34] Major American medical associations and public committees and commissions[35] have recognized the distinctions between PAS and FLST.

A. Descriptive Aspects Differentiate the Two Situations.

In addition to definitional differences and historical precedent, the situations involving PAS and FLST are associated with important moral and practical differences, including differences in access to medical care, in the practical effects of decisions, and in clinical intent.

Patients wishing to forego treatment are generally already receiving medical attention, and they have life-sustaining treatment available if desired. Thus, FLST decisions are implemented only when the life-sustaining treatment is unwarranted. However, for those seeking PAS, suicide may become a substitute for valuable but inaccessible medical attention. Persons seeking PAS may not know about, nor have available, other options for treatment, whether because of financial need, because their physician has inadequate skills,[36] or because social or ethnic barriers intervene.

Patients receiving life-sustaining treatment are usually very sick and close to death, so that even aggressive intervention is unlikely to lengthen their lives appreciably. With PAS, however, an individual may be giving up a more extended period of life. Fear of suffering and of losing dignity, along with a desire to control circumstances of death, may prompt a request for assistance in suicide before suffering might become unbearable.[37]

In FLST, the intent is not to bring about the patient's death but to respect the patient's wishes not to be subjected to undesired treatment. Once medical treatment is withdrawn or withheld, the underlying disease process usually leads to the patient's death, though some survive. Although a physician sometimes physically removes the life support, the underlying disease and not the physician's action is ordinarily considered the cause of death. Failure to remove the undesired treatment would amount to battery, an unconsented touching. In PAS, the physician may be acting in accord with the patient's wishes, but death results from a drug overdose rather than a natural course of dying.

The Second Circuit's opinion also appears to suggest that PAS follows from aggressive pain management (80 F.3d at 729). Good pain management, however, usually prolongs life, and even very high doses of opioids rarely cause respiratory depression in patients who have been taking them for more than a few days.[38] Further, good palliative care aims to eliminate the suffering, whereas PAS succeeds only by eliminating the sufferer.

B. Rights Against Interference Are Stronger Claims Than Those for Assistance.

This Court has established that patients have the authority to forego life sustaining treatment, based on the requirement that the patient's informed consent is required for medical intervention.[39] The authority to

---

[38] "*Respiratory depression.* This rarely presents a problem if the oral morphine dose is titrated carefully against the patient's pain, for pain is a respiratory stimulant. Tolerance to respiratory depression develops rapidly so that high doses of morphine can be used if necessary, without significant risk." Cicely Saunders et al., *Living with Dying: A Guide to Palliative Care* 23 (3rd ed. Oxford University Press 1995); *see also* American Pain Society, *Principles of Analgesic Use in the Treatment of Acute Pain and Cancer Pain*, 23 (3rd ed. American Pain Society 1992; Marcia Angell, M.D., *The Quality of Mercy*, 306 New Eng. J. Med. 99 (1982).

[39] *Cruzan*, 497 U.S. 261 (1990). *See also In re Quinlan*, 355 A.2d 647 (1976); Mark E Williams, M.D., *The American Geriatrics*

forego life-sustaining treatment is thus a right to prevent unwanted bodily intrusion. Withdrawing or withholding a treatment to honor the patient's refusal of consent is not a matter of providing a patient with assistance but one of leaving the patient alone. Physicians may not impose treatment on a patient who refuses that treatment, even if the physician believes that the treatment will benefit the patient. This right to be left alone does not imply any corollary right to receive a form of assistance such as PAS.

C. The Restriction of Physician Assisted Suicide to a Narrow Class of Persons Highlights Its Differences From Foregoing Life-Sustaining Treatment.

FLST is an option for all treatments and all patients, just like any other medical decision. If PAS were equivalent to FLST, it should be available to all patients. Yet both courts below and all current legislative proposals restrict the right to PAS to a certain category of patients—those that are terminally ill, competent, acting voluntarily, and suffering. Unlike FLST, no proposal allows PAS to be directed in advance or by surrogate decision makers. The uniform agreement on such restrictions clearly suggests that the courts, the legislatures, and the policymakers recognize clear distinctions between PAS and FLST.

D. The History of Familiarity With Foregoing Life-Sustaining Treatment Contrasts Sharply With the Lack of Experience With Physician Assisted Suicide.

As this Court recognized in *Cruzan*, the right to reject life-sustaining medical treatment has had a long history of public acceptance, from legal, ethical, and medical perspectives.[40] Rooted in the common law doctrine of informed consent and recognized by courts, legislatures,

---

Society's Complete Guide to Aging & Health, 119 (Harmony Books 1995); *supra* note 34.

[40] *Cruzan*, 497 U.S. 261 (1990); *see also In re Quinlan*, 355 A.2d 647 (1976); *see also* Alan Meisel, *The Right to Die* (2d ed. 1995).

and the health care professions, a consensus has emerged that persons generally have the right to refuse medical interventions, even though death may result.

In sharp contrast, no such consensus surrounds the practice of PAS. It has no common-law basis and has not been recognized widely by courts, legislatures, the public, or the medical profession. Most states have statutes prohibiting the practice of PAS—similar to the New York and Washington statutes struck down by the courts below in these cases. The practice has been approved by the voters in only one state, Oregon, where an initiative passed by a narrow margin but has not yet been implemented. The lack of any substantive experience with PAS, and the myriad restrictions attached to every proposed formulation of a right to request it, show that PAS is considered quite differently by all—its proponents, the law, health care providers, and the public.

III. THE CONSTRAINTS PROPOSED FOR THE PRACTICE OF PHYSICIAN ASSISTED SUICIDE PRESENT INTRACTABLE PROBLEMS.

As noted above, the plaintiffs below sought PAS only for a limited class of persons. Accordingly, the right to assisted suicide recognized in both cases is confined to adult patients who have terminal illnesses; are mentally competent; suffer from chronic and/or severe pain; and make a voluntary request for PAS. In addition, the only authorized method of assistance is through a physician's prescription of lethal medication which the patient must self-administer.

The Second and Ninth Circuits found a constitutional right to PAS conditioned upon these criteria, which they assumed would also function as safeguards to prevent mistakes or abuse. As the discussion below demonstrates, however, those decisions were based upon erroneous assumptions about the feasibility of both defining and applying the eligibility criteria. In fact, if PAS were to be implemented, determining the eligible population

would be intractably difficult and the proposed constraints would likely fail to provide the safeguards upon which the lower courts' decisions were based.

A. Terminal Illness.

Various statutory proposals and the cases before this Court contemplate that PAS will be authorized only for those who are "terminally ill."[41] The opinions below suggest that limiting the category to "terminal illness" helps to make the shortening of life acceptable and presume that the category can be clearly delineated. The Second and Ninth Circuits dismissed arguments asserting the difficulty of determining when a patient is "terminally ill," noting that "terminal illness" and "terminal condition" have been "defined repeatedly . . . in a model statute, the Uniform Rights of the Terminally Ill Act, and in over 40 state natural death statutes."[42] In actuality, such judgments are notoriously difficult to make. Indeed, because terminal illness or terminal condition is so difficult to define, the new Uniform Health-Care Decisions Act,[43] which supersedes the Uniform Rights of the Terminally Ill Act, upon which the Ninth Circuit partially relied, omits any reference to terminal condition

[41] Courtney Campbell, et al., *Conflicts of Conscience: Hospice and Assisted Suicide*, Hastings Center Report 36-43 (May-June 1995); Charles H. Baron, et al., *A Model State Act to Authorize and Regulate Physician-Assisted Suicide*, 333 Harvard Journal on Legislation 1-34 (Winter 1996); Oregon Death with Dignity Act, Ballot Measure 16 (passed Nov. 8, 1994); *Quill*, 80 F.3d at 731; *Compassion in Dying*, 79 F.3d at 838.

[42] "[W]hile defining the term 'terminally ill' is not free from difficulty, the experience of the states has proved that the class of terminally ill is neither indefinable nor undefined," *Compassion in Dying*, 79 F.3d at 831. *See also Quill*, 80 F.3d at 731 (stating that "it seems clear that most physicians would agree" on when the condition of "final stages" of terminal illness occurs).

[43] Uniform Health-Care Decisions Act, approved by the National Conference of Commissioners on Uniform State Laws at its conference held July 30-August 6, 1993, and approved by the American Bar Association on February 7, 1994.

and does not attempt to define terminal illness. The reasons for this omission have been explained as follows by David English, the reporter for this new Uniform Act: "Most existing advance directive legislation becomes effective only if a patient is in a 'terminal condition,' or is 'permanently' unconscious. Such restrictions have severely limited the usefulness of many state statutes and, indeed, have rendered them virtual nullities."[44]

As the drafters of this new Uniform Act thus recognized, terminal illness is notoriously difficult to define, and the working definitions of "terminal illness" for hospice or advance directive legislation are neither relevant nor reassuring, as the courts below erroneously concluded.

Hospice programs, for example, enroll mostly persons with some particular cancers.[45] Referral to hospice is most often initiated when such a patient experiences a deterioration in function, weight and comfort, usually three to six weeks ahead of death.[46] For cancer, then, the clinical course dictates timing, which is much shorter than the hospice statutory prognosis requirement of six months. Other illnesses do not regularly have such a final, relatively distinct, phase of clinical deterioration and they are engendering problems when referred into hospice.[47]

[44] See English and Meisel, *Uniform Health-Care Decision Act Gives New Guidance*, 21 Estate Planning 355, 359 (1994).

[47] Hospice programs are being scrutinized by the Dept. of Health and Human Services' Office of the Inspector General, with disagreements on prognosis as hospice expands to enroll patients dying of chronic diseases. J.G. Brown, *Review Of Medicare Hospice Beneficiary Eligibility In The Commonwealth Of Puerto Rico* (DHHS, OIG, March 1996). *See also* Standards and Accreditation Commit-

A more rigorous definition of terminal illness seems necessary for PAS, since PAS has such significant and irreversible consequences. Three general approaches might be used in attempting to define the category "terminally ill": subjective judgment, statistical criteria, or a disease severity threshold. An examination of each of these reveals crippling problems.

1. *Subjective Determination.*

Some person or persons could be designated to judge whether a patient is "terminally ill," using information about the patient's situation, prognosis, care needs, and preferences. At present, the patient, family, and professional caregivers negotiate the designation while discussing plans and making decisions. The label then marks a change from a strategy of correcting abnormalities with the expectation of long survival to a strategy focusing on function, comfort, and emotional and spiritual support with the expectation of death.

In routine patient care, the timing of this change in focus does not much matter. The various participants can arrive at the designation at somewhat different times. However, the obvious variation in and diffuseness of this process would be troubling in the context of determining eligibility for authorizing PAS, and the fact that availability of PAS would be contingent on a designation of being terminally ill may result in pressure to accelerate or resist the label.

2. *Statistical Determination.*

Defining terminal illness with an explicit statistical threshold seems to offer clarity: a person is either below or above that threshold. However, this approach fails as it encounters at least four serious barriers.

First, the data necessary to calculate estimates which can be compared with a legislated statistical threshold is

tee, Medical Guidelines Task Force, *Medical Guidelines for Determining Prognosis in Selected Non-Cancer Diseases* (2d ed. National Hospice Organization 1996).

only rarely available. Very little research addresses the issue.[48] Most people will die of conditions that are not predictable with a statistical model.[49]

Second, the threshold is unavoidably arbitrary, with many borderline cases and unavoidable errors of over-inclusion and underinclusion. Any threshold will include people who will live a long time; the rate increases with more inclusive thresholds. A population in which each person has exactly a 25% chance to live six months will have one in four persons still alive at six months. The threshold should include all who will soon die of a serious chronic disease. However, some diseases are intrinsically unpredictable, even very close to death.[50] No reason justifies setting the threshold at any particular point, thus rendering any threshold arbitrary and subject to dispute.

Third, any specific threshold is inconsistent with current usage of the category. The popular conception of "termi-

[48] APACHE III and similar systems estimate the risks of dying during a particular hospitalization for very seriously ill patients in hospital intensive care units. W.A. Knaus et al., *The APACHE III Prognostic System. Risk Prediction of Hospital Mortality for Critically Ill Hospitalized Adults*, 100 Chest 1619-1636 (1991). SUPPORT's formula allows estimation of survival throughout the ensuing six months, but only for certain seriously ill patients with nine specific diseases, treated in hospitals. W.A. Knaus, *et al.*, *The SUPPORT Prognostic Model: Objective Estimates of Survival for Seriously Ill Hospitalized Adults*, 122 Ann. Internal Med. 191-203 (1995). Other available formulae are even more restricted in population, setting, or data required.

[49] The estimate varies also because other predictions can arise from one research database.

[50] Prognoses are surprisingly optimistic very near to death. Lung cancer patients in one study had a median prognosis of 17% to live two months on the day before death, and 50% just one week before death. Those dying of congestive heart failure, however, had a prognosis of more than 60% to live two months, and more than 40% to live six months, on the day before death. So, any criterion requiring less than a 50-50 chance to live two months would exclude virtually all of those who die with congestive heart failure. J. Lynn et al., *Defining the "Terminally Ill": Insights from SUPPORT*, 35 Duquesne L. Rev. 311-336 (1996).

nal illness" mainly deals with cancer, neurological degenerative disease, and AIDS patients, all persons who have no available treatment, are losing weight and function, and who are psychologically "ready" to die. Most persons dying of chronic organ system failure will be excluded with a restrictive threshold and many persons with substantial opportunities for treatment and prolonged survival will be encompassed within an inclusive threshold.[51]

Fourth, the prognosis for survival can depend upon patient and physician choice and availability of treatment. A person with diabetes could stop insulin, a person with a feeding tube could stop its use, or a person with heart disease could be refused for transplant. If thereby such a person becomes "terminally ill," then the category is disquietingly dependent upon volitional actions rather than patient status.

Thus, defining the category of terminal illness with a statistical threshold would be arbitrary and certain to overinclude and underinclude substantial populations.

3. *Disease Threshold.*

The third way to define "terminal illness" ties the classification to clinically significant and morally important events, such as the recurrence of cancer in a distant site or the onset of fecal incontinence in a demented person.

---

[51] *Id.* Half of all persons who die of lung cancer today will have had a prognosis of better than 30% to live 2 months, just one week ago, so any more restrictive threshold will miss most persons dying of lung cancer. Conversely, such a threshold will include many persons with acute respiratory, cardiac, or liver failure, who usually are vigorously treated. In fact, they qualify for transplantation only when they become so severely ill. If the category were expanded to include everyone with up to a 50% chance to live six months, most nursing home residents would qualify. If the category were restricted to those with a 1% chance to live two months, not only would one exclude virtually all cancer patients but those in the category would be so sick that they would, on average, die within a day. *See also* J.M. Teno, et al., *Prognosis-Based Futility Guidelines: Does Anyone Win?*, 42 J. Am. Geriatrics Soc'y 1202-1207 (1994).

However, an individual's status is not well characterized by the extent of one serious disease. Rather, a person's future is shaped by a variety of illnesses; reserve capacity of various organs; social situation; personal preferences; and treatment availability, use, and response. Thus, many of the patients included will actually have long expected life spans. This method is also afflicted with problems described above with regard to a statistical criterion.

Thus, no approach to defining terminal illness offers a simple and feasible method for determining who should have access to PAS. The problems appear to be intractable and no experience yet shows that they can be overcome.

Finally, even if terminal illness could be satisfactorily defined, it would not last long as a restriction on PAS. The courts below held, for example, that there are no differences between PAS and FLST. If that were true, requiring terminal illness would eventually be dropped, since there is no such requirement for FLST.

B. Competence.

Another criterion, upon which the right to PAS recognized by the courts below is contingent, is competency at the time the request for PAS is made and implemented. This criterion is also problematic. Classifying competence is difficult and sometimes impossible. In addition, the requirement raises troubling questions about PAS, since it may induce patients to choose suicide preemptively, in order to preclude losing the option through a subsequent deterioration in their mental faculties. Furthermore, the competence requirement interacts with the requirement for being terminally ill, since patients tend to lose competence as illness becomes more severe.

Although a variety of legal and medical decisions are predicated on a finding of competency, there is no uniform standard or set of procedures for making this deter-

mination.[52] In practice, such judgments typically are made by health care professionals, in consultation with family members, and may be influenced by many factors, including the purpose of the evaluation. No professional discussion yet addresses appropriate competence standards for PAS, what components of cognitive and emotional functioning should be measured, or how capable the person must be in each component (or all taken together) in order to qualify for PAS.

The seriously ill commonly have deficits in cognitive and emotional functioning which change over relatively short periods of time and correlate strongly with suicide inquiries. Many elderly patients and dying cancer patients experience delirium, a syndrome in which they are confused, unable to maintain attention, and unable to master new information.[53] Most episodes are not detected in usual care. Likewise, depression is common, serious, and often undetected and untreated.[54] Depression, delirium, and mood disorders strongly correlate with suicide. Indeed, most cancer patients now committing suicide have discernible psychiatric illness, and having such an illness corresponds strongly with risk of suicide.[55] Treatment of depression substantially alters an initial inclination to refuse life-sustaining treatment.[56] Excluding these patients from access to PAS would be essential, but that turns

[56] Linda Ganzini, *The Effect of Depression Treatment on Elderly Patients' Preferences for Life-Sustaining Medical Therapy*, 151 Am. J. Psychiatry 1631-1636 (1994).

out to be quite difficult. Most depression, just like most delirium, is not recognized or treated in current practice.[57] The risks of involving persons with diminished capacity in PAS are substantial. Furthermore, a narrow definition of terminal illness will yield high rates of incompetence while a broader definition will yield high rates of long survival.

Moreover, as suggested above, a special problem with a lengthy dying process is fear of the indignity associated with incompetence.[58] If the right to PAS extends only to those with contemporaneous competence, then patients with conditions likely to lead to incompetence may find it appealing to undertake preemptive suicide. This is a special risk in early dementia, when patients retain ability to understand but have failing memory. The rate of progression to cognitive disability is unpredictable. Thus dementia patients hoping to avoid the worst-case scenario may be sacrificing many comfortable and relatively capable years when they seek PAS preemptively.

C. Undue Influence—Coercion.

1. *The Context of Care.*

Proponents of a constitutional right to PAS expect the practice to be limited to persons who are acting voluntarily, without undue influence or coercion. The image is that of an independent, capable person thoughtfully evaluating his or her options, unaffected by biased third parties or other circumstances. This is so far from the experience of dying as to be fanciful. Dying persons are often very weak, prone to strong emotions, and vulnerable to the suggestions, expectations, and guidance of others. In this context, pressure or encouragement from family, friends, and caregivers may cloud or overwhelm the patient's in-

[57] S.R. Rapp, et al., *Detecting Depression In Elderly Medical Inpatients*, 56 J. Consult. Clin. Psychol. 509-513 (1988).

[58] *Supra* note 8; *supra* note 13; *see also* P.J. Van der Maas, et al., *Euthanasia and Other Medical Decisions Concerning the End of Life*, 338 Lancet 669-674 (1991).

dependent judgment and thus amount to inappropriate coercion.[59]

The health care available to the terminally ill may be the most important factor influencing the care provided and may result in requests for PAS that could be avoided if appropriate care were available. Large variations in whether people die at home or in a hospital in various regions of the country are strongly related to hospital bed supply and regional hospice investment, and not to preferences, wealth, family presence, or other patient characteristics.[60]

2. *Financial Considerations.*

Patients nearing death are generally quite disabled and their care is costly. While hospital and physician costs decline past the age of 70, long-term care costs rise, and these are mostly borne privately.[61]

The plaintiff-patients in the cases below do not appear to have been burdened with economic difficulties. Yet, economic influences are among the most important in defining a population eligible for PAS. One-quarter of those over 65 are below 150% of the Federal poverty level, and institutional long-term care has become largely a poverty program under Medicaid.[62] As pressures increase to curtail health care expenses, hospital admissions are limited and hospitalizations are shortened. Decreasing availability and increasing expense in health care and the

[62] *Id.; see also* Marilyn Moon, *Medicare Now and in the Future* (1996).

uncertain impact of managed care may intensify pressure to choose PAS.

Should financial pressures be considered undue influence or not? This is the special dilemma of those who serve the frail, disabled, and poor. The AGS's concern is that PAS may become inherently coercive in a society in which supportive services and medical care are often unavailable. It would be ironic, indeed, to have a constitutional right to PAS when there is no guarantee of access to health care.

D. Suffering.

The courts below also appear to assume that the right to PAS may be reliably limited to persons who are suffering or in pain. Medical practice has no consensus on how to define or measure such a state. Most patients can be physically comfortable without sedation, and sedation can always eliminate symptoms in persons near death. This course is available at present, without any change in the law, and thus precludes a requirement that the patient must have symptoms that cannot be relieved. While some may view such treatment as undesirable, it is difficult to see why death through PAS should be considered a distinctly better (and constitutionally dictated) policy option.

E. Physician Involvement.

There is little reason to believe that physicians now have expertise in modes of killing, yet all proposals for PAS mandate physician participation. Although the counseling skills and prescription-writing privileges of physicians might at first blush suggest that their involvement in PAS is appropriate, this Court should recognize the practical difficulties this requirement imposes upon medical caregivers. There is no drug approved as safe and effective and therefore no drug legally available for PAS,[63] no in-

---

[63] In a recent survey of Oregon physicians who would be eligible to prescribe under the 'Death with Dignity Act,' 50% of respondents

struction is given in medical texts,[64] and practice standards show pervasive inattention to counseling and symptom management for those near death. Physicians are usually required to inform patients of alternatives which might be advantageous. No proposal has exempted PAS, but the implications of having to broach this subject with seriously ill persons have not been considered in the discussions to date. The potential for engendering distrust and diminishing effectiveness in physician-patient encounters may justify not engaging physicians in this work. Without experience, recognizing a right to commit suicide through the assistance of physicians is clearly premature.

F. The Scope of Assistance.

The constitutional right to PAS articulated by the courts below limits the physician's aid to prescribing medications in lethal doses. Clinical experience suggests that this limit is untenable and will inevitably lead to demands for more active physician involvement in bringing about the patient's death.

If a physician were to prescribe medication in a dose which should be sufficient to cause death, the rulings below require that the patient seeking PAS actually ingest the drugs and do not provide for any further assistance by the physician. Very likely, patients will sometimes take too little of the drug, will be more resistant than expected, or might vomit and lose much of what was ingested. Determining the appropriate response to a partial overdose in the context of legal, assisted suicide would pose difficult problems for physicians, family members, or friends, since survival with brain damage and incompetence could result.

Such difficulties seem likely to lead to pressure to allow intravenous administration of lethal drugs, both because

---

said they did not know what to prescribe for PAS. M.A. Lee, et al., *Legalizing Assisted Suicide - Views of Physicians in Oregon*, 334 New Eng. J. Med. 310-315 (1996).

[64] A. Carron, et al., *What is Taught About Care for the Dying in Three General Medicine Texts?*, 44 J. Am. Geriatrics Soc'y, 533 (1996).

they are more reliable and because they bring about death without apparent symptoms, such as prolonged respiratory distress, that might be difficult for family members or attendants to witness. Limiting the scope of physician assistance to the prescription of lethal drugs is thus unlikely to be sustainable. The experiences of physician assisted death in The Netherlands suggest that a progression from patient self-administration of lethal medication to physician assistance with intravenous routes is a likely consequence of allowing PAS.[65]

In summary, the criteria delimiting the boundaries of the constitutional right to PAS found by the courts below are inherently unstable, difficult or impossible to define, and probably incapable of application at the present time. Without the benefit of further experience, there simply is no way of knowing whether this society could accommodate the exercise of a constitutional right dependent on these eligibility criteria.

IV. THE COURT SHOULD VACATE THE ORDERS OF THE LOWER COURTS.

This Court should reverse the opinions of the lower courts, and decline to recognize a constitutional right to PAS for a limited class of persons at the end of life. This is clearly an issue that is not ripe for consideration by this Court now. We explicitly adopt the legal argument for this position as presented by the Project on Death in America in an *amicus* brief filed in these cases.[66]

As explained above, no jurisdiction in the United States has yet had any experience with the practice that, it is contended, should be recognized as a fundamental right. The AGS has been opposed to legalizing PAS or physician involvement in euthanasia, primarily on the grounds that

---

[65] P.J. Van der Maas, et al., *Euthanasia and Other Medical Decisions Concerning the End of Life*, 338 Lancet 669 (1991).

[66] *See also* Robert A. Burt, *Constitutionalizing Physician-Assisted Suicide: Will Lightning Strike Thrice?*, 35 Duquesne L. Rev. 159-181 (1996).

our frail elderly patients are especially vulnerable to social coercion and that the well-being of those who are old and sick is not being carefully considered in the legislative and judicial discussion of this issue.

This is a very dynamic time with regard to care at the end of life. Only in the last few decades has living past the eighth decade become commonplace, and only recently has dying become a slow process in the setting of progressive chronic disease. New findings about what can be done with regard to relieving symptoms and supporting dying persons and their families are being reported regularly. States continue to debate both their support of the poor and their willingness to allow PAS. This is a time to enhance our understanding of how to care for dying patients, not a time to foreclose further learning by precluding innovation and evaluation.

Instead, we believe that the issue should be left to institutions more able to fashion flexible resolutions, with the benefit of further study and debate, such as state legislatures, the health care professions, and community organizations.

In this connection, we note that, should the Court agree with the Petitioners' arguments that the New York and Washington statutes do not violate the 14th Amendmen, then the 10th Amendment could provide an additional constitutional framework for reversal.[67] Since the Constitution neither delegates to the federal government the power to regulate PAS, nor prohibits its regulation by "the States, [such power is] reserved to the States respectively, or to the people."[68]

---

[67] *See New York v. United States*, 505 U.S. 144, 157 (1992) ("The question is not what power the Federal Government ought to have but what powers in fact have been given by the [States and] the people." (*quoting United States v. Butler*, 297 U.S. 1, 63 (1936)); *see also Mugler v. Kansas*, 123 U.S. 623, 664 (1887).

[68] U.S. Const. amend. X; *see also U.S. Term Limits v. Thornton*, 115 S. Ct. 1842, 1876 (1995) (Thomas, J., dissenting); *Garcia v. San Antonio Metro. Transit Auth.*, 469 U.S. 528, 546 (1985) ("The essence of our federal system is that within the realm of authority left open to them under the Constitution, the States must be equally free to engage in any activity that their citizens choose for the common weal, no matter how unorthodox or unnecessary anyone else —including the judiciary—deems state involvement to be.")

CONCLUSION

For the foregoing reasons, the judgments of the United States Courts of Appeals for the Second and Ninth Circuits should be reversed.

POSITION STATEMENT

Physician-Assisted Suicide and
Voluntary Active Euthanasia

AGS Ethics Committee *

BACKGROUND

The American Geriatrics Society has previously issued a statement on Voluntary Active Euthanasia (VAE). The public debate on this subject has broadened to include Physician-Assisted Suicide (PAS) and reflects the concern of many individuals about control over the terminal phase of their lives. The Society has affirmed that patients have the authority to choose among available plans of care, but their autonomy is limited when there are substantial detrimental effects on the lives of others or their choices conflict with legal or professional standards. (*See* AGS position statement, "Medical Treatment Decisions Concerning Elderly Persons"). Advocates of extending legal and professional standards to include VAE and PAS believe it is the patient's right to choose deliberately to end his or her life, under circumstances of intolerable suffering, when that individual reasonably and voluntarily prefers death to the life that confronts him or her.

DEFINITION OF TERMS

Physician-Assisted Suicide

When a physician provides either equipment or medication, or informs the patient of the most efficacious use of already available means, for the sole purpose of assisting the patient to end his or her own life.

---

* Prepared by Margaret Drickamer, MD; reviewed and approved by the AGS Ethics Committee and the AGS Board of Directors, November 1994. Copies of this position statement may be obtained from the American Geriatrics Society.

Voluntary Active Euthanasia

When, at the request of the patient, a physician administers a medication or treatment, the sole intent of which is to end the patient's life.

Withholding or Withdrawing Treatment

When a medical intervention is either not given or the on-going use of the intervention is discontinued, allowing natural progression of the underlying disease state.

POSITION

1. For patients whose quality of life has become so poor as to make continued existence less preferable than death, the professional standard of care should be that of aggressive palliation, not that of intentional termination of life. It is morally acceptable for a physician to administer a medication with the intent of treating a symptom, knowing that the medication may have the unintended effect of hastening the patient's death. This approach may include the withholding or withdrawing of any medical intervention as well as the specific palliation of symptoms, even if this advances the moment of death. The patient's request for death should trigger the physician's thorough exploration and understanding of the patient's suffering and the reason the request is being made at that particular time.
2. Patients for whom these issues are relevant should be informed of two important facts: a. Profound pain can be relieved with analgesia or sedation, and b. Patients may choose to forgo any life-prolonging intervention, including artificial nutrition and hydration. Because these issues are often misunderstood, the physicians have the responsibility to inform their patients of these alternatives.
3. Laws prohibiting VAE and PAS should not be changed. In giving a patient the means to palliate his

or her symptoms, a physician may inadvertently provide the means for suicide (e.g., by prescribing necessary but potentially lethal medications). The law should differentiate between this situation and the intentional participation in the planning and execution of a suicide. Laws in many states remain very vague as to the extent to which the physician's participation is considered to be a breach of the law. The definition and legal status of PAS should be further clarified.

4. If PAS or VAE are legal in any jurisdiction, the AGS contends that the strongest protection for patients to make a choice free of coercion should be in place and that it should be illegal for professional caregivers to receive financial compensation for assisting in suicide or euthanasia.

RATIONALE FOR CONTINUED PROHIBITION

1. Historically, the fundamental goal of the doctor/patient relationship has been to comfort and to cure. To change the physician's role to one in which comfort includes the intentional termination of life is to alter this alliance and could undermine the trust between physician and patient.
2. Allowing for VAE and PAS (especially in view of the possibility for its use in Advance Directives where patients are no longer competent and their directives are subject to interpretation) opens the door for abuse of the frail, disabled, and economically disadvantaged of society.
3. It is the general consensus of the AGS that most individuals who consider PAS or VAE do so out of fear of the dying process. The vast majority of patients can be appropriately palliated (including the use of general sedation) and would choose this alternative if they had full confidence that the medical profession would do so. A thorough search for the

underlying reason for the request for death may uncover several areas amenable to potential interventions (e.g., undertreated physical symptoms, psychosocial or spiritual crisis, clinical depression, etc.).

4. Legalization of physician-assisted suicide might thwart society's resolve to expand services and resources aimed at caring for the terminally ill, dying patient.

RECOGNITION OF THE CONSEQUENCES OF CONTINUED PROHIBITION

1. By prohibiting physicians from participating in VAE or PAS, we are limiting the patient's autonomy to choose his or her mode of death. For a patient who has intractable suffering and a limited life span, who has turned down general sedation, and who wishes to avail him- or herself of the choice to plan or execute their own demise, we must withhold our professional assistance.
2. Knowing that a small number of patients will choose this alternative despite our professional nonparticipation, the AGS recognizes that its members may choose not to give professional support to the patient in this decision.

FUTURE DEBATE

The medical profession, as well as society as a whole, is continuing to address this issue. We encourage this continued debate as the physician's role in the care of the dying patient is further defined.

POSITION STATEMENT

The Care of Dying Patients: A Position Statement from the American Geriatrics Society

AGS Ethics Committee *

BACKGROUND

Dying is the final portion of the life cycle for all of us. Providing excellent, humane care to patients near the end of life, when curative means are either no longer possible or no longer desired by the patient, is an essential part of medicine. The American Geriatrics Society (AGS) recognizes that most people near the end of life desire and should be able to obtain attentive and effective care directed at relieving symptoms, maximizing comfort, and maintaining dignity and control. Providing excellent care to dying patients and their families is time consuming and requires expertise as well as compassion. Care of patients who are dying is more than just withholding burdensome treatments; it is the provision of a special form of medical care, one in which physicians can take pride and find fulfillment. Making such care regularly available will require improvements in systems for service delivery and in professional education.

DEFINITIONS

Patients Who are Dying

Within this document, people are considered to be dying when they have a progressive illness that is expected to end in death and for which there is no treatment that can substantially alter the outcome. Thus, people are dying when they have illnesses such as advanced dementia

* Prepared by Greg A. Sachs, MD; reviewed and approved by the AGS Ethics Committee and the AGS Board of Directors, May 1994. Copies of this position statement may be obtained from the American Geriatrics Society.

or severe congestive heart failure, in addition to illnesses more routinely recognized as terminal, such as advanced cancer. Care of dying patients also encompasses patients who have elected to forgo available treatments that might forestall death, such as dialysis for end stage renal disease.

Palliative Care

Within this document, palliative care, also referred to as comfort care, refers to care directed toward the quality of life of patients who are dying, including the relief of pain and other symptoms, attention to the psychological and spiritual needs of the patient, and providing support for the dying patient's family.

PATIENT CARE ISSUES

Position 1

The care of the dying patient, like all medical care, should be guided by the values and preferences of the individual patient.

Rationale

Optimal medical care of all patients, not just those who are dying, rests on frank and sensitive communication between patients and physicians. For dying patients, this ordinarily entails recognition and discussion of the facts surrounding prognosis and the likely course with a palliative plan of care. The conversations throughout must continue to elicit and respond to the patient's needs. When the patient loses decision-making capacity, care should be guided by these previous conversations as well as by written advance directives, if available.

Position 2

Palliative care of dying patients is an interdisciplinary undertaking that attends to the needs of both patient and family.

Rationale

In caring for dying patients, physicians must themselves develop a broad array of knowledge and skills and an attentiveness to comprehensive care. In addition, whether or not the patient is enrolled in a formal hospice program, physicians most often should function as members of a team. The team may include nurses, social workers, homemakers, home health aides, physical therapists, chaplains, volunteers, and the patient's family. Each team member contributes the special knowledge and the skills of his or her discipline to help meet the needs of dying patients. Together, team members provide care for the patient and assist the family in coping with the patient's dying and death. Family members (with "family" defined by the individual patient) usually play a critical role in both providing care for dying patients and in making decisions for dying patients who have lost decision-making capacity. Providing support for the patient's family, including a period after the patient dies, is an important aspect of the palliative care of dying patients.

Position 3.

Care for dying patients should focus on the relief of symptoms, not limited to pain, and should be addressed by both pharmacologic and nonpharmacologic means.

Rationale

Pain, anxiety, depression, dyspnea, constipation, and other symptoms can all be significantly ameliorated, if not eliminated, in the vast majority of dying patients, provided we employ fully our pharmacologic armamentarium and appropriate nonpharmacologic interventions. Symptoms should be treated vigorously, even if the unintended effect of these efforts is the hastening of death. Though not medical symptoms, dignity and control are central issues for many dying patients.

HEALTH CARE DELIVERY ISSUES

Position 4

Dying patients should be guaranteed access to comprehensive, interdisciplinary palliative care across the spectrum of care settings as part of any federal or state health care reform plan, without care being conditioned on the financial status of the patient.

Rationale

Palliative care is often provided most appropriately in the patient's own home, a setting where reimbursement is inadequate under many existing insurance plans. Dying patients should be able to receive palliative care in the home, the hospital, and the nursing home, depending on the needs and preferences of the patient, without a disruption in the continuity of the patient's care.

Position 5

Reimbursement policies should be modified to enhance the availability of palliative care.

Rationale

Patients and families are presently faced with major financial obstacles to choosing palliative care, while payment for continued highly technological, acute care (e.g., dialysis, ventilator care, etc.) is readily available. Physician reimbursement should also be modified to promote palliative care. Like other forms of primary care, palliative care is time consuming, does not involve highly reimbursed procedures, and requires substantial counseling of patients and families.

Position 6

Administrative and regulatory burdens that may serve as barriers to palliative care should be reduced.

Rationale

Currently, hospices providing care for dying patients face special administrative burdens in addition to the usual paperwork facing all health care institutions. Requirements regarding availability of family and a home for caregiving regularly prevent some patients from receiving palliative care through hospices. Uncertain or unavailable estimates of prognosis also may serve inappropriately to exclude patients in need of palliative care services. Regulations intended to promote adequate nutrition for nursing home residents and laws intended to prevent assisted suicide and euthanasia should be written or revised so that these issues are not confused with proper palliative care decisions and treatment.

EDUCATION ISSUES

Position 7

Physicians, as well as other health care professionals, at all levels of training should receive concrete, insightful, and culturally sensitive instruction in the optimal care of dying patients.

Rationale

Medical students and physicians in training in the United States today rarely receive specific and in-depth instruction on the care of dying patients. This instruction should address attitudes toward and reactions to death and care of the dying, symptom management (especially pain control and adequate use of narcotic analgesics), and communication skills. The importance of knowledge about the care of dying patients should be reinforced by evaluating it on board exams and other specialty certification exams.

Position 8

The public, including our patients and our colleagues, needs to be educated regarding the availability of pallia-

tive care as an important and desirable option for dying patients.

Rationale

It is the position of AGS that this kind of educational effort would benefit many by dispelling the notion that the only options available to dying patients are continued futile therapy in a medical setting or turning to assisted suicide or euthanasia (see related AGS position statement).

RESEARCH ISSUES

Position 9

Adequate funding for research on the optimal care of dying patients should be provided.

Rationale

Much of the information base needed to inform patients and physicians regarding optimal care of dying patients does not yet exist. Studies documenting the outcomes of various types of care plans, medications, and treatment settings, especially ones focused on the experience of the dying patient, should take place. Although traditional biomedical research on symptom relief is needed, much of what is already known about symptom relief is not implemented effectively because of professional ethical concerns about aggressive symptom management and institutional barriers to the provision of palliative care. Research on these matters, including educational approaches and interventions to promote palliative care, is needed.

QUESTIONS PRESENTED

(1) Is there a Fourteenth Amendment substantive due process right to obtain a physician's assistance in committing suicide?

(2) Are patients who refuse or withdraw consent to life-sustaining treatment similarly situated to patients who request that a physician prescribe or administer a lethal dose of medication?

(3) Does the state have a sufficiently important interest in prohibiting the consensual killing of patients by physicians to outweigh any purported right to assistance in suicide?

TABLE OF CONTENTS

Page

QUESTIONS PRESENTED i

INTEREST OF THE AMICUS CURIAE 1

SUMMARY OF ARGUMENT 2

ARGUMENT 3

I. THE DUE PROCESS CLAUSE DOES NOT GUARANTEE A RIGHT TO OBTAIN A PHYSICIAN'S ASSISTANCE IN COMMITTING SUICIDE 4

A. The Washington Statute Bans Homicide, Not "Hastening One's Death". 4

B. The Court Should Not Create A New "Right" To Assisted Suicide That Lacks Any Basis In The Text Of The Constitution Or The History And Tradition Of Our Nation 6

C. This Court's Decisions In *Casey* And *Cruzan* Do Not Protect Consensual Killing 10

1. *Casey* 10

2. *Cruzan* 12

TABLE OF CONTENTS—Continued

BRIEF OF THE CATHOLIC HEALTH ASSOCIATION OF THE UNITED STATES AS *AMICUS CURIAE* IN SUPPORT OF PETITIONERS*

INTEREST OF THE AMICUS CURIAE

The Catholic Health Association of the United States ("CHA") represents over 1200 Catholic sponsored health care facilities and organizations that serve millions of people each year.

Catholic health care organizations understand their mission to be far more than simply the delivery of a social good. "Catholic sponsored health ministry, like the church itself, must not only proclaim the gospel but commit to transform the social order according to gospel norms" of love and justice. National Coalition on Catholic Health Ministry, *Catholic Health Ministry in Transition* 4 (1995). This ministry is rooted in and informed by a deeply held commitment to promote and defend human life and human dignity.

CHA's interest in this case stems from its concern for the need to protect vulnerable persons; to insure appropriate care for dying persons; to preserve the integrity of the health care profession; to strengthen the bonds of community; and also to preserve the integrity of Catholic health ministry.

A body of moral principles developed over centuries informs Catholic teaching on health care matters. These moral principles likewise inform the National Conference of Catholic Bishops' *Ethical and Religious Directives for Catholic Health Care Services* (1995) ("*Directives*"), which provide guidance to Catholic health professionals on a range of economic, technological, social and moral challenges. For instance, Catholic health care is required to support patients

* Consents to the filing of this brief have been lodged with the clerk.

and their families who must face the reality of death. *Directives* at 21.

Furthermore, the *Directives* guide Catholic health ministry in its advocacy efforts:

> In accord with its mission, Catholic health care should distinguish itself by service to and advocacy for those people whose social condition puts them at the margins of our society and makes them particularly vulnerable to discrimination: * * * the elderly; [and] those with incurable diseases * * *. In particular, the person with mental or physical disabilities, regardless of the cause or severity, must be treated as a unique person of incomparable worth, with the same right to life and to adequate health care as all other persons.

Id. at 7.

Assisted suicide offends the most basic moral precepts of our culture and, in particular, poses a grave danger to those "at the margins of our society." In fulfilment of its mission, the *amicus* urges this Court to reverse the Courts of Appeals.

SUMMARY OF ARGUMENT

The Ninth Circuit partial *en banc* opinion in *Compassion in Dying v. Washington* (Wash. Pet. App. A-1 to A-117), positing a substantive due process right to physician-assisted suicide, is based on two fundamental misconceptions: first, that this Court's abortion jurisprudence stands for the proposition that any "private" or "intimate" decision by a citizen is entitled to protection under the Due Process Clause; and second, that an instruction to a physician to withdraw life-sustaining treatment, which this Court assumed to merit constitutional protection in *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990), is equivalent to a request for a physician's assistance in suicide.

The Second Circuit's opinion in *Quill v. Vacco* (N.Y. Pet. App. 1a-62a), likewise erroneously equates a person's

negative right to refuse unwanted treatment with a positive right to be assisted in suicide, holding that New York's permission of the former and prohibition of the latter violates the Equal Protection Clause. The court could see no rational basis for making such a distinction.

Nothing in the Constitution or this Court's jurisprudence entitles citizens to request that a physician prescribe or administer the means to kill. The States of Washington and New York have the duty to protect the lives of their citizens from the consequences of legalized assisted suicide. Similarly, these states have the obligation to protect the fiduciary relationship between doctor and patient, upon which the integrity of the medical profession depends. Once health care professionals are permitted to "assist" people in killing themselves, our society's rationally constructed bright line prohibiting private killing will be obliterated.

ARGUMENT

The courts below seek to create a new constitutional right to assisted suicide based primarily on their fallacious equating of assisted suicide with the withdrawal of treatment. This fundamental error is at odds with our legal and cultural tradition.

As a starting point, we look to the example of Joseph Cardinal Bernardin, Archbishop of Chicago, who announced in October 1996 that he had decided not to continue chemotherapy for his cancer. S. Kloehn, "Bernardin Ends Cancer Care/Chemotherapy Hasn't Reduced Tumor Size," Chi. Trib., Oct. 18, 1996, at 1. In his letter to this Court, Cardinal Bernardin states, "I know from my own experience that patients often face difficult and deeply personal decisions about their care. However, I also know that even a person who decides to forgo treatment does not necessarily choose death. Rather, he chooses life without the burden of disproportionate medical intervention." App., *infra*, 1a. Where life-sustaining interventions are deemed ineffective or

disproportionately burdensome, even in the case of a person on a ventilator, the intervention may be removed. Whether deciding to discontinue chemotherapy or to remove a ventilator, the absence of an intent to kill distinguishes these acts from one in which a person intends to take his own life. Such an act is suicide. Facilitating such an act is assisted suicide.

I. THE DUE PROCESS CLAUSE DOES NOT GUARANTEE A RIGHT TO OBTAIN A PHYSICIAN'S ASSISTANCE IN COMMITTING SUICIDE.

In a sweeping act of positive lawmaking, the Ninth Circuit attempts to create a new substantive due process right to assisted suicide. This Court should not endorse such a dramatic departure from its precedent and from the Nation's legal and moral traditions.

A. The Washington Statute Bans Homicide, Not "Hastening One's Death."

Suicide is "[t]he act of killing oneself intentionally." *Webster's II: New Riverside Dictionary* (1984). Catholic teaching has consistently recognized the difference between killing oneself (suicide) and withholding or withdrawing disproportionate means to sustain life.[1]

However, the Ninth Circuit asks not whether there is a right to be assisted in "killing oneself intentionally," but whether there is a liberty interest in "determining the time and manner of" or "hastening one's death." Wash. Pet. App. A-29. The court's oblique declaration of the constitutional "right" it creates allows it to sweep into the discussion "a whole range of acts that are generally not considered to

[1] "Disproportionate means are those that in the patient's judgment do not offer a reasonable hope of benefit or entail an excessive burden * * *." *Directives* at 22-23.

constitute 'suicide[]' [including] * * * the act of refusing or terminating unwanted medical treatment." *Id.* Indeed, in a total subversion of the English language, the court states that it has "serious doubts that the terms 'suicide' and 'assisted suicide' are appropriate legal descriptions of the specific conduct at issue here." *Id.*

The court's use of words is more than mere semantics. The newly proposed right is quite broad. There is no coherent way to limit a purported right to "assisted suicide" to terminally ill people or to competent people who can communicate. Once the Court affords terminally ill citizens the "right" to have a physician assist them in suicide, it will have to afford such a right at least to all competent adults for, according to the Ninth Circuit, the right is grounded not in the terminal illness, but in the right to determine the time and manner of one's death. Moreover, there is nothing to limit this right to patient-administered medication; the lower courts' reasoning would appear to apply just as readily to those seeking euthanasia (*i.e.*, physician-administered lethal medication). Of course, the Ninth Circuit dismisses this fundamental concern, "consider[ing] it less important who administers the medication than who determines whether the terminally ill person's life shall end." Wash. Pet. App. A-100 to A-101.

Once all competent adults have such a right, the right would have to be extended to incompetent adults, for incompetent persons do not lose their constitutional freedoms simply due to their incompetence. *See* Wash. Pet. App. A-159 (Beezer, J., dissenting). The only issue would be whether and how a surrogate can act for an incompetent person. *E.g., Cruzan, supra*. Once incompetent people have the right to assisted suicide (whether or not they are terminally ill), advocates for mature or emancipated minors, and for the legal representatives of minors would urge the extension of the right to them as well. *Cf. Planned Parenthood v. Casey*, 505 U.S. 833, 970-71 (1992); *City of Akron*

v. Akron Center for Reproductive Health, 462 U.S. 416 (1983); *Bellotti v. Baird*, 443 U.S. 622 (1979).

In addition, once this Court recognizes a Substantive Due Process right of physician-assisted suicide, even for healthy adults, it will face the compelling argument of those who do not need a physician's help to commit suicide, but only wish the help of a friend or trusted family member. The purported right to assisted suicide is based on the belief that the law may not prevent a person from ending his own life, and thus that a state may not interfere with the efforts of those who would assist in such an endeavor. There is no implicit limitation in such a right to the assistance of physicians; in theory, a person entitled to "hasten their death" should be able to accept the help of anyone. At this point, assisted suicide is no longer a clinical event occurring in a health care setting; it is nothing more than state-sanctioned killing by private agreement.

B. The Court Should Not Create A New "Right" To Assisted Suicide That Lacks Any Basis In The Text Of The Constitution Or The History And Tradition Of Our Nation.

The Ninth Circuit begins (Wash. Pet. App. A-31 to A-32) by dutifully reciting the standard expressed in what it calls this Court's "highly controversial" opinion in *Bowers v. Hardwick*, 478 U.S. 186, 191-92 (1986) (citations omitted):

> Striving to assure itself and the public that announcing rights not readily identifiable in the Constitution's text involves much more than the imposition of the Justices' own choice of values on the States and the Federal Government, the Court has sought to identify the nature of the rights qualifying for heightened judicial protection. In *Palko v. Connecticut*, it was said that this category includes those fundamental liberties that are "implicit in the concept of ordered liberty," such that "neither liberty nor justice would exist if [they] were

> sacrificed." A different description of fundamental liberties appeared in *Moore v. East Cleveland*, where they are characterized as those liberties that are "deeply rooted in this Nation's history and tradition."

Unfortunately, the Court of Appeals ignores this standard, all but disregarding the long history and tradition in this country of prohibiting consensual killing. Indeed, the court proceeds to survey "current societal attitudes," citing polls showing public support for "the prerogative [of patients] to accelerate their death by refusing or terminating treatment" and for assisted suicide and euthanasia. Wash. Pet. App. A-48. Relying on its understanding of "our unwritten history" and its own knowledge, the court concludes that suicide and assisted suicide are actually accepted practices in society, justifying enshrining them in the pantheon of constitutionally protected activities which may not be proscribed by legislation. *See id.* at A-51 to A-52.

An accurate reading of the American legal tradition reveals something much different. It demonstrates a consistency between our society's historical rejection of assisted suicide and Catholic teaching. Moreover, Church teaching has been influential in shaping the societal views and practices which inform this Court's due process analysis.[2]

From the earliest times, the Church has condemned

---

[2] Catholic teaching has historically been a major force in the development of Western thought. R.J. Araujo, "Thomas Aquinas: Prudence, Justice, and the Law," 40 Loy. L. Rev. 897, 913-915, 921 (1995); G. N. Herlitz, "The Meaning of the Term 'Prima Facie,'" 55 La. L. Rev. 391, 391 n.5 (1994). On end-of-life issues, courts have referred freely to historical Catholic teachings in their examination of this society's moral traditions. *E.g.*, Wash. Pet. App. A-131 to A-134 (Beezer, J., dissenting); *In re Quinlan*, 355 A.2d 647, 659-60 (N.J.), *cert. denied* 429 U.S. 922 (1976).

suicide.[3] Two figures in the Church's history stand out in this regard. St. Augustine of Hippo (354-430) articulated the principles on which Christianity condemned suicide by arguing that the prohibition against killing applies to all persons, including oneself. St. Augustine, *City of God*, Book I, ch 20. Building upon that foundation, St. Thomas Aquinas (c.1225-1273) further explained the reasoning behind the prohibition, arguing that suicide is contrary to the natural inclination that persons love themselves, that suicide injures the community, and that God alone has the power over life and death. St. Thomas Aquinas, *Summa Theologica II-II*, Q. 64, art. 5. Significantly, Aquinas also argued that suicide is an offense because it is an act of injustice against the community.

In this century, the Second Vatican Council reiterated the Church's powerful opposition to suicide:

> The varieties of crime [against the human person] are numerous: all offenses against life itself, such as murder, genocide, abortion, euthanasia and wilful *suicide* * * * all these and the like are criminal: they poison civilization; and they debase the perpetrators more than the victims and militate against the honor of the creator.

"Pastoral Constitution on the Church in the Modern World" (*Gaudium et spes*), *Vatican Council II*, at 926 (A. Flannery, ed. 1992) (emphasis added).

More recently, the Vatican reiterated the Church's opposition to suicide:

> Intentionally causing one's own death, or suicide, is therefore equally as wrong as murder; such an action on

[3] *E.g.*, the Council of Arles (452), the Council of Braga (563), the Antisidor Council (590) and the Synod of Nimes (1274). T. Marzen, M. O'Dowd, D. Crone & T. Balch, "Suicide: A Constitutional Right?" 24 Duquesne L. Rev. 1, 57, 60 (1985).

> the part of a person is to be considered as a rejection of God's sovereignty and loving plan.

Sacred Congregation for the Doctrine of the Faith, *Declaration on Euthanasia* 7 (1980). *See also Directives* at 21 ("Suicide and euthanasia are never morally acceptable options").

Most recently, the *Catechism of the Catholic Church* emphasizes the broad social consequences of killing oneself. Suicide "offends love of neighbor because it unjustly breaks the ties of solidarity with family, nation, and other human societies to which we continue to have obligations." United States Catholic Conference, *Catechism of the Catholic Church* § 2281, at 550 (1994). In sum, the Catholic tradition's aversion to suicide is so strong that the American Bishops insist that those associated with the Catholic health care ministry neither condone nor participate in assisted suicide. *Directives* at 23.

Our own legal tradition has also consistently condemned suicide, and thus assisted suicide. Henry de Bracton's 1220 treatise and Sir Edward Coke's 1644 treatise, *Third Institute of the Law of England,* identified the common law crime of suicide and its severe property penalties. *See* T. Marzen, M. O'Dowd, D. Crone & T. Balch, Suicide: A Constitutional Right?" 24 Duquesne L. Rev. 1, 57, 60 (1985). In *Hales v. Petit*, 75 Eng. Rep. 387 (1561-62), the English Court applied sanctions against suicide. In the United States, *Massachusetts Commonwealth v. Bowen*, 13 Mass. 356 (1816), illustrates the early American common law prohibition against assisted suicide. The fact that states later abolished criminal penalties for unilateral suicide does not reflect societal approval of these acts. "These changes occurred, rather, because punishment was seen as unfair to innocent relatives of the suicide and because those who committed or who attempted to commit the act were thought to be prompted by mental illness." Y. Kamisar, "Are Laws Against Assisted Suicide Unconstitutional?" 23 *Hastings*

Center Report 32, 41 (1993). Indeed, the common law, and in many instances state statutes, prohibited suicide and assisted suicide both at the time of the Revolution and at the time the Fourteenth Amendment was ratified. *See* Wash. Pet. App. A-44 to A-46; *Cruzan*, 497 U.S. at 294 (Scalia, J., concurring), citing Marzen, *et al.*, *supra*. In fact, notwithstanding the Ninth Circuit's research into popular opinion, all but one state today prohibits assisted suicide. *See* Wash. Pet. App. A-48 to A-49.

Because our moral tradition and our law has so uniformly condemned these practices, it is simply inaccurate to say that the right to assist in committing a suicide is a "liberty" that is "deeply rooted in this Nation's history and tradition," or that is "implicit in the concept of ordered liberty." Indeed, it is our proud history to have prohibited such dangerous conduct.

C. This Court's Decisions In *Casey* And *Cruzan* Do Not Protect Consensual Killing Or Assisted Suicide.

The Ninth Circuit relies on *Casey* and *Cruzan* for the unsupportable proposition that there is a liberty interest in "hastening death" which the state may not burden. Neither *Casey* nor *Cruzan*, however, can support the creation of this expansive right. Although in both cases this Court applied a balancing test to state restrictions on actual or assumed liberty interests (the same test the Ninth Circuit purports to apply), the finding of liberty interests in *Casey* and *Cruzan* was itself subject to the larger principles enunciated in *Bowers* and prior cases.

1. *Casey*

According to the Ninth Circuit, *Planned Parenthood v. Casey* requires the conclusion that there is a liberty interest in assisted suicide because "the decision how and when to die is one of 'the most intimate and personal choices a person may make in a lifetime,' a choice 'central to personal dignity

and autonomy.'" Wash. Pet. App. A-57 (quoting *Casey*).

The language in *Casey* about highly personal and intimate decisions cannot be taken out of context to support the awesome breadth of the Ninth Circuit's pronouncement.[4] The Court did not say that *any* intimate decision of importance to the individual ought to be treated as a liberty interest. Many such decisions not only lack constitutional protection, but are in fact proscribed by law:

> Those adjectives might be applied, for example, to homosexual sodomy, polygamy, adult incest, *and suicide*, all of which are equally 'intimate' and 'deep[ly] personal' decisions involving 'personal autonomy and bodily integrity,' and all of which can constitutionally be proscribed because it is our unquestionable constitutional tradition that they are proscribable.

Casey, 505 U.S. at 984 (Scalia, J.) (emphasis added). Suicide—and *a fortiori*, assisted suicide—have long been proscribed, and are not entitled to constitutional protection regardless of their "intimate" or "personal" nature. *Cf.* Bernardin, infra, 1a-2a (assisted suicide not merely a personal matter because it harms society).

---

[4] The Court's decision in *Casey* was heavily influenced by the doctrine of stare decisis, leading certain members of the Court to recognize a liberty interest in having an abortion in deference to *Roe v. Wade*, 410 U.S. 113 (1973), even if they might not have done so in the first instance. 505 U.S. at 853. Thus, the Court set the case apart: "Abortion is a unique act * * *. [T]he liberty of the woman is at stake in a sense unique to the human condition and so unique to the law." *Id.* "[O]ne could classify *Roe [v. Wade]* as *sui generis*." *Id.* at 857 (plurality). *Accord id.* at 952 (Rehnquist, C.J., concurring and dissenting). Indeed, "because *Roe*'s scope is confined by the fact of its concern with postconception *potential* life, * * * any error in *Roe* is unlikely to have serious ramifications in future cases." *Id.* at 859 (emphasis added). The abortion precedents are simply not applicable in other contexts, and cannot provide a basis for extending "privacy" or "liberty" to assisted suicide.

2. *Cruzan*

The Ninth Circuit next cites this Court's decision in *Cruzan* to support its creation of a constitutional right to "hasten death." Wash. Pet. App. A-62. In *Cruzan*, the Court assumed that a patient would have the right to refuse or terminate life-sustaining medical treatment, but held that the state had the right to insist on strict safeguards in cases involving incompetent persons. Accordingly, the Court upheld Missouri's "clear and convincing" standard for proof of an incompetent individual's wishes. 497 U.S. at 284.

Cruzan did not recognize any generalized "right to die," let alone a right to assisted suicide. On the contrary, the Court explicitly noted with approval the fact that assisted suicide was *illegal* under state law:

> States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, *the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide*.

497 U.S. at 280 (emphasis added).

Despite this clear language and the expressly narrow grounds of this Court's decision, the Ninth Circuit used *Cruzan* as a springboard to an expansive "right" heretofore unknown to the law:

> *Cruzan*, by recognizing a liberty interest that includes the refusal of artificial provision of life-sustaining food and water, *necessarily* recognizes a liberty interest in hastening one's own death.

Wash. Pet. App. A-62 (emphasis added). To appreciate the magnitude of the lower court's illogical leap from the actual *Cruzan* holding, the Court need look no further than at how the *Cruzan* Court reached its decision.

The Court began with a discussion of the doctrine of

informed consent at common law. 497 U.S. at 269 ("[the] notion of bodily integrity has been embodied in the requirement that informed consent is generally required for medical treatment"). As the Court noted, "[t]he logical corollary of the doctrine of informed consent is that the patient generally possesses the right not to consent, that is, to refuse treatment." *Id.* at 270. *See also id.* at 277 ("As these [state law] cases demonstrate, the common-law doctrine of informed consent is viewed as generally encompassing the right of a competent individual to refuse medical treatment"). This was not anything so broad as a right to "privacy,"[5] but rather the right to be free of compelled surgical intrusions. *E.g.*, *Cruzan*, 497 U.S. at 287-289 (O'Connor, J., concurring):

> Requiring a competent adult to endure [forced medical treatment] against her will burdens the patient's liberty, dignity, and freedom to determine the course of her own treatment. Accordingly, the liberty guaranteed by the Due Process Clause must protect, if it protects anything, an individual's deeply personal decision to reject medical treatment, including the artificial delivery of food and water.

The right assumed to exist in *Cruzan* is thus firmly rooted in the jurisprudence of battery, not some inchoate right to control human destiny in all respects. *Cruzan* does not govern this case.

---

[5] *E.g.*, *Cruzan*, 497 U.S. at 279 n.7:
Although many state courts have held that a right to refuse treatment is encompassed by a generalized constitutional, right of privacy, we have never so held. We believe this issue is more properly analyzed in terms of a Fourteenth Amendment liberty interest. See *Bowers v. Hardwick*, 478 U.S. 186, 194-195 (1986).

II. THE EQUAL PROTECTION CLAUSE DOES NOT GUARANTEE THE RIGHT TO ASSISTANCE IN SUICIDE.

As the Second Circuit observes, the Equal Protection Clause "simply requires the states to treat in a similar manner all individuals who are similarly situated." N.Y. Pet. App. 20a. "The general rule, then, is that state legislation carries a presumption of validity if the statutory classification is 'rationally related to a legitimate state interest.'" *Id.* at 21a, quoting *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985).

The Second Circuit struck New York's statutes criminalizing assisted suicide under the Equal Protection Clause on the ground that:

> New York law does not treat equally all competent persons who are in the final stages of fatal illness and wish to hasten their deaths [and] the distinctions made by New York law with regard to such persons do not further any legitimate state purpose.

N.Y. Pet. App. 24a. The court acknowledged that the statute fell "within the category of social welfare legislation and [was] therefore subject to rational basis scrutiny upon judicial review" but could see no "legitimate state purpose" to distinguish between persons who withhold or withdraw their consent for life-sustaining treatment and persons who wish to have physicians assist them in killing themselves. *Id.* at 24a-25a.

A. The Law Regarding Assisted Suicide And Discontinuation Of Treatment Applies Equally To All.

The Second Circuit errs in subjecting New York's legislation to judicial review because New York does not discriminate between "similarly situated" individuals at all. In New York, as almost everywhere, a patient has the right to refuse or discontinue unwanted medical treatment. *See*

N.Y. Pub. Health Law § 2892. As noted in Section I, *supra*, this right derives from the doctrine of informed consent, and is grounded in the Constitution's protection of bodily integrity. *See Cruzan*, 497 U.S. at 277. Arguably, a physician who does not respect this right is guilty of at least a civil battery. *Id.* at 269.

On the other hand, in New York, as almost everywhere, it is illegal to aid or abet a suicide, or to kill another person, even where the individuals involved are a physician and a patient. N.Y. Penal Law §§ 125.15(3), 120.30. *See also Cruzan*, 497 U.S. at 290-291 nn.2-4 (O'Connor, J., concurring) (collecting various state laws). The Court of Appeals equates revocation of consent to life-sustaining treatment and assisted suicide because they both result in the death of the patient. *See Cruzan*, 497 U.S. at 280. "But constitutional law does not work that way." *Cruzan*, 497 U.S. at 286.[6]

For one thing, patients in each example seek to employ vastly different means to their respective ends, and it is those means which New York treats differently. As did the Ninth Circuit, the Second Circuit ignores this, adopting instead the imprecise and misleading descriptor that both patients are "hastening their deaths." N.Y. Pet. App. 29a-30a. One can equate virtually any two situations by defining the terms broadly enough, but that is not the purpose of the Equal Protection Clause. *E.g.*, *Kelley v. Johnson*, 425 U.S. 238 (1976) (right of bodily autonomy does not include right to control personal appearance at the workplace).

---

[6] The assertion that different courses of conduct are equivalent simply because they cause the same result is absurd. Accidents, self defense and murder all cause deaths. Abortion and feticide both kill fetuses. Illegal drugs and alcohol both cause intoxication. The law treats all of these matters differently because they all involve different conduct. Of course, the source of the Ninth Circuit's confusion is that it improperly identifies the effect (*i.e.*, causing death) as the right assumed in *Cruzan* instead of the means (*i.e.*, withdrawal of life-sustaining treatment). *Cf.* Bernardin, App., *infra*, 1a-2a.

Indeed, New York's ban on assisted suicide is a neutral, generally applicable body of law that proscribes conduct; it does not apply unequally to different classes of people. New York does not purport to prohibit "hastening one's own death." New York prohibits aiding and abetting a suicide.

It is true that under New York's scheme some people end up with more control over the precise timing of their deaths than others, but that is not the fault of the law. It is simply due to the biological fact that certain people will die without medical intervention while others will not. The important point for Equal Protection purposes, however, is that both classes of people have precisely the same legal rights and are subject to precisely the same legal prohibitions: the right to refuse or withdraw treatment (regardless of the expected outcome), and the prohibition against aiding and abetting suicide. The fact that results arising from the exercise of the right and from the impact of the prohibition vary with the individual is not only permissible, it is to be expected in any society made up of unique individuals. *Plyler v. Doe*, 457 U.S. 202, 216 (1982) (Equal Protection Clause does not guarantee identical outcomes, just equal treatment under law).

B. Assisted Suicide Is Morally Distinguishable From Forgoing Life-Sustaining Treatment And Pain Management, Both Of Which May Hasten Death.

1. Discontinuation of Treatment and Hastening Death.

In Catholic teaching, assisted suicide is nothing less than killing. The dignity of the human person is not promoted through acts which destroy life. There is thus an important distinction between suicide and the choice to forgo disproportionate life-sustaining treatment.

Cardinal Bernardin is "at the end of [his] earthly life." App., *infra*, 1a. His decision to discontinue chemotherapy will probably hasten his death. Similarly, a decision to forgo

disproportionate life-sustaining treatment (though the person may die) does not necessarily entail an intention to kill. Both decisions are consistent with Church teaching on due proportion in the use of remedies. Sacred Congregation for the Doctrine of the Faith, *Declaration on Euthanasia* 11-12 (1980). As noted in the *Directives* (at 21):

> We have a duty to preserve our life and to use it for the glory of God, but the duty to preserve life is not absolute, for we may reject life-prolonging procedures that are insufficiently beneficial or excessively burdensome.

2. Pain Management And Hastening Death.

In the course of treatment, patients often require increasing doses of medications like morphine to control their pain. In seeking to control pain, the prescribing physician runs the risk of depressing respiration, and thus while trying to manage pain, hastening death. A. Hardie, "Morphine Drip has Little Opposition," *Atlanta Const.*, Mar. 8, 1995, at C3; L. Lamberg, "Treating Depression in Medical Conditions May Improve Quality of Life," 276 JAMA 857 (1996). In such circumstances, there is no intention to kill the patient. Death is not the object of the act. Nor is "hastening death" the *means* used to relieve pain, even though death may be forseen.

The practice of prescribing effective pain relief that may, at the same time, hasten death as a forseen yet unintended consequence is supported by both the medical profession and Catholic teaching:

> Medications capable of alleviating or suppressing pain may be given to a dying person, even if this therapy may indirectly shorten the person's life so long as the intent is not to hasten death.

Directives at 23; *cf. Declaration on Euthanasia*, *supra*, at 7-9; Pius XII, *Address* of 24 February 1957: *Acta Apostolicae Sedis* 49, at 147. *See also* Kathleen M. Foley,

"Pain, Physician-assisted Suicide, and Euthanasia," 4 *Pain Forum* 163, 164 (1995).

This analysis is consistent with the principle of double effect, Thomas O'Donnell, *Medicine and Christian Morality* 29 (1976), as understood in both the Catholic moral tradition and the medical profession. *E.g.*, D. Gianelli, "Assisted Suicide or Pain Relief?" *Am. Med. News*, July 1, 1996, at 3; D. Wintersheimer, "The Role of Courts in Terminating Nutrition and Hydration for Incompetent Patients," 10 *Issues in L. & Med.* 453, 457 (1995). Moreover, it points out the fallacious reasoning of the Ninth Circuit, which concedes its lack of appreciation for the concept:

> More specifically, we see little, if any, difference for constitutional or ethical purposes between providing medication with a double effect and providing medication with a single effect, as long as one of the known effects in each case is to hasten the end of the patient's life. Similarly, we see no ethical or constitutionally cognizable difference between a doctor's pulling the plug on a respirator and his prescribing drugs which will permit a terminally ill patient to end his own life. * * * To us, what matters most is that the death of the patient is the intended result as surely in one case as in the other.

Wash. Pet. App. A-82.

Of course, in the case of palliative care and forgoing disproportionate life-sustaining treatment "the intended result" is *not* death, but the alleviation of pain or burden. The fact that killing and withdrawal of treatment might both "hasten death" does not render them morally equivalent.

Accordingly, those who forgo life-sustaining medical interventions and those who seek a fatal dose of medication from a physician are not "similarly situated." Physicians respecting the right of a patient to refuse life-sustaining treatment are not similarly situated to physicians who comply with a patient's request for the means to accomplish a fatal

drug overdose. Statutory schemes permitting the former and prohibiting the latter simply reflect society's respect for bodily integrity and its condemnation of homicide. As such, they are not subject to judicial review under the Equal Protection Clause.

III. THE GOVERNMENT HAS A PARAMOUNT INTEREST IN PREVENTING THE KILLING OF HUMAN BEINGS THAT (1) OUTWEIGHS ANY PURPORTED LIBERTY INTEREST IN RECEIVING AID FROM A PHYSICIAN TO KILL ONESELF, AND (2) JUSTIFIES TREATING ASSISTED SUICIDE DIFFERENTLY FROM THE WITHDRAWAL OF LIFE-SUSTAINING TREATMENT.

Even if the Court were to find that there is a liberty interest in "hastening one's death" by assisted suicide, or that those seeking to "hasten death" by forgoing life-sustaining treatment and by assisted suicide are "similarly situated," the government may still prohibit assisted suicide if it can demonstrate a sufficient interest in doing so. For Equal Protection purposes, the state need only show a rational basis for the legislation. N.Y. Pet. App. 21a. For Due Process purposes, a balancing test may be employed. *E.g.*, Wash. Pet. App. A-22. In either case, the Washington and New York statutes should be upheld because those states have a compelling interest in prohibiting assisted suicide, sufficient to outweigh any purported liberty interest in private consensual killing, and sufficient to justify distinguishing between revocation of consent to life-sustaining treatment and receiving physician assistance in killing oneself.

A. Preserving Life.

The Ninth Circuit accurately describes the state's unqualified interest in preserving life:

> [T]he State may assert an unqualified interest in preserving life in general. As the Court said in *Cruzan*,

> "we think a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life * * *." *Cruzan*, 497 U.S. at 282. Thus the state may assert its interest in preserving life in all cases, including those of terminally ill, competent adults who wish to hasten their deaths.

Wash. Pet. App. A-65. Unfortunately, the court then ignores its own observation, concluding that Washington does *not* have an interest in preserving life simply because, like most states, it permits patients to refuse or revoke consent for life-sustaining medical treatment. *Id.* The Second Circuit employs essentially the same argument. *See* N.Y. Pet. App. 32a.

This approach is flawed in two ways. First, it simply begs the question of whether forgoing life-sustaining treatment can be equated with aiding a person in committing suicide. As demonstrated above, it cannot. Washington and New York do not value life any less simply because their citizens have the right to be free from non-consensual touchings. *See* RCW 70.122.010 (basing right to withdraw treatment on the right to individual autonomy); N.Y. Pub. Health Law § 2892 (codifying state common law to same effect).

Second, after paying lip service to the principle that "'a state may properly decline to make judgments about the "quality of life" that a particular individual may enjoy,'" the Ninth Circuit employs the most dangerous form of utilitarian reasoning, unjustifiably devaluing the lives of terminally ill persons: "When patients are no longer able to pursue liberty or happiness and do not wish to pursue life, the state's interest in forcing them to remain alive is clearly less compelling." Wash. Pet. App. A-72. The Second Circuit is even more blunt (N.Y. Pet. App. 31a) (emphasis added):

> [W]hat interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes * * *. What concern prompts the state to interfere with a mentally competent patient's "right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life" * * *? The greatly reduced interest of the state in preserving life compels the answer to these questions: *"None."*

Both courts below have fallen into the same conceptual trap. They have looked to language in *Casey* and in this Court's other abortion cases which weigh against the rights of the woman, the variable state interest in protecting the life of a fetus, a state interest which this Court has found to vary with the fetus' increasing "potentiality" for life. *See Casey*, 505 U.S. at 869-73.[7] These precedents are totally inapposite, notwithstanding the fact that they do accord "potential life" at least some weight in the balance. *See Casey*, 505 U.S. at 871 (abortion may be restricted after viability).

In the case of assisted suicide, the value of life is not subject to a sliding scale. There is no disputing the status of terminally ill persons: they are persons at all times and for all constitutional purposes, and their lives have as much value and meaning as the life of any other person. *See Lee v. Oregon*, 891 F. Supp. 1429 (D. Or. 1995) (striking statute permitting physician assisted suicide by terminally ill persons because it denied them equal protection of the law). Thus, Washington and New York each have a paramount interest

---

[7] Of course, this Court's entire abortion discussion proceeds from the assumption that the fetus is something less than a "person" recognized at law. *See Casey*, 505 U.S. at 982 (Scalia, J., concurring and dissenting). The CHA does not agree with the Court's conclusion, nor with its approach to statutes restricting or prohibiting abortion, but the Court's devaluation of the life of the fetus in abortion cases is still distinguishable from this case, involving other living persons.

in preserving life, and in ensuring equal protection of the law for all lives, including the lives of those who are terminally ill.

B. Preventing Suicide.

Washington and New York have decided that suicide is so dangerous to their citizens and to the social order that it ought to be a crime to aid or abet a person attempting to kill themselves. As shown above, these states are not alone, for suicide and assisted suicide have traditionally been prohibited. *See* Wash. Pet. App. A-39 to A-47; N.Y. Pet. App. 18a-19a; Section I.B, *supra*. Indeed, under most states' laws, those contemplating suicide are *per se* subject to involuntary commitment, and citizens have a privilege to interfere with anyone attempting to commit suicide. *Cruzan*, 497 U.S. at 298 (Scalia, J., concurring).

Neither Court of Appeals disputes the state's legitimate interest in preventing suicide. Instead, both courts apply the same flawed reasoning to this interest as they do to the state's interest in preserving life. In both cases, the courts below devalue the lives of terminally ill persons simply because they express a wish to die and are going to die anyway. However, the state's interest in preventing suicide does not diminish simply because a suicidal person "wants" to die.[8]

C. Protecting The Integrity Of The Medical Profession, Especially In A Managed Care Environment.

The state also has an important interest in protecting the integrity of the medical profession or, as Judge Noonan put it, denying to physicians "the role of killers of their

---

[8] Of course, everyone who attempts suicide *claims* to "want" to die. However, as the Ninth Circuit admits, "[s]tudies show that many suicides are committed by people who are suffering from treatable mental disorders." Wash. Pet. App. A-73.

patients." *See Compassion in Dying v. Washington*, 49 F.3d 586, 593 (9th Cir. 1995), *vacated*, 79 F.3d 790 (9th Cir. 1996)(*en banc*). *See also* Edmund D. Pellegrino & David C. Thomasma, *For the Patient's Good* 205-206 (1988); Edmund D. Pellegrino & David C. Thomasma, *A Philosophical Basis of Medical Practice* (1981). The courts below dismiss this by simply assuming that states will adopt safeguards to protect patients, but the states' power to adopt safeguards does not lessen their interest in the first instance in seeking the most effective way to guard against the perversion of the role of a physician. Similarly, a health care environment dominated by managed care might create economic incentives which the state must properly offset through criminal legislation.

In response to the dramatic rise in health care expenditures, cost-conscious insurers have increasingly adopted principles of managed care. AMA, Council on Ethical & Judicial Affairs, "Ethical Issues in Managed Care," 273 JAMA 330 (1995). Managed care plans' techniques to control provider costs include fixed per-patient payments, restricted treatment options and financial incentives to promote efficient care. *Id.* The most tightly managed plans pay fixed sums for enrolling a patient. The amount of the provider's payment, therefore, is not dependent on whether services are rendered to the patient.

Managed care can serve many legitimate health policy purposes. Yet, managed care requirements can place physicians and other providers in situations rife with difficult ethical concerns. The needs of patients can conflict with the financial interests of providers. *Id.* at 331. In managed care settings, providers often accept some financial risk in the treatment of their patients. This risk may be substantial when treating terminally ill patients who often require expensive treatment. In addition, the economic incentives of managed care can be structured so as to inappropriately reward minimum treatment and the shortest possible hospital

stays. *Cf.*, Newborns' and Mothers' Health Protection Act of 1996, P.L. 104-204, 1996 HR 3666, 110 Stat. 2874, 2935 (Sept. 26, 1996) (requiring health plans offering childbirth benefits to provide minimum inpatient coverage for at least 49 hours following vaginal deliveries and 96 hours following cesarean sections). Health care providers feel these economic pressures. Porter Storey, M.D., medical director of the Texas Medical Center's hospice in Houston has stated "[t]he [financial] incentives in managed care make euthanasia the most cost-effective choice." R. Sorelle, "Fear of Pain," Hous. Chron., Oct. 21, 1996, at 1.

Providing constitutional protection for physician-assisted suicide would provide a new treatment "option" for patients. In order to satisfy the doctrine of informed consent, a physician could be legally obligated to disclose an "option" to physician-assisted suicide to terminally ill patients. *See* Barry R. Furrow, *et al.*, *Health Law* § 6-11(e), at 424 (1995). *See also* Patient Self-Determination Act, 42 U.S.C. §§ 1395cc(f)(1)(A)(i)-(ii), 1396a(w)(1)(A)(i)-(ii) (hospitals must inform patients of state law health care rights). Due to the financial incentives inherent in managed care, the physician could benefit financially from a patient's decision to commit suicide. This development may place a physician in a serious dilemma between the ethical constraint to "do no harm" and the ability to gain financially should the patient choose the now "legitimate" treatment option of physician-assisted suicide.[9] Of course, rather than trusting their providers, patients will then have to question the providers' motivations to discern the most appropriate course of treatment.

Recognizing a right to assisted suicide also raises a host

[9] The physician's hippocratic oath states "[I will] abstain from whatever is deleterious and mischievious. I will give no deadly medicine to anyone if asked, nor suggest any such counsel." AMA, *The Health Care Almanac* 120 (1995).

of difficult questions for health care providers which were dismissed by the lower courts as mere regulatory matters. Wash. Pet. App. A-102 to A-104; N.Y. Pet. App. 34a n.4. What if the physician morally objects to assisted suicide? Must hospitals which institutionally object to assisted suicide (*e.g.*, Catholic hospitals) be required to cooperate in the performance of such a procedure or allow physicians on staff who perform these acts? *Cf.* Directive 60 (App. B). How must payors cover assisted suicide costs? These are not merely hypothetical questions. *E.g.*, *Lee*, 891 F. Supp. 1429.

Recognizing a "right" to physician-assisted suicide will subvert the integrity of the medical profession. States not only have an important interest, but a compelling reason, to protect their citizens from abuses and to protect the integrity of the health care profession.

D. Preventing Abuse.

The state can and should prevent the involvement of third parties in so grave a matter as suicide. Even if suicide itself is not illegal, allowing others to take part in the process will increase the risk of abuse, and expose vulnerable patients to family and financial pressures from which they should be insulated.[10]

The state also has an interest, as it always has when enacting criminal legislation, in avoiding the adverse consequences anticipated from the actions it seeks to prohibit. *E.g.*, *People v. Kevorkian*, 210 Mich. App. 601, 534

[10] The Ninth Circuit acknowledges the risk of these pressures, but appears unconcerned:

> we are reluctant to say that, in a society in which the costs of protracted health care can be so exorbitant, it is improper for competent, terminally ill adults to take the economic welfare of their families and loved ones into consideration [in requesting assistance in committing suicide].

Wash. Pet. App. A-87.

N.W.2d 172, 175 (1995)(Dr. Kevorkian's "actions implicate the criminal law and his words and actions amount to an advertisement for criminal and unethical conduct"), *appeal denied*, 549 N.W.2d 566 (Mich. 1996), *cert. denied*, 65 U.S.L.W. 3287 (U.S. Oct. 15, 1996) (No. 96-135). Here, the state can legitimately point to the fear of abuse, undue influence and the improper killing of people in situations that are not truly voluntary. This has already happened in the Netherlands, where assisted suicide has been virtually legal for 15 years. Unfortunately, the attempt in the Netherlands to afford "compassion" to the dying has devolved into state-sanctioned non-voluntary euthanasia.

Between 1981 and 1991, the Dutch inexorably moved along a continuum from a heavily regulated regimen of physician-assisted suicide for the informed, competent adult to the non-voluntary euthanasia of infants. "Physician-Assisted Suicide and Euthanasia in the Netherlands," *Report to the Constitution Subcommittee of the House Committee on the Judiciary*, 104th Cong., 2d Sess. (1996) ("Constitution Subcommittee Report").

In 1991 the Dutch Attorney General issued the Remmelink Commission Report (*id.* at 12), finding that in 1990 there were:

> 2,300 cases of voluntary euthanasia;
>
> 400 cases of physician-assisted suicide; and
>
> *more than 1,000 cases of non-voluntary euthanasia.*

In order to justify these non-voluntary euthanasia cases, the Commission explained that

> [T]he ultimate justification for the intervention is in both cases the patient's unbearable suffering. So, medically speaking, there is little difference between these situations and euthanasia, because in both cases patients are involved who suffer terribly.

Constitution Subcommittee Report at 13, quoting Ministerie van justitie, Netherlands, *Outlines Report Commission Inquiry into Medical Practice with Regard to Euthanasia* 3 (1990). The Commission also found that 14 percent of the non-voluntary euthanasia cases were performed on patients who were fully competent and 11 percent of the patients were partially competent. *Id.*

The Commission also found that of the 8,100 cases of morphine overdose in 1990, in 36 percent of the cases the physician's single intent or partial intent was that the morphine kill the patient. *Id.* In over 50 percent of the cases, the physicians administered the morphine overdose without the patient's consent. *Id.* Twenty-seven percent of these non-consenting patients were fully competent. *Id.* The Commission also reported on 25,000 cases of withdrawal of life-sustaining treatment *without* the patient's consent. *Id.*

Our society has known from its earliest times that it was dangerous to allow any ambiguity in the rule against killing. The "rights" recognized by the Ninth Circuit and the Second Circuit are no innocuous grants of personal freedom. *Compassion in Dying* and *Quill* strike at the most fundamental ethical tenets of Western culture. Indeed, they are an invitation to murder. As Cardinal Bernardin states, "[t]here can be no such thing as a 'right to assisted suicide' because there can be no legal and moral order which tolerates the killing of innocent human life, even if the agent is self-administered. Creating a new 'right' to assisted suicide will endanger society and send a false signal that a less than 'perfect' life is not worth living." App. A at 2a.

CONCLUSION

The decisions of the United States Courts of Appeals for the Second and the Ninth Circuits should be reversed.

Respectfully submitted.

APPENDIX A

STATEMENT OF JOSEPH CARDINAL BERNARDIN

The Supreme Court
of the United States
Washington, D.C.

Dear Honorable Justices:

I am at the end of my earthly life. There is much that I have contemplated these last few months of my illness, but as one who is dying I have especially come to appreciate the gift of life. I know from my own experience that patients often face difficult and deeply personal decisions about their care. However, I also know that even a person who decides to forgo treatment does not necessarily choose death. Rather, he chooses life without the burden of disproportionate medical intervention.

In this case, the Court faces one of the most important issues of our times. Physician-assisted suicide is decidedly a public matter. It is not simply a decision made between patient and physician. Because life affects every person, it is of primary public concern.

I have often remarked that I admire the writings of the late Father John Courtney Murray, who argued that an issue was related to public policy if it affected the public order of society. And public order, in turn, encompassed three goods: public peace, the essential protection of human rights, and commonly accepted standards of moral behavior in a community.

Our legal and ethical tradition has held consistently that suicide, assisted suicide, and euthanasia are wrong because they involve a direct attack on innocent human life. And it

is a matter of public policy because it involves a violation of a fundamental human good.

There can be no such thing as a "right to assisted suicide" because there can be no legal and moral order which tolerates the killing of innocent human life, even if the agent of death is self-administered. Creating a new "right" to assisted suicide will endanger society and send a false signal that a less than "perfect" life is not worth living.

Physician-assisted suicide also directly affects the physician-patient relationship and, through that, the wider role of physicians in our society. As has been noted by others, it introduces a deep ambiguity into the very definition of medical care, if care comes to involve killing. Beyond the physician, a move to assisted suicide and, perhaps beyond that, to euthanasia creates social ambiguity about the law. In civilized society the law exists to protect life. When it begins to legitimate the taking of life as a policy, one has a right to ask what lies ahead for our life together as a society.

In order to protect patients from abuse, and to protect society from a dangerous erosion in its commitment to preserving human life, I urge the Court not to create any right to assisted suicide.

With cordial good wishes, I am

Sincerely yours,

/s/ Joseph Cardinal Bernardin

Archbishop of Chicago

Chicago, Illinois
November 7, 1996

APPENDIX B

The National Conference of Catholic Bishops has directly dealt with euthanasia and assisted suicide. Directive 60 states:

> Euthanasia is an action or omission that of itself or by intention causes death in order to alleviate suffering. Catholic health care institutions may never condone or participate in euthanasia or assisted suicide in any way. Dying patients who request euthanasia should receive loving care, psychological and spiritual support, and appropriate remedies for pain and other symptoms so that they can live with dignity until the time of natural death.

National Conference of Catholic Bishops, *Ethical and Religious Directives for Catholic Health Care Services* 29 (1995).

INTERESTS OF THE AMICI CURIAE 1

SUMMARY OF ARGUMENT 2

ARGUMENT 4

I. Our Nation Is Founded On The Principle That Fundamental Human Rights, Particularly The Right To Live, Are Unalienable; A Ruling Granting Constitutional Protection To An Interest In Obtaining Physician-Prescribed Drugs To Purposely Cause Death Would Abandon This Principle. 4

II. A Constitutional Rule Permitting Persons To Alienate Their Right To Live Because They Have, Or Are Regarded As Having, A Terminal Condition Lacks A Legitimate, Non-Invidious Basis. ... 10

A. *Considerations Under The Criminal Law: The Definition Of Homicide And The "Last Spark Of Life".* 12

B. *Considerations Under The Constitution: Fourteenth Amendment Exemptions And United States v. Rutherford.* 16

III. A Constitutionally-Mandated Policy Permitting The Selective Alienation Of The Right To Live Based On A Suicide Victim's Life Expectancy Threatens The Welfare And Safety Of Vulnerable Persons And Imperils Ordered Liberty. 17

A. *Unlike Any Other Constitutional Freedom, A "Right" To Alienate One's Right To Live Licenses The Intentional Destruction Of Persons' Lives.* .. 17

B. *A Constitutional Rule Establishing The Freedom To Renounce Society's Protection Of One's Right To Live Would Ratify The Most Extreme Form Of Social And Political Alienation.* 21

C. *A Constitutional Rule Limiting Assisted Suicide To Persons With Terminal Conditions Offers A False And Dangerous Compromise.* 22

INTERESTS OF THE AMICI CURIAE

The National Catholic Office for Persons with Disabilities (NCPD is a non-profit organization established in 1982 to promote the inclusion of ten million Catholics with disabilities and their families into the mainstream of our society and the Catholic Church. It fulfills its mission through offering its expertise and resources to a national network of disability offices as well as to the U.S. Catholic Conference and other national Church-related organizations. A critical aspect of this nation office's mission is to highlight the value of each life and to encourage the creation of environments which allow each individual to fulfill their potential. If a "right" to assisted suicide for the terminally ill is lodged in the Constitution, then the goals and programs NCPD is pursuing in the interest of persons with disabilities will be for nought. NCPD opposes the legal and social devaluation of persons with disabilities, many of whom have or are regarded as having terminal conditions. Such devaluation will surely result from a constitutional rule transforming their fundamental right to life from an unalienable right to a merely alienable interest based solely on life expectancy.

The Knights of Columbus is an international Catholic fraternal organization of 1.5 million members dedicated to advancing the ideals of charity, unity, fraternity, and patriotism through its activities around the world. The Knights of Columbus engages in a broad range of social action programs to protect the family, and it devotes a considerable portion of its resources and volunteer efforts to aiding persons with illnesses and disabilities, as well as the less fortunate. This brief was written with the support of funds provided by the Knights.

The parties have consented to the filing of this brief. Pursuant to the Rules of this Court, letters of consent from the parties have been filed with the Clerk of the Court.

SUMMARY OF ARGUMENT

This brief examines the consequences of mandating the selective alienation of the right to live by constitutionalizing an exemption to the homicide code based on the terminal condition of the victim, enabling physicians to assist in suicide by prescribing a lethal drug overdose. Your Amici argue that the decisions in *Compassion in Dying v. Washington*, 79 F.3d 790 (9th Cir. 1996), and *Quill v. Vacco*, 80 F.3d 716 (1996), involving Fourteenth Amendment challenges to Wash. Rev. Code Ann. § 9A.36.060 (West 1975) and N.Y. Penal Law §§ 120.30 & 125.15 (McKinney 1987), should be reversed.

The rulings below threaten the integrity of our Nation's social covenant, founded as it was on the belief that certain human rights are so fundamental in nature that they cannot be alienated. The Declaration of Independence announced to the world that the American colonists could no longer endure British encroachments on their fundamental and unalienable interests, including especially their right to life. So the doctrine of unalienable rights provided the basis for rebellion and launched a new experiment in American self-governance. Bound up as it is within our legal history and tradition, the governmental duty to respect the unalienable rights of the people serves to this day as a safeguard against tyranny.

The constitutional rule proposed by the courts below would radically transform the right to live from an unalienable right to a merely alienable interest for the most vulnerable persons in society — those having or regarded as having terminal conditions. The rule would permit members of this class to renounce the protections of the homicide code by consenting to another's criminal act of providing suicide assistance, and would force the states to treat the lives of all members of this class as less worthy of protection against homicide. The rule would discount the right to live for all members of this class, regardless of whether they seek to die or desire to live.

At the same time, the rule would endorse the purposeful causing of death, a "right" wholly unique in constitutional law because it encompasses an abuse of liberty. Every other protected freedom is closely related to the constitutional objectives of preserving existence and providing opportunities for social participation. By extending this "right" only to persons with terminal conditions, the courts below would further subject members of this class to social alienation and devaluation.

The lower courts misread the common and statutory law by deriving therefrom a line based on the victim's terminal condition to distinguish the supposed "right" to purposely cause death from the criminal wrong of assisted suicide. Their decisions conflict with the criminal law, which rejects criminal defenses based on the victim's life expectancy and consent. The courts impinged upon the states' exclusive authority to define crimes by mandating such defenses as a constitutional rule. Moreover, the rulings below conflict with this Court's decision in the case of *United States v. Rutherford*, 442 U.S. 544 (1979). *Rutherford* rejected the federal courts' authority to carve a terminal condition exception into otherwise uniform laws designed to protect all persons against dangerous drugs regardless of their life expectancy.

A rule that deems the suicides of persons with terminal conditions to be constitutionally permissible, while leaving the states free to continue their protection of all other persons, inserts into the Constitution an invidious double standard. This Court should reject such a rule and uphold the states' authority to protect the lives of all of its citizens, regardless of condition. The Constitution should not be construed as if it were a suicide pact.

ARGUMENT

I. Our Nation Is Founded On The Principle That Fundamental Human Rights, Particularly The Right To Live, Are Unalienable; A Ruling Granting Constitutional Protection To An Interest In Obtaining Physician-Prescribed Drugs To Purposely Cause Death Would Abandon This Principle.

The Ninth and Second Circuits recognized in *Compassion in Dying* and *Quill* a constitutional right to renounce the protections of the homicide code which deter persons from assisting in the suicides of others with terminal conditions. Properly understood, the alienation of the right to live involves the rejection of otherwise applicable protections against direct threats to one's life. As one commentator explains, "What is given up in the case in which the right to life is waived . . . is not life itself; rather it is the *protection* of life that that right bestows on its possessor." Terrence McConnell, *The Nature and Basis of Inalienable Rights*, 3 Law and Philosophy 25, 37 (1984). Consequently, the constitutional claim before this Court asserts in essence that at least some individuals should be empowered to forgo their right to be protected under the homicide code, thereby alienating their right to live.

If adopted by this Court, then a constitutional rule authorizing some individuals to alienate their right to live based on their life expectancy would undermine principles embraced in the Declaration of Independence. The Declaration put the case for the American rebellion against British rule. The American colonists charged England with "injuries" to and "usurpations" of "certain unalienable rights", including "among these . . . life". Because the King and Parliament assumed a form of government "destructive of these ends", the people had the right to "alter" or "abolish" the old and "institute [a] new government". *The Declaration of Independence* para. 2 (U.S. 1776). In sum, the unalienable rights doctrine provided the essential basis for the American Revolution.

The Declaration's principles have acquired a life of their own, extending their influence far beyond the document's four corners. There is universal agreement that it is,

> the greatest absurdity to suppose it in the power of one or any other number of men at the entering of society, to renounce their essential natural rights, or the means of preserving those rights when the great end of civil government . . . is for the support, protection and defence of those very rights [including] life . . . .

Samuel Adams, *The Rights of the Colonists*, *in* The Founders' Constitution 394, 395 (Philip B. Kurland & Ralph Lerner eds. 1987).

Twenty-nine states have either expressly incorporated the unalienable rights doctrine into their constitutions or adopted constitutional provisions comporting with the doctrine.[1] Furthermore,

> *the Declaration of Independence is . . . funda-*

---

[1]The constitutions of twenty three states refer expressly to the "unalienable" or "inalienable" right to life. *See* Ala. Const. Art. I, § 1 (1975); Ark. Const. Art. 2, § 2 (1987); Cal. Const. Art. 1, § 1 (1984); Colo. Const. Art. II, § 3 (1973); Fla. Const. Art. 1, § 2 (1990); Haw. Const. Art. I, § 2 (1993); Idaho Const. Art. I, § 1 (1993); Ill. Const. Art. I, § 1 (1993); Iowa Const. Art. 1, § 1 (1989); Kan. Const. Bill of Rights § 1 (1980); Ky. Const. Bill of Rights § 1 (1988); Me. Const. Art. I, § 1 (1985); Mass. Const. Pt. 1, Art. I, (1978); Mont. Const. Art. II, § 3 (1995); Neb. Const. Art. I, § 1 (1995); Nev. Const. Art. 1, § 1 (1995); N.J. Const. Art. 1, para. 1 (1971); N.M. Const. Art. II, § 4 (1992); N.C. Const. Art. I, § 1 (1995); N.D. Const. Art. I, § 1 (1981); Ohio Const. Art. I, § 1 (1994); Utah Const. Art. I, § 1 (1991); Vt. Const. Chap. I Art. 1 (1996). Three other state constitutions refer either to a right to life that is "indefeasible" (Pa. Const. Art. I, § 1 (1994), or one that cannot be "divest[ed]". Va. Const. Art. I, § 1 (1995) & W. Va. Const. Art. III, § 1 (1983). New Hampshire's constitution refers to the right to life as "natural", "essential" and "inherent". N.H. Const. Pt. 1, Art. 2 (1988). Two other state constitutions contain provisions that comport with the unalienable rights doctrine. La. Const. Art. 1, § 1 (1996) (prohibiting euthanasia) & Miss. Const. Art. 3, § 19 (1974) (prohibiting duelling).

> *mental to a proper understanding of the [federal] Constitution;* and . . . abundant support for this proposition can be found in the leading writings and debates of the Founding era. Indeed, it would hardly be an exaggeration to say that the most fundamental pronouncements made in connection with the framing and ratification of the Constitution are restatements of the principles articulated in the [Declaration] . . . .

Dan Himmelfarb, Note, *The Constitutional Relevance of the Second Sentence of the Declaration of Independence*, 100 Yale L. J. 169, 170-71 (1990) (emphasis added); *see also Monangahela Navigation Co. v. United States*, 148 U.S. 312, 324 (1893) (noting that the Bill of Rights was adopted to protect "those rights of persons and property which by the Declaration of Independence were affirmed to be unalienable rights"); *Gulf, Colorado & Santa Fe Railway v. Ellis*, 165 U.S. 150, 159-60 (1897); *McGowan v. Maryland*, 366 U.S. 420, 563 (1961) (Douglas, J., dissenting) ("[T]he body of the Constitution as well as the Bill of Rights enshrined those principles [of the Declaration].").

The Fourteenth Amendment was drafted with the Declaration very much in mind. *See* Hermine H. Meyer, *The History and Meaning of the Fourteenth Amendment* 75 (1977) (referring to remarks during congressional debates on the Amendment by a sponsor, Representative Thaddeus Stevens, who observed that "I can hardly believe that any person can be found who will not admit that every one of these provisions is just. They are all asserted, in some form or other, in our DECLARATION or organic law.") (capitalization in original).

Finally, the unalienable rights doctrine serves as an international measure of humane and just governments. *See* Preamble to the Universal Declaration of Human Rights, *reprinted in* Paul Sieghart, *The Lawful Rights of Mankind: An Introduction to the International Legal Code of Human Rights* 172 (1985) (asserting that "recognition of the inherent dignity and

of the equal and inalienable rights of the all members of the human family is the foundation of freedom, justice and peace in the world"); *id.* at 42 (observing that while international human rights law recognizes that some rights can be acquired or renounced through personal transactions, "none of this applies to 'human' rights. . . . [T]he code [of international human rights laws] simply treats us as coming into the world with them. . . . nor can we sell them, mortgage them, or forfeit them").

Assisted suicide and voluntary active euthanasia "can both be viewed as efforts to alienate the inalienable, to give away what cannot properly cannot be given away." Joel Feinberg, *Voluntary Euthanasia and the Inalienable Right to Life*, 7 Philosophy & Public Affairs 93, 93 (1978). In accord with this principle, the states have prohibited the aiding and abetting of suicide, along with other forms of consensual homicide and self-harm. *See, e.g., Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 n.15 (1972) (referring to laws against such consensual activities as "bare fist" prize fights and duelling); *Martin v. Commonwealth*, 184 Va. 1009, 37 S.E.2d 43, 47 (1946) (consent is no excuse for homicide because the right to life is unalienable); *State v. Moore*, 25 Iowa 128, 135-36 (1868) (recognizing that the "right to life and to personal safety is not only sacred in the estimation of the common law, but it is inalienable").

Accordingly, this Court should not abandon a core doctrine upon which this Nation was founded, but instead should affirm laws that, by uniformly forbidding suicide assistance, preserve the unalienability of the right to live and thereby respect the equal dignity of all persons. Such laws reflect our founding principles, and they are just as vital to our society today as they were 200 years ago.

As one commentator explained,

> [the Declaration] linked the unalienable rights of individuals with the people's right to rebel. In the background there is the basic idea that a

> social contract of some sort had been made in which the people transferred certain rights to government in return for something. . . . What rights the people transferred is less important than the rights they did *not* transfer because they were not transferable, that is to say, unalienable. Unalienable rights were thought to be held under *any* form of government so that when a government merely showed signs of wishing to invade these rights, it could be regarded as intending to reduce the people under absolute despotism.

Morton White, *The Philosophy of the American Revolution* 239-40 (1978).

In view of the nexus between unalienable rights and the limits on despotic governance, a constitutional policy endorsing the selective alienation of the right to live raises profound questions. As one commentator has observed, "[W]e must recall that [John Locke] puts the inalienability of the right to life to good purposes when he uses it to explain why a government can never legitimately acquire an absolute rule to dispose of the lives of its citizens." Lance K. Stell, *Dueling and the Right to Life*, 90 Ethics 7, 16 (1979). Thus, the right to live is a fundamental human interest "that no man *should* transfer to any person or any government." White, *American Revolution* at 220.

What damage will be inflicted on the inviolability of life by a constitutional rule rejecting its unalienability? Will governments be free to acquire absolute dominion over persons whose fundamental rights are deemed personally transferable and thus disposable? Will society become even more coursened in its disregard for the sanctity of human life? These questions cannot be ignored because constitutional rules cannot be imposed in a vacuum.

Moreover, a rule supposedly grounded in notions of autonomy and individual freedom will unjustifiably alter the

legal status of those who have no desire to kill themselves, but who nevertheless will be swept into the category of persons deemed to have an alienable right to live. The right to live and all rights flowing therefrom will be rendered alienable not because an individual so chooses, but on account of the individual's condition. If some persons with terminal conditions are permitted to alienate their right to live because they are terminally ill, then all persons with terminal conditions will necessarily be free to make the same choice. As a consequence, by virtue of constitutional mandate and irrespective of individual desires, the right to live for all members of this class will be reduced to an inferior, alienable status. Because every member of the affected class will no longer possess an unalienable right to live, each will be left with a weaker claim, or no claim at all, against tyrannical notions of "normalcy" and "quality of life" policy-making.[2]

Finally, a constitutional rule that permits some — but not all — persons to alienate their right to live cannot be squared with the Declaration's finding and the Fourteenth Amendment's proviso that *all* persons are created equal and as a result are equally endowed with unalienable rights. Once it is posited that some persons have only an alienable right to live, then an inequality of human dignity profoundly hostile to our Nation's founding principles not only will threaten the fundamental interests of the vulnerable, but also

---

[2]One commentator has remarked on

> just how dangerous enforced physiological normality is when the definition of its parameters falls into the hands of politicians and bureaucrats. . . . [T]he war against "abnormality" implies a dangerous kind of politics, which begins with a fear of difference and eventuates in a tyranny of the normal. That tyranny, moreover, is sustained by creating in those outside the norm shame and self-hatred — particularly if they happen to suffer from that vast majority of "deformities" which we still cannot prevent or cure.

Leslie A. Fiedler, *The Tyranny of the Normal*, Hastings Center Report, Apr. 1984, at 40, 41, 42.

will imperil the integrity of our constitutional order.

II. A Constitutional Rule Permitting Persons To Alienate Their Right To Live Because They Have, Or Are Regarded As Having, A Terminal Condition Lacks A Legitimate, Non-Invidious Basis.

The Ninth and Second Circuits ruled that at least in some cases suicide assistance is constitutionally protected, and that a line must be drawn between the criminal wrong and the constitutional right based on the victim's life expectancy. The "courts may not", however, "draw lines which appear arbitrary without . . . offering a justification." *Planned Parenthood of Southeastern Pennsylvania v. Casey*, 505 U.S. 833, 870 (1992). The line chosen by the lower courts not only *is* arbitrary, but also is based on the invidious assumption that the lives of persons with terminal conditions are less worthy or deserving of protection.[3]

The Ninth and Second Circuits claimed that the common law and state statutes governing treatment refusals provided the basis for recognizing in the assisted suicide context a diminishing state interest in "preserving" the lives of persons with terminal conditions. The courts misread the law, however, and confused an interest in "preserving" life with the states' separate interest in "protecting" life.

The "terminal condition" line cannot be adduced from an accurate reading of the common law of informed consent, which extends the right to refuse treatment to all persons regardless of life expectancy. 1 Alan Meisel, *The Right to Die* 490-91 (2d ed. 1995) (referring to case law extending the right to refuse treatment to persons who are not terminally

[3]*See City of Cleburne v. Cleburne Living Center, Inc.*, 473 U.S. 432, 440 (1985) (observing that certain classifications "are so seldom relevant to the achievement of any legitimate state interest that laws grounded in such considerations are deemed to reflect prejudice and apathy — a view that those in the burdened class are not as worthy or deserving as others").

ill). Advance directive statutes often limit their scope to cases involving incompetent persons who are terminally ill, but they must be read together with the broader common law rule. Rather than limiting treatment refusals, these statutes establish a legal "safe harbor" for advance directive decision making. *See* 2 Meisel, *The Right to Die* at 85 (noting that most advance directive statutes expressly decline to supersede the common law or to set out the sole means by which the right to refuse treatment may be exercised; also noting that a majority of courts has therefore concluded that such legislation does not preempt or otherwise narrow the common law).

Moreover, whether a person has a terminal condition is relevant to the treatment refusal context only for reasons quite irrelevant to the assisted suicide context. When weighing the benefits and burdens of accepting medical treatment, a patient must necessarily consider the treatment's capacity to extend life. If a patient is terminally ill, so that the treatment will not extend his or her life indefinitely, then the state's interest in preserving life will not be implicated. *See In re Grant*, 109 Wash. 2d 545, 556, 747 P.2d 445, 451 (1987) (observing that state interest in "preserving life" by requiring "lifesaving" treatment "weakens considerably . . . if treatment will merely postpone death for a person with a terminal and incurable condition"). The state's interest in preserving life is measured according to the effectiveness of treatment in question, and does not depend on any value assessment of the lives at stake. *See also Fosmire v. Nicoleau*, 551 N.Y.S. 2d 876, 881, 551 N.E.2d 77, 82-83 (1990) (holding that patients' terminal condition is relevant only "to determine whether [this is] the circumstance[] in which the patients intended to decline the medical care" and not "because the State considered their lives worthless").

In the assisted suicide context, however, the issue is not whether the state has an interest in *preserving* life by providing treatment, but whether the state may seek to *protect* all lives against direct killing. Persons with terminal conditions are still alive, whether or not their lives can be indefinitely extended by life supports. Thus, even when it is impossible

to effectuate the state's interest in preserving their lives because life-sustaining measures are unavailing, the separate issue remains as to whether the state's interest in protecting life against killing should apply.

Consequently, the lower courts engaged in pretextual reasoning by referring to the common law of consent and the statutory law governing advance directives as bases for drawing a line at terminal condition. *See Compassion in Dying*, 79 F.3d at 817-20 and *Quill*, 80 F.3d at 727-28; *but see* 79 F.3d at 819 (quoting preamble to Washington's advance directive statute expressing the legislature's finding that without qualification "adult persons" have the right to control medical decisions, and importantly, that this right is not limited to but "*includ[es]*" those decisions involving "instances of terminal condition", thereby extending the right to refuse treatment both to persons who are and who are not terminally ill) (emphasis added) & *Fosmire*, 551 N.Y.S.2d at 881, 551 N.E.2d at 82 (finding that common law right to refuse treatment in New York extends to all competent adults regardless of condition).

As the next two sections will demonstrate, neither the criminal law nor the constitutional rulings of this Court provide an alternate basis for mandating an exemption from the homicide code based on the victim's life expectancy. To the contrary, our legal history and tradition, as well as this Court, have rejected the victim's condition as constitutionally irrelevant.

A. *Considerations Under The Criminal Law: The Definition Of Homicide And The "Last Spark Of Life".*

Criminal jurisprudence provides an instructive approach to resolving whether a non-invidious foundation exists for using a suicide victim's terminal condition as a constitutional dividing line. Many of the arguments favoring a limited right to assisted suicide for persons with terminal conditions resemble the defenses that might be raised in a trial for homicide. Thus, the definitional elements of causation, intent,

excuse, and justification provide a useful framework for addressing — and ultimately rejecting — any claim that a suicide victim's life expectancy is at all constitutionally relevant.

For example, the Ninth Circuit raised an argument sounding in causation by contending that a decision to hasten death should not be classified as suicide when the victim's "death is already in process". *Compassion in Dying*, 79 F.3d at 824. *But see People v. Moan*, 4 P. 545 (Cal. 1884) ("If a patient is lying in the last stages of consumption, with a tenure upon life that cannot possibly continue for a day, it is homicide to administer a poison to him by which his life is ended almost immediately.")

In addition, an amicus brief filed with the Ninth Circuit asserted that in cases involving suicidal persons with terminal conditions, the participants necessarily lacked the requisite criminal intent. Instead, the suicide assistant "seeks to end the [victim's] dying process", and the victim "does not have the primary goal of ending his life", because "[g]iven the terminal nature of his condition, the [victim] wants to end his suffering by shortening the dying process." Amicus Curiae Brief of the Americans for Death With Dignity and Euthanasia Research & Guidance Organization at 4 n.6, *Compassion in Dying v. Washington*, 79 F.3d 790 (9th Cir. 1996) (No. 94-35534). *But see Gilbert v. State*, 487 So. 2d 1185, 1191 (Fla. App. 1986) (rejecting defense to homicide based on claim that defendant sought only to end the victim's suffering because it would "sanction open season" for the killing of vulnerable persons).

Moreover, assisted suicide is defensible in The Netherlands on the excuse-related ground that a physician charged with a crime should not be convicted if he or she participated in a suicide under emotional duress, and was compelled to end another's misery when confronted with the victim's condition. Herbert Hendin, *Seduced by Death* 94, 103, 109 (1997). *But see State v. Fuller*, 203 Neb. 233, 243, 278 N.W.2d 756, 762 (1979) ("Duress or compulsion is no excuse to the charge of homicide.").

Finally, the respondents in *Glucksberg* raise a justification-related defense by asserting that any conflict between the state's interest in protecting life and an individual's interest in death must tilt in favor of death when the life at stake is of a "limited *quantity*". Opposition to Petition for Writ of Certiorari at 12, *Washington v. Glucksberg* (No. 96-110). ***But see*** *State v. O'Brien*, 46 N.W. 752, 753 (Iowa) ("The fact that [the homicide victim] was afflicted with a disease which might have proved fatal would not justify the wrongful acts of defendant . . . .").

The Ninth and Second Circuits would impose these theories on the states as constitutional mandates, contrary to this Court's long line of precedents leaving to the states the authority to define crimes, particularly in reference to the "doctrines of *actus reus, mens rea,* insanity, mistake, justification and duress". *Montana v. Egelhoff*, 64 U.S.L.W. 4500, 4505 (U.S. June 13, 1996) (No. 95-566). Moreover, such mandates would conflict with our legal history and tradition, which unanimously reject any defenses to homicide based on the victim's health status.

One court described the rule of law as follows:

> But though a human body must be alive in order that it may be the subject of homicide, yet the quantity of vitality which it retains at the moment the fatal blow is given, and the length of time life would otherwise have continued, are immaterial considerations. If any life at all is left in the human body, even the least spark, the extinguishment of it is as much homicide as the killing of the most vital being.

State v. Francis, 149 S.E. 348, 364 (S.C. 1929). *Accord State v. Mally*, 366 P.2d 868, 873-74 (Mont. 1961); *People v. Stamp*, 82 Cal. Rptr. 598, 603 (Cal. App.), *cert. denied*, 400 U.S. 819 (1970); *see* Daniel Avila, *Is the Constitution a Suicide Pact?*, 35 Duquesne Law Review 201, 227-230 (1996) (discussing these and other cases).

In light of this rule and its broad acceptance in our law, any attempted justification for abandoning to their suicidal impulses only persons with terminal conditions, and exposing only them to the undeterred efforts of others to assist in their deaths, bolsters the inference that an invidious disregard for the lives of the vulnerable is at play. If "[a]n accused cannot speculate as to how long his victim may live with an incurable malady when he inflicts a shot or a wound that hastens the death or the action of the fatal disease" (*State v. O'Brien*, 46 N.W. 752, 753 (Iowa 1890)), then neither should the Constitution.

If this Court were to adopt the contrary position and hold as a matter of constitutional law that the victim's proximity to death is relevant to the culpability of an individual charged with assisting suicide, then the definitional ramifications would be far-reaching. Assisted suicide cannot be distinguished from other forms of homicide. If the victim's condition is deemed relevant in the assisted suicide context, then it must also be relevant in any case of homicide. As a result, virtually any defendant accused of a homicidal act would have the constitutional right to raise the victim's debilitated condition as a defense.

By definition then, crimes against life would be limited only to those life-threatening acts which imperil the healthy and long-living. Those charged with mortally attacking an individual deemed to be in an accelerated "process of dying" could avoid conviction. Because "process of dying" is an inherently expansive concept — all persons are going to die sometime and many are going to die sooner than expected for a variety of reasons — an assortment of defense claims based on the victim's condition would emerge in a host of cases.[4]

---

[4]Such a rule would also open the door to constitutional defenses based on the victim's consent, thereby overriding state policies rejecting such defenses in cases involving homicide and other crimes. *See, e.g., State v. Fuller*, 203 Neb. at 241, 278 N.W.2d at 761 (holding that "murder is no less murder because the homicide is committed at the desire of the victim"); *Jones v. State*,

B. *Considerations Under The Constitution: Fourteenth Amendment Exemptions And United States v. Rutherford.*

This Court's unanimous decision in *United States v. Rutherford*, 442 U.S. 544 (1979), rejected a similar exemption based on a person's terminal condition. The Court ruled that a uniform federal ban against the interstate transfer of unsafe or unproven drugs reasonably applied to an experimental and potentially harmful substance (laetrile) sought by persons with terminal cancer as a last ditch means of extending their lives. *Id.* at 559. The Court found that "[f]or the terminally ill, as anyone else, a drug is unsafe if its potential for inflicting death or physical injury is not offset by the possibility of therapeutic benefit." *Id.* at 556. Moreover, "it is often impossible to identify a patient as terminally ill except in retrospect." *Id.* at 556. Finally, the Court was unwilling to endorse the proposition "that . . . safety and efficacy standards . . . have no relevance for terminal patients" because this would "deny the [government's] authority over all drugs, however toxic or ineffectual, for such individuals." *Id.* at 557-58. Thus, the Court refused to read an implied exception into an otherwise generally applicable statute since "federal courts do not sit as councils of revision, empowered to rewrite legislation in accord with their own conceptions of prudent public policy." *Id.* at 555.

Rutherford should pose a significant obstacle to any constitutional claim for assisted suicide based on a victim's proximity to death. If Congress may restrict the use of dangerous drugs by persons with terminal conditions seeking to prolong their lives, then surely the states may deter physicians from supplying lethal dosages to members of the same class who want to end their lives. The parallels between the two cases simply cannot be ignored.

---

640 So. 2d 1084 (Fla. 1994) (rejecting claim of a right to such a defense under the state constitution in a case involving charges brought under statutory rape law, even though the victim "did not want the 'protections' advanced by the state").

Thus, in light of *Rutherford*, laws discouraging drug-induced deaths among the terminally ill, as for anyone else, reasonably furthers the states' general goal of protecting life. The constitutional balance between state interests and competing private interests should not be shifted according to the victim's life expectancy. In sum, the terminally ill are similarly situated with everyone else in relation to the states' interest in protecting life. For the Court to hold otherwise, it would have to abandon *Rutherford* and entirely reverse its course with respect to constitutional exemptions generally.

III. A Constitutionally-Mandated Policy Permitting The Selective Alienation Of The Right To Live Based On A Suicide Victim's Life Expectancy Threatens The Welfare And Safety Of Vulnerable Persons And Imperils Ordered Liberty.

To deflect concerns about assisted suicide raised by persons with disabilities and members of other vulnerable populations, the Ninth and Second Circuits responded with assurances that suicide is a constitutional benefit. *Compassion in Dying*, 79 F.3d at 825-26; *Quill*, 80 F.3d at 730. Based on the considerations addressed in the remainder of this brief, your Amici disagree strongly.

A. *Unlike Any Other Constitutional Freedom, A "Right" To Alienate One's Right To Live Licenses The Intentional Destruction Of Persons' Lives.*

In no other case has the Supreme Court been asked to license an individual to assist in the intentional destruction of life at the request of the victim. All other claims of personal freedom granted constitutional protection have related in some meaningful way to the individual's enjoyment of life and continued participation in society. Thus, the Supreme Court has "reject[ed] at the outset the notion that *any* grievous loss visited upon a person by the State is sufficient to invoke" a constitutional remedy. *Meachum v. Fano*, 427 U.S.

215, 224 (1976). Whether an asserted interest to act free from government interference rises to the level of a constitutional right will depend on its "nature" — that is, its relation to the "'whole domain of social and economic fact'" (*Morrissey v. Brewer*, 408 U.S. 471, 481 (1972) (citation omitted)), as well as on its connection to an individual's ability to "'engage in any of the common occupations of life'". *Board of Regents of State Colleges v. Roth*, 408 U.S. 564, 572 (1972) (citation omitted).

Conversely, a "right" or "liberty" to obtain suicide assistance would lack any relation to the capacity to exist, move freely, and form personal attachments in society; it would be entirely antithetical to such exercises of liberty. *See Morrissey*, 408 U.S. at 482 (holding parole to be cognizable Fourteenth Amendment liberty because it "enables [offenders] to do a wide range of things open to persons who have never been convicted of any crime" such as "to return to society", "be gainfully employed", be "free to be with family and friends and to form the other enduring attachments to normal life"). Assisted suicide accomplishes the purposeful destruction of life and, as a result, forever cuts the victim off from all ties to family, friends, and society. It thus fails to achieve any "benefit" of existence or social inclusion ascertainable under the Constitution.

The Ninth and Second Circuits attempted to graft assisted suicide to the outer branches of the right to accept or refuse medical treatment. *Compassion in Dying*, 79 F.3d at 822-23 (discussing acceptance of morphine drips and refusal of tube-feeding); *Quill*, 80 F.3d at 729 (same). They argued that if the Constitution recognizes a right to make medical decisions, then it should recognize the right to assisted suicide. The courts thus contended that the personal and state interests at stake in treatment refusal and assisted suicide cases are indistinguishable, particularly with respect to their relationship to death.

On the contrary, the right to accept or refuse treatment differs significantly from an interest in suicide assistance

precisely because treatment decisions can enable persons to "engage in the common occupations of life". Moreover, the constitutional strength of an interest in making treatment decisions diminishes as the risk of death increases, while the proposed interest in assisted suicide would increase in strength *because* its objective is death.

This Court has acknowledged the existence of a "right to decide independently, with the advice of [a] physician, to acquire and to use *needed* medication [i.e., essential to health]." *Whalen v. Roe*, 429 U.S. 589, 603 (1977) (emphasis added). Treatment may be necessary to prolong life, to alleviate pain, or to overcome any other maladies which might hinder an individual's capacity to work or to engage in social activities. These benefits undoubtedly comport with the Constitution's life-enhancing objectives.

In addition, this Court has recognized an interest "in avoiding the unwanted administration of . . . drugs". *Washington v. Harper*, 494 U.S. 210, 221-22 (1990). This interest also relates to constitutional objectives by directly implicating the freedom to move about in society unimpeded by the intrusive restraint of a technological apparatus or the forced ingestion of pills or medication. *See Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261, 269, 278, 279 (1990) (referring to an interest in avoiding unwanted bodily intrusions).

To the extent that a decision to accept or refuse treatment implicates hastened death, this Court has permitted the states to limit the decision maker's discretion. Thus, the states may "prohibit entirely the use of particular drugs" deemed dangerous to the patient's health and safety (*Whalen*, 429 U.S. at 603), and may consider such "dramatic consequences" as death when weighing the policy implications of refusing treatment. *Cruzan*, 497 U.S. at 279. Far from endorsing in these cases any principle that would support the creation of a right to purposely cause death, the Court has permitted the states to circumscribe the right to accept or refuse treatment in direct proportion to the likelihood that

death will result.

Fundamental rights are protected because they enable individuals to live freely and interact socially, even if at times their exercise involves personal risk.[5] The rights to speak, vote, travel, refuse treatment, and so on, could be equated to assisted suicide only by irrebuttably imputing to the citizen who chooses to exercise them in risky situations an inherent desire to be harmed — and by falsely imputing to the Constitution's framers the intent to recognize death as simply another noble objective.

Instead, a constitutionally protected decision to purposely seek death would be unique among all other protected choices. It would embrace a lethal purpose, while the exercise of other rights merely tolerate certain residual and unavoidable risks. Its objective is death rather than life, and its exercise results in irreversible alienation rather than social participation. While the "recognition of any right creates the possibility of abuse" (*Compassion in Dying*, 79 F.3d at 831), a constitutional policy favoring assisted suicide eliminates any contingency by endorsing what is itself a form of abuse. Indeed, the abuses of other freedoms — involving threats against life and self-expulsion from society — would frame the essence of this new right. The dangers its constitutional enshrinement would pose for persons with terminal conditions, other vulnerable populations, and society itself would be of a far greater magnitude than the risks created by the exercise of any other right.

---

[5]The Supreme Court has noted that "[s]ome cost will be paid by anyone who approves or implements a constitutional decision where it is unpopular, or who refuses to work to undermine the decision or to force its reversal. The price may be criticism or ostracism, or it may be violence." *Casey*, 505 U.S. at 867.

B. *A Constitutional Rule Establishing The Freedom To Renounce Society's Protection Of One's Right To Live Would Ratify The Most Extreme Form Of Social And Political Alienation.*

While the assisted suicide claim before this Court ostensibly concerns individual rights, the Court must also consider the social consequences. In particular, constitutionalizing the right to seek to harm one's self with the assistance of others says just as much about the constitutional status of persons granted this right as it says about the right itself. Thus, the question is broader than "does the life-destroying right to assisted suicide share equal billing with other freedoms that are instead life-enhancing?" The inquiry must also focus on why the right to live of some persons should be slashed in value from an unalienable to an alienable constitutional interest.

The Ninth and Second Circuits tied the strength of one's right to live to one's proximity to death, thereby provoking a profound fear among many of those persons in society whose disabilities leave them with an already precarious hold on life. Every person with a disabling condition is already more intensely aware than most of life's contingent nature, even if his or her present condition is not certifiably terminal. Many persons with disabilities were disabled by accidents and thus have peered through the gates of death before medicine made survival possible. Many persons with disabilities rely on high tech interventions to survive, to breathe or to eat, and they are constantly reminded by the nature of their ongoing care that without proper treatment or care they would soon die. Many persons with disabilities depend on the assistance of family, friends, and professional caregivers and must orchestrate ever-shifting schedules simply to meet the minimum requirements of daily living. Some, like the actor Christopher Reeves, cannot function without substantial medical and personal assistance. Most are far less capable than a wealthy movie star of meeting the financial burdens of their care, however, and few enjoy the same public esteem.

Most members of this class are unquestionably more vulnerable to discrimination and social alienation.

Many persons with disabilities exist in a state of "virtual terminality" because the frailty of their physical condition and the specter of death are so intimately woven together. In turn, a constitutional decision asserting that their right to live is constitutionally disposable makes them "virtual aliens" because their most fundamental right — the protection of life — would hang only by the single thread of their own resolve to keep it. They will be left far less secure against both internal and external pressures to give away this right to the unjust advantage of others.

In the end, a condition-based rule in favor of assisted suicide would pour into the Constitution a poisonous concoction of warm-hearted, misguided pity and cold-hearted utilitarianism. The question of "whether we as a society are willing to excuse the terminally ill for deciding that their lives are no longer worth living" would be mixed inextricably with the question of whether assisted suicide should serve as a means "for housecleaning, cost-cutting and burden shifting — a way to get rid of those whose lives we deem worthless." *Compassion in Dying*, 79 F.3d at 856-57 (Beezer, J., dissenting). Who stands to benefit most from a constitutional policy by which the right to live of vulnerable persons is reduced to an alienable interest? Is it the person with a terminal condition bent on suicide regardless of what the Constitution holds, or is it a cost-conscious society seeking more ways to ration its generosity?

C. *A Constitutional Rule Limiting Assisted Suicide To Persons With Terminal Conditions Offers A False And Dangerous Compromise.*

Proponents of assisted suicide strive to appear moderate and attempt to strike a balance between what they perceive to be extremes on both ends of the spectrum. They claim that, while an across-the-board ban is too restrictive for their

tastes, unrestricted suicide is not their aim. They would agree to the construction of what is, in effect, a brick wall across the slippery slope — supposedly to accommodate both the "hard cases" and society's general abhorrence of intentional killing. The Ninth and Second Circuits extended this call for compromise in the constitutional order by overriding the states' uniform bans against assisted suicide, yet nevertheless recommending the adoption of various legislative safeguards. *Compassion in Dying*, 79 F.3d at 832-33; *Quill*, 80 F.3d at 730.

Such appeals for compromise seek to divide permissible from impermissible suicides according to the victim's proximity to death and quality of life. They assume that the desirability of death can and should be balanced against the desirability of life by referring to a person's physical and mental condition. No matter how desperate for death suicidal individuals may be and no matter how little they may value their own lives, their requests to die will be approved only according to a social, not individual, estimation of the comparative values of their life and death. Through such a calculus, the law and the community would sanction death not because the victim wants it, but because the victim who wants it also happens to have a condition that the law and community identify as unworthy of protection.

Moreover, such a policy would still permit the states to punish suicide assistance when the victim is not terminally ill. The retention of a uniform ban evinces the belief that suicide is a bad thing both for the victim and society, and that the law's protection is a benefit — yet *only* if the victim is healthy and expected to live indefinitely. Because the resulting disparity in the level of protection would create an apartheid based on one's health status, the lower courts' assertion that suicide is a constitutional benefit should be rejected on its face.

Why is it beneficial for persons with terminal conditions but no one else to obtain lethal medications to kill themselves? The question calls for a more compelling response

because one can easily infer from the circumstances an invidious motive.[6] A policy which permits lethal assistance for some, but not for the majority, implicates the view that those provided the lethal assistance are less worthy or deserving of protection, and that their lives have less value under the law. Such a policy would fundamentally alter our country's commitment to providing equal protection to vulnerable persons.

As one commentator has written:

> [Our society's] liberal commitment to limited popular government requires a commitment to the equal worth of each person and to limits on the power of government that are contained in the teaching of inalienable rights, especially an inalienable right to life. This teaching forms the essential horizon of liberal theory and it is only within this horizon that liberal regimes and the policies they endorse can take shape. . . . Given the liberal commitment to equality as the precondition of liberty, the "new consensus" [proposing that certain suicides be sanctioned based on the assumption that some lives are less valuable than others] fails completely in its policy recommendations. The policies these writers wish to see adopted logically entail the creation

---

[6]A Florida statute making consensual sexual activity with "chaste" minors a crime but not with "unchaste" minors created a similar invidious inference, according to an opinion found in *B.B. v. State*, 659 So. 2d 256 (Fla. 1995). Florida Supreme Court Justice Kogan asserted that such a law

> seems to regard unchaste minors as being somehow less deserving of the state's protection than those who are [chaste]. . . . Any statute that purports to grant special status to a favored group . . . over all others, to my mind at least, must be regarded as inherently questionable. On its face this statute suggests discrimination. . . . Laws should protect everyone, not merely a favored group.

Id. at 260-61 (Kogan, J., concurring).

> of a public standard for determining when some lives are in fact not worth living anymore. However, this is a judgment that is fundamentally inconsistent with the premises of the very regime that is supposed to adopt this policy.

Richard Sherlock, *Suicide and Public Policy: A Critique of the "New Consensus"*, 4 Journal of Bioethics 58, 62 (1982-83).

For this reason, the law should not abandon whole categories of the most vulnerable individuals under the guise of protecting individual rights. Instead, as concluded by the British Medical Association,

> the deliberate taking of a human life should remain a crime. This rejection of a change in the law to permit doctors to intervene to end a person's life is not just a subordination of individual well-being to social policy. It is instead, an affirmation of the supreme value of the individual, no matter how worthless and hopeless that individual may feel.

British Medical Association, *Euthanasia: Report of the Working Party to Review the British Medical Association's Guidance on Euthanasia* 69 (1988).

This Court has assured the Nation that "while the Constitution protects against invasions of individual rights, it is not a suicide pact." *Haig v. Agee*, 453 U.S. 280, 309 (1981) (quoting *Kennedy v. Mendoza-Martinez*, 372 U.S. 144, 160 (1963)). Consistent with this assurance, this Court should reject the Ninth and Second Circuit rulings.

CONCLUSION

For the foregoing reasons, the judgments of the Ninth and Second Circuits should be reversed.

ing *Kennedy v. Mendoza-Martinez*, 372 U.S. 144, 160 (1963)). Consistent with this assurance, this Court should reject the Ninth and Second Circuit rulings.

CONCLUSION

For the foregoing reasons, the judgments of the Ninth and Second Circuits should be reversed.

Respectfully submitted,

WHEN DEATH IS SOUGHT[:] ASSISTED SUICIDE AND EHTHANASIA IN THE MEDICAL CONTEXT, New York State Task Force on Life and the Law (May 1994)	1, 27-28

INTEREST OF THE AMICI

Amici curiae are New York and Washington state legislators who strongly support the public policy expressed in their state laws prohibiting assisted suicide and who vigorously oppose efforts to legalize assisted suicide in the legislatures or the courts. *Amici* firmly believe that there is no social, economic or medical need to permit physician-assisted suicide under any circumstances, and that to allow suicide assistance, even for mentally competent, terminally ill adults, would lead to grave abuses and exploitation of the most vulnerable members of our community, as it already has in the Netherlands. *Amici* fully concur with the warning of the New York State Task Force on Life and the Law that creation of a right to suicide "would carry us into new terrain."

> American society has never sanctioned suicide or mercy killing. We believe that the practices would be profoundly dangerous for large segments of the population, especially in light of the widespread failure of American medicine to treat pain adequately or to diagnose and treat depression in many cases. The risks would extend to all individuals who are ill. They would be most severe for those whose autonomy and well-being are already compromised by poverty, lack of access to good medical care, or membership in a stigmatized social group. The risks of legalizing assisted suicide and euthanasia for these individuals, in a health care system and society that cannot effectively protect against the impact of inadequate resources and ingrained social disadvantage, are likely to be extraordinary.
>
> WHEN DEATH IS SOUGHT[:] ASSISTED SUICIDE AND EUTHANASIA IN THE MEDICAL CONTEXT vii-viii (May 1994).

This Court should heed their warning and not recognize a right to suicide or suicide assistance.*

---

* This Brief is filed with the consent of the parties. Letters of consent have been lodged with the Clerk of the Court.

SUMMARY OF ARGUMENT

In a pair of unprecedented opinions, the Second Circuit and the Ninth Circuit have held that New York and Washington are powerless to prevent mentally competent, terminally ill patients from intentionally ending their lives with the assistance of physicians who are willing to prescribe lethal drugs for them. *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996); *Compassion in Dying v. State of Washington*, 79 F.3d 790 (9th Cir. 1996). In recognizing a right to commit suicide with the assistance of third parties, the *en banc* majority in *Compassion in Dying* swept aside a uniform tradition of legal and societal opposition to suicide and assisted suicide that dates back to the earliest days of the common law. Contrary to the Ninth Circuit's opinion, nothing in *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), required or allowed the court of appeals to ignore this history in evaluating plaintiffs' wholly novel constitutional claim.

Compounding this error, both the Ninth Circuit and the Second Circuit seriously misread this Court's decision in *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990). Both courts attempted to derive an interest in deliberately inducing death, which the law always has treated as a crime, from the interest in refusing unwanted medical treatment, which the law traditionally has protected out of respect for the inviolability of the human person. Disregarding critical distinctions between *intending* a result and *knowing* that a result is likely, and between *causing* death artificially and *allowing* death to occur naturally, the lower courts reasoned that because refusing life-sustaining treatment and intentionally ingesting a fatal dose of drugs both result in a person's death, the right to do the former necessarily entails the right to do the latter. *Quill*, 80 F.3d at 725-31; *Compassion in Dying*, 79 F.3d at 820-24. "But constitutional law does not work that way." *Cruzan*, 497 U.S. at 286.

At the outset, *amici* note that this Court has never held that "a competent person has a constitutionally protected liberty interest" in refusing "life-sustaining medical treatment." *Cruzan*, 497 U.S. at 278, 279. In *Cruzan*, the Court *assumed*, for purposes of deciding the case, that the Constitution "would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Id.* at 279. Nevertheless, the Court cautioned that "the dramatic consequences involved in the refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible," *id.*, thereby implying that the State's "interest in the protection and preservation of human life," *id.* at 280, might be sufficient to outweigh the patient's interest in refusing unwanted treatment. That implication was made explicit when the Court said, "We do not think that a State is required to remain neutral in the face of an informed and voluntary decision by a physically able adult to starve to death." *Id.*

Even if it is assumed that a competent person has a constitutionally protected liberty interest in refusing life-sustaining treatment, that interest has its origins in the law of battery and the doctrine of informed consent (*see Cruzan*, 497 U.S. at 269-77) which both define its nature and limit its scope. The interest restricts "governmental power to mandate medical treatment or bar its rejection," *Casey*, 505 U.S. at 857, but does not confer a right to insist upon a particular form of treatment, much less one that will cause, and is intended to cause, the person's death. *See United States v. Rutherford*, 442 U.S. 544 (1979) (FDA had authority to proscribe laetrile, even for terminally ill cancer patients). It is the source and the nature of the interest that determine its ultimate reach. Whether the constitutionally protected interest in refusing unwanted medical treatment extends to life-sustaining treatment, a question this Court need not answer here, that interest clearly has reached its furthest

limit when all treatment—life-sustaining or otherwise—has been withheld or withdrawn.

Beyond their multiple errors in analysis, however, the decisions in both *Compassion in Dying* and *Quill* are, in principle, illimitable. If the right to refuse unwanted medical treatment is the doctrinal source of a right to assistance in committing suicide, it is apparent that the latter right cannot be confined to mentally competent, terminally ill patients, as the Ninth Circuit admitted. *See* 79 F.3d at 816, 831-32 & n.120. The lower court decisions, if affirmed, would plunge the country into a generation of constitutional conflict over the nature and extent of the "right," a conflict which would cause irreparable damage to the Nation, to the American People and to this Court. *Amici* ask the Court not to take this precipitous step.

ARGUMENT

I. THE LIBERTY LANGUAGE OF THE DUE PROCESS CLAUSE OF THE FOURTEENTH AMENDMENT PROTECTS ONLY THAT CONDUCT WHICH IS IMPLICIT IN THE CONCEPT OF ORDERED LIBERTY AND WHICH, HISTORICALLY AND TRADITIONALLY, IS CONSIDERED BEYOND THE POWER OF THE STATE TO PROHIBIT.

The Ninth Circuit held that there is "a constitutionally-protected liberty interest in determining the time and manner of one's own death," or, "in common parlance, . . . a right to die." *Compassion in Dying*, 79 F.3d at 793, 799. The court held further that, in the case of mentally competent, terminally ill patients who wish to end their lives by taking a fatal dose of drugs, this liberty interest outweighs the State's "legitimate and countervailing interests, [including] those that relate to the preservation of human life." *Id.* at 79[illegible]-94. Conceding that there is no "liberty interest in receiving 'aid in killing oneself,' " as such, the court couched the issue in wider terms, whether there is "a right to die," to determine "the

time and manner of one's death" or to "hasten[] one's death," because "it is the end and not the means that defines the liberty interest." *Id.* at 801-02.

The circuit court's phrasing of the issue disregards this Court's admonition that " '[s]ubstantive due process' analysis must begin with a careful description of the asserted right, for '[t]he doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field.' " *Reno v. Flores*, 507 U.S. 292, 302 (1993) (quoting Justice Stevens' opinion for a unanimous Court in *Collins v. City of Harker Heights, Texas*, 503 U.S. 115, 125 (1992)). In *Cruzan*, this Court declined to answer the broad question as to whether there is a "right to die," focusing instead on the narrower question of whether "a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment." 497 U.S. at 277-78.

Precision in defining the issue is also required here. The issue is not whether there is "a right to die," or "a liberty interest in determining the time and manner of one's death" or in "hastening one's death," *Compassion in Dying*, 79 F.3d at 801-02, but "whether the constitution encompasses a right to commit suicide and, if so, whether it includes a right to assistance." *People v. Kevorkian*, 527 N.W.2d 714, 730 n.47 (Mich. 1994) (rejecting right to suicide), *cert. denied sub nom. Kevorkian v. Michigan*, 115 S.Ct. 1795 (1995), *Hobbins v. Kelley*, 115 S.Ct. 1795 (1995).[1]

This Court has enunciated various standards for evaluating both substantive and procedural due process claims. Due process protects those rights which are "so rooted in the traditions and conscience of our people as to be ranked as fundamental." *Snyder v. Massachusetts*, 291 U.S. 97,

[1] ". . . the common definition of 'suicide' is the intentional killing of oneself by any means, and the temporal proximity of death is irrelevant to the threshold inquiry into whether the constitution encompasses such a right." *Id.* at 725 n.27.

105 (1934). Alternatively, due process secures those rights which are "implicit in the concept of ordered liberty" such that "neither liberty nor justice would exist if they were sacrificed." *Palko v. Connecticut*, 302 U.S. 319, 325, 326 (1937). In another frequently cited formulation, Justice Powell described fundamental liberties as those liberties which are "deeply rooted in this Nation's history and tradition." *Moore v. City of East Cleveland, Ohio*, 431 U.S. 494, 503 (1977).

Regardless of the precise wording, each of these tests requires an examination of our history and traditions to assess whether the right (or interest) being asserted has enjoyed legal and societal protection. *Compare Roe v. Wade*, 410 U.S. 113, 140-41 (1973) (recognizing right to abortion where, in the Court's view, there was no unambiguous tradition of legal and social opposition to abortion in English and American law), *with Bowers v. Hardwick*, 478 U.S. 186, 192-94 & nn. 5-7 (1986) (refusing to recognize fundamental right of adult homosexuals to engage in consensual acts of sodomy where both English and American law clearly prohibited such conduct for centuries). The Court's reliance on historical tradition in *Bowers* coincided with a less expansive view of its authority "to discover new fundamental rights imbedded in the Due Process Clause." 478 U.S. at 194.

As this Brief demonstrates, there has never been a period in English or American history when suicide (or suicide assistance) was regarded as a "fundamental right," a "protected liberty interest" or even a socially tolerated practice. Perhaps anticipating that its historical survey, 79 F.3d at 806-10, would fail to convince this Court that a right to (or an interest in) suicide (or suicide assistance) can be derived from our history and traditions, the Ninth Circuit, citing *Planned Parenthood v. Casey*, concluded that these factors are no longer controlling or even persuasive in evaluating substantive due process claims. 79 F.3d at 804-06. But that conclusion is unwarranted.

First, in reaffirming *Roe*, the Court in *Casey* stressed the importance of the rule of *stare decisis* and the integrity of the Supreme Court as an institution in the constitutional order. 505 U.S. at 845-46, 854-69. Neither consideration lends any support to the establishment of a heretofore unrecognized constitutional right. Moreover, in reaffirming *Roe*, the Court sought to *end* the "national controversy" over whether abortion should remain a protected right, *id.* at 867, not to *begin* an entirely new debate on the nature and extent of a previously unheard of right.[2]

Second, in *Casey*, the Court referred to abortion as "a unique act," and said that "the liberty of the woman is at stake in a sense unique to the human condition and so unique to the law." 505 U.S. at 852. If abortion is a "unique act" and "so unique to the law," then *Casey* cannot be cited in support of a liberty interest in committing suicide, which has no affinity with this Court's decisions "afford[ing] constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing and education," *id.* at 851, which are "deeply rooted in this Nation's history and tradition." *Moore*, 431 U.S. at 503.

Third, in *Casey*, the Court stated that "the essential holding of *Roe* forbids a State from interfering with a woman's choice to undergo an abortion procedure if continuing her pregnancy would constitute a threat to her health." 505 U.S. at 880. But protection of that core interest differs radically from an asserted interest in self-destruction where not health, but death, is the desideratum.

Fourth, in *Roe*, the Court was able to recognize a right to abortion only after holding that the unborn child is not a person within the meaning of the Fourteenth Amendment. 410 U.S. at 156-59. Nothing in *Roe*, how-

---

[2] The Court's reluctance to state in *Casey* whether *Roe* had been correctly decided as an original matter, 505 U.S. at 869, 871, severely limits the usefulness of looking to either *Roe* or *Casey* as an unexplored source of unenumerated rights.

ever, or in any other decision of this Court remotely suggests that a seriously ill patient, regardless of condition and prognosis, is not a constitutional "person" whose life the State has the right to protect. *See Cruzan*, 497 U.S. at 282 n.10 (recognizing State's interest).

Finally, an examination of *Casey's* analysis of how substantive due process claims are to be reviewed reveals that history and tradition remain critical. "[A]djudication of substantive due process claims may call upon the Court in interpreting the Constitution to exercise that same capacity which by tradition courts always have exercised: reasoned judgment." 505 U.S. at 849. But exercise of that judgment does not allow the Justices "to invalidate state policy choices with which [they] disagree." *Id.* The Court's reliance in *Casey* on Justice Harlan's dissent in *Poe v. Ullman*, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting from dismissal on jurisdictional grounds), *Casey* 505 U.S. at 849-50, makes it clear that in evaluating original claims of constitutional right, recourse to our history and traditions is still necessary. Thus, this Court must decide whether "the asserted right to commit suicide arises from a rational evolution of tradition, or whether recognition of such a right would be a radical departure from historical precepts." *People v. Kevorkian*, 527 N.W.2d at 730.

II. THE COMMON LAW OF ENGLAND, AS RECEIVED BY THE AMERICAN COLONIES, PROHIBITED SUICIDE AND ATTEMPTED SUICIDE.

An understanding of the development of the common law crime of suicide in England is critical to any analysis of the status of suicide in American colonial law.[a] More

[a] Much of what follows in this and the following argument draws upon the research set forth in Thomas J. Marzen, Mary K. O'Dowd, Daniel Crone and Thomas J. Balch, *Suicide: A Constitutional Right?*, 24 DUQUESNE L. REV. 1 (1986) (hereinafter, *Marzen*). Although the Ninth Circuit repeatedly cited the *Marzen* article in its historical survey (79 F.3d at 807-10 & nn. 23-24, 27, 33-37, 39-40, 42-44), it misstated many of its findings and ignored its conclusion that "the weight of authority in the United States, from colonial days through at least the 1970's[,] has demonstrated that the predominant attitude of society and the law has been one of opposition to suicide," *Marzen*, 24 DUQUESNE L. REV. at 100. *See Compassion in Dying*, 85 F.3d 1440, 1445 & n.14 (9th Cir. 1996) (O'Scannlain, J., dissenting from order rejecting request for rehearing *en banc* by the full court).

than 700 years ago, the thirtenth-century commentator Bracton wrote, "Just as a man may commit felony by slaying another so he may do so by slaying himself, the felony is said to be done to himself [*felo de se*]." 2 H. de Bracton (c. 1250), ON THE LAWS AND CUSTOMS OF ENGLAND (S. Thorne trans. 1968) 423 (BRACTON). If the suicide was committed to avoid punishment for a crime he had committed, all of his property—real and personal—was forfeited to the King. *Id.* at 366, 423-24. But if "a man slays himself in weariness of life or because he is unwilling to endure further bodily pain . . . he may have a successor, but his movable goods are confiscated. He does not lose his inheritance, only his movable goods." *Id.* at 424. His heirs could inherit his real property (because he had not committed suicide to avoid punishment for committing a crime) but his personal property was confiscated by the Crown. "The principle that suicide of a sane person, for whatever reason, was a punishable felony was thus introduced into English common law." *Marzen*, 24 DUQUESNE L. REV. at 59. But no penalty applied to the suicide of one who was not sane. "[A] madman bereft of reason[,]" "the deranged, the delirious and the mentally retarded" or "one labouring under a high fever" do not commit felony *de se* "nor do such persons forfeit their inheritance or their chattels, since they are without sense and reason and can no more commit an *injuria* or a felony than a brute animal." BRACTON at 424.

Bracton's contemporaries agreed that suicide was a crime at common law. The commentator known as Brit-

ton wrote that "where a man is a felon of himself, his chattels shall be adjudged ours [the King's], as the chattels of a felon, but his inheritance shall descend entire to his heirs." I Britton, Bk. I, ch. VIII (F. Nicols trans. 1865) (reprinted 1983 W.W. Gaunt) 39. Fleta, writing near the end of the thirteenth century, provided a fuller treatment of the subject:

> Just as a man may commit felony in slaying another, so he may in slaying himself; for if one who has lately slain a man or has committed some like act whence felonies arise, conscious of his crime and in fear of judgement, slay himself in any fashion, his goods accrue to the Crown nor may he have any other heir than the lord of the fee. But should anyone slay himself in weariness of life or because he is unable to support some bodily pain, he shall have his son for his heir, but his movable goods will be confiscate. Those, too, who cast themselves down from a height or drown themselves likewise have heirs, provided they have committed no felony. Similarly, madmen and those who are frenzied, childish, deranged or are suffering from high fever, although they kill themselves, do not commit felony or forfeit their inheritance or chattels, because they lack sense and reason. Their wives, moreover, should receive their dowers.

Fleta (c. 1290), Bk. I, ch. XXXIV, *"Of Suicides,"* Publications of the Selden Society, Vol. 72, p. 89 (1955).

In 1628, Sir Edward Coke published his classic INSTITUTES. In his THIRD INSTITUTE, Coke classified suicide as a form of murder. *"Felo de se* is a man or woman, which being *compos mentis*, of sound memory, and of the age of discretion, killeth himself, which being lawfully found by the oath of twelve men, all the goods and chattels of the party so offending are forfeited" E. Coke, THIRD INSTSTUTE OF THE LAWS OF ENGLAND 54 (1644 ed.). Like his predecessors, Coke noted an exception for persons who had killed themselves while insane. "If a man lose his memory by the rage of sickness or infirmity,

or otherwise, and kill himself while he is not *compos mentis,* he is not *felo de se*: for as he cannot commit murder upon another, so in that case he cannot commit murder upon himself." *Id.* According to Coke, a *felo de se* forfeited only his goods and chattels *Id.* at 55.

In 1716, the first edition of William Hawkins' A TREATISE OF THE PLEAS OF THE CROWN was published. Noting that "our Laws have always had . . . an Abhorrence of this Crime," Hawkins' analysis of "Homicide against a Man's own Life" largely followed Coke. Wm. Hawkins, 1 A TREATISE OF THE PLEAS OF THE CROWN (1716) 67-68. Hawkins rejected the prevailing "Notion" that anyone who kills himself must be mentally incompetent, *id.* at 67, and condemned the killing of another person with his consent or at his request, as well as suicide pacts. *Id.* at 68.

In 1736, Sir Matthew Hale's work, HISTORY OF THE PLEAS OF THE CROWN, was published. Like Hawkins, Hale reflected Coke's views on the criminality of suicide at common law. M. Hale, 1 HISTORY OF THE PLEAS OF THE CROWN, Ch. XXXI, *"Concerning homicide and first of self-killing or* felo de se," (1736) at 411-12. In accord with the earlier commentators, Hale stated, "If he lose his memory by sickness, infirmity, or accident, and kills himself he is not *felo de se,* neither can he be said to commit murder upon himself or any other." *Id.* at 412. But Hale doubted whether every suicide could be treated as an insane act. *Id.*

In 1803, Sir Edward East published his PLEAS OF THE CROWN. East described anyone "who wilfully . . . causes his own death" as a *"felo de se."* E. East, 1 PLEAS OF THE CROWN (1803), ch. V, § 5, at 219 (1972 reprint). Calling suicide "an heinous offence," East said that "he who voluntarily kills himself is with respect to the public as criminal as one who kills another. It is equally an offence against the fundamental law of society, which is protection." *Id.*

Sir William Blackstone summarized the law of *felo de se* in his classic eighteenth century commentaries. Characterizing suicide as "[s]elf-murder," Blackstone reiterated the common law's condemnation of suicide as "among the highest crimes, making it a peculiar species of felony, a felony committed on one's self." 4 Blackstone, COMMENTARIES ON THE LAWS OF ENGLAND 189 (1769). Like Hawkins and Hale, Blackstone criticized the tendency of coroner's juries to find "that the very act of suicide is an evidence of insanity; as if every man who acts contrary to reason, had no reason at all: for the same argument would prove every other criminal *non compos,* as well as the self-murderer." *Id.* Blackstone noted that the punishment for suicide at common law was forfeiture of all of the suicide's personal property and ignominious burial in the public way. *Id.* at 190. These punishments were threatened in the hope that a potential suicide's "care for either his own reputation, or the welfare of his family, would be some motive to restrain him from so desperate and wicked an act." *Id.* Nevertheless, Blackstone recommended that the severity of the law be tempered by the power of the sovereign "to execute mercy in judgment." *Id.*

The condemnation of suicide at common law was not limited to the commentators; it was also expressed by the courts. In a case decided more than 400 years ago, an English court described the "quality of the offence" committed by the suicide as "a degree of murder." *Hales v. Petit,* 1 Plowd. 253, 261, 75 Eng. Rep. 387, 399-400 (Queen's Bench 1561-1562). English courts treated both assisted suicide and suicide pacts as forms of homicide.[4]

[4] *See Vaux's Case,* 4 Co. Rep. 44a, 76 Eng. Rep. 992 (1591); *Rex v. Dyson,* Russ. & Ry. 523, 168 Eng. Rep. 930 (1823); *Regina v. Alison,* 8 Car. & P. 418, 173 Eng. Rep. 557 (1838); *Regina v. Jessop,* 16 Cox Cr. Cas. 204 (1887); *Regina v. Stormonth,* 61 J.P. 729 (1897); *Rex v. Abbott,* 67 J.P. 151 (1903). *See also Regina v. Gaylor,* 1 Dears. & B. 288, 169 Eng. Rep. 1011 (1857).

And at common law, *attempted* suicide was a misdemeanor, punishable by fine and imprisonment.[5]

The sparse records available indicate that this was also the law in colonial America. At least nine of the original thirteen colonies prohibited, and in some cases punished, suicide and attempted suicide,[6] though the common law

[5] *See Regina v. Moore,* 3 Car. & K. 319, 175 Eng. Rep. 571 (1852); *Regina v. Doody,* 6 Cox. Crim. Cas. 463 (1854); *Regina v. Burgess,* 9 Cox Crim. Cas. 247, 169 Eng. Rep. 1387 (1862); *Rex v. Mann,* 2 K.B. 107, 83 L.J.K.B. 648 (1914). In its survey of English law, the Ninth Circuit minimized the clear condemnation of suicide (by the mentally competent) enunciated by Bracton and Coke, 79 F.3d at 808-09, relegated Blackstone to an obscure footnote, *id.* at 809 n.38, ignored the other great commentators who unequivocally condemned suicide as criminal and overlooked at least a dozen English cases expressing the law's (*and* society's) disapproval of suicide. Although, in the case of *completed* suicides, juries may have been reluctant to return a verdict that would result in a property forfeiture that would punish only innocent survivors, the guilty verdicts returned against persons who *attempted* suicide, *assisted* suicide or *survived* suicide pacts strongly suggest that English juries experienced no comparable difficulty in applying the law where no forfeiture was at stake.

[6] *Connecticut:* 2 Z. Swift, A SYSTEM OF LAWS OF THE STATE OF CONNECTICUT 304 (n.p. 1796) (reprinted 1972) (noting early instances of ignominious burials); Booth, Woodruff, Mather, Baldwin & Turrill, *Preface* to CONN. GEN. STAT. at vi (1875) (noting State's adoption of common law of England).

Georgia: Life Ass'n of America v. Waller, 57 Ga. 533, 536 (1876) (suicide "a species of crime or wickedness—something wrong; a kind of self-murder" at common law).

Maryland: Pope v. State, 396 A.2d 1054, 1072-74 (Md. 1978) (adoption of common law); Note, *Criminal Liability of Participants in Suicide:* State v. Williams, 5 MD. L. REV. 324, 325-26 (1941) (reporting unappealed trial court decision treating suicide as a common law crime).

Massachusetts: THE GENERAL LAWS AND LIBERTIES OF MASSACHUSETTS COLONY (1672), *reprinted in* THE COLONIAL LAWS OF MASSACHUSETTS 137 (W. Whitmore ed. 1887) (statute mandating ignominious burial for suicide).

North Carolina: State v. Willis, 121 S.E.2d 854 (N.C. 1961) (suicide a criminal act at common law, attempted suicide punishable

penalties generally were abolished after the Revolution.[7] The penalties were abolished, not because society no longer regarded suicide as a wrong (much less as a right), but because of an awareness that punishment could not reach the suicide and a moral sense that it was unfair to punish the suicide's innocent survivors. *See Cruzan*, 497 U.S. at 294 (Scalia, J., concurring).

---

as a misdemeanor). *See also* N.C. Laws, ch. XXXI, § VI (1715), *reprinted in* 1 THE FIRST LAWS OF THE STATE OF NORTH CAROLINA 18 (John D. Cushing ed. 1984) (adopting common law).

Pennsylvania: Connecticut Mut. Life Ins. Co. v. Groom, 86 Pa. 92, 97 (1878) (describing suicide as "the crime of self-murder"); *Commonwealth v. Wright*, 11 Pa. D. 144 (Ct. Quarter Sess., Phil. County 1902) (criticizing practice of indicting persons "for the common law offence of attempting to commit suicide"); *Elwood v. New England Mut. Life Ins. Co.*, 158 A. 257, 259 (Pa. 1931) (classifying attempted suicide as "a crime infamous at common law," and a successful suicide as "a species of felony").

Rhode Island: THE EARLIEST ACTS AND LAWS OF THE COLONY OF RHODE ISLAND AND PROVIDENCE PLANTATIONS, 1647-1719, at 19, 59 (John D. Cushing ed. 1977) (adopting common law punishments for suicide).

South Carolina: S.C. Acts, No. 253, § VI (Apr. 9, 1706), *reprinted in* 1 THE EARLIEST PRINTED LAWS OF SOUTH CAROLINA, 1692-1734, at 192 (John D. Cushing ed. 1978), (recognizing criminality of suicide at common law).

Virginia: A. Scott, CRIMINAL LAW IN COLONIAL VIRGINIA 108 n.198, 198-99 nn.15-16 (1930) (noting instances of ignominious burial and forfeiture of property).

[7] *See, e.g.*, DEL. CONST. art. 1, § 15 (1792); MD. CONST., Declaration of Rights § 24 (1776); N.H. CONST. pt. 2, art. 89 (adopted 1789); N.J. CONST. of 1776, art. 17; N.C. Laws, ch. XXXI (1787), *reprinted in* 2 THE FIRST LAWS OF THE STATE OF NORTH CAROLINA 626 (John D. Cushing ed. 1984); an Act to reform the penal Laws, § 53 (1798), *reprinted in* 2 THE FIRST LAWS OF THE STATE OF RHODE ISLAND 604 (John D. Cushing ed. 1983); Act of Mar. 14, 1848 (Criminal Code), tit. II, ch. XI, §§ 23, 25, 1847-48 Va. Laws 124. Contrary to the understanding of the Ninth Circuit, 79 F.3d at 809, the abolition of common law penalties did *not* mean that suicide had been decriminalized. *See Potts v. Barrett Div., Allied Chem. & Dye Corp.*, 138 A.2d 574, 580 (N.J. Super. 1958); *State v. Willis*, 121 S.E.2d 854 (N.C. 1961); *Wackwitz v. Roy*, 418 S.E.2d 861, 864 (Va. 1992).

III. ALTHOUGH THE PENALTIES FOR SUICIDE AND ATTEMPTED SUICIDE ULTIMATELY FELL INTO DISFAVOR IN AMERICAN LAW, THE STATES HAVE RETAINED A STRONG AND COMPELLING INTEREST IN THE PRESERVATION OF HUMAN LIFE AND IN THE PREVENTION OF SUICIDE.

The common law penalties for suicide were abandoned after the Revolutionary War, and attempted suicide was seldom prohibited[8] and more rarely punised.[9] Nevertheless, suicide was regarded as "*malum in se*" and was often referred to as a "crime," a "wrongful

---

[8] At one time or another, eight States prohibited attempted suicide: *Minnesota*: MINN. PENAL CODE, §§ 143, 147 (1885), *codified as* MINN. GEN. STAT. §§ 6428, 6432 (1894), *recodified as* MINN. REV. LAWS, § 4870, *repealed by* an Act of Apr. 20, 1911, ch. 293, § 1, 1911 Minn. Laws 409, 409; *Nevada*: Crimes & Punishments Act of 1911, § 115, *codified as* NEV. REV. LAWS § 6380 (1912), *repealed by* an Act of Mar. 25, 1913, ch. 238, § 1, 1913 NEV. STAT. 362, 362; Act of Mar. 4, 1957, ch. 35, § 1, 1956-57 NEV. STAT. 59, 59-60, *repealed by* an Act of Mar. 31, 1961, ch. 256, § 1, 1961 Nev. Stat. 416, 416; *New Jersey*: Act of May 9, 1957, ch. 34, § 1, 1 N.J. Laws 63, 67 (1957), *codified as* N.J. REV. STAT. § 2A:170-25.6 (Supp. 1967), *repealed by* an Act of Act of Feb. 16, 1972, ch. 450, § 3, 1971 N.J. Laws 1934; *New York*: Act of July 26, 1881, ch. 676, §§ 174, 178, 1881 N.Y. Laws (Vol. 3 Penal Code) at 42-43, *repealed by* an Act of May 5, 1919, ch. 414, § 1, 1919 N.Y. Laws 1193, 1193; *North Dakota*: G. Hand, REV. CODES OF THE TERRITORY OF DAKOTA, PENAL CODE §§ 230, 236 (1877), *repealed by* an Act of Mar. 4, 1967, ch. 108, § 1, 1967 N.D. Sess. Laws 215, 300; *Oklahoma*: Okla. Terr. Stat. 2076 (1890), *repealed by* an Act of Jan. 30, 1976, ch. 6, § 2, 1976 Okla. Sess. Laws 7; *South Dakota*: G. Hand, REV. CODES OF THE TERRITORY OF DAKOTA, PENAL CODE §§ 230, 236 (1877), *recodified as* S.D. CODE, § 13.1903 (1939), *repealed by* an Act of Feb. 17, 1968, ch. 31, § 1, § 13.1901, 1968 S.D. Sess. Laws 47, 47; *Washington*: CRIM. CODE, ch. 249, § 134, 1909 Wash. Laws 11th Sess. 890, 929, codified at REM. & BAL. CODE § 2386 (1910), *repealed by* WASH. CRIM. CODE, 1975, ch. 260, § 9A.92.010(213)-(217) Wash. Laws 817, 866, *codified as* REV. WASH. CODE § 9A.92.010(213)-(217) (1977).

[9] Three courts held that attempted suicide could be charged as a common law crime. *See State v. Carney*, 55 A. 44 (N.J. 1903); *State v. Lafayette*, 188 A. 918 (N.J. Common Pleas 1937); *State v. Willis*, 121 S.E.2d 854 (N.C. 1961).

act," a "grave public wrong," or an act of "moral turpitude," even though it was no longer punishable.[10] Indeed, in a case decided 120 years ago, this Court characterized suicide as "self-murder," and referred to the suicide of a sane person as "an act of criminal self-destruction." *Bigelow v. Berkshire Life Ins. Co.*, 93 U.S. 284, 286 (1876).

---

[10] *See, e.g., McMahan v. State*, 53 So. 89, 90-91 (Ala. 1910); *Pennsylvania Mut. Life Ins. Co. v. Cobbs*, 123 So. 94, 97 (Ala. App. 1929); *Life Ass'n of America v. Waller*, 57 Ga. 533, 536 (1876); *Grand Lodge of Illinois, Indep. Order of Mut. Aid v. Wieting*, 48 N.E. 59, 61-62 (Ill. 1897); *Dickerson v. Northwestern Mut. Life Ins. Co.*, 65 N.E. 694, 696 (Ill. 1902); *Wallace v. State*, 116 N.E.2d 100, 101 (Ind. 1953); *Brown v. Metropolitan Life Ins. Co.*, 7 N.W.2d 21, 24 (Iowa 1943); *Manhattan Life. Ins. Co. v. Beard*, 66 S.W. 35, 37 (Ky. 1902); *Dugan v. Commonwealth*, 333 S.W.2d 755, 756 (Ky. 1960); *Commonwealth v. Mink*, 123 Mass. 422, 426, 428-29 (1877); *Bohaker v. Travelers Ins. Co.*, 102 N.W. 342, 344 (Mass. 1913); *Hale v. Life Indem. & Inv. Co.*, 63 N.W. 1108, 1108 (Minn. 1895); *Shipman v. Protected Home Circle*, 67 N.E. 83, 85 (N.Y. 1903); *Benard v. Protected Home Circle*, 146 N.Y.S. 232, 235 (App. Div. 1914); *State v. Willis*, 121 S.E.2d 854, 855-57 (N.C. 1961); *Wyckoff v. Mut. Life Ins. Co. of N.Y.*, 147 P.2d 227, 229 (Or. 1944); *Elwood v. New England Mut. Life Ins. Co.*, 158 A. 257, 258-59 (Pa. 1931); *State v. Levelle*, 13 S.E. 319, 321 (S.C. 1891), *overruled on other grounds, State v. Torrence*, 406 S.E.2d 315 (S.C. 1991); *Phadenhauer v. Germania Life Ins. Co.*, 54 Tenn. (7 Heisk.) 567, 576 (1872); *State ex rel. Swann v. Pack*, 527 S.W.2d 99, 113 (Tenn. 1975), *cert. denied*, 424 U.S. 954 (1975); *Plunkett v. Supreme Conclave, Improved Order of Heptasophs*, 55 S.E. 9, 10-11 (Va. 1906); *Patterson v. Natural Premium Mut. Life Ins. Co.*, 75 N.W. 980, 983 (Wis. 1898).

In its highly selective use of historical materials, the Ninth Circuit ignored twenty-two decisions from sixteen American jurisdictions (most of which were cited in *Marzen*) condemning suicide and, instead, focused on one, isolated New Jersey Supreme Court decision from 1901 which, in *dicta*, appeared to excuse suicide, at least in some instances. *See Compassion in Dying*, 79 F.3d at 809-10 (quoting *Campbell v. Supreme Conclave Improved Order Heptasophs*, 49 A. 550, 553 (N.J.L. 1901)). The court failed to note that later New Jersey opinions expressly rejected *Campbell's* approbation of suicide. *See State v. Carney*, 55 A. 44 (N.J. 1903); *Potts v. Barrett Div., Allied Chem. & Dye Corp.*, 138 A.2d 574, 580 (N.J. Super. 1958).

Regardless of the status of suicide itself, most States prohibited *assisted* suicide. By the time that the Fourteenth Amendment was approved in 1868, at least twenty-one of the then thirty-seven States, including eighteen of the thirty ratifying States, banned assisted suicide, either as a statutory[11] or common law offense.[12] Whatever may have been the common law ra-

---

[11] *Arkansas:* Act of Feb. 16, 1838, *printed as* ARK. REV. STAT. ch. XLIV, div. III, art. II, § 4, at 240 (1838); *Florida:* Act of Aug. 6, 1868, ch. 1637 (No. 13), subchap. 3, § 9, 1868 Fla. Laws 61, 64; *Kansas:* KAN. TERR. STAT. ch. 48, § 8 (1855); *Minnesota:* MINN. TERR. REV. STAT. ch. 100, § 9, at 493 (1851); *Mississippi:* Act of Feb. 15, 1839, ch. 66, tit. 3, § 7, 1839 Miss. Laws 102, 112, *codified as* MISS. CODE ch. 64, art. 12, tit. 3, § 7, at 958 (Hutchinson 1849); *Missouri:* Act of Mar. 20, 1835, art. II, *codified as* MO. REV. STAT. CRIMES & PUNISHMENTS, art. II, § 8, at 168 (1835); *New York:* 2 N.Y. REV. STAT. pt. IV, ch. I, tit. I, art. 1, § 7 at 661 (1829); *Oregon:* OR. GEN. LAWS 1845-1864 (Deady 1866), CODE OF CRIM. PROC. § 508 at 528; *South Carolina:* 1 THE EARLIEST PRINTED LAWS OF SOUTH CAROLINA 1692-1734, at 190 (John D. Cushing ed. 1978) (statute condemning suicide as a felony and, by implication, *assisted* suicide); *Wisconsin:* REVISED STAT. OF THE STATE OF WIS. ch. 133, § 9 (Albany, N.Y. 1849), *codified as* REV. STAT. OF WIS. ch. 164, § 9 (1858).

[12] *Alabama:* Alabama adopted the common law of crimes, including the law of homicide. ALA. DIGEST, tit. 17, ch. 1, § 45, at 214 (H. Toulmin ed. 1823); PENAL CODE, No. 138, ch. 3, § 2, 1840-41 ALA. ACTS 122 (*codified as* Supplement to AIKEN'S DIGEST PENAL CODE, ch. 3, § 2, at 210 (A. Meek ed. 1836-41)). For the modern statutory codification of common law crimes, *see* ALA. CODE § 13A-6-3 (1994) and *Commentary*. Since "[e]very murder at common law is murder under our statutes," *McMahan v. State*, 53 So. 89, 90 (Ala. 1910), suicide was a felony even though no punishment could be attached. *Id.* at 90-91 ("intentional self-destruction" is "felo de se"). Accordingly, *assisted* suicide would have been criminal, also. *See also Crook v. State*, 160 So.2d 884, 893 (Ala. 1963): "Suicide is murder at Common Law. . . . An agreement compassing it is a criminal conspiracy. If one of the conspirators dies . . . the survivor—if he contributed to the suicide whether present or not—can legitimately be tried for murder."

Connecticut: Connecticut also adopted the common law of crimes. *See* Booth, Woodruff, Mather, Baldwin & Turrill, *Preface to* CONN. GEN. STAT. at vi (1875). Persuading, provoking or counseling

tionale for prohibiting suicide, the States have retained a strong interest in protecting the lives of their citizens. That interest is currently manifested in several ways.

---

another to commit suicide was treated as murder. 2 Z. Swift, A DIGEST OF THE LAWS OF THE STATE OF CONNECTICUT 270 (New Haven 1823).

Georgia: A post-Reconstruction case referred to suicide as "something more than self-sought and self-inflicted death. It is a species of crime or wickedness—something wrong; a kind of self-murder." *Life Ass'n of America v. Waller*, 57 Ga. 533, 536 (1876). This language suggests that *assisted* suicide would have been criminal, too.

Kentucky: In 1904, the Kentucky Court of Appeals held that suicide was a common law felony and that one could be charged and convicted for advising or assisting in the commission of a suicide. *Commonwealth v. Hicks*, 82 S.W. 265 (Ky. 1904).

Maryland: From its earliest days, Maryland adopted the common law of crimes. *See Pope v. State*, 396 A.2d 1054, 1072-74 (Md. 1978) (recognizing common law crime of misprision of felony); *Gladden v. State*, 330 A.2d 176 (Md. 1974) (adopting common law "transferred intent" rule); *State v. Buchanan*, 5 H. & J. 317 (1821) (adopting common law crime of conspiracy). Both suicide and assisted suicide were crimes at common law. An unappealed trial court decision in 1940 upheld the conviction of the survivor of a suicide pact for second-degree murder, essentially holding that active assistance in committing suicide is a form of homicide. *See* Note, *Criminal Liability of Participants in Suicide:* State v. Williams, 5 MD. L. REV. 324 (1941).

Massachusetts: Commonwealth v. Bowen, 13 Mass. 356 (1816) (holding that one prisoner who assisted another prisoner in hanging himself in jail could be charged with murder); *Commonwealth v. Mink*, 123 Mass. 422, 429 (1877) (reviewing cases on suicide and attempted suicide and concluding that while not "technically a felony in this Commonwealth," suicide was nevertheless "unlawful and criminal as *malum in se*," and that "any attempt to commit it is likewise unlawful and criminal").

Michigan: From its earliest days as a territory, Michigan adopted the common law of crimes, in addition to particular statutory crimes. *See* CASS CODE OF 1816, Crimes § 58, *reprinted in* 1 MICH. TERR. LAWS 132-33 (1871). For the modern statutory codification of common law crimes, *see* MICH. COMP. LAWS ANN. § 750.505 (West 1991). In an 1876 decision, the Michigan Supreme Court recognized that the suicide of sane person was a crime at common law. *See John Hancock Mut. Life Ins. Co. v. Moore*, 34

First, almost all of the States (forty-six States) forbid assisted suicide, either by an express statute [13] or by ap-

---

Mich. 41, 45 (1876). In *People v. Roberts*, 178 N.W. 690 (Mich. 1920), *overruled in part, People v. Kevorkian*, 527 N.W.2d at 733-39, the Michigan Supreme Court upheld a murder conviction of a man who provided poison to his wife who committed suicide. In *Kevorkian*, the Michigan Supreme Court held that assisted suicide was punishable as a common law crime even in the absence of special legislation. *Id.* at 739.

North Carolina: In 1961, the North Carolina Supreme Court, noting that the State had adopted the common law of crimes (*see* N.C. GEN. STAT. § 14-1(1) (1993)), held that attempted suicide was an indictable misdemeanor. *State v. Willis*, 121 S.E.2d 854 (N.C. 1961). The court expressly held that one who "aids and abets another in . . . self-murder is amenable to the law." *Id.* at 856-57. After independence, North Carolina readopted the common law. *See* N.C. LAWS, ch. V, § II (1778), *reprinted in* 1 THE FIRST LAWS OF THE STATE OF NORTH CAROLINA 351 (John D. Cushing ed. 1984).

Pennsylvania: In 1878, the Pennsylvania Supreme Court defined suicides as "the crime of self-murder" in "legal acceptation and in popular use." *Connecticut Mut. Life Ins. Co. v. Groom*, 86 Pa. 92, 97 (1878). As a State that adopted common law crimes, *assisting* suicide would have been a criminal offense.

Tennessee: Tennessee adopted the common law. *See State v. Alley*, 594 S.W.2d 381, 382 (Tenn. 1980). In 1872, the Tennessee Supreme Court referred to suicide "a crime of the highest grade." *Phodenhauer v. Germania Life Ins. Co.*, 54 Tenn. (7 Heisk.) 567, 576 (1872). Thus, *assisted* suicide also would have been unlawful.

Virginia: Virginia adopted the common law of crimes. *See* A. Scott, CRIMINAL LAW IN COLONIAL VIRGINIA 27 (1930); VA. CODE ANN. § 18.2-16 (1996); *Plunkett v. Supreme Conclave, Improved Order of Heptasophs*, 55 S.E. 9, 11 (Va. 1906) (referring to suicide as a "crime"). *See also Wackwitz v. Roy*, 418 S.E.2d 861, 864 (Va. 1992) ("[s]uicide . . . remains a common law crime in Virginia as it does in a number of other common-law states").

[13] Thirty-five States have enacted statutes banning assisted suicide. ALASKA STAT. § 11.41.120(a)(2) (Michie 1989); ARIZ. REV. STAT. ANN. § 13-1103(A)(3) (West Supp. 1995); ARK. CODE ANN. § 5-10-104(a)(2) (Michie 1993); CAL. PENAL CODE § 401 (West 1988); COLO. REV. STAT. § 18-3-104(1)(b) (Supp. 1995); CONN. GEN. STAT. ANN. § 53a-56(a)(2) (West 1994); DEL. CODE ANN. tit. 11, § 645 (1995); FLA. STAT. ANN. § 782.08 (West 1992); GA. CODE ANN. § 16-5-5(b) (1996); ILL. COMP. STAT. ANN. CH. 720,

plication of general homicide or common law principles.[14] Although suicide assistance is not as common as suicide

§ 5/12-31(a)(2) (Smith-Hurd Supp. 1996); IND. CODE ANN. § 35-42-1-2.5(b) (Michie Supp. 1996); Iowa S.F. 2066, *to be codified as* IOWA CODE § 707A.2 (Supp. 1996); KAN. STAT. State*, 108 S.W. 1139, 1141 (Tenn. 1907); *Goodin v. State*, 726 S.W.2d 956, 957-58 (Tex. Cr. App. 1987); *Martin v. Commonwealth*, 37 S.E.2d 43, 47 (Va. 1946). *See also State v. Mays*, 307 S.E.2d 655 (W. Va. 1983).

[20] *People v. Conley*, 411 P.2d 911, 918 (Cal. 1966) ("one who commits euthanasia bears no ill will toward his victim and believes [that] his act is morally justified . . . nonetheless acts with malice if he is able to comprehend that society prohibits his act regardless of his personal belief"); *Gilbert v. State*, 487 So.2d 1185, 1190 (Fla. Dist. Ct. App. 1986), *rev. denied*, 494 So.2d 1150 (Fla. 1986); *Eichner v. Dillon*, 426 N.Y.S.2d 517, 533 (App. Div. 1980), *aff'd as modified sub nom. In re Storar*, 420 N.E.2d 64 (N.Y. 1981). Anecdotal evidence and polling data that some physicians may assist their patients in killing themselves, *Compassion in Dying*, 79 F.3d at 811 & nn.54-59, does not reflect societal acceptance of such conduct, especially where the conduct is difficult to detect and prosecute.

[21] The Model Penal Code prohibits assisted suicide, even though the Code does not criminalize either suicide or attempted suicide. *See* MODEL PENAL CODE § 210.5(2). In their *Comment*, the drafters said that "the interests in the sanctity of life that are represented by the criminal homicide laws are threatened by one who expresses a willingness to participate in taking the life of another, even though the act may be accomplished with the consent, or at the request, of the suicide victim." *Id.* at 100.

cannot plausibly be argued that a right to commit suicide (or suicide assistance) under any circumstances is "deeply rooted in this Nation's history and traditions," *Moore v. City of East Cleveland, Ohio*, 431 U.S. at 503, or that it is "implicit in the concept of ordered liberty," *Palko v. Connecticut*, 302 U.S. at 325. It would be "an impermissibly radical departure from existing tradition, and from the principles that underlie that tradition, to declare that there is such a fundamental right protected by the Due Process Clause." *Kevorkian*, 527 N.W.2d at 733.

IV. BOTH THE SECOND CIRCUIT AND THE NINTH CIRCUIT ERRED IN EQUATING SUICIDE WITH THE REFUSAL OF UNWANTED LIFE-SUSTAINING MEDICAL TREATMENT.

The key error of both the Second Circuit's equal protection analysis and the Ninth Circuit's due process analysis was to equate suicide, a crime at common law, with the refusal of unwanted medical care, a right protected by the common law and the Constitution. *See Quill*, 80 F.3d at 725-31; *Compassion in Dying*, 79 F.3d at 820-24. They are not equivalent.

> [W]hereas suicide involves an affirmative act to end a life, the refusal or cessation of life-sustaining treatment simply permits life to run its course, unencumbered by contrived intervention. Put another way, suicide frustrates the natural course by introducing an outside agent to accelerate death, whereas the refusal or withdrawal of life-sustaining medical treatment allows nature to proceed, i.e., death occurs because of the underlying condition.
>
> * * * *
>
> [P]ersons who opt to discontinue life-sustaining medical treatment are not, in effect, committing suicide. There is a difference between choosing a natural death summoned by an uninvited illness or

> calamity, and deliberately seeking to terminate one's life by resorting to death-inducing measures unrelated to the natural process of dying.

People v. Kevorkian, 527 N.W.2d at 728-29.

Virtually without exception, state legislators and both state and federal courts have recognized the distinction between directly *causing* death by an affirmative act ending life and *allowing* death to occur by withholding or withdrawing life-sustaining medical treatment. Forty-seven States expressly disapprove of mercy killing, suicide and assisted suicide in either their natural death acts/living will statutes,[22] or their durable power of attorney for

[24] *See* notes 22 and 23, *supra*. *See also* CONN. GEN. STAT. ANN. § 19a-575 (West Supp. 1996) (form declaration); N.J. STAT. ANN. § 26:2H-54(d), -(e) (West 1996) (legislative findings); N.M. STAT. ANN. § 24-7A-13(C) (Michie Supp. 1995).

> In the case of the competent adult's refusing medical treatment such an act does not necessarily constitute suicide since (1) in refusing treatment the patient may not have the specific intent to die, and (2) even if he did, to the extent that the cause of death was from natural causes, the patient did not set the death producing agent in motion with the intent of causing his own death.

Id. at 426 n.11. *See also Thor v. Superior Court*, 855 P.2d 375, 385 (Cal. 1993) ("a necessary distinction exists between a person suffering from a life-threatening disease or debilitating injury who rejects medical intervention that only prolongs but never cures the affliction and an individual who deliberately sets in motion a course of events aimed at his or her demise and attempts to enlist the assistance of others); *Fosmire v. Nicoleau*, 551 N.E.2d 77, 82 (N.Y. 1990) ("merely declining medical care, even essential treatment, is not considered a suicidal act"); *In re Colyer*, 660 P.2d 738, 743 (Wash. 1983) ("[a] death which occurs after the removal of life sustaining systems is from natural causes, neither set in motion nor intended by the patient").

Almost every court recognizing a right to refuse medical treatment has expressly distinguished removal of life support from suicide, and has drawn a clear distinction between *allowing* death to occur by passive means (refusing life-sustaining treatment) and *causing* death by active means (killing the patient by a direct act that ends his life).[25] No court, with the exception of those courts

[25] *See also Rasmussen v. Fleming*, 741 P.2d 674, 685 (Ariz. 1987); *Bouvia v. Superior Court*, 225 Cal. Rptr. 297, 306 (Ct. App. 1986) (quadriplegic's "decision to let nature take its course is not equivalent to an election to commit suicide with real parties aiding and abetting therein"); *Bartling v. Superior Court*, 209 Cal. Rptr. 220, 225 (Ct. App. 1984); *Barber v. Superior Court*, 195 Cal. Rptr. 484, 487 (Ct. App. 1983); *McConnell v. Beverly Enterprises, Inc.*, 553 A.2d 596, 605 (Conn. 1989); *In re Guardianship of Browning*, 568 So.2d 4, 14 (Fla. 1990) ("suicide is not an issue when . . . the discontinuance of life support 'in fact will merely result in [the patient's] death, if at all, from natural causes'") (citing *Satz v.*

whose decisions are under review here, has held otherwise. As these cases demonstrate, suicide cannot be equated with the refusal of medical treatment. They are different in two key respects: First, in the case of removing life-sustaining treatment, there is no intent to end life, but only the knowledge that death may result. Second, regardless of whether there is an intent to end life, the removal of life support is not the actual cause of death; rather, death results from natural causes (*e.g.*, an underlying pathology that renders a patient unable to breathe or eat without mechanical assistance). These distinctions fully justify treating assisted suicide differently from the refusal of unwanted life-sustaining medical treatment. *See FCC v. Beach Communications, Inc.*, 508 U.S. 307, 313-16 (1993). As the New York State Force Report on Life and the Law noted:

> The imposition of life-sustaining medical treatment against a patient's will requires a direct invasion of bodily integrity and, in some cases, the use of physical restraints, both of which are flatly inconsistent

Perlmutter, 362 So.2d 160, 162 (Fla. Dist. Ct. App. 1978), *aff'd*, 379 So.2d 359 (Fla. 1980); *In re Estate of Longeway*, 549 N.E.2d 292, 296 (Ill. 1989); *In re Lawrance*, 579 N.E.2d 32, 40 n.4 (Ind. 1991); *De Grella by and through Parrent v. Elston*, 858 S.W.2d 698, 707 (Ky. 1993) ("'[m]ercy killing' and 'euthanasia' or any other 'affirmative or deliberate act to end life' are fundamental violations of the common law") (citation omitted); *In re P.V.W.*, 424 So.2d 1015, 1022 (La. 1982); *In re Gardner*, 534 A.2d 947, 955-56 (Me. 1987); *Guardianship of Doe*, 583 N.E.2d 1263, 1270 (Mass. 1992), *cert. denied sub nom. > with society's basic conception of personal dignity. . . . It is this right against intrusion—not a general right to control the timing and manner of death—that forms the basis of the constitutional right to refuse life-sustaining treatment. Restrictions on suicide, by contrast, entail no such intrusions, but simply prevent individuals from intervening in the natural process of dying.

WHEN DEATH IS SOUGHT 71.

The decision respondents urge upon this Court not only would overturn the assisted suicide statutes throughout the States, but also would undermine the right of public and private actors to intervene to prevent suicide and jeopardize the authority of public health officials to institutionalize for treatment persons who attempt suicide. Moreover, recognition of a right to suicide assistance could easily lead to the legalization of "homicide by consent." The Ninth Circuit views this possible development with complete equanimity. *Compassion in Dying*, 79 F.3d at 831-32.

Notwithstanding their disclaimers, the right respondents ask this Court to recognize could *not* be limited to mentally competent, terminally ill patients. This is apparent from respondents' reliance upon this Court's abortion jurisprudence and the extensive case law that has developed in support of the right to refuse medical treatment. If abortion jurisprudence is the source of a right to suicide, the States would be powerless to examine the reasons persons would want to kill themselves and then, based on that examination, permit some suicides (the "rational" ones) and forbid others (the irrational ones). *See Casey*, 505 U.S. at 879 ("[the] State may not prohibit any woman from making the ultimate decision to terminate her pregnancy before viability").

The case law recognizing a right to refuse treatment offers even less reason to believe that a right to suicide (or suicide assistance) could be contained. The right to refuse unwanted medical treatment, including life-sustaining medical treatment, may be exercised *by* persons who are not terminally ill and *for* persons who are not competent. *See* Edward R. Grant and Paul Benjamin Linton, *Relief or Reproach? Euthanasia Rights in the Wake of Measure 16*, 74 OREGON L. REV. 449, 459-61 & nn. 36-39 (1995) (listing cases). A right to assistance in commiting suicide, once established, would inevitably expand to include the incompetent and those who are not terminally ill, as the Ninth Circuit freely acknowledged.[26] *See generally* Grant and Linton, *Relief or Reproach?*, 74 OREGON L. REV. at 516-25 & nn. 293-328.

Only three years ago, the Supreme Court of Canada was asked to legalize the same practice of physician-assisted suicide that respondents urge upon this Court. *See Rodriguez v. British Columbia*, [1993] 3 S.C.R. 519. The Court refused to do so in an opinion that bears careful reading. The prohibition of assisted suicide, the Court stated, "is valid and desirable legislation which fulfills the government's objectives of preserving life and protecting the vulnerable." *Id.* at 590. A "blanket prohibition" of assisted suicide is neither arbitrary nor unfair in the sense of being "unrelated to the state's interest in protecting the vulnerable." *Id.* at 595.

> [The law against assisted suicide] has as its purpose the protection of the vulnerable who might be induced in moments of weakness to commit suicide. This purpose is grounded in the state interest in protecting life and reflects the policy of the state that human life should not be depreciated by allowing life to be taken. This policy finds expression . . . in the provisions of our *Criminal Code* which prohibit

---

[26] *See Compassion in Dying*, 79 F.3d at 816: "Our conclusion is strongly influenced by, but not limited to, the plight of mentally competent, terminally ill adults. We are influenced as well by the plight of others, such as those whose existence is reduced to a vegetative state or a permanent and irreversible state of unconsciousness." *Id.* at 832 n. 120 ("we should make clear that a decision of a duly-appointed surrogate decision maker is for all legal purposes the decision of the patient himself").

> murder and other violent acts against others notwithstanding the consent of the victim, ...

Id. The Court declined to sanction assisted suicide, even for the terminally ill, because "the active participation by one individual in the death of another is intrinsically morally and legally wrong" and "there is no certainty that abuses can be prevented by anything less than a complete prohibition." *Id.* at 601. "Creating an exception for the terminally ill might . . . frustrate the purpose of the legislation of protecting the vulnerable because adequate guidelines to control abuse are difficult or impossible to develop." *Id.* The law against assisted suicide "may discourage those who consider that life is unbearable at a particular moment, or who perceive themselves to be a burden upon others, from committing suicide." *Id.* at 608.

To confirm the right of the States to preserve and protect human life, and to prevent the abuses that would arise if assisted suicide were legalized, *amici* ask the Court to uphold the New York and Washington statutes banning assisted suicide.

CONCLUSION

For the foregoing reasons, *amici curiae* respectfully request this Honorable Court to reverse the judgments in Cases 95-1858 and 96-110.

Respectfully submitted,

PAUL BENJAMIN LINTON *

INTEREST OF AMICUS CURIAE 1

SUMMARY OF ARGUMENT 1

ARGUMENT

I. IN STRIKING DOWN STATE LAWS PROHIBITING ASSISTED SUICIDE, THE SECOND AND NINTH CIRCUITS FAILED TO ADEQUATELY CONSIDER THE ECONOMIC PRESSURES THAT WOULD FORCE INDIVIDUALS TO ACCEPT ASSISTED SUICIDE .. 3

II. IN DETERMINING WHETHER STATES HAVE BOTH A VITAL AND RATIONAL INTEREST IN PROHIBITING ASSISTED SUICIDE, THIS COURT MUST CONSIDER THE IMPACT OF MANAGED CARE ON THE CONTEXT IN WHICH ASSISTED SUICIDE WOULD BE CARRIED OUT 5

A. Managed Care Has Changed the Very Basis upon which Health Care Is Provided 5

B. Managed Care Programs Use a System of Financial Incentives and Disincentives which Impose Conflicts of Interest between Patients and Their Doctors 7

C. Managed Care Programs Have Created Barriers between Physicians and Patients which Violate Patients' Rights to Receive Complete and Accurate Information about Their Health Care. 10

D. To Preserve a Competitive Edge in the Marketplace, Managed Care Organizations Resist Attempts to Assure Patients' Rights 11

TABLE OF CONTENTS—*(Continued)*

Page

E. Denial of Emergency Care which Often Occurs as a Result of Managed Care Can Create the Very Conditions that May Lead to Assisted Suicide 13

F. Managed Care Programs Often Operate in a Manner that Indicates a Quest for Only Short Term Effectiveness and Maximum Cost Containment 16

G. Patients' Fears of Dependence, Unremitting Pain and Loss of Dignity Are Often Exacerbated by the Practices of Managed Care Programs. ... 18

H. The Appeals Process under Managed Care Is Often So Complex that Patients Could Consider Assisted Suicide to Be Their Only Recourse 22

I. The Policies of Managed Care Corporations Compromise the Quality and Expertise of the Medical Profession, Making It Imperative that States Have the Right to Protect Residents from Assisted Suicide 25

III. POLICIES WHICH PUT COST CONTAINMENT AND HEALTH CARE INDUSTRY PROFITS BEFORE PATIENT WELL-BEING MAKE IT ABUNDANTLY CLEAR THAT STATES HAVE BOTH A VITAL AND A RATIONAL INTEREST IN PROTECTING THEIR RESIDENTS BY PROHIBITING ASSISTED SUICIDE 26

STATEMENT OF INTEREST

The International Anti-Euthanasia Task Force (IAETF) is the trade name of the Family Living Council, a non-profit corporation formed in 1976 to provide education in matters related to family life, health and related matters. The IAETF, with networkers throughout the world, addresses the medical-ethical issues of death and dying, health care delivery, the rights of the terminally ill, the chronically ill, the elderly, persons with disabilities and their families. Involvement of the IAETF in such matters includes education, advocacy, consultation, legislative analysis and networking. The IAETF is a major resource for individuals and groups seeking information about the rights of medically vulnerable individuals and their families.

This *amicus curiae* brief has been filed with consent of the parties. Letters of consent were filed with this brief with the Clerk of the Court.

SUMMARY OF THE ARGUMENT

The matter at bench is one of the most important constitutional challenges ever to face this Court. At stake is the determination of the very organizational purpose for which our society, under law, exists.

This Court will decide whether the state's foundational role as protector of the lives of all of its citizens is consistent with existing constitutional principle and the law, or whether this traditional state responsibility will be superseded and replaced by new and radical constitutional notions which prohibit states from protecting their citizens and, further, force states to countenance and facilitate the deliberate ending of human lives under the guise of compassion, elimination of suffering, and exercise of individual rights.

The current question before the Court is not whether dying patients have the right to end their suffering, as Respondents argue. (Certainly, the ending of suffering is a laudable goal and, if that were the real issue, there would be no controversy.) Rather, the issue before this Court is whether states

have the right to protect weak and vulnerable individuals as well as the greater societal good by prohibiting assisted suicide.

Strong emotional arguments are made by Respondents who seek to have this Court decide that existing state laws which proscribe assisted suicide are unconstitutional. Proponents of this radical theory of constitutional jurisprudence claim that the state has little or no legitimate interest in prohibiting assisted suicide because the assisted suicide of patients would permit them to determine "the time and manner of one's own death"[1] and would be used as " a treatment of last resort,"[2] to take place only after people have exhausted all treatment and comfort care possibilities.

As this brief will demonstrate, such conclusions and arguments are facile, designed as a veneer to deflect the Court's attention from the context in which legalized assisted suicide would be practiced. This brief argues that assisted suicide, as it would take place in the "real world," demonstrates both the rational and vital state interests promoted by state laws which currently outlaw assisted suicide.

The "last resort" claim is based upon the false premise that virtually every American citizen or resident has access to wanted medical treatment and necessary health care. Further, it mistakenly assumes that all necessary time and health care resources would be at the disposal of each suicidal patient prior to any implementation of physician facilitated death.

The reality of the United States health care delivery system belies these soothing assurances. An increasing number of people are experiencing great difficulty in obtaining necessary medical services, in part because of the ongoing transition from "fee for service" medicine to "managed care." In such a milieu, this brief argues, assisted suicide would be especially dangerous.

Managed care systems often have financial incentives which impose conflicts of interest between patients and their

1. *Compassion in Dying v. Washington*, 79 F.3d 790, 793 (9th Cir. 1996).

2. F. Miller, T. Quill, et al, *Regulating Physician-Assisted Death*, 331 New Eng. J. Med. 119,120 ((1994).

own doctors. These conflicts create the potential for denial of wanted and needed medical care based on pecuniary, rather than medical, considerations. In turn, the suffering caused by denied or delayed care can create a desire for assisted suicide.

The "medical practice" of assisted suicide would not be implemented in a vacuum. There is nothing to indicate that a judicially created transformation of assisted suicide from a crime into a legitimate form of medical treatment would cause the health care delivery system to become more responsible to patient needs, nor would it afford a compassionate means for patients to have their suffering alleviated. If anything, the availability of assisted suicide would likely result in a decreased amount of time and attention given to treating and alleviating significant medical problems, such as pain, particularly when assisted suicide would be far less time-consuming and less costly than interventions which alleviate pain while not taking the patient's life. This latter point is especially pertinent in a health care system dominated by managed care.

It is within the context of the growing managed care system of health delivery and the growing prominence and influence of for-profit health maintenance organizations (HMOs) that the far reaching implications of striking laws which prohibit assisted suicide must be considered. Considering the financial implications of legalizing assisted suicide as it relates to proper patient care, a state not only has the right but the positive responsibility, to protect its citizens by prohibiting assisted suicide.

I. IN STRIKING DOWN STATE LAWS PROHIBITING ASSISTED SUICIDE, THE SECOND AND NINTH CIRCUITS FAILED TO ADEQUATELY CONSIDER THE ECONOMIC PRESSURES THAT WOULD FORCE INDIVIDUALS TO ACCEPT ASSISTED SUICIDE.

The Second Circuit Court in *Quill v. Vacco*[3] erroneously disregarded the importance of the significant economic and psychological pressure that would be placed on individuals if states were barred from prohibiting assisted suicide. In strik-

3. *Quill v. Vacco*, 80 F.3d 716 (2nd Cir. 1996).

ing down New York's laws against assisted suicide, the Second Circuit nonchalantly suggested that any such pressures could be alleviated by state formulated guidelines: "In any event, the state of New York may establish rules and procedures to assure that all choices are free of such pressures."[4] Not only did this suggestion totally ignore the carefully drafted report of the New York State Task Force on Life and the Law,[5] which clearly outlined and documented the peril in which citizens would be placed if assisted suicide were permitted, even under guidelines intended to be protected, it also failed to take note of the reality of the current state of the health care delivery system.

Likewise, the Ninth Circuit, in concluding that state laws against assisted suicide are unconstitutional, paid little attention to this reality.

After a cursory acknowledgment that economic factors and lack of adequate health care may well influence an individual's decision to die by assisted suicide, the Ninth Circuit fastidiously decided to "stand aside from that battle."[6] The Court implied that, if assisted suicide were not available to those who are already injured by the lack of access to adequate health care, they would be further harmed: "On the other hand we are certainly not obligated to pile injury upon injury. . . ."[7]

In fact, by removing the states' rights to protect vulnerable citizens from the considerable economic pressure to die and get out of the way, the Second and Ninth Circuits did pile injury upon injury. In concluding that states should not be able to prohibit assisted suicide, both courts sent a bold message that access to death-producing medical intervention is a constitutional right, but access to life saving or life enhancing medical intervention is not.

II. IN DETERMINING WHETHER STATES HAVE BOTH A VITAL AND RATIONAL INTEREST IN PROHIBITING ASSISTED SUICIDE, THIS COURT MUST CONSIDER THE IMPACT OF MANAGED CARE ON THE CONTEXT IN WHICH ASSISTED SUICIDE WOULD BE CARRIED OUT.

A. Managed Care Has Changed the Very Basis upon which Health Care Is Provided.

In an effort to control unnecessary medical costs and improve the efficiency of health care, a transition of monumental import is currently taking place in the health care system. This transition is from a traditional "fee-for-service" system to a "managed care" system of health care delivery.

Under the fee-for-service system, health providers were paid for each service performed. This sometimes led to patients' being overtreated and subjected to interventions that were futile. In the fee-for-service system, health providers had a financial incentive to exhaust all treatment possibilities or provide unnecessary care since the more treatment that was given, the greater was a provider's income.

Managed care operates in a manner that is almost a reverse of the fee-for-service system. Under managed care, health providers are encouraged by a myriad of incentives and disincentives to control costs by *limiting* treatment and care. Health care professionals now find that their incomes, in large part, depend upon providing fewer, not more, services.

While there is nothing inherently wrong with the concept of managed care, nor with the attempt to appropriately control health care costs, managed care, as it presently operates, has caused enormous problems: "Prodded by large companies fed up with rising medical costs, the new medicine's entrepreneurs have turned health care into a corporate battlefield increasingly governed by the promise of stock market wealth, incentives that reward minimal care and a brand of aggressive competition alien to front-line doctors. . . ."[8]

8. Larson, *The Soul of an HMO*, Time, Jan. 22, 1996, at 45.

The usual and traditional presumptions about health care financing and delivery have been turned inside out, and its effects are being felt by millions of people.

In 1995 up to 130 million people were in some type of managed care program.[9] Among American workers who are covered by health insurance, seventy-one percent are in managed care programs[10] and, according to the Health Care Financing Administration's Office of Managed Care, eighty thousand Medicare beneficiaries are being transferred each month from traditional fee-for-service health plans into managed care programs.[11]

The number of physicians affected by the growth of managed care is also increasing rapidly. Whereas physicians used to be self-employed and, thus, were ultimately in charge of how much time they spent with patients and how much care they wished to provide for a certain fee, more and more doctors are now becoming employees who are subject to control by managed care organizations. According to the American Medical Association, only slightly over half of doctors remained self-employed by 1995.

Indicative of the new way in which medicine is practiced is the terminology now used in conjunction with medical care. Provider-consumer business terminology has largely replaced references to what was formerly called the physician-patient relationship. Such business oriented designations have caused grave concern among physicians.[12]

The agreements used in that provider-consumer relationship have undergone such a significant transformation that the meanings of commonly used words and phrases may now mean something far different to the consumer than they do to

12. See, e.g., J. Olivero, *Why "Providers" Instead of Physicians?*, 156 Arch. Inter. Med. 2148 (1996).

the provider.[13] Additionally, this consumer-provider construct bears striking similarity to one which is contractual in nature. In a contractual relationship, however, there is generally some type of parity as it relates to information. That parity is lacking in the medical realm under managed care. It is the provider who has virtually all of the information. It is the provider who may withhold information on the basis of possible benefit or potential harm to the provider. It is the consumer who often does not have adequate information, because the provider has withheld it.

This presents a clear conflict for physicians and increases the possibility of grave harm to patients, a matter clearly relevant to the matters before the Court. If states were prohibited from banning assisted suicide, patients who were denied full access to information about the availability of treatment could be led to believe that assisted suicide was their only remaining option.

B. Managed Care Programs Use a System of Financial Incentives and Disincentives which Impose Conflicts of Interest between Patients and Their Doctors.

Under the doctrine of informed consent physicians have a common law duty to provide patients with all information that is material to that patient's treatment decisions. This duty encompasses informing patients about all reasonable treatment alternatives, and the risks and benefits of each, regardless of cost.[14]

Additionally, a patient has the right to be told about financial incentives that may exist to induce physicians to manipulate the range of options offered to the patient. The physician has an obligation to "disclose personal interests

13. See, e.g., R. Marker and W. Smith, *The Art of Verbal Engineering*, 35 Duq. L. Rev. 81 (1996).

14. *Cobbs v. Grant*, 8 Cal. 3d 229 (1972).

unrelated to the patient's health, whether research or economic, that may affect the physician's professional judgment."[15]

Despite the existence of clear requirements for such disclosure, managed care programs have created barriers between physicians and patients which threaten a patient's right to receive complete and accurate information and which compromise the professional responsibility of physicians. These barriers arise from a combination of factors: a method for health services payment referred to as "capitation," a combination of financial incentives and disincentives, and the existence of what are called "gag rules" in managed care contracts.

These approaches, used by managed care organizations, hold down costs by controlling physicians' fees and limiting patients' access to services. They could be accurately described as a "carrot and stick" method which compensates physicians in direct proportion to how little they do for patients.

Under the "capitation" approach, the managed care organization pays a flat fee per patient per month to a physician or group of physicians. For example, under one managed care plan, physicians receive $8.43 each month for every male patient between the ages of twenty-five and forty-four and $10.09 per month for each female patient between the ages of twenty and twenty-four.[16]

15. *Moore v. Regents of the University of California*, 793 P. 2d 479, 271 Cal. Repr. 146 (1990).

16. *Compromising Health Care*, Wash. Post, June 16, 1996, at C8. At the same time that doctors and other health professionals are being pushed to see more and more patients for less and less pay, and as patients are often being denied needed treatment, it is estimated that profits of twenty to thirty percent are going into the pockets of investors. In 1995, the total compensation package of the typical health care corporate CEO was close to $2.9 million. Auerbach, *As the Marketplace Changes, Consumers Are Caught in the Middle*, Wash. Post, June 25, 1996, at Z12. Several earned between $8.8 and $15.5 million per year. Freudenheim, *Health Chief's Big Paychecks for Chopping Costs*, N. Y. Times, Apr. 11, 1995. That does not take into account stock dividends paid to investors.

In return for the monthly fee per patient, the physician is to provide all medical services (subject to the terms of the managed care contract) for each covered patient. These services generally include primary care, specialty care, hospitalization, prescriptions, and a broad range of other health care services. If, during any given month, the actual cost of care for the covered patients is lower than that of the fees paid, the doctor retains the excess. If, however, the actual cost of care exceeds the fees, the health provider loses money. The possibility of losing money by providing care can be a powerful incentive to deny even needed care.[17]

Another cost control method, often coupled with capitation, depends upon what is referred to as a "withhold" in which the managed care organization withholds a percentage of the per patient fee that would ordinarily be paid to the physician. At the end of a certain period of time, the managed care program reviews the physician's practice and determines whether the physician should receive any of the withheld fees. If the managed care program determines that the physician is spending too much time per patient or that he or she is ordering too many diagnostic tests or providing too much treatment, the managed care organization retains the withheld fee. Amounts withheld in this manner vary from a low of eleven percent (withholds of less than eleven percent have been found ineffective as an incentive for physician's to limit services and referrals) to more than thirty percent.[18] Even when income is not withheld, some managed care organizations place a lien on future earnings or reduce the capitation fee as a means of penalizing a physician's failure to meet the fiscal expectations and requirements of the managed care program.[19]

According to data compiled in 1995 by the American Medical Association, one-third of doctors have capitated com-

17. See generally: Freudenheim, *Health Care in the Era of Capitalism*, N.Y.Times, Sept. 4, 1996, at 6E; and T. Bodenheimer and K. Grumback, *Capitation or Decapitation*, 276 J.A.M.A. 1025 (1996).

19. Id.

mercial contracts, and forty-eight percent are subject to some method of fee withhold. For doctors who have such contracts with manage care programs, nineteen percent of their income is attributed to capitation accounts.[20]

The wedge that such financial incentives and disincentives places between patients and doctors is intensified by another provision, referred to as a "gag rule," that is contained in many contracts between managed care organizations and physicians.

C. Managed Care Programs Have Created Barriers between Physicians and Patients which Violate Patients' Rights to Receive Complete and Accurate Information about Their Health Care.

Doctors who sign managed care contracts that have gag rules are prevented from providing often essential information to patients. Some gag clauses forbid a doctor from telling a patient about treatment options until the plan approves the specific treatment for that patient. Other programs prevent a doctor from telling a patient that a beneficial treatment that is not covered by the program is available elsewhere.

Under the gag clause provisions doctors say they cannot talk freely to patients about either their treatment options or about the particular managed care program's payment policies. They are even forbidden to tell patients that doctors who save money by withholding care get financial bonuses.[21]

Gag clauses also prohibit informing patients about outside "gatekeepers."

For example, one managed care organization sent a notice to physicians under contract with its program stating, "Do not discuss proposed treatment with [the managed care program's] members prior to receiving authorization" and further directed doctors to avoid discussing the procedures that must be followed to obtain such authorization[22]

20. Johnsson, *Trial Focus: Public Unease with Physician Incentives*, Am. Med. News, Aug. 12, 1996, at 1, 34.

21. Pear, *Doctors Say H.M.O.'s Limit What They Can Tell Patients*, N.Y. Times, Dec. 21, 1995, at A1.

In many managed care programs, it is the primary care physician who serves as the gatekeeper. Physician gatekeepers may come under considerable pressure to deny access to services as evidenced by a warning, given by one managed care organization to physician gatekeepers in its program, stating that the physicians' contracts would be terminated if they approved too many specialist referrals. [23]

Other programs rely on outside gatekeepers (who may be physicians, nurses or persons who are not trained in medicine). Outside gatekeepers may be located in a different city or state and have no personal contact with the patient or the patient's primary care physician. This type of gatekeeper or reviewer is often compensated on the basis of cost saving for the managed care organization.

The role of an outside reviewer was described by Dr. Linda Peeno when she testified before the House Commerce Health Subcommittee. Dr. Peeno, who had served as a medical reviewer for a managed care program, said she saved her employer money by denying treatment. She explained that, in one such case, her decision led to a man's death but, rather than being held accountable, she was financially rewarded. She earned an annual six-figure income by using her medical expertise to bring financial gains to the organization. "According to the managed care industry, it is not an ethical issue to sacrifice a human being for a 'savings,'" she said.[24]

D. To Preserve a Competitive Edge in the Marketplace, Managed Care Organizations Resist Attempts to Assure Patients' Rights.

Until very recently, health institutions, both public and private, were overwhelmingly non-profit endeavors. However,

22. Id.

23. Reuters Health News Service, *HMOs Respond to Member Complaints*, Aug. 20, 1996.

24. Gianelli, *Congress Considers Ban on Managed Care "Gag" Clauses*, Am. Med. News, June 19, 1995, at. 5, col. 1.

for-profit organizations are becoming the rule, rather than the exception, so that more than seventy percent of all HMOs are now for-profit corporations. With this change has come a shift in focus. Within the non-profit realm, any excess money is earmarked to improve services, access and care for the served population. In the for-profit sphere, money saved by limiting services benefits corporate shareholders. Meeting profit projections supplants meeting patient needs and is the driving force in the for-profit arena.

It would seem reasonable to assume that if patients demand types of care that may increase costs, managed care programs would respond since pleasing the customer has always been considered good business practice. The program could then pass on the costs to the consumer by raising premiums. However, this assumption misses a crucial point. In most cases, employers, not individual subscribers, pay the premiums, so they are the customers who must be pleased. Further, it is the employer, seeking to keep expenditures for employee benefits down, who will opt for a program that keeps rates down.

In 1995, a broad coalition of patient and provider groups drafted a set of standards on the rights of patients, including the right to information about provider incentives or restrictions that might influence practice patterns. Managed care organizations refused to sign on. Although the principles were endorsed by over one hundred groups including the American Medical Association, American Cancer Society, American Association of Retired Persons, and the Joint Commission on Accreditation of Health Care Organizations, a managed care representative explained that the principles seemed to be "too close to the operational issues" of managed care.[25] A subsequent attempt to adopt government regulations restricting managed care organizations' practice of incentives and gag rules was successfully resisted by managed care programs. The

25. Page, *Managed Care Firms Balk at Patient Rights Agreement*, Am. Med. News, Dec. 4, 1995, at 3, 23.

managed care industry claimed that such practices are important in "a fast-moving, intensely competitive industry."[26]

With their sites firmly on profit margins and beating the competition, it seems reasonable to predict that managed care corporations would be more than willing to reimburse for inexpensive assisted suicide services that would eliminate the need for some costlier services.

E. Denial of Emergency Care which Often Occurs as a Result of Managed Care Can Create the Very Conditions that May Lead to Assisted Suicide.

The Emergency Medical Treatment and Active Labor Act (EMTALA) requires hospitals to provide "a standard medical screening evaluation"[27] to anyone who goes to an emergency room requesting care. In addition, the hospital must give any treatment that is necessary to stabilize the patient's condition, making use of all necessary and routinely available facilities of the hospital to reach a diagnosis that rules out the presence of a legally defined emergency medical condition.[28]

Emergency physicians are well aware that any delay in emergency care while seeking to obtain authorization for payment may be detrimental not only for the patient but may result in liability for the hospital.[29] However, managed care organizations and clinics run by health maintenance organizations are not within the scope of these requirements since "the plain wording of the statute makes reference only to 'hospitals' and shows legislative intent to provide emergency medical treatment by hospitals to all individuals."[30] Managed care organizations escape responsibility under EMTALA because they are only authorizing payment, not treatment.

26. Pear, *U.S. Shelves Plan to Limit Rewards to HMO Doctors*, N.Y.Times, July 8, 1996.

27. 42 USC 1395 dd (a).

28. 42 USC 1395 dd (b).

29. 42 USC 1395 dd (h). See, e.g., *Griffith v. Mount Carmel Hospital*, No. 92-1141-MLB, (D. Kan. Aug. 23, 1993).

30. *Dearmas v. Av-Med Inc.*, 814 F. Supp. 1103, 1108 (S.D. Fla. 1993).

Although, technically speaking, the managed care organizations cannot deny authorization to receive emergency treatment,[31] managed care policies do operate to block emergency room care by denying payment if pre-authorization is not obtained. Thus, a clear conflict exists between federally mandated medical screening examinations and the pre-authorization processes that are required by most managed care organizations. "Managed care requirements that patients be pre-authorized for emergency department visits or admissions are totally inconsistent with and unregulated by EMTALA."[32]

Emergencies are, by definition, unexpected and difficult to manage. Obtaining pre-authorization in an emergency situation can result in loss of time and loss of life. Nonetheless, managed care programs continue to require pre-authorization. As one members' handbook stated (in fine print), "Failure to contact the primary care physician prior to emergency treatment may result in denial of payment."[33]

According to Dr. Charlotte S. Yeh, chief of emergency medicine at the New England Medical Center in Boston, "In some ways, it's less frustrating for us to take care of homeless people than HMO members. At least we can do what we think is right for them, as opposed to trying to convince an HMO over the phone of what's the right thing to do."[34]

Such inconsistencies can place patients at risk and may force emergency room physicians to choose between providing necessary medical care or facing loss of hospital privileges for providing care that may not be reimbursed. In a survey of 1,047 board-certified emergency physicians, 18.6% said "they

31. "Managed healthcare plans cannot deny a hospital permission to examine or treat their enrollees. They may only state what they will and will not pay for, and regardless of whether a hospital is to be reimbursed for the treatment, it is obligated to provide the services specified in EMTALA." HCFA's Rules and Regulations, 59 *Fed. Reg.* 32,116 (1994).

had been threatened or lost hospital privileges because they voiced concerns about quality of care."[35]

At a time when managed care cost containment provisions make even emergency care difficult to obtain, it would be incredibly naive to assume that the same managed care programs would authorize access to all medical options, some of which may be expensive, before approving the cost effective treatment of assisted suicide.

Indeed, managed care programs have consistently resisted providing services which, under fee-for-service, were previously included within even the most basic type of health care coverage. Even after there was tremendous public outcry about so-called "drive through deliveries" – in which new mothers and their infants were sent home from the hospital within hours of birth – many managed care programs maintained their refusal to pay for more than a day of hospitalization. It took federal legislation to require that new mothers and their infants could receive a minimum hospital stay of 48 hours after birth.[36]

It seems reasonable to believe that managed care programs which had to be forced to allow new mothers and infants to receive an additional 24 hours of hospitalization, may be less than willing to permit months of palliative care or great amounts of long term therapy for chronic conditions. This would be particularly true if the same managed care programs could authorize the provision of a lethal prescription as a quick and inexpensive means to "treat" the same condition.

In fact, most managed care organizations fail to provide services which address anything other than short term cost effectiveness.

35. *American Academy of Emergency Medicine Survey Preliminary Report*, Emergency Med. News, August 1995.

36. Veterans Administration.-HUD Appropriations Act of FY 1997, Pub. L. No.104-204, 110 Stat.2874, Title VI, Sec. 601 (Sept. 26,1996).

F. Managed Care Programs Often Operate in a Manner that Indicates a Quest for Only Short Term Effectiveness and Maximum Cost Containment

For medical conditions, like appendicitis or minor infections that can be addressed in the short term, managed care programs do relatively well. Problematic, however, is the care received by people who have conditions that require long term care. Thus, a relatively healthy person who enters into a managed care program will generally be satisfied with the program as long as his or her health remains good overall. If, as often happens, a person develops a condition, like multiple sclerosis, that requires on-going care, managed care often falls short of expectations.[37]

Additionally, while all managed care programs emphasize preventative care, not all have programs to prevent complications that can result from chronic disease. The way in which managed care deals with diabetes is an illustration of the quest for short term cost effectiveness. Fewer that one-half of HMOs have implemented programs to manage diabetes[38] even though more than 14 million Americans are known to have diabetes,[39] which can cause blindness, kidney failure, nerve damage and is the fourth leading cause of death in the United States.[40]

Regimens that could result in greatly reduced costs in terms of patients' lives and health care resources have sometimes been ignored in the interest of immediate monetary saving. When the National Institute of Health (NIH) supported a study on diabetes that showed that good control would reduce the complications of diabetes, managed care organizations indicated a marked lack of interest in the program. According to Dr. Judith Vaitukaitis, director of the National Center for

37. Rosenthal, *Patients Say N. Y. HMOs Don't Deal Well with Complex Illnesses*, N.Y.Times, July 15, 1996, at A19.

40. *New Diabetes Treatment May Block Worst Effects*, San Francisco Chron., June 14, 1993, at A3.

Research Resources at NIH, this stance on the part of managed care programs was due to the fact that the managed care organizations did not want to spend the extra time and resources that good control would require. She explained that "the benefit of reduced complications is not seen for years ahead and they [managed care organizations] don't see the benefit in reduced costs because of the rapid turnover of their members."[41]

This emphasis on quick profits has also been described by Dr. George Lundberg, editor-in-chief of the *Journal of the American Medical Association*, who stated, "Getting managed care companies to think in terms of the long term is starry-eyed. Profit is to be made here. The managed care companies are not interested in the long term."[42]

It would seem logical for managed care organizations to promote long term preventative care since this would result in future savings. However, according to health care consultant Theodore J. Weinberg, individuals change health care programs about every three or four years.[43] The advantages of long term preventative measures may not show up for ten years or more and, by that time, a person may be in another managed care program. Consequently, competitive managed care programs are unlikely to invest in outcomes that would not pay off within a short period since the investment in a prevention program paid for by one managed care organization may result in better health (and thus lower expenditures) for enrollees in a competitor's program.

With this short sighted approach to health care, the long term consequence could be greater numbers of debilitated individuals who would create additional strain on the health delivery system. This, in turn, could spur greater incentives for managed care programs to promote assisted suicide as what one euthanasia advocate has called "a new age form of hospice care."[44]

G. Patients' Fears of Dependence, Unremitting Pain and Loss of Dignity Are Often Exacerbated by the Practices of Managed Care Programs.

A 1996 Gallup poll, conducted for the National Hospice Organization, regarding public attitudes about assisted suicide found that, among their greatest fears about death, people fear most the prospects of dependence, pain and loss of dignity.[45] In many ways, the current practices in managed care programs operate in a manner that turns these fears into reality.

It is often chronically ill patients, particularly those who are elderly or poor, who are hardest hit by the cost containment aspects of managed care. Within HMO plans, such patients fare poorly in comparison to similar patients in fee-for-service plans.[46] Their plight may become even more pronounced in the future since these patients "account for a disproportionate share of health care expenditures and are therefore prime targets of cost containment." [47]

It is well known tnat chronic conditions can often be controlled or, at least, their progression can be slowed down if appropriate and necessary care is provided. The lack of emphasis placed on chronic care by managed care organizations can actually lead to patients' becoming dependent sooner than they would have been if appropriate care had been provided. Thus, managed care's lack of attention to chronic conditions may serve to heighten dependence which a great number of people fear and could actually lead to a greater number of people considering assisted suicide.

47. Id., at 1040.

The fear of unremitting pain which causes great anxiety for patients and which some have said could lead them to seek assisted suicide is heightened due to the inaccessibility of pain control for many people. It is the lack of access, not an absence of such interventions, that creates this tragic situation. Patients are often forced to endure pain because third party payers refuse to reimburse for its treatment. In effect, "by rationing pain management on a financial basis, patients are being forced to consider death as their only option."[48]

Navigating the murky waters of services not covered, services not approved and the complex methods of co-payments is particularly difficult for patients who are in pain. They have precious little energy to deal with a system that seems to block their access to necessary pain relief at every turn.

This denial of needed pain control is most pronounced within certain categories of patients. In 1994, the State of California's "Summit on Effective Pain Management"[49] found that third party payers often restrict payment for pain-related services.[50] It further found that pain is more likely to be undertreated if the patient is a member of a minority, female, elderly, or a child.[51]

Among these groups who are undertreated, the problem of pain relief is especially difficult for the elderly. Until recently, management of pain in elderly patients was largely ignored, although findings indicate that the prevalence of pain in the elderly is known to be twice that of younger people and can be as high as eighty-five percent in older people living in

long-term care settings,[52] even though individualized pain management plans for older people can be highly effective.[53] The problem in a managed care context is that individualized plans are time consuming.

Nurses, in particular, have been important in providing the personalized attention needed for effective pain management plans. The nurse's role has been particularly important since it has been the nurse who has previously been able to spend the time to communicate carefully with the elderly patient so that pain control needs can be accurately assessed. Now, however, in attempts to reduce costs in the realm of managed care, many hospitals and other health facilities are cutting back on their nursing staffs and patients are finding that not only doctors, but nurses, no longer have time for them.

According to Howard Berliner, professor of health policy at the New School for Social Research, "Hospitals are under pressure from managed care to reduce costs, and they are looking at nurses as their highest-cost line item."[54] In many cases, nurses are being replaced with unlicensed aids who have neither the training nor skill required to serve as effective patient advocates.

The failure to allocate the necessary time and resources to giving adequate pain management creates the untenable situation, so greatly and rightfully feared by many people. This could well lead a patient to believe erroneously that "nothing can be done" to alleviate suffering and, in turn, this could result in a patient's choosing assisted suicide as the only available means to escape pain.

Patient concerns about loss of dignity are also heightened by the cost containment policies and requirements of managed care programs. It is difficult for patients to feel valued and

54. Rosenthal, *New York Hospitals Cut Costs by Laying Off Nurses*, N.Y.Times, Aug. 19, 1996.

cared for when physicians are compelled to treat them as though they were assembly line products being processed in an allotted number of minutes. This production line mentality was described by Dr. Leonard Laster, distinguished professor of medicine and health policy at the University of Massachusetts Medical Center in Worcester: "Business managers working in the interests of cost-cutting now tell doctors how much time to spend with a patient, and many allow only ten minutes for a returning patient and no more than twenty minutes for a new patient. How can anyone perform even a passable evaluation in twenty minutes on an elderly patient with a massive written clinical record. . . .?"[55]

Mandated time restrictions are not the only thing that can leave patients feeling demeaned and unimportant. Sometimes the greatest assaults on one's sense of self-worth emanate from small indignities. When one of the nation's largest managed care companies experienced losses in 1995, it instituted cost cutting measures which included the refusal to provide gowns for gynecological exam patients. Patients were told to disrobe and then, instead of being provided with a gown, they were given a small square of paper on which they were to sit while awaiting the examination.[56]

It stretches credulity to think that managed care programs — which fail to reimburse for adequate pain control, control exam times down to the minute, and deny a patient even a simple gown with which to cover herself — would allot large sums of money for comprehensive services so that assisted suicide would be used only as a last resort.

It could be assumed that, if patients are faced with demeaning and life threatening conditions such as have been described, they need only avail themselves of the appeal or complaint procedures that are in place in large corporations, including large health care corporations. However, the process of appealing a managed care program's decision is often time-consuming, costly and beyond the ability of many patients

55. Laster, *Managed Care Translates to "Let the Patient Beware,"* Am. Med. News, Feb. 19, 1996, at 18.

56. Auerbach, supra note 16.

who are already using every ounce of energy and every financial resource to exist on a daily basis. Meanwhile, as the quest for administrative remedies drags on, the patient's agony remains unrelieved.

H. The Appeals Process under Managed Care Is Often So Complex that Patients Could Consider Assisted Suicide to Be Their Only Recourse.

When essential treatment is denied, the appeals procedure under managed care is often so complex and time consuming that the accompanying delays can cause a patient grave harm. Additionally, personnel investigating the appeal may not have expertise in assessing the actual medical condition or its appropriate treatment. One such case involved a child with an extremely rare kidney tumor that is fatal if not treated but has a ninety-seven percent cure rate with prompt surgery. The child's primary care physician sought permission from the group plan to refer the child to an out-of-group specialist, since the group itself had no one with the needed expertise in treating the child's condition. The group's acting medical director, an ophthalmologist (eye specialist), refused to authorize the referral, saying that an in-group physician should perform the surgery. When the child's parents appealed, the appeal procedure was handled by a nurse who also denied the referral.

This left the family with two options: Have the surgery performed by a surgeon who was unqualified for it or personally bear the cost of an experienced medical team outside the group. Her parents opted for the latter, and the child's condition was cured. However, the managed care group not only refused to pay for the surgery but also denied any reimbursement for the accompanying hospital costs, even though these costs were identical to those that would have been incurred if an in-group physician had performed the surgery.

It took close to four years but, in October of 1996, the managed care program was fined by the California Department of Corporations for failing to provide the child "as well as all member patients with all medically necessary physician

services." It was also found that the managed care program had failed to demonstrate that its refusal to refer the child to a qualified surgeon was unhindered by fiscal and administrative considerations.[57]

Unfortunately, many people who are denied care, give up. They have neither the money to obtain care outside their managed care program nor the inclination to embark on court challenges. The outcome for such individuals could mean that a potentially fatal, yet curable, condition is allowed to progress. If assisted suicide is permitted, such individuals may well find that the same managed care organization that denied reimbursement for life-saving interventions will approve reimbursement for life-ending medication.

Obtaining necessary services through HMOs has been particularly difficult for Medicare patients. For many elderly patients, the process required for peer review of an HMO's decision to deny them care is too confusing, involves long time delays, and ultimately ends up being a useless endeavor. These facts prompted a class-action lawsuit on behalf of the millions of Medicare beneficiaries who are in HMOs.[58]

The administration and the HMO industry contended that federal Medicare law "does not require an impartial review procedure for Medicare beneficiaries enrolled in HMOs before a termination or denial of their HMO services."[59] However, U.S. District Court Judge Alfredo C. Marquez found otherwise. He stated that Medicare patients in HMOs are entitled to immediate hearings whenever they are denied medical services.[60] The need for immediacy is particularly important for Medicare patients since, "When Medicare services are denied, they are often foregone and, depending on the medical condition, final adjudication may come too late

to rectify the situation, especially if the deprivation contributed to or resulted in unnecessary pain and suffering or death."[61]

In a strongly worded opinion, Judge Marquez noted that, even though there were regulations and guidelines that should have protected Medicare beneficiaries, they were not being followed. Complex and confusing in-house review procedures amounted to little more than "a 'rubber stamp' of the initial denial,"[62] which has "grave consequences because an HMO denial may mean the enrollee will go without medically necessary service."[63] He further noted, "Given the length of time it takes for further appeal of the HMO denial, deprivations will certainly have significant impacts on quality of life and some may even be life threatening."[64]

According to Judge Marquez, an HMO often "hides the ball"[65] and frequently doesn't let Medicare patients know that they have a "right to present additional evidence to the HMO for reconsideration."[66] He concluded, as did the District of Columbia Circuit Court in *Gray Panthers v. Schweiker,*[67] "Current procedures allotted to the elderly Medicare claimant, probably disadvantaged by disability and poverty, resemble playing against a stacked deck. . . ."[68]

Yet, it is not only patients that are detrimentally affected by the manner in which managed care organizations are presently operating. The impact on the medical profession as a whole and, along with it, the increased risk to patients which may not be evident for several years must also be considered.

I. The Policies of Managed Care Corporations Compromise the Quality and Expertise of the Medical Profession, Making It Imperative that States Have the Right to Protect Residents from Assisted Suicide.

Credentialing procedures for those in the health care field are not new. For years professional organizations have established standards for credentialing physicians and other licensed independent practitioners. Historically, hospital review committees and other professional organizations examined a physician's educational background and professional competency to determine his or her ability to render appropriate medical care. With the advent of managed care, however, a new type of credentialing, known as "economic credentialing," was instituted. This type of determination about physicians' suitability to practice medicine is unrelated to the quality of care they provide or to their professional competency. Rather it is based upon economic criteria. Thus, if a physician is deemed to spend too much time with patients or found to be ordering too many diagnostic tests (even though the time and tests may have been medically appropriate), the physician risks dismissal from a health plan or physician group.[69]

Ironically, at the same time that managed care organizations have placed great emphasis on credentialing as it relates to competency in reducing costs, they have often paid far less attention to credentialing that would insure patient safety. For example, one HMO solicited physicians by mail and encouraged them to become providers within the managed care organization. The screening process for the physicians was limited to verifying that the physicians were licensed, had hospital medical staff privileges and were able to prescribe narcotics. No personal interviews and no investigations about prior medical malpractice claims were conducted.[70]

Although an increasing number of physicians are alarmed by the harmful impact of managed care upon professional practice, this may not be enough to deter young physicians,

69. See, e.g., Cal. Med. MEDFAX, (So. Cal. Ed.) Jan. 8, 1996, at 2.
70. See, e.g., *Harrell v. Total Health Care, Inc.* 781 S.W. 2d 58 (Mo. 1989).

just entering medical practice, from embracing managed care. Due to the increased competition for health care dollars and the decline of the traditional fee-for-service practice, many physicians feel compelled to contract with managed care firms out of a sense of economic survival. Since large managed care firms offer employers a reduced rate for employee health coverage, and since these firms, in turn, contract with physicians, physicians who practice in fee-for-service are being left high and dry. Thus, a young physician who is entering into practice with the burden of heavy medical school debts may find that the economic security of a managed care contract — flawed though it may be — is the only economically viable option.

Indeed, with managed care beginning to dominate the entire health care delivery system, doctors may find themselves forced to choose between practicing managed medicine or not practicing medicine at all.

III. POLICIES WHICH PUT COST CONTAINMENT AND HEALTH CARE INDUSTRY PROFITS BEFORE PATIENT WELL-BEING MAKE IT ABUNDANTLY CLEAR THAT STATES HAVE BOTH A VITAL AND A RATIONAL INTEREST IN PROTECTING THEIR RESIDENTS BY PROHIBITING ASSISTED SUICIDE.

As providers in a managed care environment, many physicians will continue to be sincerely motivated by respect for patient well-being and autonomy, but the cost factor will always lurk in the shadows. As precarious as the situation resulting from managed care is at present, it would only become worse if physician-assisted suicide were to be considered a legitimate and legal medical option. If states are not permitted to protect their citizens from assisted suicide, the managed care provider would, in many cases, become the managed death provider. Dr. Daniel Sulmasy described the link between managed care and assisted suicide in concise terms when he stated that "the movement toward managed care as a preferred means to control health care cost and the

movement toward managed death as the preferred means to control terminal suffering are strong, active and current."[71]

To gauge the accuracy of Dr. Sulmasy's warning, one need only reflect on the vise-like pressure placed on doctors that has been described above and examine what has happened when voters in the state of Oregon approved Measure 16, the "Death with Dignity Act," which permits assisted suicide under certain conditions.[72] Less than five weeks after Measure 16's passage, Oregon's Medicaid director, Jean Thorne, said that assisted suicide would be covered under a part of the Oregon Health Plan called "comfort care."[73] Noteworthy was the fact that, as assisted suicide was being scheduled as a covered service, other existing services for poor Oregonians were being scrutinized for cuts.[74]

While some may question any direct relationship between the passage of Oregon's assisted suicide measure and attempts to cut health services, the cost effectiveness of hastened death is as undeniable as gravity. The earlier a patient dies, the less costly is his or her care. In any event, dead patients do not threaten managed care profits.

Likewise, there are varied opinions about any link between cost of care and euthanasia in the Netherlands where thousands of assisted suicide and euthanasia deaths occur annually, and more than one half of those deaths are not requested by the patients who died.[75] Of note is the cost of

---

71. D. Sulmasy, *Managed Care and Managed Death*, 155 Arch. Int. Med. 133 (1995). Although Sulmasy refers to managed death for "terminal suffering," it is highly unlikely that assisted suicide would or could be limited to those whose conditions are diagnosed as "terminal." See e.g., E. Chevlen, *The Limits of Prognostication*, 35 Duq. L. Rev.337 (1996); and Marker, supra note 13, at 90-94.

72. The Oregon statute was enjoined by federal district court Judge Michael Hogan the day before it was to take effect. See *Lee v. State of Oregon*, 891 F.Supp.1429 (D. Or. 1995).

73. Postrel, *State Could Cover Assisted Suicide*, Statesman Journal (Salem, OR), Dec. 1, 1994, at A1.

74. Deitz, *Lawmakers May Trim Health Plan*, Statesman Journal (Salem, OR) Jan. 9, 1995.

75. Marker, supra note 13, at 85. Although the Dutch practice of physician induced death began with the intent of offering patients greater con-

performing euthanasia in the Netherlands which, Dutch euthanasia practitioner Dr. Pieter Admiraal has explained, can be performed for about five guilders whereas the cost of a single day of hospitalization is five hundred guilders.[76] Perhaps coincidentally, perhaps not, the Netherlands has the lowest per capita health expenditure in all of Europe.[77] According to Dr. Jeffrey Jackson of the Walter Reed Army Medical Center in Washington, this low per patient expenditure "reflects an ongoing effort to ensure that Dutch physicians are sensitive to cost and practice economically prudent medicine."[78]

CONCLUSION

Managed care has been referred to as a "work in progress"[79] which may eventually work very well if improvements are made. But those improvements could take years as legislatures and courts wrestle with the complex problems and conflicts of interest inherent in managed care programs. Meanwhile, the issues before this Court demand immediate resolution.

This Court faces the momentous task of determining whether the United States Constitution precludes states from enacting statutes prohibiting assisted suicide. Proponents of a constitutional right to have a doctor actively participate in assisted suicide argue that the issue before this Court is one of individual rights. But their assertions ignore the context within which that activity would be undertaken.

NOTES *(Continued)*

trol over their own deaths, the practice of euthanasia and assisted suicide has actually increased the power and control of doctors, not patients. See generally: H. Hendin, *Seduced by Death: Doctors, Patients, and the Dutch Cure* (New York: W.W. Norton & Co.1997).

76. R. Marker, *Deadly Compassion* 146 (New York: Wm. Morrow & Co. 1993).

78. Id.

79. P. M. Ellwood, *Managed Care: A Work in Progress*, 276 J.A.M.A. 1083 (1996).

This Court must decide the issue based not only on abstract notions of individual liberty but on the reality of the environment within which personal and medical decisions would be made. Only then can it determine whether the state laws under consideration sufficiently support valid state purposes and thus, pass constitutional scrutiny.

This brief has demonstrated that the current health care environment is evolving into a system defined by cost-cutting imperatives and dominated by a form of health insurance known generically as managed care. Further, it has shown that the very purpose of managed care, which is to reduce the cost of providing medical care, is accomplished, in large part, through a system that rewards reduced levels of care.

In such a milieu, the kind of treatment that modern medicine is capable of providing (e.g. pain control, symptom management, and treatment of depression which is often essential to patient well-being and a desire to continue living) can be difficult to obtain. This problem would be exacerbated if the less costly and less time consuming "service" of assisted suicide were available mandatorily as a constitutional right. This could well create scenarios in which agonized and depressed patients would elect to have their deaths facilitated since their relievable suffering went unalleviated because of their health providers' financial imperatives. Moreover, forcing physicians to elect between providing patients with care, at the risk of having their own incomes reduced, and suggesting assisted suicide as a cost saving measure, would place doctors in an ethical and moral conundrum. The deleterious impact of that would be felt by the medical professionals, patients, and society as a whole.

This is the reality with which the Court must grapple.

In sum, legalizing physician-assisted suicide in a health care system in which financial incentives would favor denying care and hastening death would create a profound injustice.

Rather than serving the noble cause of individual liberty, it would make a mockery of freedom, since the "choice" to commit assisted suicide would, in many cases, have essentially been predetermined by managed care's financial imperatives.

Decisions to die would often be based, not on the inability of physicians to control pain and limit suffering but on pecuniary determinations.

That being so, state legislative decisions to prohibit assisted suicide are constitutional since they serve vital and rational state interests. Such laws ensure that managed health care does not devolve into a system of managed death. They protect and reinforce the traditional ethics of the health care profession. They strengthen the bond of trust essential to the patient-physician relationship by preventing doctors from being tempted to end patients' lives in order to promote their own financial ends. Perhaps most importantly, they reinforce the essential moral concept that human beings are not commodities, that lives cannot be measured in pecuniary terms, and that rich or poor, powerful or weak, no one should be sacrificed to benefit financial bottom lines.

Respectfully submitted,

INTEREST OF *AMICI CURIAE*: Damage to the liberty and property rights of nurses 1

SUMMARY OF ARGUMENT 3

ARGUMENT: The Courts of Appeal granted an entitlement to assisted suicide which inculpates nurses, thereby denying liberty and property rights of nurses to practice a profession undamaged by assistance in suicide 3

1. Legal assisted suicide would inculpate all nurses in assisted suicide, denying nurses the liberty and property interests in their profession 4

   a. Legal assisted suicide would inculpate nurse practitioners as prescribers of drugs used in suicide 6

   b. Nurses other than nurse practitioners would be affected by legal assisted suicide 8

      (1) The practice of every nurse would be changed by legal assisted suicide (which seeks to solve a nonexistent problem) 8

      (2) Hospice and home health nursing practice would be changed under legal assisted suicide 11

      (3) Hospital and long term care nursing practice would be changed under legal assisted suicide 13

   c. Anticipation of legal assisted suicide in one state has caused its nurses to accept involvement 15

INTEREST OF *AMICI CURIAE*:

The decisions of the Courts of Appeal damage the liberty and property rights of nurses.

Letters of the parties consenting to file this brief *amici curiae* have been filed with the Court. Descriptions of each group filing this *amici* brief are set forth in the Appendix.

By striking state laws criminalizing assisted suicide, the decisions of the Courts of Appeal, if affirmed, would make assisted suicide legal. The *amici curiae* will be uniquely and directly affected by the Court's decision in this case. To demonstrate their unique interest, *amici* will present evidence that nurses would be 1) involved, and 2) detrimentally affected, if assisted suicide were made legal.

The decisions of the Courts of Appeal on review grant an entitlement not only to "physician-assisted suicide" but also (a fact unknown to many) to "nurse-assisted suicide." The practitioner most likely to be with the patient as he dies, is his nurse. A large difference exists between the professions of nursing and other professionals in illness care, regarding the care of terminal patients. The patients who are the subject of assisted suicide almost always require nursing care, not always medical care. At the very time when medicine may have little to offer the patient, the nurse can give comfort, concern, and care. The interest of nurses in what happens to their dying patients is unique, even among other professionals.

The nurses' interest differs from other professionals in another way: nurses are almost always employees. They will not have the luxury that other professions might have, abstractly and coolly to deliberate on whether to assist a patient in suicide. Nurses rarely can choose their patients; they are assigned to them. Because of their societal and employment status, nurses would be vulnerable to pressures to assist in suicide against their professional or ethical judgment. They are often in the unenviable position of being responsible for executing decisions in which they have no voice. The nursing coat of arms in some instances might well read: "Responsibility without Authority."

The effect of inculpating nurses in the self-killing of their patients will not be addressed by any other *amici* or Party. The effect is this: If assisted suicide is made legal, nurses will be asked to assist suicide. All nurses care for patients who die, and some of their patients might die by prescription. That nursing care would be nurse assistance in suicide, because the definition of "assist" cannot be narrowly limited only to providing medication. Those nurses and thus the whole profession would be inculpated in nurse-assisted suicide. Further, Nurse Practitioners (NPs) in several states now legally prescribe the medications that would be used to cause death in patients.

The Nurses' concern for their *patients* who would be harmed, will be addressed by other *amici*. Nurses add that the harm done to the profession of nurses, the largest group of practitioners who care for patients, would affect not only current patients but all who would need nursing care in the future.

All nurses would be involved intimately in the death of their patients who might self-kill. The decision of one of the Courts of Appeal contemplates this, together with an assumption that at some future time euthanasia may be delegated:

> "We recognize that in some instances, the patient may be unable to self-administer the drugs [for suicide] and that administration by the physician, **or a person acting under his direction or control** may be the only way the patient may be able to receive them." [Emphasis and material in brackets added]. *Compassion in Dying v. State of Washington*, 79 F.3d 790 at 831 (9th Cir.1996).

The inevitable inculpation of nurses in legal assisted suicide would erode the personal and professional ethics of nurses, expose them to criminal and civil sanctions, and destroy the confidence of the public in the profession. Thus the nurses' rights to liberty and property in the practice of their profession would be violated.

SUMMARY OF ARGUMENT

The decisions of the Courts of Appeal grant the entitlement to suicide with assistance and approval and thereby deny liberty and property rights of nurses in their profession, damaged irrevocably by nurse assistance in the deliberate deaths of patients. Nurses would be 1) inculpated, and 2) harmed, by legal assisted suicide:

1. Under legal assisted suicide, nurse practitioners and all other nurses would be inculpated in nurse-assisted suicide. One association of nurses already has advised its members that nurses would be involved in assisting suicide if it were legal.
2. Legal assisted suicide would harm irrevocably the ethical and legal basis of the nursing profession; current ethical standards of nurses would be eroded; and the public's perception of the profession would deteriorate, all causing damage to the liberty and property rights of nurses in practicing their profession.

ARGUMENT

To commit suicide with assistance and approval is not a right but an entitlement. Making assisted suicide legal does not merely allow the ability to do an act by one person, but confers the power to involve another person in the act.

Nurses leave to other *amici* the elaboration of the certain fact that the vast majority of people who seek suicide are psychologically impaired. Even terminal patients in pain do not seek death (and *amici* assert this pain can be relieved, under current standards of care). E.J. Emanuel, *et al, Euthanasia and physician-assisted suicide: attitudes and experiences of oncology patients, oncologists, and the public*, 347 Lancet 1805 (1996).

Terminally ill patients who seek to die are almost invariably depressed and ambivalent about dying, and those patients can be helped with medication. If encouraged, such ambivalent patients will choose to live. For the rare patient who is terminal, competent, non-depressed and seeking suicide with help (and even that patient is likely ambivalent about dying):

Before these Courts of Appeal decisions, prescriptions have been written with knowledge that their purpose was suicide. Though that information has been acknowledged, no prescribers have ever been convicted of assisting suicide. T.H. Stone & W.J. Winslade, *Physician-assisted suicide and euthanasia in the United States*, 16 J. Leg. Med. at 492 (1995).

The aim of making assisted suicide legal, then can be seen. It is not merely to allow a prescription for the few competent, terminal, non-depressed patients who would commit suicide with such drugs. Instead, it provides a prescription *with approval of its purpose*. This prescription would be visible evidence of approval of the act from the doctor or nurse practitioner. Legal assisted suicide confers the entitlement to suicide with approval, by inculpating the professions. The intent is to give to the act the imprimatur and approval of the law, and of the professional.

The tacit tolerance of assisted suicide already creates the perception that some special cases exist that warrant assisted suicide. This tolerance would become explicit if legal. The nurse would be forced to act either in compliance with her conscience (to safeguard her patient, profession, and opinion of herself), or to act in compliance with what would then be the law. She would have to be silent or even assist suicide.

1. Legal assisted suicide would inculpate all nurses in assisted suicide, denying nurses the liberty and property interests in their profession.

The relationship of nurses to their patients has been called a social contract with the public. That is, the public/patient knows in general what a nurse is, and what she is expected to do. People who are currently in the profession entered that work with the knowledge of, and expectation of, what their work would be. They have a property interest in their occupation; and they have a liberty interest in being able to practice the profession as it exists without arbitrary government interference. Both interests have been found to rise to the level of fundamental rights, deserving Constitutional protection.

> " . . . [T]he right to work for a living in the common occupations of the community is of the very essence of the personal freedom and opportunity that it was the purpose of the Amendment to secure."

Truax v. *Raich*, 239 U.S. at 41 (1915); and

> "[T]he right to hold specific private employment **and to follow a chosen profession** free from unreasonable governmental interference comes within the 'liberty' and 'property' concepts of the Fifth Amendment."

Greene v. *McElroy*, 360 U.S. at 492 (1959) [Emphasis and material in brackets added].

The liberty and property interests asserted here are not merely in a specific job, though specific employment also may be endangered for the nurse who will not participate. The nurse who will not participate in assisting suicide cannot merely go to another nursing job that is unaffected by legal assisted suicide. Any and all nurses would find their profession damaged by the inculpation of nurses in assisted suicide. All jobs, all nurses, would be tainted.

The practice of nursing does evolve and change; but the underlying values expressed in the ethics of nursing, and enforced in the minimum of the law, have not changed in thousands of years. The *amici* assert that it has not ever been the legitimate work of their profession to assist patients to kill themselves. Legal assisted suicide would make those acts part of the work of nurses.

Courts have always considered the effect of their decisions on all the people involved in a case. Under these decisions, the nurses are immediately and intimately and detrimentally involved. In particular, the impact of their decisions on the integrity of the professions has been of major concern to courts. *Superintendent of Belchertown* v. *Saikewicz*, 370 N.E.2d at 426 (Mass.1977), *Satz* v. *Perlmutter*, 362 So.2d at 163 (Fla.1980).

Other courts have expressed concern for nurses asked to assist in causing death in their patients (in the case quoted below, by denying nursing care).

> I find it difficult to understand how we can order nursing professionals with an abiding respect for their patients to cease to furnish the most basic of human needs to a patient in their care. [Such an order] may impinge on the privacy rights of those nursing professionals.

In re Jobes, 529 A.2d at 464 (N.J. 1987) (O'Hern, J., dissenting). [Material in brackets added].

Another court worried about the ethics of nurses asked to assist in deliberately dehydrating to death a comatose patient:

> . . . for almost all concerned the adoption of the proposed course will be a merciful relief, [but] this will not be so for the nursing staff, who will be called on to act in a way which must be contrary to all their instincts, training and conditions. They will encounter the ethical problems, not in a court or in a lecture room, but face to face.

Lord Mistill, House of Lords. *Airedale NHS Trust (Respondents)* v. *Bland* (Acting by his guardian *ad litem*) (Appellant) London: House of Lords, 1993 [Material in brackets added].

a. Legal assisted suicide would inculpate nurse practitioners as prescribers of drugs used in suicide.

If assisted suicide were legal, nurse practitioners in many states would be affected in exactly the same way as physicians. They would be seen as practitioners who could prescribe death instead of promoting life. In some states nurse practitioners potentially can prescribe all the drugs that patients seeking to suicide most likely would be prescribed to kill them. Drugs that might be prescribed are used at present for pain, sleep, anxiety, or depression, all of which categories some nurse practitioners legally can prescribe now. See, for example, Or. Rev. Stat. 678.385.

Patients who could legally obtain drugs for the purpose of suicide from physicians could get a prescription for the same or similar drug from a nurse practitioner. This is so, even if the NP technically could not prescribe for the *purpose* of suicide. If prescriptions from the physician for the purpose

of assisted suicide were legal, patients would be encouraged (and perhaps even more likely) to ask for the same drugs from their nurse practitioner. Patients who formerly might not have sought a prescription for suicide might be encouraged to do so if it were legal. The legality of the prescription would remove the stigma from suicide or at least spread it onto the prescriber.

Nurse practitioners in the future likely would be included as "prescribers" if assisting suicide were legal. The equal protection clause of the Fourteenth Amendment to the Constitution would prohibit the exclusion of Nurse Practitioners from prescribing drugs for self-killing. The limitation of such prescriptions to physicians would discriminate without rational basis, since nurse practitioners too could prescribe the drugs most likely to be used to kill the patient.

To assert that the prescription of killing drugs could be limited to physicians because they are better qualified to judge the mental status of the patient, has no factual basis. Comparison of the curricula of their respective educational programs would demonstrate that nurse practitioners (especially those working in mental health) are even more likely than doctors to have been educated in psychosocial components of care. Thus nurse practitioners are at least as able as physicians to assess patients for their competency in making a request to die. Nurse practitioners would be inculpated in legal nurse-assisted suicide as prescribers. Their exclusion will not meet the rational basis standard of Amendment Fourteen of the Constitution.

Nurse practitioners unwilling to assist the patient in suicide likely would be required to transfer medical records to the next practitioner chosen to assist suicide, just as physicians would be. This participation would be required, regardless of the religious or moral or professional objections of the nurse to inculpation in the self-killing. The nurse's objection that suicide was inappropriate for this patient, based on her assessment of the patient, would be no bar to enforcing such

transfer of records. An example of such requirement to transfer patient records in a law with "safeguards" as recommended by the decisions of the Courts of Appeal, is Oregon Ballot Measure 16, Section 4.01(4).

b. Nurses other than nurse practitioners would be affected by legal assisted suicide.

(1) The practice of every nurse would be changed by legal assisted suicide (which seeks to solve a nonexistent problem).

Legal assisted suicide would affect all nursing practice; most nurses care for terminal patients on a daily basis. Some of those patients (those who are depressed and ambivalent) might seek suicide with assistance. Participating in assisted suicide would become part of the practice of nursing. The consequences of legal assisted suicide noted below support that conclusion, and it is admitted by the position of the Oregon Nurses Association (ONA) discussed more fully below. Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995).

If assisted suicide were legal, according to the ONA paper discussed below, even the nurse who is morally opposed to assisted suicide would be required to inform the patient of his right to referral to a physician (or nurse practitioner) who would prescribe a lethal dose. For some nurses, supplying this information would be assisting the patient's suicide. They would assist, as surely as did German nurses under National Socialism assist euthanasia. Those German nurses identified some children as retarded, knowing the result of the diagnosis would be death.

From the research done on attitudes and behavior of patients who are terminally ill, it is evident that the Courts of Appeal have written law to solve a problem that does not exist. Data cited above (Emanuel) show that patients who seek suicide are depressed and at least ambivalent about their wish to die. Practitioners are notoriously bad at diagnosing

and treating depression[1] (a reason to educate practitioners, not a reason to assist depressed patients to suicide). The data also show that competent terminal patients, even those (unnecessarily) in pain, are very unlikely to seek suicide.

According to research studies, a large majority of patients want heroic efforts made if they die. They may overestimate the success rate of heroic efforts, but patients who are very seriously ill, even those that might be classed as "terminal," want to live. R.S. Phillips *et al, Choices of seriously ill patients about cardiopulmonary resuscitation: correlates and outcomes*, 100 Am. J. Med. 128 (1996).

At present, the nurse's duty toward a depressed patient dying in pain is to alleviate the pain and treat the depression, both remediable conditions. If assisted suicide were made legal, the nurse's practice would be changed, perhaps to assist the patient to suicide in order to relieve depression and pain. Effective (non-lethal) treatment is available right now for depression and pain. *Amici* know it is not necessary to end the patient, to end his pain.

The Courts of Appeal have confused withdrawing treatment that patients do not want, with suicide, assisted suicide, and euthanasia. Researchers too have confused refusing treatment with suicide, resulting in studies that seem to indicate that intensive care nurses already assist suicide or euthanize patients. D.A. Asch, *The role of critical care nurses in euthanasia and assisted suicide*, 334 N. Eng. J. Med. 1374 (1996). In reality, only treatment that the patient rejects is removed. Often the treatment rejected would not have prolonged the patient's life in any event. The public (including jurists and researchers) overestimate also the success rate of medicine and nursing in prolonging life with heroic efforts.

---

[1] Purported safeguards in legislation such as those in Oregon's Measure 16, ask the practitioner to refer the patient who may be depressed for counseling. But many practitioners cannot recognize the diagnosis in the first place, so they cannot refer. New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* (May 1994) p. 127.

Though it may be blurry to the Courts of Appeal, the line is very clear and bright between withdrawing treatment which would not prolong life, and actively causing death. Nurses are adamant that care that is not useful, and is not wanted, be ended. The nurse is very often the patient's greatest advocate in such situations. She will take whatever measures are needed to see that the patient's wishes are honored. These measures may include conversations (even confrontations) with doctors, ethics committees and employers. But for the nurse, it is a thousand leagues distance from honoring her patient's wish to stop treatment – to being her patient's agent of death.

Under legal assisted suicide a nurse would encounter a family pressuring the terminal patient to die (subtly or not, and done for the patient's benefit or not). Currently, this behavior might rise to the level of neglect or abuse of an elderly or dependent patient, and the nurse's obligation is to report it. Under legal assisted suicide, the nurse's practice would be changed (perhaps to refer the patient and family to a practitioner who would prescribe a lethal dose).

Under legal assisted suicide, federal law might require nurses to inform the patient who is even possibly "terminal," of his right under state law to assisted suicide. The Patient Self-Determination Act 42 U.S.C. Sec.1395cc(a)(1) *et seq.* requires recipients of Medicare funds (hospitals, skilled nursing facilities, home health agencies, and hospice programs) to provide information to each patient concerning

> "an individual's rights under State law . . . to make decisions concerning such medical care, including the right to accept or refuse medical or surgical treatment and the right to formulate advance directives."

Even government employers may require practitioners to give information preferred by the employer's policy. *Rust* v. *Sullivan*, 500 U.S. 173 (1991). Private employers surely would be able to dictate information to be given. For employers of nurses such as managed care companies or their contractors (virtually all employers of nurses are included in the latter category), the patient's suicide or euthanasia might

be a very cost effective procedure. If the procedures were legal, nurses would be under pressure to assist suicide and euthanize. Nurses might be expected to suggest such "alternatives" to expensive care.

Nurses could be directed by their employers to tell patients that help in killing themselves is available, or be at risk of losing their jobs. Some nurses from strong religious and ethnic tradition, and other nurses who also place primary value on the life of the patient, would be especially at risk. If legal, such nurses who work on oncology and AIDS units, in long term care, hospice, and home health would find their job opportunities limited if they declined to participate in assisted suicide.

Nurses could be forced to choose between job and conscience in a time of shrinking job opportunities in nursing. Most nurses work as "at will" employees, vulnerable to covert and overt pressures to conform to employer goals. Nurses are career professionals, whose jobs usually provide the main source of income in their families. Many could not afford the luxury of maintaining their ethical standards at the cost of losing their livelihood.

(2) Hospice and home health nursing practice would be changed under legal assisted suicide.

Under legal assisted suicide, some hospice or home health nurse would visit her patient to find he had obtained a massive overdose of drugs. (If legal, it would be considered not an overdose but a "correct" dose to kill himself.) Before legal assisted suicide, the nurse would have assumed her duty was to help the patient live. After legal assisted suicide, the nurse's duty could conceivably be to counsel how best to take the drugs to assure death.

Under legal assisted suicide, some nurse who made a visit to check on her patient would find the patient had already ingested the prescribed overdose. (If legal, the dose would be called the "correct" dose – to kill the patient.) Currently, the nurse's duty is to call 911 and resuscitate.

Under legal assisted suicide, the nurse's duty might be to remain passively with the patient/family until the death. The ONA paper [cited below] suggests that if no other nurse were available, legal assisted suicide would create a duty to stay passively with the patient until death, regardless of the nurse's strong intent *not* to assist suicide.

The nurse whose patient would die by legal prescription would be inculpated in the death, because such a death is not so swift or sure or painless as might be assumed.[2] The patient may not die immediately or even within several hours or days. In addition to taking the prescription, proponents of suicide advise placing a plastic bag over the patient's head to assure asphyxiation if the patient awakens. This course of events is said to be not uncommon.

The ONA paper below suggests that even the nurse who did not wish to assist the patient in suicide, still would have to assume the patient's "end of life care" if assisted suicide were legal. If she were unable to transfer the suiciding patient to another nurse, she would have no choice but to participate.

Under legal assisted suicide, the nurse's duty might be changed horribly, perhaps extending to placing the plastic bag over the patient's head if the patient were unable to do so.

---

[2] Prescribers for legal assisted suicide would not be competent to prescribe for a totally new purpose – to kill. To illustrate the problem: Excellent pain control measures are available, but many physicians and nurse practitioners are still unable to prescribe appropriate pain control for terminal patients. (This is not an excuse to kill the patient to relieve the pain, but a reason for more education of prescribers about the near 100% effective relief available.) Considering that current failing, it would be long before prescribers were good at killing. There is no scientific basis for this practice and doctors and nurse practitioners have had no experience in doing it. A new era of research would result if assisted suicide were legal. Such investigation of how to kill people yielded the Guillotine in the 18th Century, and the gas chamber in the 20th. It might well be asked what rough science slouches toward the 21st Century to be unearthed.

Eyewitnesses assert that it is sometimes necessary to hold the suiciding person's hands as he smothers, to keep him from forcefully removing the bag. The nurse's duty could extend to doing that.

If assisted suicide were legal, a hospice or home health nurse would find a suiciding patient alone and with no plastic bag. Currently the nurse's duty is to call 911 and resuscitate. Under legal assisted suicide the nurse's duty might be changed, to placing a plastic bag herself as noted above. Or her duty might be seen as passive, to leave the patient in a comatose state, visiting later to see if the patient died in the interim. It is highly impractical to say that the nurse would be obligated to stay with such a patient. Patients in a coma may take 11-14 days to die of dehydration (known from the experience of deliberately dehydrating to death, non-dying patients). Ruth Phillips, *The legacy of Nancy Cruzan,* 6(2) Living World 16 (1992).

A failed attempt could result in a very damaged patient, which would encourage or even mandate the nurse to ascertain that her patient does not fail. Nursing practice eventually might extend to directly killing the patient who failed in the suicide attempt. Legal assisted suicide does not prohibit active euthanasia; initially, it merely does not "authorize" it. For example see Oregon Ballot Measure 16, Section 3.14.

(3) Hospital and long term care nursing practice would be changed under legal assisted suicide.

Under legal assisted suicide, some patients prescribed a lethal dose would choose to take the drug in the hospital or long term care facility. One proposed "safeguard" legislation recognizes that possibility on its face.

> "If the patient [who wishes to suicide] is an inpatient at a health care facility, one of the witnesses [to the request for suicide] shall be an individual designated by the facility."

Oregon Ballot Measure 16, Section 6, "FORM OF THE REQUEST." [Material in brackets added.] The nurse designated by the facility would be faced with assisting suicide at least to the extent of witnessing the patient's request, regardless of her moral, ethical and professional objections.

If the nurse on duty in a hospital or other inpatient facility knows of the patient's plan to suicide beforehand, her duty might change from trying to save the patient's life – to assisting with his death. Currently the nurse continues nursing care for the patient who is dying; turning the patient, suctioning secretions, administering medications, etc., to help the patient *live* comfortably. Under legal assisted suicide, the nurse's practice would change. The duty logically might be to do whatever would cause the patient to die sooner.

Under legal assisted suicide, the "worse" the nurse by present standards (that is, the faster and better at killing), the better for the patient. The "better" the nurse by present standards (that is, the more life-saving, caring), the worse for her patient under legal assisted suicide. The *amici* assert: This situation stands nursing practice on its head.

These vignettes look macabre, but they are not worst-case scenarios; they are the likely situations that nurses would encounter if the Courts of Appeal are affirmed. Immediately, intimately and inextricably, nurses would be inculpated in assisted suicide.

Nursing "care" would be redefined to include the killing of the patient, and assistance as the patient self-kills. Nursing theory would be developed to teach students how to "care" (or, in every accurate usage of the word, how *not* to "care") for patients committing suicide. Continuing education would be needed for current nurses, on how to assist patients being killed by self-administration of drugs. If assisted killing were extended to people unable to self-administer the drugs (as would be likely), nurses would be taught to kill patients directly.

Nursing education and curricula would be changed to incorporate the "new" ethic and law and nursing practice: Some patients would be given good care. Some patients' "good care" would include giving them prescriptions to kill

themselves. And some patients' "care" would include killing them.

c. Anticipation of legal assisted suicide in one state has caused its nurses to accept involvement.

The threat of legal assisted suicide in one state already has prompted a paper in which the nurses association accepts that nurses will be involved in their patients' suicide. In anticipation that legal assisted suicide would be implemented, and to prepare their members for that reality, the Oregon Nurses Association (ONA) adopted a position statement to guide nurses in the care of terminal patients under legal assisted suicide. Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995).

The ONA document asserts that the nurse's role under legal assisted suicide would be "to share information about health choices **that are legal**." [Emphasis added] Oregon Nurses Association, p. 3. This statement is evidence that nurses will be involved if assisted suicide is legal. Nurses would be expected to teach patients about the option of killing themselves. Mere legality (not any higher ethical standard) would be the defining parameter of the nurse's behavior.

Theoretically, under the Oregon "safeguard" legislation which proposed to make assisted suicide legal, the nurse could refuse to care for a patient who chooses to kill himself. But the ONA paper admits that if she couldn't transfer the patient, "the nurse has the responsibility to provide for ongoing end of life care." Oregon Nurses Association, p. 3. Transfer might be impossible if the nurse discovered the suicide attempt after the patient had taken the poison. Requesting and securing a replacement nurse from her agency (if even granted) could take longer than the patient had to live. Nurses could not opt out of legal assisted suicide, no matter what the language of any "safeguard" legislation adopted by a state legislature.

Nurses are competent to make professional judgments about the mental and physical status of their patients that would affect the appropriateness of a request for suicide.

Further, they are competent to make moral judgments for themselves, about the appropriateness of suicide for any person at any time. Regardless, under legal assisted suicide, the ONA paper asserts that the nurse would be involved and would be muzzled:

> "You may not subject your patients or their families to unwarranted, **judgmental** comments or actions because of the patient's choice [to kill himself]."

Oregon Nurses Association, p. 4. [Emphasis and material in brackets added].

The nurse would be involved, her professional judgment would be thwarted and her freedom of speech compromised under legal assisted suicide.

The ONA position paper is evidence that legal assisted suicide would inculpate nurses fully in assisted suicide, and to the detriment of the practice of the profession.

2. Legal assisted suicide would harm the ethics and law of nursing; the threat already has done harm.

a. Legal assisted suicide would erode the ethics and law of nursing.

The inculpation of nurses in assisting patients to kill themselves causes the degeneration of the ethics and law of nursing, which are based on six values (elaborated below): Doing No Harm, Doing Good, Being Free, Being Fair, Being True, and Life. The position of the American Nurses Association (ANA) states the ethical foundation of nursing practice:

> "The goals of nursing are the promotion, maintenance, and restoration of health, the prevention of illness, and the alleviation of suffering. The social contract between nursing and society to meet these goals is based upon a code of ethics that is grounded in the basic ethical principles of respect for persons, the noninfliction of harm, and fidelity to recipients of nursing care. These principles command that nurses protect or preserve life, avoid doing harm, and create a relationship of trust and loyalty with recipients of nursing actions."

American Nurses Association, *Position Statement on Capital Punishment* (1988).

The ethical standards of conduct (a higher ideal) are used by lawmakers in making lower, legal minimum mandates. Nursing law is the minimum enforcement of nursing ethic. It is the arbitrarily drawn line that separates desired behavior (ethics) from mandated behavior (law). The law exists to guide people who have no higher ethic. People who will not do right voluntarily, can be made to do at least a minimum of "not wrong" with law.

Those people, and others who have no moral compass, will take the law as the highest, not the lowest, standard of behavior. For them, the law becomes the ethic. "It's legal, therefore it must be ethical" is the reasoning. If the nurse who assists suicide were acting legally, some then would assume that she was acting ethically, too.

As noted below regarding nurse participation in executions, the nursing profession nationally has not succumbed to that lowest level of behavior. The national nursing associations, such as the American Nurses Association (ANA) and the National Association of Prolife Nurses, set and promote professional standards of ethics. Those standards cannot be varied according to popularity poll, nor may they descend to whatever acts the popular will has made temporarily legal. As an analogy to assisted suicide: Nursing leaders have suggested that nurses who participate in executions – even if the act is legal – are so far below the ethical standard required of nurses, that their licenses should be revoked.

Assisting a patient to kill herself, merely because it is legal, should not change the standards of nursing practice and ethics; but it would. The legal standard of nursing would be so low that merely to meet it would violate nursing ethics. The standard of nursing ethics and nursing practice would inevitably be ratcheted down to a lower level commensurate with the law.

Some nurses would do whatever is legal. That is why it is not sufficient to say that nurses can protect the ethics of the nursing profession simply by voluntarily refusing to participate in legal assisted suicide. Unlike the isolated participation

in legal executions by a few nurses, *all* nurses are intimately involved in the lives and deaths of dying patients. Under legal assisted suicide, nurses would be inextricably inculpated in their patients' suicides. The erosion of the law would corrupt the ethic correspondingly. Law would lead instead of follow the ethic, and would irreparably harm the profession of nursing.

The ethics and the resulting law of nurses are based on the following six values held by nurses (and all the illness care professions): Doing No Harm, Doing Good, Being Free, Being Fair, Being True, and Life. J.K. Hall, *Nursing Ethics and Law* (1996). Discussion of each value follows with its resulting ethic and law and the changes that legal assisted suicide would cause. As the law deteriorates, so do the ethics.

DOING NO HARM

Legal assisted suicide would damage the nursing ethic and law based on the value, *Doing No Harm* (Non-maleficence). That value is enforced by criminal law, civil intentional tort law and licensure law. Currently, nurses can be prosecuted under their licensure law which in most states allows license revocation for conduct which can be characterized as gross incompetence or gross negligence. See, for example, Or. Rev. Stat. 678.111(b). Presently, assisting deliberately caused death in a patient could be characterized at least as gross incompetence or as gross negligence, if not intentional harm. If assisting suicide were legal, the nursing licensure law would have been dramatically changed.

Assisting deliberately caused death now would surely be "conduct derogatory to the standards of nursing," also grounds for licensure discipline in most states. See for example, Or. Rev. Stat. 678.111(f). Again, legalizing assisted suicide would change the licensure law. As noted above, the standards of nursing have been national parameters, not community or state standards subject to the vagaries of what lawmakers set. But the law will lead those who have no ethical guide, and if assisted suicide is legal, nurses who

assist will seem to meet the minimum standard of nursing practice.

Presently, the nurse whose terminal patient is being pressured to commit suicide may be obligated to report that as neglect or abuse of an elderly or dependent patient. See for example Or. Rev. Stat. 410.610 *et seq.* (elderly) and Or. Rev. Stat. 441.630 *et seq.* (nursing home). If assisted suicide were legal, such encouragement might be considered the right thing for family or nurse to do.

Under legal assisted suicide the enforcement of these laws preventing harm to the patient would change. "Safeguard" legislation (such as that passed in Oregon) would have to provide that nurses would not be subject to criminal or civil liability or professional disciplinary action for assisting suicide. Such law would erode the authority of the board that regulates nursing, and any other agencies that enforce the law that prohibits and punishes harm to patients. Allowing nurses to assist in suicide would erode the minimum ethic enforced by the law, and correspondingly lower the standards expected of nurses generally.

DOING GOOD

The nursing ethic based on the value *Doing Good* (Beneficence) is enforced in malpractice law. Currently, when nurses fail to do good (as a reasonable prudent nurse would do), even unintentionally, they are subject to liability. Currently, nurses are not relieved of their own liability for their actions by physician orders and actions or patient wishes; nurses are morally and legally liable for their own malpractice. See generally, *Nurse Liability for Own Malpractice*, 51 ALR 2d 970.

Legal assisted suicide would change the nursing malpractice law. The standard of care of the "reasonable prudent nurse" would be changed from obligation to *save* the patient's life, to obligation to help *end* it in some situations. As noted above, under legal assisted suicide, the nurse would be obligated to inform the patient about the availability of assisted

suicide. Regardless of her personal moral convictions or professional assessment that the patient can be helped short of suicide, the patient or survivors might bring an action for subsequent pain and suffering based on a negligence theory if she did not so inform.

On the other hand, nurses who did refer or assist the patient who sought assisted suicide, might also be liable. The theory of liability could be failure to assess adequately for depression or decisional capacity, or failure to challenge the prescriber's assessment and prescription if they were faulty.

The family member or the estate who learns about the nurse's involvement in the attempt might have a cause of action for malpractice or wrongful death. The family might notify the licensure board of the nurse's action, alleging failure of nursing care. (Though as noted above, the licensure board might be powerless to enforce standards after legal assisted suicide.)

BEING FREE

Legal assisted suicide would damage the nursing ethic based on the value *Being Free* (Autonomy), enforced by consent law. The nurses leave to other *amici* to elaborate on the obvious fact: The patient's autonomy must *not* be honored and he must be protected from himself, if he is not competent to make decisions. That is the situation if the patient is depressed or suffering from mental illness, which almost all suicidal patients are.

The right of the patient to refuse treatment is stronger than the grant of an entitlement (as in legal assisted suicide), but even that power of refusal is not absolute. The right is conditioned on the impact on other people; for example, the power to refuse a transfusion may be conditioned on the patient's responsibility for another person.

Nurses have some rights to their own autonomy. The patient's demand for treatment which transgresses the professional's ethics cannot be honored. For example, the patient's demand to remove a healthy body part (because the person wanted to qualify as disabled) must be declined by the ethical

physician. Even an *un*ethical doctor would face legal sanctions for performing such a procedure. Government cannot arbitrarily inculpate the professions in such entitlement, to the detriment of their fundamental liberty and property rights to practice their profession with autonomy.

A rough analogy to the damage to nurses' autonomy under legal assisted suicide: Imagine a law granting the entitlement to assisted suicide with the help of a police officer to accomplish the killing. The damage is obvious to the ethic of police officers, whose professional responsibility is to protect innocent life. As noted above, the reason to have a professional assist is to put her imprimatur on the act.

Another analogy of damage, to another profession that might serve as provider of assisted suicide (and whose ethics much of the public already consider to be below reproach) is the legal profession. A recent article describes the perception that lawyers will do whatever their clients order, without reservations based on personal integrity or professional ethics. The authors suggest, perhaps not tongue-in-cheek, that the legal profession might be the ideal suicide assistants. R.M. Sade & M.F. Marshall, *Legistrothanatry: A new specialty for assisting in death*, 39(4) Perspectives in Biology and Medicine 547 (1996).

The American Nurses Association addresses the fine line separating the patient's autonomy from the moral mandates and integrity of his nurse:

> "Though there is a profound commitment both by the profession and the individual nurse to the patient's right to self-determination, limits to this commitment do exist. In order to preserve the moral mandates of the profession and the integrity of the individual nurse, nurses are not obligated to comply with all patient and family requests. The nurse should acknowledge to the patient and family the inability to follow a specific request and the rationale for it."

American Nurses Association, *Position Statement on Assisted Suicide* (1994) p.4.

BEING FAIR

Legal assisted suicide would damage the nursing ethic based on the value *Being Fair* (Justice), enforced by laws requiring equal treatment under the law. Other *amici* will discuss the laws that enforce fairness toward patients in this country. They include the due process and equal protection clauses of the Fifth and Fourteenth Amendments to the Constitution, the Americans with Disabilities Act, and the prohibition against discrimination toward some groups who are more likely to experience pressure to die if assisted suicide were legal.

Amici assert, as detailed above, that the fundamental fairness due nurses under the Fifth Amendment would be violated under legal assisted suicide.

BEING TRUE

Legal assisted suicide would damage the nursing ethic based on the value *Being True* (Loyalty), enforced at a minimum in law by contract law, confidentiality, informed consent, and by law requiring nurses to be advocates for patients. Nursing law mandates that nurses must be advocates for the patient, even if their action is counter to the physician or employer's order.

The changes in nursing practice that legal assisted suicide would force (elaborated above in descriptions of nurse involvement under 1.b.) are severe dislocations of the nurse's ethical and legal duties of loyalty to the patient. Under legal assisted suicide, the nurse's duty to advocate for the patient might become the duty to advocate death for the patient.

LIFE

Legal assisted suicide would damage the nursing ethic based on the value *Life*, enforced by all law that outlaws killing. Though mentioned last, this is the first value of nurses, or the one that underlies all others. The *sine qua non* of nursing ethic is promoting the life of the patient in all aspects, including the comfort of the patient and her value as

an individual. This is so, even and especially as the patient is dying. Promoting and protecting the dying patient's life cannot be subverted to mean assisting her deliberately to kill herself.

At present, the life of the individual is protected by the law, overridden only in extreme circumstances. For example, killing is justified only under narrow conditions such as self-defense, executions, or war.
